On the spending side of the ledger, the recently proposed reductions in the growth rate of real defense spending from the 10-percent area to nearer the 5-percent annual rate of increase area is certainly a step in the right direction. On nondefense spending in the entitlements area, I fully understand the difficulty of further significant cuts for fiscal 1984 with current unemployment around 10 percent. However, as the economy recovers and the jobless rate recedes, further cuts in "social spending" should be more politically aceptable. One idea is to "trigger" future cuts to falling unemployment in the mid-1980's with legislation this year. In that way, the capital markets might breathe more easily about the longer-run deficit picture.

I hope that my comments have been helpful. They represent not only my views but the views of the hundreds of professional investors with whom I regularly consult. If I can be of further help in answering questions from you and your colleagues on the Senate Budget Committee, please feel free to contact me.

Yours very truly,
Dr. MAURY N. HARRIS,
Chief Economist, Paine Webber, Inc.

CARNEGIE-MELLON UNIVERSITY,
Pittsburgh, Pa., May 10, 1983.

Senator WILLIAM L. ARMSTRONG,
U.S. Senate, Washington, D.C.

DEAR SENATOR ARMSTRONG: I am responding to your letter of April 19 on the subject of budget deficits. Like you, I am dismayed by the willingness of the administration and the Congress to tolerate extremely large deficits for the indefinite future. These deficits shift resource use from investment to consumption. They contribute to the pattern of recent years: weak recoveries, prolonged recessions, stagnation.

I have signed the bi-partisan proposal prepared by former Secretary Peter Peterson and the five former Secretaries of the Treasury. I believe that proposal, though not ideal, is a distinct improvement over our current and prospective position. It is a beginning. On pages 11 to 18 of the enclosed paper, I comment on some of the institutional changes that are required to bring our economy back to high growth with low inflation.

I will be happy to help in any way that will contribute to the re-establishment of procedures that will assure orderly growth with low inflation.

Sincerely,
ALLAN H. MELTZER,
John M. Olin Professor of Political Economy and Public Policy.

PRESENT AND FUTURE IN AN UNCERTAIN WORLD

(By Allan H. Meltzer)

In the two decades that followed World War II, real per capita income probably increased at a higher rate, in more countries and for more people than at any other time in recorded history. The achievement is not diminished by the qualifications. There are, of course, more people, and the recorded history for much of the world is relatively brief. It remains true, however, that in these two decades, there was considerable material progress for much of the world's population.

The progress of the fifties and the sixties continued in the seventies. Estimates by the World Bank show that between 1970 and 1977, nearly 50 percent of the world's population lived in countries that experienced growth of real per capita incomes of 4 percent or more.[1] Many of these gains are real gains in standard of living that do not vanish when we mentally make the more obvious adjustments for erroneous and imprecise reports, effects of the oil cartel on the reported income in oil producing countries, and differences between consumption and average per capita income reported or produced. Much of the world may remain poor on some absolute standard, but most of the world is less poor than a generation ago. And progress appears to have been more rapid and widespread than in earlier periods of comparable length.[2]

By the end of the seventies, however, growth and development slowed in many countries. Reduced growth in several of the major developed countries necessarily slowed the growth in other, less developed, countries that rely on the growth of their exports to maintain or increase growth of domestic output and income. Growth rates remained below the level of the sixties in many countries during the first two years of the eighties. Although the world economy has grown more slowly and many countries have experienced temporary recessions or stagnation, there is no general decline that is in any way comparable to the decline from 1929 to 1933 or even the decline of 1920–21.

It is common, now to assign major responsibility for slower growth to some recent political personalities or their policies. Reaganomics and Thatcheritis are often described as causes of slower growth, stagnation or even depression in the world economy. Such statements are imprecise and inaccurate. Slower growth did not begin in 1980 or 1981. The growth rate of output for 1977–80 had fallen below the rates achieved earlier in the decade. A substantial decline in reported growth for 1977–80 relative to 1970–77 occurred in many countries, including the U.S. and the U.K., but also including Canada, Spain, New Zealand, Belgium, Brazil, Korea, France and the Netherlands.[3]

Growth occurs when people sacrifice current consumption in anticipation of increased future consumption. Output and consumption increase if the resources released from current consumption are invested in productive assets, in useful training, or in improvements of technology. Properly calculated measures of the return on these investments depend on the rate of interest. The higher the rate of interest, the smaller is the present value of returns received in future years; the lower the rate of interest, the larger the present value of returns received in future years. Projects with a given current cost become more profitable as the rate of interest falls. A rise in the rate of interest reduces investment, the accumulation of capital and the level of future of output.

The rate of interest relevant for these comparisons is the so-called real rate of interest. This rate differs from quoted market rates by the rate of inflation that borrowers and lenders anticipate. The higher the anticipated rate of inflation, the higher is the market rate that is required to maintain a given real rate of interest.

The critical role of the real rate of interest in allocating resources between present and future suggests that we look to the present level of real rates to explain the slower growth of output experienced in many countries during recent years. All computations of the real rate of interest—whether by subtracting the past average rate of inflation, the current rate of inflation or some measure of expected future inflation—show a marked rise in the computed real rate in recent years.

I believe that increased risk or uncertainty is a principal reason that interest rates, after adjusting for inflation, have remained above their postwar norms in recent years. One principal cause of the increased uncertainty is the greater variability of money growth that we have experienced in recent years. Although the Federal Reserve announces targets for money growth, the targets bear little relation to the actual rates of money growth. No one can guess whether monetary policy will produce another round of inflation, a severe deflation, or a period of disinflation. Interest rates and exchange rates reflect this uncertainty.

Unstable U.S. monetary policy is not the only source of increased uncertainty. Trade policy and fiscal policy are difficult to forecast also. Countries repeatedly use and threaten to use tariffs, quotas, subsidies and regulations to protect or support domestic industry or to retaliate against real or alleged harm done by others. Recent tax cuts in the United States did not increase certainty about fiscal policy or make future tax rates more predictable. Future tax rates are no more certain.

Increased uncertainty about the future discourages investment in real assets and encourages people to hold relatively safe assets such as currency, insured bank deposits and short-term debt. The attempt to shift from long-term debt, land, common stocks and other real assets to these safer assets raises the real rate of interest on long-term debt and on real assets. In principle, the increased demand for money and short-term securities may raise or lower the real rate of interest on short-term securities. If long-term debt is a closer substitute for short-term debt than for money, real rates on short-term debt rise with long-term rates. This is the pattern observed in recent years.[4]

The mismanagement of monetary control by the Federal Reserve increased the variability of both money growth and interest rates after 1979. Instead of trading increased variability of interest rates for greater certainty about money growth and inflation, Federal Reserve policy added to the risks in the economy. The increased risk is reflected by the higher levels of short- and long-term rates and by the failure of rates to respond fully to the substantial decline in current and expected future rates of inflation.

The increase in risk premiums helps to explain several features of recent experience other than interest rates and the increased demand for "safe" financial assets. The increased demand for money lowered the increase of the price level and contributed to the decline in inflation. The reduced demand for real capital contributed to the persistent stagnation of real output from 1979 through 1982. The rise in real rates of interest attracted foreign capital and contributed to the higher exchange value of the dollar.

Technical economic analysis contributes to an understanding of our past and current position and the effect of policy procedures on risk. It does not explain why destabilizing and inefficient procedures are adopted and maintained or why policymakers do not adopt more stable policies. To explain the choice of policy procedures, we must join the political to the economic aspects of policy.

WHY GOVERNMENT POLICIES ARE OFTEN VARIABLE AND UNPREDICTABLE[5]

Every predictable policy is a policy rule. Policy rules may be complex or simple. They may call for predictable changes in response to observable events. Or, they may specify a constant level, a constant ratio or a constant rate of change. The essential feature of a policy is that action is predictable.

The alternative to a policy rule is random, haphazard, unpredictable action. No one chooses to defend haphazard or unpredictable policies, so the case for unpredictable policy is presented instead as a defense of discretionary action by a policymaker. The traditional argument for discretion presupposes that the central bank or government can predict future changes well enough to offset them and reduce variability. The traditional case against discretionary policy is that, in practice, discretionary policy increases variability and reduces stability.[6] At issue, is the degree to which discretionary changes in policy can be used to offset unforseen changes arising from other sources. A rule that requires policies to remain predictable denies to governments the opportunity of responding to unforseen events but

[1] See World Bank Atlas 1979.

[2] Persistent declines in output for both the periods 1960–70 and 1970–77 are found in only five countries reported by the World Bank. The five are: Cuba, Ghana, Niger, Somelia and Kuwait. Data are from World Bank Atlas 1972 and 1979.

[3] See Appendix, Table 1 for the reported growth rates in these and other countries. A few countries on the list—Mexico, Italy, Switzerland, Germany and Swedan—reported substantially higher growth in the later period. For 8 of the 23 countries, the relative growth rates do not differ by more than 10 percent up or down in the two periods. The list includes most of the market economies of North America, Europe and Asia but excludes the Comecon countries and others for which comparable data is not available in the sources used.

[4] Technical details of this argument and estimates of the increased risk premium are in Angelo Mascaro and Allan H. Meltzer, "Long- and Short-term Interest Rates in a Risky World," unpublished December, 1982. This study suggests that the risk premiums in short- and long-term rates increased by 3½ and 1½ percentage points during the period 1979–81.

[5] This section is partly based on Alex Cukierman and Allan H. Meltzer, "A Postive Theory of Credibility and Monetary Inflation," unpublished November 1982.

[6] See Milton Friedman, "The Effects of a Full Employment Policy on Economic Stability: A Formal Analysis," in Friedman (ed.) Essays in Positive Economics Chicago: University of Chicago Press, 1973, pp. 117–33.

also prevents governments from making errors.

There are probably specific examples of discretionary policy that reduced variability and, on the other side, some mistakes that increased variability. A recent very approximate calculation, for the period 1953–80, suggests that, on balance, discretionary monetary policy in the United States slightly increased the variability of the economy. In the more recent period, 1969–80, a monetary rule that held the growth of the monetary base constant would have eliminated 60 percent of the variability in growth of nominal GNP.[7]

Computations of this kind, or more exact computations that give broadly similar results, are not likely to persuade central bank or governments to adopt a monetary rule. The experience with monetary targets shows that legislation requiring the Federal Reserve to announce money growth rates has not been followed by tighter control of money growth. Deviations from announced targets are large and variability of quarterly growth rates has increased. Studies completed by the staff of the Federal Reserve show that many of the errors, and much of the variability, is avoidable if improved control procedures are adopted.[8] Most of the required changes have not been made.

Experience in several other countries that have announced monetary targets has not been studied in as much detail. In many of these countries, however, there are substantial differences between the announced and actual growth rates. The Bank of Canada announced monetary targets for several years but often pursued exchange rate policies that were inconsistent with the announced monetary targets. The Bank of England publicly accepted the monetary policy of the government but strongly resisted any effort to adopt procedures that would improve monetary control.[9]

None of these experiences is inconsistent with the propositions that governments, and their central banks, resist policy rules, fail to adopt procedures that would make rules work effectively and prefer discretionary policies even if these policies increase variability and uncertainty. The problem is to explain why governments often resist policies that reduce uncertainty and favor discretionary policies that increase uncertainty.

The reason, I suggest, is that government policymakers gain from discretionary policies. The gains arise from the effects that unanticipated policy changes have on employment and output. Unanticipated increases in money increase spending, output and employment. Fully anticipated changes in money increase prices but have no effect on output and employment. Anticipated and unanticipated changes in tax rates have different effects on the timing of spending.

Discretionary policies give policymakers the opportunity to respond to shifts in voter preferences and to make exaggerated claims about the short-run effects of their actions. Public opinion polls that ask people about their "priorities" show positive association with current problems. When unemployment is high, the polls report that the public gives higher priority to reducing unemployment than to reducing inflation. When the rate of inflation rises, the reported "priorities" change.

Public opinion polls do not inquire about the public's long-term preferences or ask whether the public is willing to increase the maintained average rate of inflation or the size of government to speed the reduction in unemployment. Economists recognize that there is no permanent trade-off between unemployment and inflation. Increases in the growth rate of money increase the rate of inflation but have no lasting effect on employment or the growth of output. Increases in the budget to stimulate spending often become permanent programs and lead to higher tax rates. We can only guess at the extent to which public opinion polls reflect these long-term effects or the public's preferences for stable long-term policies instead of shifting priorities.

Suppose policymakers respond to the poll results. If they respond immediately, changes in policy are predictable. The polls would be an accurate index of the timing (but not the magnitude) of policy changes. People would learn to anticipate a shift to inflationary or disinflationary policy or a change in tax rates or government spending and could take action to protect themselves. To increase the effectiveness of discretionary policy, there must be a very loose relation between reported changes in opinion and policy changes. People must remain uncertain about the timing and magnitude of policy changes and the duration of policies.

Although uncertainty increases the effectiveness of policy changes, it has a cost to the policymaker as well as to the public. Large, frequent differences between announced and actual policy reduce the credibility of announced policies. Low credibility means that the public puts low weight on policy announcements. The public remains skeptical about commitments to reduce inflation or to keep inflation from rising or to reduce taxes.

Widespread skepticism about policy announcements raise the cost of slowing inflation and the cost of shifting resources from consumption to investment. Skepticism reduces the gains to the policymaker from announcements or campaign promises. The greater is the skepticism, the slower is the response by the public to policy announcements. People take a wait and see approach. They delay increases in investment and are hesitant to make long-term commitments based on the belief that the announced policies will continue. We have seen some recent examples of the high social costs of skepticism and the low credibility about the degree to which tax rates and inflation will remain low in the future. These social costs differ from the costs borne by the policymaker, but the two are related. The public blames the policymaker for the persistence of "high" interest rates, unemployment, slow growth and falling real income that are consequences of the low credibility, skepticism and disbelief about the announced policies or about commitments to "stay the course" which leave "the course" uncertain.

The policymaker has no lasting interest in perfecting policy operations to eliminate control errors. The reason is that, at times, control errors have a function for the policymaker. If control is poor, the policymaker can attribute his mistakes to errors in the control process. Since the public cannot separate control errors from unannounced changes in policy, they learn, gradually, that actual policy differs from the announced policy. They observe the deviation but cannot be sure whether they have observed a control error that will be corrected or an unannounced policy change that will persist. When policies change, some are fooled into believing that policy has not changed. The policymaker who chooses to increase current output and employment by choosing more expansive policies than he announces raises the cost of slowing inflation that he, or his successor, bears in the future.

Abstract arguments about credibility and control errors may seem far removed from practical affairs, but they are not. Currency devaluations are almost always preceded by commitments to maintain the exchange rate. Control errors make it difficult to separate the thrust of actual policy from random fluctuations. President Johnson chose to hide the increase in expenditures for the Vietnam war in the monthly budget variances. The Federal Reserve, the Bank of England and other central banks resist changes that can reduce the errors in monetary control and the variability of money growth to a fraction of their current values. They choose poorer to better control. Opportunities for discretion are increased, but uncertainty is increased also.

REDUCING UNCERTAINTY

Risk and uncertainty cannot be eliminated. The timing of productive innovations, epidemics, weather conditions, other natural occurrences, wars and political events abroad introduce variability into current prices and output. The future is uncertain because we do not know what will occur or how long the changes we have observed will persist.

The institutions, voting and market arrangements that societies adopt can alter the risks and uncertainty that people bear. Insurance is an example of a market arrangement that reduces risk and the cost of risk bearing by pooling risk. The invention of checks, double entry bookkeeping, and credit cards are additional, familiar examples of innovations that reduce risk for the buyer, the seller or both.

Many social and political arrangements reduce risk and uncertainty. Others increase risk. Countries with a history of political instability generally have less capital per worker and less durable capital than countries with greater political stability. In countries with a history of instability, the productivity of new capital may be very high, but the return on investment in durable capital is uncertain.

Where risk and uncertainty are above the attainable minima, the risk premiums in interest rates are above the minimum. Interest rates are increased. People hold more of their wealth in assets that earn returns quickly, or they hold a substantial fraction of their wealth in gold, other precious metals, diamonds or foreign assets that are not dependent on domestic political uncertainty. The risk premium for investments in long-term capital reflects the social and political instability. The stock of real capital is reduced to a level at which the after-tax, risk adjusted real return compensates for bearing uncertainty.

---

[8] Errors of 1 percent per year, or less are attainable according to Federal Reserve estimates. See Board of Governors, New Monetary Control Procedures vols. I and II. Washington 1981 and also J. Johannes and R. H. Rasche, "Predicting the Money Multiplier," Journal of Monetary Economics 5, (July 1979) pp. 301–25.

[9] There is simply no factual basis for James Tobin's claim that the "central bank fraternity embraced monetarism," and Tobin offers none. See James Tobin "The Monetarist Counter-Revolution Today—An Appraisal," Economic Journal 91 (March 1981) p. 30.

Argentina offers an example of a country where political institutions and a history of monetary and fiscal instability hamper development by increasing uncertainty and reducing capital formation. Bolivia is rich in resources but has a history of coups and revolutions. Per capita income in Bolivia is the lowest in South America. Hong Kong, with few natural resources is one of the richer countries of Asia and one of the most stable. Stable political and economic arrangements are not the only factor determining whether economic development occurs, but the absence of political stability and high uncertainty about tax rates, inflation and other economic policies increase the real rate of interest that projects must yield and, thus, hinder economic development.

In countries with a history of political stability, like the United States or Britain, the political system increases variability in a number of ways that are less dramatic and less apparent than the coups and disruptions of Bolivia and Argentina. In Britain a small change in the vote has shifted power from those who favor nationalization of industry or confiscatory taxes on wealth to those who favor denationalization and reduced taxes. Throughout the nineteenth century, the tariff was a major issue in U.S. politics. Small changes in the vote were capable of producing major changes in the real returns to investment in steel and agriculture. Currently in Britain, the United States and other western countries, voters may change their commitment to disinflation or price stability and have done so on a number of occasions.

Voters' right to change policy is a principle of democracy. Our choice of policies must always be subject to change as majority opinion changes. Within that framework of a political democracy, we can increase stability, lower the real rate of interest and increase real output by removing the instability introduced by unanticipated policy changes and adopting policy rules. To illustrate, I will suggest a set of monetary, fiscal and trade rules that provide greater certainty than current arrangements.

Monetary arrangements

From 1947 to 1964, the United States maintained a relatively stable monetary framework under which many countries developed, recovered and prospered. Inflation remained low in the United States and in many other countries that tied the values of their currencies—their exchange rates—to the dollar. The framework and monetary policy procedures were not ideal, but they produced greater stability than the monetary regimes that preceded or followed.

The system of fixed exchange rates based on the dollar, known as the Bretton Woods system, formally ended in 1971 when President Nixon allowed the exchange value of the dollar to be set by market forces. Holders of dollars and dollar securities could, no longer have any certainty about the long-term values of the dollar. Long before the Bretton Woods system ended, however, uncertainty about monetary policy, inflation and the future value of the dollar had increased. Inflationary policies after 1964 eroded much of the credibility of the U.S. commitment to a fixed exchange rate system and a non-inflationary monetary policy. The unwillingness of the U.S. to change its policies and the unwillingness of other countries to increase their rates of inflation made certain that the Bretton Woods system would not survive. Only the timing of the breakdown of the system was uncertain.

Many people look back on the Bretton Woods system nostalgically. They would like to restore some type of fixed exchange system to recapture some of the stability that enabled countries to achieve the benefits they associate with that system. There are several proposals. Some want to establish a world central bank that would issue a common money to be used as reserves and for settlements between national central banks. Others propose a return to some type of gold standard.

These and other proposals for a return to fixed exchange rates misinterpret the experience under Bretton Woods. Fixed exchange rates were not a cause of increased stability and the relatively high growth of the world economy during those years. They were a result of the relatively stable policies followed in major trading countries and, particularly, the relatively stable monetary and fiscal policies in the United States. In the years 1953-1964, when the Bretton Woods system flourished, deficits remained small on average and the most common measure of the U.S. money stock—currency and checking deposits—rose at an average annual rate of less than 2½ percent. In the succeeding seven years, that the breakdown of the system, average U.S. money growth rose to 5 percent and the variability of money growth increased.

To restore monetary stability, I propose a monetary arrangement that builds on past experience. I do not suggest that the proposal would eliminate uncertainly, for I believe that is not possible. I do not claim that the proposal would reduce uncertainty to some theoretical minimum, but I believe there is much to be gained from the reduction of uncertainty that the proposal brings.

The proposal calls on the central banks and governments of the leading economies—the United States, Japan and Germany—to maintain the growth rate of their monetary liabilities, known as the monetary base—currency and bank reserves—in relation to the average rate of growth of domestic output (measured in real terms) during the preceding three years. The relation would be set to maintain a zero average rate of inflation in each of the countries. Other countries that wish to do so could make a similar commitment, or could fix their exchange rates in relation to one of the three currencies, or could remain outside the system.

Price levels would continue to fluctuate in the three countries, and exchange rates between the dollar, the yen and the mark would fluctuate. Fluctuations would remain bounded by the commitment of major trading countries to maintain policies that aim at non-inflationary money growth. Each country would gain from its own policy even if other countries did not honor theirs. The gain to participants increases, however, as the number of countries in the agreement rises.

The proposal increases stability in five main ways. First, there is a stable framework for policy that reduces uncertainty about the future price level. Second, exchange rates are free to fluctuate, but long-term changes are constrained by the commitment to non-inflationary and non-deflationary policies. Third, the system adjusts, gradually, to changes in the growth of output or in the demand for money. Fluctuations in prices or output arising from these sources are not eliminated, but they do not cumulate. Fourth, monitoring is relatively easy, so the credibility problem is reduced. Fifth, central banks are required to control the liabilities on their own balance sheets, a task which is within their capability and can be achieved with precision. They do not forecast or base policies on forecasts by others.

Trade and capital movements

A stable monetary framework encourages people to hold a smaller share of wealth in precautionary balances and to invest a larger share in capital. By reducing present uncertainties, the monetary system contributes to lower real interest rates, a larger capital stock and increased output.

The monetary framework should be supplemented by rules that strengthen trade in capital and reduce the risk of exchange controls. The right to own foreign currencies and invest in foreign assets, like the right to own gold, is a valuable right. The fact that people choose to exercise the right suggests that they perceive risks that can be reduced by the maintenance of rules that make policies more predictable. Restrictions on capital movements attempt to block the operation of this mechanism. Fear of restrictions encourages people to diversify into short-term foreign assets or into diamonds and precious metals. This reduces investment in long-term capital and lowers real output.

The growth of world trade during the past three decades provided a major stimulus to economic development, the growth of income in many countries and the increase in standards of living. Without rules for trade and agreements (or rules) that reduced tariffs and non-tariff restrictions, growth would have been lower and the increase in standards of living smaller.

The Hawley-Smoot tariff of 1930, and the prompt retaliation to the tariff by many countries lowered world real income. Restrictions on trade were an important factor converting the 1929 recession into the period known as the Great Depression and contributing to the avoidable monetary collapse of 1931 to 1933.[10] The well-intentioned policies of fiscal and monetary stimulus contributed to recovery, but did not restore real output to the level reached in 1929 until 1935 for major European countries and until 1939 in the U.S. Absent the restrictive trade practices, the recession and the monetary contraction would have been smaller and the depression less severe and long lasting.

Governments can contribute to the expansion of the world economy by reaffirming their commitment to the rules guiding trade polices during the last three decades and by reducing many of the remaining restrictions on trade and capital movements. By removing barriers to trade and capital the principal market economies of the world work to expand output and standards of living. The expansion of world trade is one of the main ways that permanent gains in living standards can be achieved.

A rule for fiscal policy

Rules for money, trade and capital movements cannot assure that resources are used efficiently. Government tax and spending policies in many countries encourage the transfer of resources from future to current consumption. Variable fiscal policies that in-

[10] I have discussed this issue in great detail in "Monetary and Other Explanations of the Start of the Great Depression," Journal of Monetary Economics, 2, pp. 455-71. See, also, Anna J. Schwartz, "Understanding 1929-1933," in K. Brunner, ed., "The Great Depression Revisited." Boston: Martinus Nijhoff, 1981.

crease uncertainty about future tax rates on labor and capital also encourage current consumption and leisure.

A monetary rule without a fiscal rule cannot assure stability. The reason is that budget deficits must be financed either by increasing money or by selling debt to savers. When deficits become large relative to saving or output, the saving rate may be too low to finance the deficit and pay the interest on the outstanding debt. Governments typically rely on inflation, under these circumstances, to reduce the real value of outstanding debt and to tax wealth owners.

A rule for fiscal policy that fixes the relative size of government, or the relative growth of government, increases certainty about future tax rates. Several years ago, I proposed a rule that ties the growth of government spending to the growth of nominal output and ties tax collections to the average level of government spending. A rule of this type produces a cyclically balanced budget, more predictable average tax rates and limits the growth of government.

A common objection to any fiscal rule is that legislatures meet annually and can, if they wish, set an annual limit to spending, taxes, and deficits. Governments have not chosen to limit the growth of spending. In all democratic countries, government spending has grown faster than output for several decades.

A main purpose of a fiscal rule is to provide a common understanding of the outcome of collective decisions. A spending rule is an agreement under which everyone agrees to limit the demands he places on government in exchange for a promise by others to limit their demands. A rule that limits the growth of spending affects the demands made by all groups and individuals. In the absence of the rule, no one can be certain whether others will agree to limit the demands they make. The outcome of elections decide how the spending is allocated. The purpose of a spending rule is to provide greater certainty about the demands that others can make and the taxes that everyone pays.

CONCLUDING REMARKS

In recent years, interest rates after adjustment for inflation have remained higher than in the past and growth of the world economy has slowed. A common response to these, related events is to urge a change in the mix of policies in many countries and particularly in the United States. Coordinated monetary expansion in the United States, Germany, Japan and other countries and higher tax rates in the United States are proposed to reduce interest rates and increase output.

The recommended change in the policy mix ignores lessons that can be learned from the experience of the past decade and many previous periods. Faster growth of money will be followed either by higher inflation or by another recession. Higher inflation will be the inevitable result of faster money growth; recession is the likely outcome if money growth is reduced at some time in the future. And, both will occur if money growth remains at recent levels then quickly drops to less inflationary levels. No lasting improvement will be achieved if we continue the variable policies of the past two decades.

Proposals to adjust the mix of policies ignore learning, anticipations and risk. Years of experience with variable policies has brought higher inflation and higher average unemployment. Many people have learned that periods of monetary stimulus are followed, first, by higher inflation, then by attempts to slow inflation and by higher unemployment. They have learned, also, that the large budget deficits incurred during recessions are usually followed by higher tax rates and by monetary policies that raise tax rates by making an increased share of income subject to higher marginal tax rates.

Skepticism about attempts to steer the economy from quarter to quarter or year to year by varying fiscal and monetary policy are a cause of current high interest rates and stagnation. Variable policies increase variability of the prices of assets and output and increase uncertainly. People demand higher risk premiums for investing in durable capital. Investment is lower, so the capital stock is lower, and output is lower. A larger fraction of wealth is held in relatively safe short-term assets or in gold.

This paper suggests a very different program to increase output and employment. Emphasis is on long-term stability, on policy rules and on policies that increase information, reduce uncertainly and restore credibility. I argue that acceptance of policy rules that reduced uncertainty about trade, payments and inflation were much more important, and shifts in government policy much less important, than proponents of finely structured mixes of policy recognize or concede when they survey the past or exhort us, currently, to raise taxes, end tax indexation and inflate away the budget deficits that are in large part a result of past efforts to redistribute income.

Each of the principal market economies can contribute most effectively to lower interest rates and increase output permanently by adopting rules for monetary, fiscal and trade policy to replace the rules that provided stable growth and relatively low interest rates in the fifties and sixties.

The monetary rule that I propose calls for the U.S., Germany and Japan to fix the growth rates of domestic money stocks in relation to the average growth of output so as to maintain price stability on average. Exchange would be permitted to fluctuate, but the range of fluctuation would be reduced by the commitment to maintain long-term price stability in each of the countries. A rule of this kind combines the benefit of relatively stable prices that each major country can achieve alone to the benefit of relatively stable exchange rates that countries cannot achieve alone.

A monetary agreement of this kind is not a panacea. I propose additional steps to reduce uncertainty about fiscal policy and steps to expand trade by reducing tariffs, other trade restrictions and restrictions on capital movements. Still other steps to provide rules for lenders of last resort can also reduce uncertainty.

Opponents of policy rules typically argue that activist policies are required to offset shifts in the rate of use of money, or monetary velocity. This argument is not compelling, as Friedman showed long ago.[11] Discretionary policies conducted with the best of intentions, can increase rather than reduce variability. The fact that there are changes in monetary velocity does not establish that discretionary policies will offset instability. Large or poorly timed policy changes may—and indeed have—increased variability during the seventies, in the depression of the thirties, in the recovery of 1937 and in the past five years.

[11] Milton Friedman, op. cit.

The Federal Reserve, and other central banks and governments, make the mistake of identifying most, and perhaps all, instability with changes in the public's willingness to hold money. They want to offset such changes by varying money growth. They fail to recognize that they cannot forecast many of the changes that occur or their duration. They fail to recognize that some of the variability is the result of weather, innovation and other random events. By varying policy, they often increase variability and uncertainty, add to the risk premiums and cause us all, rationally, to discount the future more heavily and to be poorer as a result.

APPENDIX TABLE 1.—GROWTH RATES OF REAL OUTPUT

[Compound annual rates of growth in percent]

AMERICAN ENTERPRISE INSTITUTE
FOR PUBLIC POLICY RESEARCH,
Washington, D.C., May 2, 1983.

Hon. WILLIAM L. ARMSTRONG,
U.S. Senate, Washington, D.C.

DEAR SENATOR ARMSTRONG: I share your concern about the deficits implied by current policy. They may not kill us, but they will make u erribly unhealthy.

As I see i he main effects of deficits are as follows:

1. If we c inue on the current path, federal govern ent deficits will be equivalent to a far l her portion of net national saving tha anything experienced in our postwar history. The resulting increase in real interest rates will damage business capital formation, housing and consumer durable industries.

2. The interest rate increase will be held down to the extent that we can borrow abroad. But that raises the value of the U.S. dollar making it harder for our exporters and import-competing industries to compete with foreigners. Note that many of our traditional smokestack industries cannot win. They sell to markets that are sensitive both to interest rates and to foreign competition.

Unfortunately, many do not understand the intimate link between our budget deficit and the trade deficit. The latter is often blamed on "unfair" foreign competition and calls for protectionism are intensifying. If we succumb and grow ever more protectionist, other countries are sure to retaliate and

chances for a worldwide recovery will evaporate.

3. Financial markets fear that our political system will not tolerate the high real interest rates related to the deficit. The Fed may be forced to buy more and more of the bonds issued by the Treasury. This would cause bank reserves to soar and ultimately would be inflationary. To protect themselves against this eventuality investors are demanding higher interest rates on long-term bonds than is warranted by current inflation or the current demand for funds.

4. We must service the debt in the hands of private investors. As this grows 15 to 20 percent per year, the interest bill of the government can become a budget problem by itself. This problem is masked in all official budget projections by the assumption that interest rates will fall in the future. They may, but if they do not, we are significantly understating the budget totals implied by current policy. Ultimately, there is a danger of an explosion as we borrow to pay interest and borrow to pay the interest on that borrowing and so on.

If the chronic deficit problem is to be attacked on the spending side, little will be accomplished unless we focus on three major program categories. Defense, pensions (mostly social security), and health along with interest on the debt will constitute about 80 percent of total spending over the next few years. Significant structural changes must be made in these program areas to alter the future spending path significantly.

If we decide that we really like those programs more or less as they are, we must raise taxes. I do not wish to imply that there are no possible economies in the other 20 percent of the budget. However, it would be unrealistic to think that a significant dent can be made in a $200 billion deficit by cutting the rest of the budget which now totals less that $200 billion. (There is a bit of a conceptual problem in knowing how to categorize offsetting receipts but it is not worth going into here.)

If we raise taxes, we must be careful. Some tax increases are worse than the deficit. We should try to avoid increases in marginal tax rates which are the source of the disincentives inherent in our tax system. We must instead engage in tax base broadening undertaking a critical examination of the deductions, credits, exemptions, and rate concessions which so complicate our system. Interest deductions on consumer loans, the President's health insurance "cap" proposal, our policies toward industrial revenue bonds, and local housing bonds are but a few examples of the sort of thing that would be high on my list of things that require critical analysis.

Best wishes,

RUDOLPH G. PENNER,
Resident Scholar.

MELLON BANK N.A.,
Pittsburgh, Pa., May 11, 1983.

Hon. WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ARMSTRONG: My apologies for the delay in responding to your letter of April 19.

First of all, I am alarmed that the approach of a major election year along with illusory hopes that the economic recovery might in some way solve the problem has made the Congress—and the Administration—even more reluctant to seek politically unpopular cuts in spending—and tax increases.

Those who seem relatively unconcerned that the federal budget is virtually out of control point to the fact that over the past year or more large deficits have been successfully financed without putting upward pressure on rates or producing any other painful side effects. They argue that in the past, worries about big budget deficits and the crowding out of private investment proved groundless. Why then should we worry about the projected deficits for 1985 and beyond?

The difference, of course, is that the budget problem is now structural, meaning that steady progress toward full employment will not bring about a significant reduction of the deficit. We should all be very concerned that annual deficits in the $200 billion zone will hold up long-term interest rates and, by soaking up much of the nation's savings and available credit, preclude the level of investment which is needed for a sustained and balanced economic expansion. It is important to recognize that recent deficits have been readily accommodated by the credit markets only because private-sector credit demands have been extemely weak. Before long however—within the next year or so—the resurgence of private credit needs associated with a developing recovery will inevitably collide with the Treasury's enormous borrowing requirements and, in all likelihood, drive interest rates sharply upward.

Unless these projected deficits are substantially reduced, there will be a serious risk that progress toward stable, noninflationary growth—and full employment—will be either halted or reversed. It is much easier, of course, to diagnose the problem than prescribe an effective remedy. My own preference would be to reduce the growth of government spending, but should election year politics preclude action on the expenditure front, then I think we must find the will to seek increased revenues. Above all, we should not be lulled into thinking that, because of the recent surge in stock prices and falling interest rates, big budget deficits don't, and won't matter.

If there is anything else I might do, please let me know.

Sincerely,

NORMAN ROBERTSON.

DEAN WITTER REYNOLDS, INC.,
New York, N.Y., May 10, 1983.

Hon. WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ARMSTRONG: Enclosed is a report that we published in January of this year which states that big budget deficits cause enormous problems for real activity, both domestically and internationally. Large budget deficits and high interest rates are negatives for the U.S. economy, especially through the international channels, by keeping the dollar high and thus hurting U.S. export sales/jobs and causing sharp growth in imports manufactured abroad which helps job creation there.

With our projections of potential annual deficits of $450 billion through the end of the decade, we strongly urge a reduction in the government's spending share of GNP which is at an all-time record high of 24 percent. We also strongly urge sharp cutbacks in spending over the next several year. An alternative but less acceptable method to curb the deficits would be to raise taxes only to the extent that they impact consumption rather than income or investment.

If you would like to further discuss our budget and spending projections, please feel free to get in touch with me.

Sincerely,

ARNOLD X. MOSKOWITZ.

A TRILLION HERE, A TRILLION THERE

Senator Everett McKinley Dirksen was quoted as having said during the early 1960's that, as Congress "spends a billion here, a billion there, after a while, it adds up to real money." For the Reagan Administration, and particularly Senate Majority Leader Howard Baker, Dirksen's son-in-law, an updated quote might read, "A budget deficit of $100 billion here, $100 billion there adds up to real financing dollars." In recent weeks the credit markets were surprised by the Council of Economic Advisers' projection that, if present laws are not altered, the annual budget deficit would rise to $300 billion in 1988. Our own estimates are not nearly as optimistic. With income-tax indexing in 1985, the budget deficit will rise to $450 billion a year. That does not include the deficit projection from Reagan's special Social Security commission, which is unlikely to balance even with the latest compromise. Given present policies, by the late 1980's we could have a cumulative federal deficit of $3.1 trillion, up from almost $1.5 trillion now. So a trillion here and a trillion there, and after a while these deficits add up to real money.

If our projections seem high, remember it was two years ago, in February 1981, that we said, "Given present Reagan policies, $100 billion annual deficits are likely through 1984." At that time the Kudlow/Stockman budget deficit estimates from the Office of Management and Budget called for a balanced budget by 1984 at the latest. These officials of the Office of Management and Budget pushed the twin policies of tight money (Kudlow) and big budget deficits (Stockman)—the latter to force sharp social spending cuts by Congress. This plan backfired, since Congress couldn't cut spending as fast as the deficits were piling up. Therefore, huge permanent deficits for several years were the only likely result of OMB policy. The Kudlow/Stockman budget fiasco is history, and the only relevant issue now is the coming 1984 budget. The budget outlook continues to be bleak.

In last month's Money and Credit Memorandum, we laid out our budget projections through 1985. We include them again in Table A. If we take the most optimistic assumptions on real economic growth (3-4 percent real GNP gains in the 1983-84 fiscal years) and make optimistic assumptions on spending cutbacks ($30 billion a year for the next two years), then the deficit for the Treasury alone will be $167-169 billion. With off-budget financing added to the Treasury's needs, the total federal credit deficit will rise to $192-199 billion (Table B).

If we make the additional optimistic assumption that in 1985 personal income-tax indexing to inflation will be eliminated from present law, we get a $178 billion Treasury deficit; with off-budget financing added in, total federal financing in 1985 will be about $220 billion. The first point to note is that there is no danger of the budget being anywhere near in balance in the next three years and certainly not near the Administration's $150 billion political target. The second point worth noting is that Treasury expenditures as a percentage of gross na-

tional product will remain at a post-World War II record level of 24–25 percent. Therefore, contrary to the Reagan Administration's stated policy of reducing the size of government in the economy, it is higher now than in the past 40 years. The last point is that just the Treasury deficit as a proportion of GNP will be at a record 4–5%; add in off-budget financing and it is 5–6% of GNP. These numnbers are dismal. The rejoinder from some observers is that the large deficits are a result of the recession and low levels of economic activity. In Table B we show why that argument is wrong.

The projected deficits in Table B are less a product of our forecasted levels of economic activity than they are a result of structural deficits, which result from the original Reagan tax cut and the subsequent tax increase in September 1982 (TEFRA). In Table B we show the net Reagan tax cut. By and large individuals got the largest net tax cut, $143 billion, while business received a minor $19 billion in 1985. The net loss of revenues to the Treasury is $75–157 billion annually over the next three years, an amount impossible to make up by increased economic activity. In the column marked "Economic Deficit Independent of Reagan Policies," we see that for fiscal 1983 the deficit with recession would have been $92 billion, not $167 billion, and by fiscal 1985 the deficit would be $22 billion, not $178 billion. Therefore, economic activity is not responsible for the deficits, but wrong-headed fiscal policies are. In fact, under the most optimistic assessment of DWR estimated deficits, the Treasury's cumulative deficit for the next three years is $514 billion and the total amount of federal financing is $610 billion. If our $30-billion-per-year spending cut doesn't materialize for the next three years, then $700 billion of net new money will have to be raised. So much for the domestic deficit side. We now turn our attention to the international side.

As clearly stated by Martin Feldstein in his congressional testimony, large domestic budget deficits cause permanent, high real interest rates and negatively impact the U.S. trade deficit. Not surprisingly, our view over the past year has been that large budget deficits and financial deregulation would keep real interest rates, measured on high-grade corporate bonds, in the 6–8% range. (See our Economic Memorandum dated April 15, 1982, "The New Reality of the 1980's: A Vastly Different Financial Structure.) As of December this is where they were trading, well above the 2–3% historical norm. (See accompanying chart.) It is interesting to note that the present 6–8% real interest-rate level is significantly higher than the real rate levels seen at comparable bottoms of the 1975 and 1980 recession periods, when they hovered between minus 0.5% and minus 1% levels.

We had expected the present high real interest rate to keep the dollar relatively strong in the international markets and contribute to a worsening U.S. trade deficit, reinforcing slow growth in the rest of the world. The first part of our expectation of a worsening trade deficit has indeed occurred. What was surprising was a collapse in the financial structure in the developing countries, which led to a shutdown to U.S. exports by these countries. This shows that huge deficits have secondary impacts in the international area well beyond present policy makers' views. This has continued to a much higher U.S. trade deficit, $65–70 billion, and to a huge jump in U.S. international lending through the IMF and direct bailouts to these countries. We estimate the U.S. financing requirement in the bond market will rise $15–20 billion in 1983 and another $20 billion in 1984 for international lending.

This amount of Treasury, international, and off-budget agency financing should raise net new funds to $192 billion this year and place gross funding at a record $242 billion. From our monthly flow-of-funds forecast, we estimate $64 billion in financing this quarter, up sharply from $43.1 billion in last year's first quarter. Furthermore, we estimate the second quarter's financing requirement at $48 billion, up $21 billion from 1982's second quarter. The prospect of $112 billion of first-half financing this year is $40 billion higher than last year's first half, and with second-half financing still higher, clearly the bond market's near-term prospects are not favorable. Also, our forecast for first-half real economic activity to rise by 3–5%, as measured by GNP, should put some modest increase into private credit demand coming from autos, housing, and inventory building.

While the government's budget deficits mushroom, the monetary authorities have been under increasing political pressure to lower short-term rates. Ironically, the Administration's monetarists, Messrs. Kudlow and Sprinkel, who were vigorously attacking the Federal Reserve Board last year, when the money supply was slightly above its 5.5% M–1 target, are now strangely quiet while money growth has been expanding by 12% since July. However, relatively soon the domestic bond market will begin to worry whether or not Fed policy will ever be allowed to tighten in face of these expanding deficits. Financing these deficits via easy money will raise inflationary expectations in the bond market. Investors, both domestically and internatinally, will withdraw funds from the bond market, causing interest rates to rise significantly. These higher rates will put a brake on economic expansion and reinforce slow growth, underscoring a disinflation trend. Therefore, inflationary fiscal or monetary policies will be checked by the capital markets. Ironically, therein lies our long-term bullish posture on bonds: the quicker interest rates rise to head off rising deficits, the quicker government policies will be forced to change.

TABLE A.—DWR ESTIMATES FOR FEDERAL REVENUES, OUTLAYS, AND DEFICITS

[Dollar amounts in billions]

	Revenues	Outlays	Percent gain in outlays	Expenditures as percent of GNP	Treasury's deficit	Deficit as percent of GNP
Fiscal year:						
1983	$661	$828	11.9	25.1	$167	6.1
1984	711	880	6.3	24.1	169	4.6
1985	752	930	5.7	24.0	178	4.6

TABLE B.—NET REAGAN TAX CUT AND DWR ESTIMATED DEFICITS

[Dollar amounts in billions]

Fiscal year	Net Reagan tax cuts	Economic deficit independent of Reagan policies [1]	DWR expected	
			Deficits	Federal financing
1983	$74.7	$92	$167	$192
1984	112.2	57	169	199
1985	156.6	22	178	218

[1] Assuming 3 to 4 percent real GNP growth.

FIRST BOSTON,
New York, N.Y., April 26, 1983.

Senator WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ARMSTRONG: Although you probably will not be pleased with the reply, thank you for including me among the economists to whom you sent your recent letter.

The issue of the forthcoming budget deficit is, I am afraid, a dead horse. As you know, of approximately $850 billion in annual Federal expenditure, approximately $600 billion consists of military outlays, old age pensions, medical care expenses, and interest. There is no possibility of reducing the remaining $250 billion sufficiently to make a meaningful dent in the deficit. As to the "core" outlays of $600 billion, recent political decisions and nondecisions make it clear that growth will continue largely unimpeded.

Whether these outlays are to be financed by taxes or borrowing is, in my judgment, of relatively minor importance for the economy and financial markets as compared with the impact of the spending itself. Military and old-age related expenditures absorb real resources that otherwise would be available for use by the working age population. Surely when times are good and even when they are bad, that population will endeavor strenuously at least to maintain its current standard of living against such inroads. Tax them more heavily, and they will save less and borrow more. Federal borrowing will be replaced by private borrowing. But for financial markets and interest rates, it makes little difference whether additional demand for credit arises from private or governmental credit demands.

Like the foreign countries frequently cited as economic paragons, Germany and Japan, we probably have already learned to live with enormous budget deficits. While these may be intrinsically undesirable, they threaten neither renewed inflation or recession. To the contrary, a drastic tax increase or expenditure reduction sufficient to balance the budget within a few years might well trigger massive bankruptcies.

MERRILL LYNCH ECONOMICS INC.,
New York, N.Y., May 10, 1983.
Hon. WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ARMSTRONG: Your letter asked for comments on the economic consequences of large deficits, both currently and prospectively. Moreover, comments were requested on how best, economically speaking, fiscal policy should be adjusted in order to achieve a better balance between federal expenditures and federal revenues.

We have for some time now stressed the importance of reducing the size of government. Unless reduced, the growing size of the federal deficit, in both absolute and relative term, threatens either (a) a reacceleration of inflation via monetization or (b) to siphon off funds from the private sector. Either development is troublesome in the sense that higher interest rates would follow and seriously impair the sustainability of economic recovery.

Perspective on the federal deficit in relation to the economy can be obtained by comparing the absolute size of the federal deficit to the level of nominal GNP. In fiscal year 1983, we are projecting the federal deficit will reach a postwar record 6.1 percent of nominal GNP. To zero in on the potential "crowding out" effect of high dollar federal deficits one should compare the deficit to the amount of gross private saving, i.e., the sum of personal saving, undistributed corporate profits and depreciation allowances. The importance of this latter measure is that a relatively large absorption of gross private saving by the federal government would limit the amount of credit available for private sources, and, as a result, would restrain economic growth prospects. In fiscal year 1983, we are projecting that the federal deficit absorption of gross private savings will total 35.3 percent, a postwar record.

An outyear downward trajectory in these ratios is essential to reducing the extremely high level of real interest rates and to achieve a course of secular disinflation. Critical in achieving these objectives is a more credible fiscal policy. Addressing deficits via incessant revenue raising measures, e.g. attacking the July tax cut and the 1985 indexing provision, may seem to lessen prospective deficits, but these tax law repeals would tend to raise government's relative role in the economy and that is counterproductive. While some enhancement of the tax base may be necessary, the focus must be on restraining the growth of government spending. The financial markets would, in our view, react very positively to a lessened relative role of government in the economy.

In sum, reducing the federal deficit is critical to the well being of the economy, both in the sense of the sustainability of the economic recovery and the future pace of inflation. In addition, the specific composition of fiscal policy adjustments is important. To approach the deficit problem in a credible manner requires reducing the size of government, i.e., slowing the growth in federal spending. This must include national defense and Social Security.

Sincerely,

JACK W. LAVERY.

ALAN GREENSPAN,
New York, N.Y., May 3, 1983.
Hon. WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR BILL: I do, as you might suspect, consider the huge pending deficits a serious threat to the nation's economic stability. Ideally the deficit should be brought down from the expenditure side. Certainly tax rate increases, in and of themselves, raise the possibility of financing increased outlays rather than closing the deficit. However, some form of negotiated package of expenditure cuts and tax increases may be the practical way to resolve this question. Clearly, the sooner the better.

Best regards.

Cordially,

ALAN GREENSPAN.

BANKERS TRUST CO.,
New York, N.Y., May 5, 1983.
Hon. WILLIAM L. ARMSTRONG,
U.S. Senate, Washington, D.C.

DEAR SENATOR ARMSTRONG: I appreciate this opportunity to comment on the mounting Federal budget deficit and its implications, as I share your deep concern over the recent course of events in the fiscal area. It is all too clear from studies by the Congressional Budget Office and The Conference Board that our mammoth Federal deficit is largely structural in nature, not simply a cyclical phenomenon associated with the recession, and therefore cannot be brought down significantly, even under the most favorable conditions, without specific action by the Congress. Unless some legislative steps are taken this year that assure a meaningful and permanent reduction in the budget deficits that currently loom ahead as far as can be seen, their effect on the financial markets and on the U.S. economy in general stands to be more serious than seems generally recognized.

Persistent Federal budget deficits of the enormous size in prospect, because of the upward pressure they will exert on long term interest rates, threaten the health of the economy in several ways. First of all, there is a risk that the upturn in business activity, which has just gotten under way, may not become sufficiently broadly based to reduce unemployment to satisfactory levels, and also that this economic recovery will not prove sustainable. Indeed, the economic recovery so far is turning out to be subnormal by historical standards, in spite of the tax cuts and the dramatic headway achieved this past year in slowing inflation. This is, in part, because of the damage inflicted by the earlier protracted period of high interest rates, yet it is also because of business and investor fears that private sector borrowing, as economic recovery takes hold, but that they will inevitably force the Federal Reserve to "monetize" the expansion in Government debt, thereby eventually restimulating inflation and pushing up interest rates.

While interest rates have come down enough to generate an impressive rebound in home building, it seems doubtful that the housing industry, which has been largely responsible for sparking this economic recovery, can climb much higher in the absence of a further decline in mortgage rates, and certainly any sustained uptrend in long-term interest rates would soon lead to a cutback in residential building, along with a reduction in activity in other interest-sensitive, consumer-related sectors of the economy. Meanwhile, the still relatively high cost of financing obviously is hindering the revival of business capital investment. And by helping to keep the dollar overvalued in the international exchange markets, the existing high interest rates are contributing to a worsening in our foreign merchandise trade deficit.

More important, however, is that the persistence of mammoth Federal budget deficits of the size indicated is likely to retard economic growth through the balance of the 1980s, as the Government's huge borrowing requirements absorb most of the limited available private savings required for investment in new plant and equipment and needed for infrastructure. The shortfall in investment, in turn, will act as a drag on the growth of the nation's productivity, and result in a further loss of world markets for our exports while bringing increased import competition for many of our lagging basic industries.

Though many contend that the awesome Treasury financing can be handled without giving rise to such economic problems, and even with interest rates continuing to decline, the fact is there is no precedent in recent U.S. financial history for assessing the impact on the money and capital markets of such huge and relentless Government borrowing as is now in sight. Though it is normal for Federal budget deficits to increase during recessions, typically in economic recoveries the deficits shrink automatically, thereby freeing up funds for the private economy; it is frequently forgotten—and not without some significance—that in the first year of economic recovery following the severe 1974–75 recession Treasury financing receded, which is in marked contrast to the trend today. Moreover, as a result of the experience thus far during the 1980s with rapid inflation and high and volatile interest rates, a great aversion to risk has developed among our major investing institutions. Unless these investors become convinced that the Federal budget deficits are really going to narrow in the out years, long-term interest rates are bound to stay high, the present encouraging performance of inflation notwithstanding.

As to what steps are needed to deal with the Federal budget situation, the first priority is for Congress to gain control over Government spending. This means enacting legislation both to reduce the gigantic defense program and to curb the rapid growth of the Federal entitlement programs, which together account for the greater part of controllable Government spending. As things stand, there is no alternative. While there may be room for additional cuts in other nondefense areas, most objective observers, I think, are inclined to believe that some of these cuts may have already gone too far. And interest on the public debt can, of course, only be reduced by cutting the total budget deficit.

As a start, and to allow proper time for the development of bipartisan support and an effective approach, I would favor a one-year freeze on benefit payments under Social Security, Veterans programs, civil service and military pensions and other subsidies and payments that are not means-tested. Thereafter, limits must be placed on the automatic inflation indexing of these benefit payments, which drive such expenditure programs upward, through capping these adjustments. In the case of the defense budget, spending authorizations need to be trimmed to provide for an overall increase in real terms of no more than 7 per cent over the next couple of years, rather

than 10 per cent, and perhaps only 5 per cent thereafter.

Even if these difficult steps to curb Government spending are taken, being realistic, it is hard to escape the conclusion that, in time, additional Federal revenue will be necessary, if the budget deficits are to be reduced appreciably; the fact is the Federal revenue base was seriously undermined by the 1981 tax cuts. It is important, however, that the additional revenue come from consumption-based taxes, such as a tax on oil, and by imposing user fees for Federal services and not from taxes that discourage savings and investment. In short, the road out of our current fiscal dilemma promises to be long and trying, and will require patience and stamina. But failure to come to grips with the Federal budget problem is almost certain to bring even greater economic difficulties.

I hope these thoughts prove helpful in your deliberations and debate on the Fiscal 1984 budget. Thinking you might find it relevant and of interest, I am enclosing a copy of Credit and Capital Markets 1983, which I co-authored, which comments at some length on the Treasury financing this year.

Sincerely yours,

DONALD E. WOOLLEY,
Senior Vice President and Chief Economist.

IRVING TRUST,
New York, N.Y., April 27, 1983.

Hon. WILLIAM D. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ARMSTRONG: I very much share the concerns in your recent letter about the Federal deficit. Most worrisome of all is the fact that the budget is not projected to come into balance as the economy moves toward full employment. If nothing is done, some projections even show the deficit increasing as the economy recovers. Clearly something must be done.

Any deficit which remains as the economy nears full employment will all end up as inflation. Financing this deficit will clearly crowd out private needs for capital just as the need for private investment becomes critical to expand capacity restraints and prolong the recovery.

Logically, of course, the deficit can be reduced either by cutting spending or raising taxes. Nevertheless, it seems clear that most of the deficit reduction must occur through cuts in spending. Otherwise, we will erode incentives to work and save, which are necessary if productivity is to grow. Productivity growth is necessary if Americans are going to enjoy in the 1980s rising real per capita income.

If the budget is brought into balance largely through tax increases, it will mean that the Government is channeling an increasing share of our national output to those who benefit from it. As people work to enjoy the fruits of their labor, there is no question but that this erodes the incentives necessary for economic growth.

Best regards.

Cordially,

GORDON PYE.

FORD MOTOR CO.,
Dearborn, Mich., April 27, 1983.

Senator WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ARMSTRONG: In response to your letter of April 19, I agree that the huge budget deficits are a serious threat to the nation's long-run economic growth. There is a danger, however, in mis-stating the case, because if the economy continues to recover at a moderate pace, with no significant resurgence of inflation, then the big spenders can point to the absence of an economic collapse or raging inflation and persuade themselves and others that large deficits do no harm. The harm deficits inflict is not in their inflationary impact (if it were, inflation would have gotten worse rather than better during the past three years); nor is the harm in forcing the economy to stall out in the present recovery (that is very unlikely). The harm deficits inflict is twofold: they allow continued expansion of government as a percentage of GNP, taking income from the private sector; and they crowd out private capital spending, thus reducing the long-run rate of economic growth. Put another way, it is less damaging that the deficits are large than that government spending is a growing percentage of GNP. Though deficits and increased spending often go together, they need not.

This leads to your second question regarding whether the remedy for the forecasted deficits is lower expenditures or higher taxes. Expenditures, in my opinion, should be cut, especially for social programs and social security. These, in my opinion, are already too high, partly because they are inequitable and partly because they are ineffective or counter-productive. Those of the poor who are trapped into welfare are more likely to get out of the trap if welfare grows less and the economy grows more. Further, the intergenerational transfer of income via social security, medicaid and medicare has gone too far. I fear a reaction by the younger people who are being asked to bear a greater burden than they think is right.

I do not speak of reducing national defense expenditures for two reasons—though I suspect that cuts in the Administration's budget can, and undoubtedly will, be made. I've read a good deal about the subject and have opinions, but I hesitate to second-guess the Administration, which I believe has a good perception of our international problems. Also, I believe we can afford the defense we need, even if it should cost as much as the Administration is saying. I'm not against defense cuts, but I have a feeling that many in Congress think that, above a low minimum, defense is a kind of luxury that is perhaps less important than, say, an increase in spending for food stamps or public housing.

I welcome your inquiry and hope you find this letter responsive to your needs.

Sincerely,

JOHN V. DEAVER,
Economic Director.

THE UNIVERSITY OF MICHIGAN,
GRADUATE SCHOOL OF BUSINESS ADMINISTRATION,
Ann Arbor, Mich., April 29, 1983.

Senator WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR BILL: This is in response to your letter of April 19.

In this uncertain world, and with economic matters such as federal spending and deficits seeming to go beyond the boundaries of normal limits, one can apparently never be sure about anything. I do believe, however, that the deficit path we are on will cause us trouble down the way. The fact is that these deficits, even if financed through normal market processes, do preempt funds which will not then be available for housing and other activities. If these pressures in financial markets are too severe, they will inevitably tend to crowd monetary policy off the course and toward a more inflationary mode of policy. This is the normal process by which large government deficits historically, and around the world, have been associated with inflation. (Since there would not then be enough savings, political pressures force printing new money.)

The real question is whether we can act in advance or whether we have to land in the middle of the problem before action will occur. Obviously I would hope that in government and on the part of intelligent and thoughtful citizens generally, there will be enough prudence to take the former course.

Regards.

PAUL W. MCCRACKEN.

THE CHASE MANHATTAN BANK, N.A.,
New York, N.Y., May 4, 1983.

Hon. WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ARMSTRONG: Thank you for your letter of April 19. My view also is that the inability of Congress and the Administration to come to grips with spending policy is a serious threat to our economy.

As we all know, spending must be paid for eventually by higher taxes. The growing federal deficit is evidence that Congress has not faced this fact. Until (1) spending becomes controllable and forecastable and (2) the method—income, excise, or inflation—of taxation is forecastable, then the economy faces a rough road. The debate is not whether taxes are going to be raised to cover expenditures but about how, when, and by whom they will be paid.

You are correct that interest rates will reflect these uncertainties emanating from the fiscal authorities, though I disagree with the view that deficits necessarily cause higher interest rates and inflation. The deficit may or may not have this effect, but it surely will increase the likelihood of inflationary financing. This "risk" is sufficient to retard the growth of real economic activity in the near term, resulting in sustained unemployment and larger future deficits. Indeed, this recovery is weaker than usual precisely because of uncertainty about the future course of government spending and taxation.

Congress must deal with these fiscal issues now, if the economy is to achieve its potential. Merely closing the current "gap" by imposing new taxes will not solve the problem. The American taxpayer will logically forecast that this is just the prelude to yet another round of increases in expenditures and taxes. Thus, the solution to this fiscal crisis must be a resolution of the fundamental question of "who is going to own the economy"—the government or the people. As long as government expenditures outpace the growth of the economy—as they are doing now—it is easy to understand why the incentives to work, save, and pay one's taxes are diminishing. Spending must be controlled; raising taxes without cutting expenditures merely means that the solution will be postponed and the problem worsened.

Sincerely,

J. RICHARD ZECHER,
Senior Vice President and Chief Economist.

MANUFACTURERS HANOVER TRUST CO.,
New York, N.Y., May 3, 1983.

Hon. WILLIAM L. ARMSTRONG,
U.S. Senate, Washington, D.C.

DEAR SENATOR ARMSTRONG. Many thanks for your letter of April 19. I, too, have great concern about the budget deficit. I have written quite extensively on the subject, as you undoubtedly know from reading my Economic Reports. While I am enclosing several recent issues, for your information and guidance, I plan to write more extensively on the subject in the May issue and will send that to you as soon as it is available.

Your interest in Manufacturers Hanover is deeply appreciated.

Sincerely,

IRWIN L. KELLNER,
Senior Vice President.

Enclosure.

[Economic Report, Manufacturers Hanover, March 1983]

WHY INTEREST RATES ARE HIGH

(By Irwin L. Kellner, Senior Vice President and Economist)

Bankers must be very responsible people. For whenever anything goes wrong in the economy—we seem to be responsible. Don't take my word for it, ask Treasury Secretary Donald T. Regan. He said last month that the banks were responsible for high interest rates: "I think that banks, faced with a lot of problem loans, both domestic and international, are doing their utmost to keep their earnings up by keeping their interest rates up." This was followed by several articles in the financial press which added credence to the Secretary's remarks by comparing the rates that banks charge to prime business customers with a money market rate in percentage point terms alone, without regard to other factors.

I have discussed the subject of interest rates many times before, so some of what follows will not seem new to regular readers of the Economic Report. However, I feel constrained to respond to these allegations, for they are misleading, to say the least. Let me tell you why I think interest rates are high, and whose responsibility it is to bring them down.

BANK LENDING SPREADS

Superficially, it does appear that the spread between the rates banks charge on money they lend and pay for money they attract has widened dramatically in recent years. In 1977, for example, little more than one percentage point separated key money market rates from the banks' lending charges on prime business loans. Today that spread is as high as three percentage points. However, because of the rising interest rate environment we have had in recent years, it is inaccurate to look at spreads in percentage point terms alone. This is because banks, like any other business, set their prices in relative terms compared with their costs, not absolute terms. Between 1977 and 1982 short-term interest rates about doubled. Obviously, charging the same absolute spread in 1982 as in 1977 would have resulted in a percentage markup only half as great. In relative terms, then, the spread between the prime rate and the banks' cost of funds did not increase as much as it seems.

But this is not all. For while the posted prime is an important benchmark rate, it does not accurately represent the interest rates that banks charge on many short-term loans. According to the Federal Reserve Board, the weighted-average interest rate on short-term commercial and industrial loans today is as much as one percentage point lower than the posted prime. This reflects the growing tendency of large, top-rated corporations to be able to negotiate rates below the posted prime because of their ability to access the domestic and international money markets, where rates are lower. Looking at bank's lending charges this way discloses that the average rate on short-term loans was not unusually high in 1982, when compared with money-market rates in either absolute or relative terms.

As for the banks' cost of funds, I would like to point out another misconception. This is that the latest interest rate on Federal funds, commercial paper, or certificates of deposit represents the average cost of funds to banks at a given moment in time. It does not, since banks obtain money from a variety of sources with maturities ranging from overnight to several years in duration. One must combine these sources into a blend, or weighted average cost of funds to get the true picture of a bank's money costs. If one does, one will find that these costs are even closer to the average rate charged on short-term business loans—both in absolute as well as in relative terms.

• • • ARE LESS THAN THEY SEEM

Even this does not tell the entire story. For a bank's interest cost structure reflects more than simply a spread between the average rate earned on earning assets (loans) and the average rate paid for interest-bearing funds. You see, spread is not the same as yield, which takes into account not only interest-bearing funds but interest-free sources as well, such as demand deposits. And in recent years, as a result of both deregulation and a change in corporate deposit habits, banks have seen a dramatic decline in the amount of interest-free funds available to them.

At Manufacturers Hanover, the percentage of funds coming to us interest-free that we use to finance our assets has been cut in two since 1976, from nearly 20 percent then to only about 10 percent today. Add to this the deregulation of consumer deposits, which replaced interest-free checking accounts and low-interest savings accounts with NOW accounts, money market accounts and Super NOWs and you can see the addition of another sizable cost to the interest cost structure of the banking system. And the banks are not only relying more on interest bearing deposits, they have to make sure they are paying competitive rates, since these interest bearing deposits are becoming increasingly market-rate sensitive.

NET YIELD ON EARNING ASSETS AT 20 MONEY CENTER BANKS

[In percent]

Year	Earning asset yield	Interest bearing liabilities cost	Interest rate spread	Cost of all funds	Net yield on earning assets
	(1)	(2)	(1)-(2)=(3)	(4)	(1)-(4)=(5)
1975	8.91	6.76	2.15	5.43	3.48
1976	8.16	5.91	2.25	4.72	3.43
1977	8.13	5.87	2.26	4.75	3.38
1978	9.50	7.26	2.24	5.96	3.54
1979	11.81	9.82	1.99	8.26	3.55
1980	13.60	11.97	1.63	10.14	3.46
1981	16.11	14.67	1.44	12.72	3.39
1982 [1]	14.82	12.93	1.89	11.20	3.63

[1] Average of first three quarters.

Source: Robinson Humphrey/American Express, Inc.; MHT.

The bottom line is quite different from the top line. As you can see from the table, while there was a 45 basis point improvement last year in the interest rate spread at 20 money center banks, the figure that affects profits, net yield on earning assets, showed an improvement of only 24 basis points. And these are in absolute terms; in relative terms, on both the interest rate spread and net yield basis, the difference between what we charge and what we pay was lower in 1982 than seven years earlier!

Critics of bank lending charges might have more of a leg to stand on when they look at consumer lending rates. For unlike the prime rate and other lending rates to business, which have come down considerably from their recent peaks, consumer lending rates have hardly budged at all—and in some cases are higher today than one and two years ago.

Here, too, there is an explanation. For one thing, consumer loans tend to be smaller than business loans, thus involve more paperwork (loan applications, credit checks and so forth) per million dollars, for example, than a business loan. Obviously this is a cost which has to be factored into the price of the loan. And, unlike business loans, loans to consumers tend to be at fixed rates of interest for several years at a time. This means that a loan which is profitable when it is initially approved, may eventually become unprofitable if money costs rise above the return on the loan—as has been the case so many times in the past. There are greater risks involved in loans to consumers than to businesses so this must be factored into the cost of the loan. Until recently, most consumer lending operations were not profitable because of interest rate ceilings. These have been lifted in most states, suggesting that the high rates on some types of consumer loans may be just

an immediate after-effect as these departments seek to make up for lost profitability.

One thing must be remembered in discussing the banks' pricing policies. This is the fact that the banks are not the only source of funds for both individuals and business. What is more, the commercial banks may be losing ground to other companies in the financial services industry which suggests that bank loan pricing cannot get too far out of line with these other sources.

INTEREST RATES ARE HIGH * * *

Let me turn from bank lending rates to interest rates in general. For in the final analysis, the banks can only squeeze their interest rate spreads so far in bringing down the cost of borrowing to business and consumers. If the cost of money, itself—in other words, the general level of interest rates in the money markets—is high, then there's no way that bank lending charges can get down low enough to satisfy the Administration, or anyone else, for that matter.

Therefore, it is necessary to consider why market rates of interest are still high—not only in nominal or quoted terms, but in real terms, when measured against the current rate of inflation. For it has been the high real rates of interest that have been largely responsible for slowing the economy. Indeed, when real interest rates hit 50-year highs between mid-1981 and mid-1982, they were subsequently followed by a rise in business failures to half-century highs which produced the worst recession since the 1930s.

Of course, real interest rates have come down somewhat from these half-century records. However, they are still well beyond the boundaries that both business and consumers have grown accustomed to over the last several decades. The December Economic Report offered the following explanation: "The greater volatility of both interest rates and the money supply following the Federal Reserve's shift to monetarism three years ago seems to have added a 'volatility premium' to the level of interest rates besides the inflation and rent premiums, both of which had been embodied in interest rates for many years. In the summer of 1981, another premium might have been added, one that, for lack of a better term, could be called a 'fear' premium.

"The markets got scared beginning in the summer of 1981 when Washington revealed that the government's budget deficits were not going to get smaller and eventually disappear by mid-decade, but rather, were going to get bigger and expand into the 12-digit territory. The fear was that either these deficts and their associated borrowing requirements would overwhelm the money and credit markets, driving up interest rates in the process—or that they would not; that the Federal Reserve would monetize these deficits, but in the process, set the stage for a new round of inflation."

* * * BECAUSE BUDGET DEFICITS * * *

I would say that these fears are very much in evidence today. The volatility premium no doubt has shrunk because the Federal Reserve since July 1982 appears to be focusing more on managing interest rates and less on managing the quantity of money. Indeed, short-term interest rates have become extemely stable day-to-day—notwithstanding their precipitous decline last summer. But the fear premium is still very much in evidence. In the money markets, there is a fear of a renewed credit squeeze if the Federal Reserve once again becomes concerned over money supply growth and seeks to slow it down. And the bond markets are concerned about the higher rate of inflation that seems likely to arise sometime down the road if the Fed does not concern itself with money supply growth, and allows recent hefty rates of increase to continue.

Before you conclude that there is a Catch-22 here suggesting that interest rates are bound to rise one way or another, let me point out that they need not. However, this would require action by the Administration and the Congress. The key to lower interest rates deals with current and prospective borrowing by the Treasury to meet its huge, unprecedented budget deficits. No matter how you look at it, the deficit is far too large, given the state of our economy, the financial markets, and the availability of savings to finance them. Whether you compare the deficit with the gross national product, or total Federal borrowings with the supply of savings, you must conclude that we are in uncharted territory.

To make matters worse, the underlying imbalance between our spending programs and the revenue-generating capacity of the tax system at reasonable levels of employment (the structural deficit) promises to increase as fast as the cyclical portion of the deficit declines. This means that we cannot count very much on economic recovery to reduce the deficit and get the Federal Government out of the way of the private sector in the competition for funds in the financial market place. The implication is that a new clash between government financial needs and the needs of business, home buyers, farmers and consumers is on the horizon. Since the government is an insensitive borrower (it borrows what it needs, when it wants to, regardless of the cost), the financial markets, in anticipation of the higher interest rates that will result from this clash, are keeping interest rates high today in order to protect themselves against tomorrow.

In criticizing the banks for keeping interest rates high, the Administration is trying to deflect public opinion from its own economic mistakes. This year's budget document contains the same amazing revelation as last year's concerning the revenue impact of the Economic Recovery Tax Act (ERTA) of 1981. The Office of Management and Budget estimates that between 1982 and 1986. ERTA alone will cost the Federal government $609 billion in tax revenues. That's 72 percent of the $850 billion cumulative deficit that the Administration believes it will run during this time! The balance, I am sure, can easily be accounted for by the impact that these deficits had on the level of interest rates and the subsequent recession that these high interest rates caused. High interest rates, of course, added to government spending and subtracted from government tax revenues, while the recession cut further into Federal tax revenues while increasing Federal expenditures on unemployment insurance, and so forth.

CONTINUE TO GROW

The time has come for the Administration to stop blaming others for its misdeeds and start looking at its own policies. It should be clear by now that the original plan to boost government revenues by cutting taxes has not worked and will not work. It should also be obvious that using lower revenues as a club to force Congress to cut spending has only a limited effect. If you don't believe me, look at the record: With only two budget surpluses in the past quarter of a century, when did lack of revenues ever constrain the government from spending?

Bankers may indeed by very responsible people—but it is the Administration that is responsible for keeping interest rates high, not us.

AUBREY G. LANSTON & CO., INC.,
New York, N.Y., April 26, 1983.

Hon. WILLIAM L. ARMSTRONG,
U.S. Senate,
Washington, D.C.

DEAR BILL: I'm honored by your request for advice on the Federal budget problem. The problem is a big one, but with men of your high caliber and dedication working on it, the chances of a solution are improved. I have the highest admiration for you, both as a Senator, and, based on our meetings at the Colorado Bankers, as a friend.

There is no question that the out-of-control budget deficit has profoundly disturbing implications for our economy. For the first time in our post World War II experience, the Federal deficit threatens to increase even as the economy recovers. This "structural" deficit stands in sharp contrast with the budget's behavior in past expansions when the deficit gap has been sharply narrowed by improving tax receipts (based on rising incomes and profits) and moderating spending on unemployment compensation and other counter-recession measures.

The dismal prospect is that without dramatic deficit-cutting measures, the deficit gap by which spending exceeds revenues would almost certainly soar to a $200-300 billion range in fiscal years 1984 and 1985. Most disturbing, this would push the Federal deficits as a percent of GNP above 6 percent (2 percent is normal). To be sure, this fiscal stimulus should serve to initially strengthen consumer spending. Nevertheless, our recovery would be modest and uneven as interest rates remain high owing to the clash between recovery-related increases in consumer and business spending and excess Federal borrowing demands.

This outcome assumes that the Federal Reserve will maintain monetary discipline by sticking to its already established targets for 1983. If the Fed instead tries to fully accommodate the combined private and Government credit demands, interest rates may initially fall, but the resulting excessive monetary growth will promptly renew inflationary expectations and will eventually push longer-term interest rates higher.

The major victim of the current irresponsible budget policy would be depressed business spending on new plant and equipment. This is because the massive structural Federal deficits and related borrowing needs will mop up most of the net private savings usually available in support of private investment. It is estimated that net private savings available for new business capital investment will, as a result of projected excessive Federal borrowing demands, fall to a disasterously low 3.2 percent of GNP by 1985, barely half the 6.0 percent figure for savings availability to meet capital spending needs in the 1970's and less than half the 7.0 percent in savings availability in the 1960's.

An appropriate longer-term Federal budget objective would be in my view, not only to balance the Federal budget and eliminate the deficits, but also to reduce Federal receipts and spending in relation to GNP. This would set the stage for prolonged and, hopefully, noninflationary economic growth, founded upon, as a result of an increased private share of economic ac-

tivity, increased individual initiative, rising productivity, more creative innovation, and a wave of energetic entrepreneurship, particularly in high technology areas. While such measures as tax indexing can help in principle with attaining such an objective, the simple practical fact is that the only way to achieve this objective is to link tax cuts directly and irreversably to Federal spending cuts.

The point is that the attainment of the commendable objective of reducing the Federal government's share of total economic activity must involve cuts in both defense and nondefense spending. The failure of the Reagan fiscal program has come not because it was wrong in principle, but because it was wrong in execution. Given the difficulties in controlling social entitlement programs arising from decades of fiscal irresponsibility, there was simply no way for the President to cut taxes, on one hand, and sharply increase defense spending, on the other, without disasterous budget deficit consequences.

There are only a few ways out of this mess. Just tinkering won't do; the solution must be radical and we need action fast. Three possible solutions that would be both credible in the financial markets and supportive of sustained and noninflationary economic expansion are listed below, along with my related revenue and spending estimates (beyond those stemming from the President's fiscal 1984 budget proposals):

[In billions of dollars]

	Fiscal 1984		Fiscal 1985	
	Revenues	Outlays	Revenues	Outlays
Choices:				
(1) Keep tax cuts but deep freeze all defense and nondefense spending		−30		−60
(2) Impose a 5 percent surcharge on corporate and individual tax payments, and a $10 a barrel tax on imported oil; limit defense spending to 5 percent real growth but keep Reagan's nondefense spending proposals	+25	−3	+30	−12
(3) Eliminate the third year of the tax cut, but keep indexing; allow for a 7½ percent increase in real defense spending, but deep freeze nondefense spending	+30	−22	+33	−41

My preference would be for choice #3 above. Its favorable psychological impact on the financial markets could push the longer-term Treasury bond rate, say 2 percentage points below its current 10½ percent level. A second-best alternative would be choice #2 which might improve psychology sufficiently to push the longer-term Treasury bond rate as much as 1 percentage point below current levels. Of course, roughly corresponding declines could be expected in mortgage rates and obviously this would help our recovery.

I hope these views are helpful.

With best regards,

Sincerely,

DAVID L. JONES,
Senior Vice President and Economist.

P.S.—Enclosed is my latest Lanston Letter on this subject.

AUBREY G. LANSTON & CO., INC.,
April 25, 1983.

Prices of Government securities lost ground last week, bringing to a halt the upward momentum of the two preceding weeks. Investors appear to be increasingly disturbed by the dim prospects for concrete budget deficit-cutting actions as Presidential election politics come into view. Also serving to dampen market optimism is a growing realization that the Federal Reserve is unlikely to help spur the market with further near-term easing moves, especially now that an appropriately moderate and non-inflationary recovery seems to be underway.

The monetary authorities have every reason to continue to hold to a stable policy stance in the weeks immediately ahead. The Fed moved in mid-March to slightly snug bank reserve availability, in response to excessive monetary growth. However, the monetary officials are unlikely to see any immediate need to tighten further, assuming that monetary growth slows significantly in April, as is widely expected.

Since mid-March the Fed appears to have been aiming at approximately a 0 free (net borrowed) reserves target, down from a free reserves level of about $250 million. (Net borrowed reserves have averaged $65 million over the past six bank statement weeks.) This degree of Fed pressure on bank reserves would seem to be consistent with a Federal funds rate centering on 8¾ percent, and most trading remaining within a relatively narrow 8½–9 percent range. (The Federal funds rate has averaged 8.84 percent over the past six weeks.)

The lack of an agreement between Congress and the Reagan Administration on substantial Federal deficit-cutting measures for fiscal year 1984 and beyond is likely to depress market psychology in the weeks ahead. Perhaps the most frustrating prospect is that neither new revenue-increasing measures nor significant Federal spending cuts can be counted on to trim the out-of-control deficit. For example, with the influence of next year's Presidential election increasing day-by-day, it seems most unlikely that Congress will either do away with the already scheduled tax cuts or pass any new significant tax increases (such as an oil import tax).

On the Federal spending side, deficit-cutting prospects are not much better. The President is fighting for his originally requested 10 percent increase in real defense spending in fiscal 1984 and he seems unlikely to settle for anything below 7½ percent, if that. On the non-defense side, Congress is actually increasing spending, relative to the President's 1984 budget proposals, on the grounds that social programs have already been cut too much.

In the previously inconceivable, but now possible, event that no new deficit-cutting measures for fiscal year 1984 will be agreed upon, the following results are likely:

(1) The Federal deficits will soar to a $200–300 billion range in fiscal years 1984 and 1985. Federal deficits as a percent of GNP will climb above 6 percent (2 percent is normal).

(2) Consumer spending will eventually be strengthened by excessive fiscal stimulus.

(3) The economic recovery will be modest and uneven as interest rates remain high owing to the clash between recovery-related increases in consumer and business credit demands and excessive Federal borrowing demands. This outcome assumes that the Federal Reserve will stick to its already established monetary targets for 1983. If the Fed instead tries to fully accommodate the combined private and government credit demands, interest rates may initially fall, but the resulting excessive monetary growth will promptly renew inflationary expectations and will eventually push longer-term interest rates higher.

(4) Business spending on new plant and equipment will remain weak, lagging the recovery much longer than normal. This is because the massive structural Federal deficits and related borrowing needs will mop up most of the net private savings usually available in support of business capital spending.

SENATE CONCURRENT RESOLUTION 46—ARMS CONTROL RESOLUTION

● Mr. DOLE. Mr. President, last week, I testified before the Foreign Relations Committee on a subject of urgent importance to all Americans—arms control, and how we might achieve an equitable agreement with the Soviet Union. My contribution to this debate, Senate Concurrent Resolution 46, would address the problem through a full agenda of negotiated reductions according to the nuclear triad at both the strategic and intermediate-range levels of nuclear weapons.

The Senator from Kansas was gratified to learn of the testimony the following day of a distinguished American and recent Director of the Arms Control and Disarmament Agency, Dr. Eugene Rostow. Dr. Rostow was asked for his assessment of the numerous arms control resolutions that are now before us. I am gratified by his analysis of the Dole resolution, and I ask that Dr. Rostow's comments on this point be printed in the RECORD.

The comments are as follows:

COMMENTS OF DR. EUGENE ROSTOW

The last question put to me asks for comment on the various freeze and build-down proposals before you.

The analysis I have presented here and in the package of speeches I have submitted makes my response to your question obvious.

The basic premise of the administration's negotiating position and of the Scowcroft Commission report is that the most serious problem we face is the Soviet lead in ground-based ballistic missiles—a lead we have allowed to develop in the last 10 years. That Soviet advantage is incompatible with deterrence and stability. And it is the source of the nuclear anxiety now transforming political attitudes throughout the West.

It follows as a matter of arithmetic that a freeze at current levels or a scheme involving equal reductions on each side cannot solve the problem. Such an approach would confirm and legitimize a position of strate-

gic inferiority for the United States, and make real arms control impossible. Stability can be restored only by agreeing to parity for each side—that is, to equal levels, especially in the area of the most destabilizing classes of weapons. Of course, an agreement should take all parts of the nuclear arsenal into account, on a weighted basis which reflects the destructive capacity of each category of weapons.

The freeze proposals fall into two groups. Some, like the draft offered by Senators Jackson and Warner last year and by Senator Dole this year, propose freezes at equal and lower levels of deterrent nuclear power. They would support the administration's approach, and give it additional weight. When Congress and the President are together on a policy, there is a full national consensus. A much stronger negotiating position is then possible. Others—despite a good deal of ambiguity—seem to favor a freeze at current levels. They would eliminate any incentive the Soviets might have to negotiate at all. The Soviet negotiators are practical and experienced bargainers. They cannot be expected to give up their advantage in ground-based ballistic missiles unless the alternatives are unattractive.

Soviet spokesmen argue vehemently that in proposing a standard of equality between the Soviet Union and the United States we are asking them to make unequal concessions, indeed to disarm unilaterally. They offer instead the criterion of "equality and equal security," which would require us to accept their right to a force equal to the sum of the United States, British, French, and, ultimately, Chinese forces. This is not a claim for equality, but for dominion.

In the context of this analysis, the objection to build down proposals is equally apparent. Equal reductions in the ballistic missile forces of the two sides could make the critical Soviet advantage even more significant than it now is. Build-down proposals could make a contribution to a balanced and effective agreement as part of it. Of themselves, however, build-down proposals are, in my view, of dubious merit.

The Soviet claim is that our proposals would require them to disarm unilaterally. There is nothing inequitable about unequal reductions to reach equal ceilings. During the 1920's, the United States sank more naval tonnage than the other naval powers to reach the limits set in the Washington Treaty of 1922.

The United States should, of course, be alert to every possibility for a fair agreement, and flexible in its negotiating tactics, but it can never agree to the Soviet version of "Equal Security." Our guiding principle must be that of parity. Soviet-American nuclear parity would in itself be a major contribution to world political stability. Once that is achieved, multilateral agreement among all the nuclear powers should become more feasible.●

VIETNAM VETERANS PARTICIPATE IN DEATH VALLEY MARATHON

● Mr. HART. Mr. President, it has recently come to my attention that 13 Vietnam veterans participated in the Death Valley Marathon this past February. These 13 Vietnam veterans demonstrated the determination, dedication, and "Can Do!" spirit of our veterans and I believe symbolizes the collective energy and courage of the Vietnam veteran to turn the spirit of this country from the "energy to war" to "energy of peace".

This 100-mile run was a symbolic achievement of which each participant can be proud. The positive media generated by this significant event will surely serve to focus the Nation's attention on the continuing and uncharted roads facing this very special group of citizens. It is especially noteworthy that the "team" had earned every award this country bestows for combat heroism from the Medal of Honor to the Army Commendation Medal.

It is extremely gratifying to know that the aftermath of the Death Valley Marathon has been to foster the birth of the Vietnam Veterans Marathon Foundation. Plans are already underway for next year's run.

Mr. President, I ask my colleagues to salute the symbolic run of the Vietnam veterans. The participants were: Gary Beikirch, Greece, N.Y.; Bob Cook, Madison, Wis.; John Deacy, Miramar, Fla.; James Donahue, E. Amherst, N.Y.; Gene Gagliardi, Las Vegas, Nev.; Gene Imes, Las Vegas, Nev.; Scott Lyon, Las Vegas, Nev.; Lionel Pinn, Las Vegas, Nev.; Chuck Popelka, Vienna, Va.; Bill Price, Buffalo, N.Y.; Larry Rader, San Diego, Calif.; Robie Stevenson, Rochester, N.Y.; and Scott Whitting, Glen Head, N.Y.●

LAWRENCE, KANS., SUMMIT

● Mr. DOLE. Mr. President, I rise today to draw the Senate's attention to a fine and worthy offer that could have a marked benefit for peace. The citizens of Lawrence, Kans., motivated by the desire to make a practical contribution toward reducing world tensions, have offered their college community as the site for a meeting between President Reagan and General Secretary Andropov. I understand that that early gesture has been marked by successive meetings and practical planning. Clearly the kind generosity of Mayor David Longhurst and the commissioners of Lawrence sets a tone that would bode very well indeed for the summit.

The Senator from Kansas would also like to mention, Mr. President, that the invitation proceeds from the highly successful experience of the Kansas relays, where Russian and American athletes recently competed in track events. Key to the organization of this successful event was the Athletes United for Peace group, whose members have also, I understand, been instrumental in the current Lawrence summit initiative.

In the belief that this effort was worth supporting fully, I wrote in support of it to President Reagan, and I ask that my letter, and the replies which I have received from Assistant to the President Kenneth M. Duberstein and Assistant Secretary of State Powell A. Moore, be included in the RECORD.

Mr. President, cynicism about peace and about summits and their possible achievements is a ready commodity. But I know personally that much can be accomplished through personal initiative and good will. I would hope that something of that Kansas spirit would stay with the participants in a Lawrence summit long enough for a real contribution to a more peaceful world to be made. In the meantime, the offer itself and the hard work that is going forward in Lawrence are praiseworthy reflections of American generosity and concern for peace at their very best.

The material follows:

U.S. SENATE,
Washington, D.C., May 18, 1983.

The PRESIDENT,
The White House, Washington, D.C.

DEAR MR. PRESIDENT: I am pleased to endorse the invitation that you have received from the Mayor and Commissioners of Lawrence, Kansas, to meet with General Secretary Yuri Andropov in their community.

Their invitation proceeds from the conviction, which I entirely share, that the warm and friendly Kansas hospitality which all participants in an historic summit could expect in Lawrence would contribute greatly to the summit's success. Clearly the timing for the summit would depend upon many factors, but one of them—the belief that a personal meeting between yourself and General Secretary Andropov would itself generate a more productive atmosphere for peace—is a persuasive argument for an early meeting. I therefore hope that you will be able to meet with the Soviet leader soon, and that you will give favorable consideration to Lawrence, Kansas as the location for the summit.

Sincerely yours,

BOB DOLE,
U.S. Senate.

DOLE RELEASES RESPONSES ON "SUNFLOWER SUMMIT" FROM WHITE HOUSE, STATE DEPARTMENT

DEAR SENATOR DOLE: Thank you for your May 18 letter endorsing the invitation from Mayor Longhurst for the President to meet with Soviet leader Yuri Andropov in Lawrence, Kansas.

We appreciate having your comments and recommendation regarding this very thoughful invitation to the President. I assure you that most careful consideration will be given to this request.

With best wishes,

Sincerely,

KENNETH M. DUBERSTEIN,
Assistant to the President.

DEAR SENATOR DOLE: Thank you for forwarding the invitation, on behalf of the citizens of Lawrence, Kansas, for a U.S.-Soviet summit in their city. The President's office referred your letter of May 18, 1983 to the Department of State for careful consideration.

We appreciate the concern of your constituents and their efforts to better the climate of U.S.-Soviet relations. On our part, we have made clear to General Secretary

Andropov that the U.S. will continue to be firm in its response to unacceptable Soviet actions, such as the continuing occupation of Afghanistan. But we are also ready and willing to resolve outstanding problems with the Soviet Union. These points have been and will continue to be transmitted to the Soviet side through the Soviet Embassy here, by our Embassy in Moscow, and in other bilateral fora. Concerning the general question of a future U.S.-Soviet summit, President Reagan has said on many occasions that he would be willing to meet Secretary Andropov, but that this would require careful preparation and the expectation of tangible results.

We are continuing an active dialogue with the Soviets to find opportunities for constructive and genuine progress on specific problems, but we must be realistic. It is likely to be a slow and difficult process.

With cordial regards,

Sincerely,

POWELL A. MOORE,
Assistant Secretary for Legislative and Intergovernmental Affairs.●

DRUNK AND DRUGGED DRIVING

● Mr. HATCH. Mr. President, we as a nation suffer tragedies each day on our highways and in our neighborhoods from drivers who misuse alcohol and drugs. In the last few years, a growing awareness of the carnage caused by drinking and driving has called forth a rapidly developing national consensus that the time is now to get tough on the drunk and drugged driver.

The problems posed have rightfully stirred national outrage among our citizens—and now Congress should enact the Senate joint resolution, sponsored by Senator GORDON HUMPHREY and I, which designates the week December 11-17, 1983, as "National Drunk and Drugged Driving Awareness Week." This week would acknowledge the importance of citizens, business, and Government activity that has been undertaken to deal with this national tragedy. Drunk drivers are finding they no longer can get away with tacit acceptance. Instead they face an increased likelihood of being caught, prosecuted, and punished. Last year I joined Senator HUMPHREY in introducing a resolution designating December 12-18, 1982, as "National Drunk and Drugged Driving Awareness Week." This week proved enormously successful, and I am confident this year's "National Drunk and Drugged Driving Awareness Week" will prove to be as successful as last year's efforts.

Drunk and drugged driving is a national epidemic, transcendent of State boundaries. Drunk and drugged drivers are the leading cause of death and injury on the road. The victims are often innocent drivers, passengers, and pedestrians; no one can safely count themselves immune to the effect of this carnage. Misuse and abuse of alcohol and drugs pose a most serious threat to the economic, social, and emotional health of our society.

About 1.3 million of the 146 million licensed drivers in the United States are arrested annually for driving while intoxicated. But what can we as concerned citizens do?

The greatest protection we have against drunk and drugged drivers are seatbelts. Drivers should buckle up seatbelts every trip and insist their passengers do so.

Report any suspicious driving to the police, especially on the weekends.

Petition local officials to establish task forces to study driving while under the influence (DWI) problems and to recommend necessary local solutions.

We are all potential victims when a drunk gets behind the wheel of a car. The statistics alone offer a grave reminder of the magnitude of this serious problem. Each year 26,000 Americans die and 1.5 million are injured by drunk drivers. The tragedy is even greater when you add the losses suffered as a result of drugged drivers. Society's loss in wages, productivity, medical, and legal costs caused by deaths and injuries in drunk driving crashes exceed $24 billion each year. More than 25 cents of every auto insurance dollar goes to pay for damage done by the drunk driver.

Let me pose some long-range strategies to effectively rid the roads of the driver who drinks.

First, I urge all States to legislate and enforce strict laws against drivers who drink. Statistics show that a large percentage of drunk drivers are or will be repeat driving-while-intoxicated (DWI) offenders. Too many DWI offenders still have their licenses because the laws are too lenient. Too often even repeat offenders are held under court probation or supervision, or plea bargained to a lesser charge.

Second, I support changes in existing drunk driving laws in all 50 States from presumptive level to illegal per se statutes, making it illegal per se for a driver to be in control of an auto when his blood alcohol content is 0.10 percent (B.A.C.) or higher. These per se laws help arresting officers to structure a more reliable drunk driving case. Accurate, scientific tests that measure the percentage of alcohol in a person's bloodstream have proven that hazardous intoxification exists when there is a concentration of 0.10 percent or higher. Half of all drivers killed each year have blood alcohol concentrations in excess of the limit of 0.10 percent.

Third, prevention activities must begin in the home. Families must continue and intensify their efforts to educate their children on the various problems associated with overuse of alcohol and drugs. I would like to commend the grassroot parent's organizations that have so successfully encouraged parents to become role models for their children. They recognize that the key to preventing children's involvement with alcohol and drugs is communication.

Fourth, we must support continued funding of research in alcohol- and drug-related problems to tackle the problems of substance abuse in our country. President Reagan and the Congress has set forth an array of Federal progams to battle the tremendous problems of alcohol and drug misuse. Through continuation of support for the National Institute on Alcoholism and Alcohol Abuse and the National Institute on Drug Abuse, we can better understand the myriad of issues surrounding alcohol and drugs in our society.

Working in cooperation with all States and community efforts to develop and implement their own strategies is the National Highway Traffic Safety Administration (NHTSA), a division of the U.S. Department of Transportation. NHTSA was instrumental last year in coordinating the weekly activities of the Drunk and Drugged Driving Awareness Week. The NHTSA program provides the States and their communities with the latest technology in solving the drunk and drugged driver problem acts as a catalyst to move States and communities into action in an organized and systematic manner; and educates members of society as to the magnitude of the problems and the possible solutions to ultimately significantly reduce the toll of alcohol-related deaths, injuries, and property damage. NHTSA officials stress that "even though drunk driving is a national problem, it can be solved only at the local level."

Let us as a nation briefly pause and remember the victims and their families. But after our solitude, let us then push ahead with renewed vigor to initiate and support any and all action that may end further suffering. Sandy Golden in "How To Save Lives and Reduce Injuries—A Citizen Activist Guide To Effectively Fighting Drunk Driving" writes: "We have to get the word out that we will no longer tolerate drunk (and drugged) driving in our communities and mean it."●

THE AMERICAN POLITICAL SCIENCE ASSOCIATION'S CONGRESSIONAL FELLOWSHIP PROGRAM

● Mr. DOLE. Mr. President, I rise today to mark the 30th anniversary of the American Political Science Association's congressional fellowship program. Over the years, the program has evolved from rather modest beginnings to the established program that we see today.

Congressional fellows are chosen through a careful selection process on the basis of merit. They represent a number of different professions. For example, some are political scientists and journalists, and these fellows are selected following a national competition, and receive a fellowship stipened from the American Political Science Association itself. There are also participants who are outstanding health professionals, whose program was first established by the Institute of Medicine, with a grant from the Robert Wood Johnson Foundation. Several international fellows now also participate annually, including this year two West German fellows, as well as a Malaysian journalist and professionals from the Philippines and Sri Lanka, that have been sponsored by the Asia Foundation.

There is particularly rigorous competition for career executive branch officials, who serve as either Federal or foreign affairs fellows. The latter have a special 8-week orientation on "Foreign Policy and the Congress" before entering the congressional fellow program. I have been pleased to welcome a foreign affairs congressional fellow from the State Department, Bill Shepard, as a member of my personal staff this year.

The congressional fellowship program, Mr. President, is bipartisan in the best sense. Fellows serve with both Democrats and Republicans, liberals and conservatives. Usually, a congressional fellow will split his time, serving in both Houses of Congress in turn, often switching the party affiliation of the Member of Congress for whom he works, in the process. Some also work first as a personal staff member, and then later on a committee staff. The variety is there for a productive work experience, a variety as entensive as the backgrounds of the Members of Congress themselves. And through weekly lecture sessions which feature Senators, Representatives, staff members, journalists, and lobbyists, the program insures a broad exposure to the problems of the Congress.

One of the best points about the program, Mr. President, is that nobody places the congressional fellows. Their task has just begun when they have been awarded their fellowships. Then comes the difficult—and, I am sure, in some cases ego-deflating—job of landing assignments. The interviewing process often turns out, though, to be remembered as a particularly valuable part of the fellowship experience.

The payoff for the Congress and the congressional fellows themselves is substantial, Mr. President. For one thing, congressional fellows bring a new and sometimes vital practical dimension of work experience to their congressional offices. The Senator from Kansas hears that a rather substantial library on the Congress could now be put together on the basis of the books that former congressional fellows have written—books that reflect the Congress with greater accuracy and depth for the experiences that their authors have had on the job. There is, after all, no substitute for practical experience to understand the Congress as a living institution. I am told that this greater understanding cuts both ways. When a Member of Congress is tempted to grouse about the way in which his constituent interests have been handled by an executive department, he may also remember a more helpful association with that same department that his office once had through the congressional fellow program.

So, Mr. President, I support this program. It is economical, it is productive, and it works. And after 30 years, there are not many programs of which that can be said. I hope, therefore, that other Senators will join the Senator from Kansas in taking a good hard look at the congressional fellows who will be knocking on our doors next fall. The results can be well worth the effort for both the Senator and the congressional fellow.●

THE REFUGEES ARE COMING

● Mr. KENNEDY. Mr. President, those of us who have closely followed over many years the tragic flow of refugees around the world, and the critical foreign policy and humanitarian issues they represent, cannot help but be dismayed over the administration's flippant and scaremongering comments on the Central American refugee crisis.

Contrary to the President's recent statement, the crisis of refugees from Central America is not a crisis of the future—it is a crisis that is already here, with nearly half a million refugees already displaced within their country or fleeing across borders to neighboring countries.

They are fleeing violence and escalating conflict. A policy of pouring more arms and more military personnel into the region, without engaging in serious diplomatic negotiations to end the conflict, will only prolong this violence and produce more refugees.

If this administration is genuinely concerned over the plight of refugees from Central America, then let it engage in policies that will bring them peace and relief today—not more war tomorrow.

If we are concerned over the flow of Salvadoran refugees to our borders, then let us demonstrate some concern and help for them when they seek safe haven in Mexico, in Honduras, and elsewhere.

Mr. President, it is long past due for us to support regional and international initiatives to assist those countries of first asylum, such as Mexico, to help them cope with the rising tide of refugees that have come from Guatemala and El Salvador.

Last week, the New York Times succinctly stated the issue and, I believe, properly took this administration to task for shouting "the refugees are coming"—which is a cry that "is neither a humane refugee policy nor a persuasive argument for Mr. Reagan's larger policy." I ask that this editorial be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 24, 1983]

THE REFUGEES ARE COMING!

For weeks, officials in Washington have been muttering darkly about a potential tidal wave. Unless the public supports more military spending to combat troublemaking communists in Central America, then watch out: hordes of poor refugees will start pouring in. Now, the muttering is no longer low-level or anonymous. It's coming straight from the President.

If the flood of Southeast Asian boat people was a problem, he says, just imagine what it will be like when the "feet people" start marching north from Central America. That's scare-mongering, and a contradictory sort. The surest way to avoid a refugee tide is to keep it from arising in the first place. The present Reagan policy risks creating more refugees, not fewer.

Some of the portents emanate from the Army. Three weeks ago, The Washington Post reported that an unnamed general has been warning that so many Latin Americans will flee communism that we'd need to recall some troops from Europe to seal our southern border.

The State Department's Refugee Affairs office has been ringing a similar alarm. In a paper dated May 17, H. Eugene Douglas injected figures into the fears. It estimates the refugee potential at 2.33 million. Not 2 million, not 2½ million, but 2.33 million. Such precision means sophistication, and credibility, right? The figure, it turns out, is what you get if you make the dubious assumption that 10 percent of the region's population will take flight.

Such fanning of fears was unattractive at lower levels. But this week, President Reagan joined in. Speaking in Mississippi, he said, "We must not listen to those who would disarm our friends and allow Central America to be turned into a string of Marxist dictatorships. The result could be a tidal wave of refugees—and this time they'll be 'feet people' and not 'boat people' . . . ."

There is some basis for expecting new refugee pressure. Continuing violence has already pushed hundreds of thousands across one border or another. Mexico has just tightened its borders against Salvadorans, Guatemalans and others, using the same logic that the United States uses against illegal migrants from Mexico. An accelerating flow of migrants to this country would strain our law enforcement—and conscience.

The surest way to avoid a refugee tide is prevention, and that means caring about more than military assistance. Arms alone would, if anything, increase the number of refugees. Which side do frightened people typically take? The side of safety. The longer the combat goes on, the more people who will be scared out of their wits, homes and countries.

To shout, "The refugees are coming!" is neither a humane refugee policy nor a persuasive argument for Mr. Reagan's larger policy.●

PRESIDENT REAGAN'S TRIBUTE TO SENATOR JESSE HELMS

● Mr. McCLURE. Mr. President, our colleague, Senator JESSE HELMS, received a remarkable tribute recently from the President of the United States. Speaking at a dinner in the Senator's honor, President Reagan praised his role in standing against great odds to oppose the dangerous and destructive policies of the past. Along with the President, many of us here can say, "We'll never forget how he battled, especially during those first lonely years, to protect our liberties, preserve our family values, and keep America strong." For those who may have forgotten, I recommend the reading of Mr. Reagan's remarks, and I ask that they be printed in the RECORD.

The remarks follow:

REMARKS OF THE PRESIDENT AT A DINNER IN HONOR OF SENATOR JESSE HELMS

The PRESIDENT: Thank you very much.

And, Jesse, from the bottom of my heart, thank you for those wonderful thoughts and words. Now I know why people say, "Let Helms be Helms."

Jesse was in Washington before I arrived. In fact, let me say this straight off. Thanks to Jesse Helms, his friendship and commitment, we can say tonight our grassroots movement is alive, well and getting stronger every month as America strides forward on the road to greatness again.

You've heard that a faithful friend is the medicine of life. Emerson said, "The only gift is a portion of thyself." Well, I happen to know this is true. I know it because Jesse proved it to me. There was a time in 1976 when many people were writing off my candidacy and Jesse Helms didn't. He came to me and said, "Governor, if you would just speak on the issues to the people of North Carolina, I will get that message broadcast and personally send it to every corner of the state."

Well, I did what the doctor ordered—and Jesse really came through. I'll never forget that Saturday before the Tuesday primary. The press was asking only one question: when would I quit the race? We didn't quit and, thanks to Jesse, we won big, big enough to come close and then come back to win it all in 1980.

You don't forget how a man like Jesse cares about you and the people of North Carolina. You don't forget this kind of courage and compassion—like when he helped rescue a fellow citizen's wife from Poland after imposition of martial law, like when he cut through red tape to bring home from China another citizen stricken with a blood clot on the brain, like when he helped a North Carolina woman locate and contact her injured husband serving with the Marines in Lebanon.

We'll never forget how he battled, especially during those first lonely years, to protect our liberties, preserve our family values and keep America strong. There he was, standing day after day to a government Goliath, crying out like a voice in the wilderness. He was a trailblazer who trusted Andrew Jackson's words that, "One man with courage makes a majority."

And gradually, his amendments that had won only 5, 10 and 15 votes were winning 30 and 40 and 50. And bit by bit, he became more than a lonely crusader. He grew into a lionhearted leader of a great and growing army. So, Jesse, we just want you to know the reinforcements are here, the Cavalry is ready, and we intend to march with you until victory is yours on Election Day, 1984.

You know, Sam Ervin, a great Democrat and patriot, said of Jesse, "I admire Senator Helms very much because he's one of the few men in public life who's got the courage to stand up for what he honestly believes. Courage is the rarest trait among public men I know of. Many of them are intelligent, but there are very few of them courageous."

We've seen the kind of courage that Sam Ervin speaks about. Here in Washington, there is great sympathy for practically any scheme to spend more money. But for years, Jesse Helms has been telling the truth—government can only spend what it borrows or taxes away. And working Americans who pay this nation's bills need higher taxes like they need a plague of locusts.

If the liberals in the Congress had their way, the American people would never have received any tax cut—no first year, no second year, no nothing. If we had followed their definition of compassion, the average family of four would be paying nearly $799 in higher taxes in 1983. But they don't have to. With the unwavering support from Jesse, we passed the first decent tax rate reduction for every working American since 1964. I promise you the final 10 percent reduction will go into effect July 1st—and it will be followed by indexing in 1985.

Indexing is an historic reform. It's our promise to every working man and woman that their future will be better than their past. There will be no more sneaky midnight tax increases by a government which uses bracket creep so it can spend, and spend and spend. To pretend that eliminating indexing is somehow fair to wage earners reminds me of Samuel Johnson's comment about the fellow who couldn't see any difference between virtue and vice. Samuel said, "When he leaves our house, let us count our spoons."

If ever there was a litmus test on fairness for the average American taxpayer, indexing is it. Indexing will not help those who are already in the top brackets. It will protect working people from being pushed by inflation into those same high brackets. And that's why I think it's important for the people of North Carolina to know that Jesse Helms has given a rock-solid pledge to defend indexing.

But his likely opponent has already said that it's probably a good idea, this eliminating indexing. So you tell me—who's determined to protect the people's real interests?

You know, there's little figure that I'd like to give here right now because I asked for it the other day. You know, there's some talk about that usual breaking point—$50,000 a year. It's all right to clobber anyone that's making $50,000 or up and it's been that way for many, many years. That's been the sort of dividing line between big money and just ordinary money. But there's been a thing for a number of years, thanks to some people we won't mention here, called inflation. And I got a little curious. How long are we going to keep using that figure? And I said, "Tell me something. Find out for me what is $50,000 a year now as to what it was 10 years ago. Is it still that same breaking point between big money and little?" And do you know how much you have to make today to be where you were at $50,000 10 years ago—$113,850.

So when they start telling you, "We can do something for everybody below $50,000 but not above," you've talking about clobbering an awful lot of people that are out there in the middle income and lower income brackets, trying to send the kids through school and stay even with what inflation has done to them.

Jesse, I hope the good people of North Carolina won't mind if I tell them how effective you've been as Chairman of the Senate Agriculture Committee—the first chairman from North Carolina in nearly 150 years. Without you, there probably would be no tobacco program.

I also want to thank you, Jesse, for your great help in strengthening our foreign policy and standing up for a strong national defense, making America second to none. You and I both know that this debate on defense is about more than deficits and rooting out waste, as important as they are. It's about protecting lives and preserving freedom because that's the source of all our other blessings. What occurred during the last decade when the Soviets raced ahead militarily while we stood still was dreadfully wrong. We believe it's immoral to ask the sons and daughters of America to protect this land with second-rate equipment and weapons that won't work. We can only keep our families safe and our country at peace when the enemies of democracy know America has the courage to stay strong. And Jesse Helms and I intend to make sure they know that.

Jesse is Chairman of the Senate Subcommittee on Western Hemisphere Affairs. He understands that we have vital interests in helping our neighboring countries in Central America. Either we pay a small price now with mostly economic but some military assistance so we can prevent a crisis, or we listen to the do nothings and risk an explosion of violence and millions of refugees on our doorstep later on. Make no mistake—the United States must and will support our friends who are building and defending democracy in Central America. We will not permit dictators to ram Communism down the throats of innocent people in one country after another.

You know, the other day the Soviet paper, Pravda, actually said something I support. It said that peace in Central America is possible only on the basis of respect for the right of each people to choose itself its way of life. Well, I would only add this—that two perfect places to begin are Cuba and Nicaragua where free and democratic elections are not permitted.

You know, to those dictators we say, "Prove to the world your system is legitimate. Prove you're not afraid of your own people. Put down your guns. Permit a free press. Let your people vote." And then we'll see if they truly desire the endless repression and regimentation or the chance for a new life with dignity and opportunity and freedom.

We Americans are blessed in so many ways. We're a nation under God, a living and loving God. But Thomas Jefferson warned us, "I tremble for my country when I reflect that God is just." We cannot expect Him to protect us in a crisis if we turn away from Him in our everyday living. But, you know, He told us what to do in II Chronicles. Let us reach out to Him. He

said, "If my people, which are called by my name, shall humble themselves and pray and seek my face and turn from their wicked ways, then will I hear from Heaven and will forgive their sin and will heal their land."

Jesse understands this. That's why he's worked so hard and will deserve so much credit when two blessed days arrive, finally arrive—the day when we welcome the Lord back into America's classrooms and the day when we protect the life of the unborn child.

Jesse, I know that you feel within you a sense of calm. You have placed your life in His hands. And with your faith, honor, and good works, it is we who can be thankful to say, "Jesse Helms is my friend."

Thank you very much and God bless you all.●

MSGR. BELA VARGA

● Mr. MOYNIHAN. Mr. President, recently the last speaker of the free Hungarian Parliament, Msgr. Bela Varga, who resides in New York, celebrated his 80th birthday.

Monsignor Varga has been distinguished as a Catholic clergyman and as a democratic leader in Hungary. For his ecclesiastical services, Pope Paul VI awarded him with the title of Papal Proto-Notary and for his services in helping escaped French prisoners of war during World War II, President Charles DeGaulle awarded him with the French Legion d'Honeur, the highest order of France.

During the war, Monsignor Varga, at the time a parish priest in the small Hungarian town of Balatonboglar and a Member of Parliament, opened his parish house and concentrated his energies upon helping the unfortunate victims of nazism. To quote the story in Time magazine of February 8, 1960:

> In the dark, early days in World War II, the Hungarian village of Balatonboglar became a haven for hapless victims of the crushing Nazi advance—50,000 Polish officers and civilians, fleeing the Nazis and the Soviets, and later some 2,000 French soldiers who escaped from Nazi Prison camps after the Battle of France. All found a firm, resourceful friend in the pastor of Balatonboglar, a Father Bela Varga, whose church of the Sacred Cross became the center of refugee relief. Others, especially imperiled Jews, got forged documents from Father Varga that enabled them to settle down in Hungary.

After World War II, while democracy was still tolerated by the Soviets, Varga resumed a leading position in the Smallholders Party and became a member of the Presidential Council of Hungary. In Hungary's only free election after World War II, Varga's party won a majority and Monsignor Varga was elected Speaker of the Hungarian Parliament.

In 1947 when Hungarian democracy came to an end, Varga and other Hungarian leaders fled to freedom in the West. Even in exile, Monsignor Varga did not abandon the fight against totalitarianism. In 1948 he founded the Hungarian National Committee in New York with other exiled Hungarian leaders and represented the cause of Hungarian freedom internationally.

Msgr. Bela Varga is still officially the head of the Hungarian committee, although many of the former members have died. He is a leader of free Hungarians, a symbol of Hungarian democracy, Catholicism, and tradition, and a living testimony to the spirit of a nation that continues to aspire to freedom and national independence.

I congratulate Msgr. Bela Varga, on the occasion of his 80th birthday, for his tireless work and devotion to the ideals of Christianity, democracy, and true humanism.●

REPEAL THE FUEL USE ACT

● Mr. COCHRAN. Mr. President, I am pleased to join in cosponsoring S. 512, introduced by Senator NICKLES, to repeal the Powerplant and Industrial Fuel Use Act of 1978, which prohibits the use of natural gas or petroleum as the primary fuel source in new electric utility powerplants and in new major industrial facilities. It further permits the Secretary of Energy to prohibit the use of natural gas or petroleum in any existing major fuel-burning installation.

The Powerplant and Industrial Fuel Use Act was passed at a time when this country was experiencing shortages of natural gas. Residential consumers, schools, and others were faced with curtailments of natural gas supplies. Concerned about maintaining adequate supplies of natural gas for homes and schools and decreasing our dependence on imports of petroleum, Congress responded to that time of crisis by enacting this law.

Today, this law is no longer needed. In fact, it is my belief that it has contributed to the increased costs to consumers of natural gas supplies. Consumers not only bear the cost of an industrial facility's conversion to an alternate fuel, but also the increased transportation costs to the pipeline when its industrial users reduce or eliminate their natural gas take. Residential and industrial consumers are concerned about these increased costs and the governmental regulations that have created this distorted natural gas market. I share these concerns, and I urge my colleagues on the Senate Energy and Natural Resources Committee to act to end these needless prohibitions on the use of natural gas.●

CONGRESSIONAL VIGIL FOR SOVIET JEWS

● Mr. NICKLES. Mr. President, as part of the congressional vigil for Soviet Jews, I would like to bring to the attention of my colleagues the oppressed condition of many Jews in the Soviet Union and of those who have intervened on their behalf. Two such men are Yuri Federov and Alexei Murzhenko who have been imprisoned in the Perm labor camp since 1970 because of their attempts to fly an airplane to Israel. Thirteen years have passed since these men went to prison for this offense. It is difficult for us as U.S. citizens to fully understand the plight of those being denied the right to emigrate and being imprisoned by the Government of the Soviet Union with seemingly no hope of freedom.

Both Yuri Federov and Alexei Murzhenko are suffering from serious illnesses and are being denied proper medical treatment. They have a remaining 2 to 3 years to serve in the labor camp. Naturally, their families fear that these men will not survive their sentences in the Perm labor camp unless they receive immediate attention.

We who live in a country of freedom and opportunity must do all that we can to insure freedom and opportunity for the oppressed. Mr. President, I am sure all the Members will join me in urging the Soviet authorities to release Yuri Federov and Alexei Murzhenko, as well as the many others they are holding as prisoners. I believe it is time for them to be allowed to go home.●

THE RETIREMENT OF CHARLES M. COPLEY, JR.

● Mr. DANFORTH. Mr. President, the retirement of Charles M. Copley, Jr., as commissioner of the St. Louis City Air Pollution Control Section is a milestone for him and for the city he has served so well.

Mr. Copley's important contributions to the improvement of air quality in St. Louis have been recognized nationally and internationally. There remains a big job to do, but the air quality in St. Louis today is vastly improved from the "Black Tuesday" levels of years past. Mr. Copley has had a great deal to do with the improvement.

It is a privilege to recognize the professionalism and dedication of Mr. Copley to the cause of cleaner air. Because of his work over so many years, hundreds of thousands of St. Louisans can breathe easier.●

DECADE OF THE DISABLED

● Mr. STAFFORD. Mr. President, the U.N. General Assembly has declared 1983-92 as the U.N. Decade of Disabled Persons. In conjunction with this international decade, I join my distinguished colleagues in supporting the Senate Concurrent Resolution (S. Con. Res. 22) on the U.S. Decade of the Disabled.

This resolution will reinforce our commitment to this Nation's 35 million disabled individuals by emphasizing, for example, the need for improved access to housing, buildings, and transportation; enhancing the opportunities for employment and to increase the application of technology to ameliorate the effects of disabling conditions.●

ETHIOPIAN FAMINE

● Mr. KENNEDY. Mr. President, over a decade ago a famine swept across Ethiopia, claiming the lives of hundreds of thousands of men, women, and children. At that time, the government of Emperor Haile Selassie attempted to ignore the crisis and to suppress reports about it.

Today, another famine has struck Ethiopia. And once again the Government of Ethiopia—a Marxist regime—is failing to respond adequately, refusing to seek emergency assistance from all quarters, including the United States.

As the RECORD will show, Mr. President, I spoke out strongly in 1973 against the callous policies of the Selassie government. And today we should be no less reticent to express deep alarm over the policies of the government of Col. Mengistu Haile Mariam.

The regrettable difference, however, is in the response and policies of the U.S. Government when clear information on famine conditions has come to our attention.

In 1973 we reacted strongly and positively, and we responded to the appeals of international and voluntary agencies.

Today, this administration is silent. No serious offer of emergency humanitarian assistance has been made, even though the evidence of mass famine has been known for many weeks. And only token response has come to the pleas of the church agencies and others working in northeast Ethiopia.

Mr. President, this is a silence that speaks loudly of a humanitarian policy that is cruelly selective—that picks and chooses between starving men, women, and children. It is a silence that is contrary to every humanitarian principle for which this Nation has stood. And it is a silence that turns our back on our proud history of responding to famine emergencies—no matter on what side of a border or on what side of an ideological line they occur.

My office some weeks ago learned of the urgent appeals of voluntary and international agencies for assistance to avert mass famine in Ethiopia. We have waited for more than a token response—for a serious commitment to join in an international effort to deal with the escalating human crisis in Ethiopia.

I believe it is long past due for us to do what our country has always done throughout our history, and that is to help starving people wherever and whenever we can.

Mr. President, I ask that two important press dispatches from the field, prepared by Jay Ross of the Washington Post, as well as an editorial from today's edition, be printed in the RECORD.

They speak for themselves, and I hope they also speak to those in this administration who have the power to offer America's helping hand to people in Ethiopia—as we did a decade ago.

The material follows:

[From the Washington Post, June 26, 1983]

FAMINE, WAR THREATEN THOUSANDS IN ETHIOPIA

(By Jay Ross)

ADDIS ABABA, ETHIOPIA.—Tens of thousands of Ethiopians, mostly women and children, are threatened with starvation in the next few months in a famine that could become one of the most catastrophic in African history.

Despite urgent appeals for international assistance while there is still time to save thousands of lives, the United States, the world's largest source of surplus food, has virtually turned its back on the potential disaster.

About 50 to 100 children are already dying daily, according to Trevor Page, a United Nations World Food Program official who recently toured areas of northern Ethiopia where the government and relief agencies say 3 million people are affected by drought and 1 million are in dire need.

Most relief officials think that the death toll is likely to increase sharply until the next harvest in November unless foreign donors provide emergency food supplies and massive assistance in transportation to bring food to isolated areas.

Some say the toll could approach the 200,000 who died in the same area a decade ago in Africa's worst famine. Unlike that drought, which Emperor Haile Selassie's government tried to hide, this time Ethiopia's military government has provided ample warning and has sought to organize international aid. These efforts can prevent a major disaster if assistance is provided, officials say.

The relief effort, however, has been made much more difficult by wars that have engulfed Eritrea and Tigray provinces and have spilled over into the other two drought-affected provinces in the north, Gondar and Welo.

Several guerrilla groups have been fighting the central government for the independence of Eritrea for 22 years in Africa's longest war. In Tigray, the region hit hardest by drought, the Tigray People's Liberation Front guerrilla organization claims to have captured most of the countryside in its struggle for autonomy. The Ethiopian government denies the claim.

The intermingling of famine and war has made the Ethiopian drought a classic example on both the domestic and international level of the politics of starvation.

With the government and the guerrillas jockeying for international aid, the Tigray Front has charged Ethiopia with diverting food assistance from the needy—charges that Ethiopia and international aid organizations have strongly denied.

Meanwhile, the United States has virtually bowed out of its customary role of providing humanitarian relief to the starving because of Ethiopia's close ties to the Soviet Union.

This series will examine the politics of starvation and its impact on millions of people in a country where hunger is a permanent fact of life, the only difference being whether scores die or tens of thousands, depending on the vicissitudes of nature.

Relief officials interviewed in Washington, London, Rome, Ethiopia and elsewhere in Africa say the Reagan administration is putting politics ahead of humanitarian considerations.

Ethiopia, the closest ally of the United States in black Africa until a Marxist revolution overthrew Haile Selassie in 1974, is now a firm friend of the Soviet Union, its arms supplier, and host to about 12,000 Cuban troops. The military government in the East African nation is sharply critical of the United States, professes a common ideology with the Soviet Union and shares another Soviet trait—an inability to feed its people without importing food.

A western diplomat said it was clear that the United States was not going to provide major assistance unless others fail to do so.

"There is not much inclination [for the United States] to feed Ethiopians while the Russians arm the country and direct it against the United States," he said.

Most of the emergency food aid has been provided by the U.N. World Food Program, the European Community and individual European nations.

"European countries are quite prepared to differentiate between economic aid needs and humanitarian needs of starving people," another western diplomat said.

In general, that has also been the policy of the United States. The diplomat noted the long-standing tradition of such American humanitarian assistance given despite political considerations, recalling that in the 1920s, under conservative Republican leadership, the U.S. government organized a massive relief effort to overcome a famine in the Soviet Union even while Washington refused to recognize the new Communist government.

Some western donors have pointed out to Ethiopian officials that their Soviet Bloc allies give them very little food assistance.

"You can't give what you don't have," said Shimelis Adugna, until recently the head of the Ethiopian Relief and Rehabilitation Commission.

The Soviet Union, a major food importer, recently pledged to give Ethiopia 9,500 metric tons of rice because of the crisis, almost twice the U.S. total of about 5,500 tons. The current U.S. allocation includes about 4,000 tons distributed through Catholic Relief Services in an annual program that is being eliminated and 1,500 tons of emergency supplies. The most visible aid was the airlift this month requested by the World Food Program of almost 100 tons of instant corn soya milk, used in feeding undernourished children.

[An Agency for International Development spokesman in Washington rejected the criticisms of the U.S. response to the famine in Ethiopia. Besides the responses to Catholic Relief Services and the World Food Program, he said the United States is providing food aid to the refugees who are moving from the area into Sudan. Ethiopia

is "fairly well taken care of with all the other donors," he said, in reference to European and other international programs.]

Shimelis, who worked closely with U.S. officials in setting up an early warning system to prevent famine after the 1973-74 drought, called the U.S. assistance "insignificant" for such a major donor nation.

"To help Ethiopia establish the early warning system and then do nothing about the warnings is illogical, to say the least," he said.

So politically charged is the issue that American Embassy officials refuse to speak for attribution about the U.S. policy except to hand out a release that outlines the limited emergency assistance and says the government "is continuing to monitor the situation."

Most of the U.S. assistance will be provided through Catholic Relief Services, which made the emergency request last December. It took five months for the U.S. government to approve the emergency aid.

Not mentioned in the U.S. Embassy press release is the fact that while the seriousness of the famine was becoming apparent early this year, the Reagan administration cut out of the fiscal 1984 budget an annual relief appropriation of $2 million to $3 million that had been channeled through the Catholic organization for the past several years.

"In the past the U.S. policy has been to give more to favorable countries but not to cut out food aid at times of famine," said the Rev. Thomas Fitzpatrick, Catholic Relief Services director in Ethiopia. "This is the first time our program has been cut out for political reasons, but we are not accepting that the program will remain cut.

"The fact that the program is not in the budget means somebody made a decision against Ethiopia," Fitzpatrick added.

More than 70 members of Congress have asked the Agency for International Development to restore the cut funds and also to respond favorably to a United Nations appeal for $35 million worth of food, transportation, shelter and medicine. So far, AID has not reacted.

A U.S. aid official in Africa pointed out that Ethiopia is the only country among the 39 on the continent receiving U.S. food grants to be deleted from the program.

"It sticks out like a sore thumb," he said as he looked at the list of recipients. "It has almost always been the policy that Title II food aid in emergency situations is apolitical." Under Title II, the United States pays all costs of food aid, including transportation.

The only exception he could think of happened two years ago when the Reagan administration cut off food grants to Mozambique for six months after the government expelled U.S. diplomats and their spouses, accusing them of being CIA agents. Ironically, Mozambique is the number one recipient of direct U.S. food aid under the Title II program this year.

The aid official also pointed out that Title II aid to Africa has been cut sharply from $85 million in 1982 to a proposed $71 million in fiscal 1984, despite widespread drought on the continent and significant increases in transportation costs.

Ethiopia, however, does not make it easy for Washington to give aid. Col. Mengistu Haile Mariam, the country's military ruler, routinely attacks the United States in the harshest terms.

Last September, Mengistu called the United States "arrogant" accused it of using "mercenary proxies in economic sabotage" and said Washington was "arming bandit gangs to pollute peace." In contrast, he said, the Soviet Union "earnestly stands for peace."

Those kinds of remarks and Ethiopia's anti-American votes at the United Nations have particularly irked Jeane J. Kirkpatrick, U.S. ambassador to the world organization.

In addition, the Ethiopian military government has a poor record in the human rights field, coming under criticism in the State Department annual report and from Amnesty International. Many opponents of the government have been imprisoned for years without trial, and thousands were killed in a bloody campaign of suppression in the late 1970s.

"No one in the U.S. government wants to do anything" about the Ethiopian famine, a Washington source said. "They just want the problem to go away because they don't see any political benefits and they don't want to antagonize the lady in New York."

Kirkpatrick, he added, has had "a chilling effect" on U.S. humanitarian policies.

Maj. Dawit Wolde Giorgis, the new director of the Ethiopian Relief and Rehabilitation Commission, made a plea for U.S. help but acknowledged in an interview that help was unlikely to be forthcoming.

"U.S. transportation assistance would save many lives," he said, calling the lack of serviceable vehicles the most serious problem.

There is currently enough grain in the country to feed the drought-stricken people in the north. This is so because the government has released marketed stocks needed later in the year in urban areas. Those stocks are to be replaced by similar amounts of international relief supplies when they arrive.

Supplies in the distribution areas, however, are insufficient because of lack of vehicles and poor roads. Relief officials say the transportation problem is urgent: if the rainy season starts on schedule before the end of the month, it will make distribution all the more difficult for the limited trucks available.

The U.N. Disaster Relief Office has issued an appeal for 100,000 tons of food, 140 trucks and about 75 trailers, which would cost about $35 million. It also called for an airlift, if three planes capable of landing and taking off on short dirt airstrips can be provided.

So far no nation has provided transportation, although the European Community has pledged $500,000 worth of vital spare parts, some to be airlifted, to get disabled vehicles back on the road. The relief commission has almost 300 vehicles to cover a country twice the size of France, but only about 170 are operational.

Ethiopia, Africa's second most populous country with more than 40 million people, "has less roads per square miles than any other African country," a western diplomat said.

About 60 percent of the U.N. appeal for food has already been pledged or sent, a U.N. official in Geneva said in a telephone interview.

"It is disappointing to have the grain and no way to transport it," said Dawit, the Ethiopian relief official, who has a law degree from Columbia University in New York.

Although he was critical of U.S. policy toward Ethiopia, he said the government appreciated a recent U.S. allocation of $900,000 to assist in resettling Ethiopian refugees returning from Somalia, Sudan and Djibouti.

He concluded the interview by saying, "Get us something from the United States."

"Undoubtedly, if the United States pulled out all the stops the effect would be massive because you have the transport, you have the supplies," the European diplomat said.

That will certainly not happen, however, since it would probably go beyond the definition of humanitarian aid. U.S. assistance to the country is legally limited to the humanitarian field because Ethiopia has not compensated American companies that it nationalized in the 1970s.

Page, the World Food Program official heading the relief effort, was philosophical about the U.S. attitude.

"The U.S. has taken the approach that it doesn't like the Ethiopian government so let some other countries bail out Ethiopia. So, if the U.S. doesn't want to bail them out, that's its business. There are other sources for food," he said in Rome.

The possibility that the Reagan administration was using food for ideological purposes was another matter.

"People who are in need of food don't care about Marxism or capitalism," Page said. "They just have empty bellies that need to be filled."

Martin Mock, a World Food Program official in Ethiopia said, "You cannot just close your eyes. If you think, 'Let them die because they are socialists,' then you should say that, or you should do something."

Ethiopia's Marxist line or even its close ties to the Soviet Union, however, are probably not reason enough by themselves for the U.S. reluctance to assist.

Marxist Mozambique has a friendship treaty with the Soviet Union but in this fiscal year Maputo has already received 43,500 tons of free food from the United States valued at almost $10 million, that is, almost twice the amount originally allocated. The southern African country is also in the throes of a serious drought but without the life-threatening dimensions of the drought here.

Mozambique is bound to get more help since the administration announced earlier this month that $25 million in emergency food aid would be made available to 10 southern African nations even while it maintained silence on the pleas to assist Ethiopia.

The Reagan administration is seeking to use the good offices of Mozambican President Samora Machel in its attempt to negotiate the independence of South African-controlled Namibia.

The politics with Ethiopia, however, are all negative. Ethiopia has Cuban troops, provides port facilities for the Soviet Navy and has an alliance with Libya's Col. Muammar Qaddafi, all black marks in the Reagan administration's book.

Ethiopia has paid for its strident anti-American policy. Under Haile Selassie it was one of the leading recipients of western aid. Now it receives about $250 million a year, only $6 per capita, the least amount of any developing country.

Meanwhile, the future of tens of thousands of starving people depends on international aid.

Until the next harvest in November, "there is no possibility of improvement in the food situation without international assistance," said Kokebie Asres, head of early warning and planning services in the Relief and Rehabilitation Commission.

"Warnings were issued in September, October and March, each one a little more frightening," he said. "But as I open my report on responses for the last nine months, I must say it is not very encouraging."

ETHIOPIAN FAMINE CLAIMS CHILDREN FIRST

(By Jay Ross)

ZWI HAMUSIT, ETHIOPIA.—By the time you read this article, Bezuayhe Tesema, a 2-year-old wisp of skin and bones, is certainly dead.

When I saw her at the Zwi Hamusit "shelter" late last month, Bezuayhe weighed less than 9½ pounds and was only 24 inches long. The average healthy American baby usually reaches that weight a month or two after birth and would be three times her weight by age 2.

Suffering from pneumonia, often one of the harbingers of death in childhood malnutrition, Bezuayhe had lost more than 10 ounces since her last weighing two months before. Her tiny ribs protruded against her shriveled skin; her arms were like toothpicks. Flies covered her eyes and almost as much of Bezuayhe's body as her ragged clothes. They also crawled in the cup of milk she was too weak to drink, despite her mother's pleading efforts.

Nutritionist Birtukan Metefiria, of the World Vision International relief team, made it clear that life was slipping away.

Bezuayhe was simply one of the worst cases of malnutrition I saw during a four-day tour of several relief centers here in northern Ethiopia, where tens of thousands of people, mainly women and children, face starvation in one of Africa's worst famines.

She was one of 84 severely malnourished children at the makeshift camp receiving "intensive" feeding in an effort to keep them alive, according to Deneke Wayu, a health assistant for World Vision, a voluntary relief organization headquartered in Monrovia, Calif.

Another 384 children were receiving "supplementary" feeding for a less critical state of malnutrition. Children are put on the intensive feeding program if the circumference of their arms is five inches or less.

Most of the children under 5 in the camp were classified as malnourished, meaning their height and weight are less than 80 percent of the norm.

The situation here at Zwi Hamusit could well be a forerunner of widespread starvation unless massive international food and transportation assistance are provided soon. So far, the food-rich countries of the world have been slow in reacting to repeated Ethiopian warnings that a disaster could be in the offing.

The United States government, despite a tradition of humanitarian aid without political considerations, has virtually turned its back on the starving Ethiopians beccause of their government's strong ties to the Soviet Union.

Ethiopia, although making efforts to organize drought relief, has been slow in arranging transportation and sometimes inefficient in providing available food to the hungry.

If governments continue to hesitate or debate the merits of assistance, however, it seems certain that tens of thousands of Ethiopian children will not live until the next harvest in November. The crisis period is expected to be in October, when people will need more energy to start bringing in the food.

Some starvation is common in Ethiopia, where pockets of famine are an enduring part of life even in years of fair harvests. However, poor rains for two years followed by a disastrous 60 percent decline in precipitation in many of the northern areas last year have made the situation critical.

In a society that normally lives on the margin, drought can push it over the edge.

The burial ground at Zwi Hamusit shows part of the toll so far. Each grave on the hillside is marked by a small pile of stones. The piles are very close together, indicating that most of the deaths have been infants or young children. Tegegne Wobet, a resident of the camp, said about 150 children had been buried there in the past two months.

The reasons for the toll were easy to discern following a walk around the camp, which is 52 miles from the provincial capital of Gonder but almost a full day's trip by four-wheel-drive vehicle.

The dusty, parched camp was set up by the Ethiopian Relief and Rehabilitation Commission with the assistance of World Vision, but it was closed this month because of a guerrilla attack and lack of adequate water resources and supply routes. On an almost treeless plain at 6,500 feet altitude, the camp was one of only two shelters where people living too far from food distribution points were able to settle and receive regular relief supplies.

Many families split up, with some staying at the shelters and others remaining in their highlands villages, so there would be fewer people sharing the meager supplies. What happens to the children left behind, Deneke, the World Vision health assistant, was asked.

"Nobody know," he responded glumly.

Last month more than 2,000 people were living in Zwi Hamusit in primitive squalor, with a few sticks shaped as a hut for shelter, no sanitary facilities, limited water and little food, because the only means of supply, a Twin Otter turboprop plane owned by World Vision, was grounded awaiting spare parts from Canada.

Because food was running out, each person was limited to one cup of grain a day. Too little to grind, it was simply roasted, a method that makes it almost indigestible for undernourished children.

Although he minimizes the possibility of mass deaths, Maj. Dawit Wolde Giorgis, the head of the Ethiopian Relief and Rehabilitation Commission, said he fears that unless international assistance for the transportation problems is provided soon, thousands of people will stream out of the mountains seeking food. "It will take years to rehabilitate them," he said.

With the expected onset of the rains by the end of the month, there were fears that the camps would become centers of epidemics. People were deemed to be better off remaining in their villages and walking out several days once a month to get food at distribution centers, if it can be provided.

After two days of unseasonable rain last month, measles and dysentery swept the shelter at Zwi Hamusit and 10 children died in a week. Seven partially dug wells were destroyed.

The only remaining shelter is at Ibnet, south of Zwi Hamusit, and most of the 5,000 population there last month also has returned to the bush, leaving only about 800 residents.

Although the two sites are 50 miles apart, it takes three hours to drive the distance in a four-wheel-drive vehicle.

They are separated by the Balesa Mountains, whose eerie shapes could be right out of a Hollywood western if it were not for the abject poverty of the people.

The name has a touch of irony: In Amharic, the main language of Ethiopia, *balesa* is a special word for the apple tree in the Garden of Eden. It is hard to imagine any place further removed from paradise than Zwi Hamusit and Ibnet.

A report by Dr. Paul Shears, of the British relief organization Oxfam, outlined the deterioration in nutrition among children at Ibnet between March and May. By May, 12 percent of the children were severely malnourished and 33 percent were moderately malnourished. The corresponding figures in a March survey had been 3 percent and 20 percent.

Shears said the cause of the deterioration was simple: regardless of size, families were given 25 kilograms, or 55 pounds, of grain a month because, without scales, it was easier to divide a 100-kilogram sack into four parts rather than provide each person with the recommended 15 kilos that results in a 1,750-calorie standard daily subsistence diet. A family of four receiving 55 pounds a month would only be getting 750 calories a day per person.

"The situation has deteriorated because of a lack of objective assessment or planning and of relatively inexperienced staff at the field level," Shears said in his report.

It is apparent that the badly stretched Relief and Rehabilitation Commission does not have enough trained personnel in the field to cope.

The director of the Ibnet center is a man of 22 who was equipped with reams of statistics but seemed oblivious to the fact that many people had been waiting three days for food distribution. Grain was stored in the open, subject to rot with the oncoming rains, while bags of Soviet cement dated 1971 were kept in a warehouse.

"What they give us is not enough," one recipient with a family of seven said.

Those arriving at the shelter often said they had to sell their oxen and eat their seeds to survive—thus compounding the disaster for the next season. If they did not sell their cattle, however, the animals would die for lack of grazing before the next rains.

So far, the government has not managed to get seeds and implements to many of the people in advance of the planting season next month.

A man waiting for food distribution said it takes "two days for the strong, three days for the weak" to walk from his village to Ibnet. About two more days will have to be added after the rains because people will no longer be able to ford the rivers.

At the current pace of distribution it will take half a month of walking and waiting for people to get a month's food supply.

The U.N. Disaster Relief Office has appealed for trucks and the use of aircraft capable of landing and taking off on short airstrips to speed distribution. So far, however, there has been no response to the appeals for transportation assistance.

"The only thing to do is to get people out of the camps, because if they stay, they will die," said nurse Vivian Walden of Danish Church Aid before the number of people at Ibnet was reduced to the more manageable total of 800.

Walden said 26 of the 115 children in the intensive feeding center had died. Asked how many had died outside the center, she said, "I don't know but certainly more. We live near a church and there are funerals

every day. I've stopped counting." Children are most endangered because they are the weakest, Walden said. Often the most at risk is the second youngest child in a family, since he or she is no longer being breast-fed.

Under current conditions at the camp, Walden said, "Each family will lose one or two children."

Children in supplementary feeding programs receive *fafa*, a mixture of grain, milk, vitamins and minerals intended to be eaten as porridge. But families are so short of grain that they often use the *fafa* to make the pancake, called *injera*, that is the staple of the Ethiopian diet.

In that form it is difficult for malnourished children to digest and impossible for infants to get enough calories. In addition, it means the child's ration is being shared with adults.

In front of a typical hut, a woman was cooking five *fafa* pancakes over her dung-fueled fire to feed her family of seven for the entire day. She said they never had meat. A sauce to eat with the *injera* was being prepared with "burberrie," a hot-spice, that she had bought in exchange for some grain.

The people were lucky in one sense since water was trucked in from a nearby river. Often village women spend half the day walking to get water. But there was only enough for one to two gallons a day per person, far less than recommended subsistence level in refugee camps.

In Africa, it is rare to hear infants cry because of the attention they get from their mothers, but in Ibnet the sound of wailing, hungry children could be heard everywhere.

Twenty-five miles to the northeast in the village of Quallisa, people were much healthier, according to Anne O'Mahony, a nurse for the Irish relief agency Concern.

By staying in their village they have maintained their independence and thus do not have the defeated looks of those in Ibnet, she said. The people have terraced many of the fields to prevent erosion under a government-run food-for-work program in which they get 6.6 pounds of food for each day worked.

Everywhere in Gondar province, there are plowed, terraced but bone-dry fields awaiting the rains for planting, a testament to humanity's eternal hope that next year will be better.

There are three distribution centers for food north of Gonder, the provincial capital.

At Amba Giyorgis, 25 miles from Gonder, Abahoy Aduna and his two children would wait three days for their 88 pounds of food to take back to his wife and two other children, a two-day walk away.

The need to get food overrides development plans, so Abahoy was missing his literacy classes and his children were absent from the school, only recently provided.

Asked about his possessions, he shrugged and answered that he had no food, no seeds, no oxen, no money and no clothes but the ragged shirt and pants he was wearing. He pointed proudly, however, to a scarf his daughter had made.

Farther north in Debark, Aselef Fanta hoisted a 55-pound sack of grain onto her back and started to set off on a four-day trek into the mountains to bring food to her three children.

She said she was 50 but, shriveled and dressed in rags, she looked at least 70 as she bent under the weight of the sack. She was wearing one rope sandal; the other foot was bare.

She had left her three teen-age children behind in school.

"It is easy for me to bring the food because I am old and do not go to school," she said through a translator.

Her walk would be particularly arduous because she had to skirt the nearby 15,150-foot Mount Rasdajan, Africa's third highest mountain.

For the past two years her crops dried up because of the drought. She said she survives by making clothes and exchanging them for food.

As bad as the current drought is, she said it does not compare with one in 1966 and 1967.

"That was unforgettable. Many people died," she said.

That was a famine the world never heard about.

TRANSPORT DIFFICULTIES STYMIE FOOD DELIVERY IN ETHIOPIA

(By Jay Ross)

GONDER, ETHIOPIA.—The difference between surviving or dying in this year's Ethiopian famine could well depend upon how close a peasant lives to transportation routes and distribution points.

Hugh Goyder, the British Oxfam relief agency representative, described the famine as "an avoidable disaster" if enough food can be delivered to thousands of people isolated from the country's transportation system.

At present there is enough grain in the country, said Hussein Rahman of the United Nations World Food Program. The food offloading capacity of Ethiopia's two ports of Aseb and Mitsiwa is only 500 tons a day, meaning that it would take six months for the country to absorb the 90,000 tons requested by the U.N. Disaster Relief Office unless there is an expensive airlift.

The problem is to get the food to distribution centers near enough for people to travel to them and then return to their villages.

That task is formidable because of lack of transportation equipment and roads. Tens of thousands of those afflicted must walk for many days to get to a distribution center.

In one of the world's poorest countries, the Ethiopian Relief and Rehabilitation Commission faces the mind-boggling job of feeding more than a million widely scattered people.

A few numbers in Gondar administrative region, which is not the hardest hit of the four drought-affected northern provinces, paint a grim picture.

It is estimated that between 300,000 and 500,000 people in the province need food relief but only about 200,000 are being reached at nine distribution centers, according to Adenou Mumuye, the relief commission's director in Gonder.

Last month only six relief commission trucks were in operating condition to deliver food supplies, although some newly repaired vehicles are expected soon. Trailers, which would greatly increase each delivery, are not available. The commission says it needs 10 more heavy-duty trucks in the province.

Two months ago, a commission official said, more trucks were running but there was no food to deliver. Now there is a warehouse full of grain at Addis Zemen, southeast of Gonder and not enough vehicles to deliver it.

"Half a dozen mechanics and some spare parts could do wonders," Rahman said.

World Vision International of Monrovia, Calif., mounted an expensive airlift to the Zwi Hamusit shelter before it was closed. Up to 12 round-trip flights a day by a Twin Otter turboprop plane, costing $600 each, were sent to the camp carrying 1.9 metric tons of food each. The high-cost project, however, was of dubious value because plane breakdowns twice delayed deliveries for long periods. No substitute method of supply was available.

Sometimes a small expenditure can go a long way toward bringing food to thousands of people. Some privately owned vehicles are available in the province but lack of money for the commission and a frustrating government bureaucracy have stalled their use.

Then last month Oxfam appropriated about $11,500 to hire trucks that moved 500 tons of food into the distribution centers over a 10-day period.

That small outlay means that 28,000 people will received subsistence rations for one month, a move that could save many lives.

Similarly, rebuilding a 15-mile road from Nefas Mochas south to Arbagay would mean 25,000 more people could be reached, and another 50 miles of road to Moja to the southwest would feed another 50,000 people, the commission said.

The crude roads, which would only last for one rainy season, would be built by manual labor, employing thousands of peasants who would be paid in food. The commission, however, has not managed to organize the road projects yet.

We just need trucks, we need to get food and we need to get going," a frustrated international relief official said. "But I guess we will have to have a few more study missions before we get that message across."

[From the Washington Post, June 27, 1983]

HELP STARVING PEOPLE

Some 50 to 100 children are already dying daily in northern Ethiopia as the result of a famine that could become one of the worst in African history, Post correspondent Jay Ross reported from Addis Ababa yesterday. This staggering prospect is the product of factors familiar in Ethiopia and many other states in Africa and elsewhere in the Third World. The margin is very narrow in most of those countries. Things must go well for them just to subsist. If even one big thing goes wrong, the price is heavy. In Ethiopia, on top of the usual suspects—poverty, underdevelopment, drought—local wars and the policies of the Ethiopian government have combined to put the country on the brink of an immense catastrophe.

In the wars going on in Eritrea and Tigray provinces, food is a weapon of war. This is especially true of the Ethiopian regime, whose efforts to pry local populations out of their support for rebellion often seem to center on depriving them of food and the means of a normal existence, such as it is.

In the past, Ethiopia turned first to the United States for emergency food aid. But the repressive Marxist regime now in power has cast its lot with the Soviet Union and its clients, Cuba and Libya. These friends of Ethiopia choose to leave it pretty much on its own when it comes to food. Col. Mengistu Haile Mariam, the country's leader, cannot bring himself to interrupt even briefly his political attacks on the United States and to ask for relief for his suffering people. This task has been delegated to

relief officials in his government or assigned to the international relief agencies.

The United States has done relatively little to help Ethiopia meet its growing crisis. Essentially taking the view that the Ethiopian government has made its own choices, the Reagan administration suggests it is up to that government to exhaust all other sources of food aid, European and international, before making further requests of Washington.

We can understand the reason for the United States' giving first call on its available resources to friendlier governments. And there is an irony in the United States' being expected to show more compassion for starving Ethiopians than their own government shows. But it's not as if we were running out of the resources with which to help those desolate people. And surely there is something beyond irony at stake here: there is something desperately wrong when the United States does less than it could to help keep a dying population alive. This country could be especially useful if it were to provide trucks or aircraft to distribute supplies inside Ethiopia, and it could certainly send more food. Whatever the politics, the moral choice is not complicated at all—this country must help the starving Ethiopians and help them now.●

HONORING DOMINIC JACOBETTI

● Mr. LEVIN. Mr. President, the Upper Peninsula of Michigan has been represented by a long line of superb leaders. In recent years, State Representative Dominic Jacobetti has continued that tradition. "The Godfather," as he is known to many, has served his area, and indeed the entire State, for almost 30 years. As chairman of the house appropriations committee in the State legislature, he has never failed to bring home the bacon to his constitutents and support economic development efforts in the region.

On Saturday, June 25, the Upper Peninsula Commission for Area Progress recognized Representative Jacobetti's accomplishments by making him the Upper Peninsula Person of the Year. It is a well-deserved honor. A recent editorial in the Ironwood Daily Globe summarizes his many accomplishments, and I include it at this point in my remarks. I ask it be printed in the RECORD.

The editorial follows:

[From the Ironwood Daily Globe]

"THE GODFATHER" RECEIVES DESERVED HONOR

The Upper Peninsula has contributed many outstanding leaders to the Michigan Legislature through the years. One of them is Rep. Dominic Jacobetti, chairman of the powerful House Appropriations committee.

Jacobetti, the longest serving member of the present Legislature, will receive the well-deserved acclaim of an appreciative region later this month in his hometown of Negaunes. He has been named the Upper Peninsula Person of the Year by the Upper Peninsula Commission for Area Progress.

Jacobetti's service to the U.P. sounds like the record of a renaissance man.

First elected to the state house in 1954, Jacobetti has served on the appropriations committee for 14 years and has been chairman since 1975.

As chairman, Jacobetti oversees the multibillion dollar state budget, including revenue, expenditures and program implementation. In addition, Jacobetti serves as chairman of the governing board of the House Fiscal Agency.

He knows the political arts as few other legislators. He understands the levers of power and has the energy to use them. His knowledge of pending legislation is monumental, and he always knows exactly where he stands and precisely why.

Jacobetti has been legislatively and personally involved in a wide range of issues aimed at benefitting the region and our entire state.

He's been controversial and at times dictatorial. Yet his unflagging commitment to the betterment of the U.P. has been influential in unifying the at-times refactory U.P. region.

Jacobetti has an uncanny perception of the diverse needs of the region and can be expected to bring clear vision of what state government must do now and in the future to contine to efficiently and effectively serve the people.

He seems to do the right thing, to say the right thing, before most lawmakers had even thought about the issue, let alone come to a conclusion.

The tribute is well deserved.●

SCHOOL AGE CHILD CARE BILL

● Mr. CHILES. Mr. President, I am glad to be a cosponsor of the school-age child care bill, S. 1531. This legislation seeks to address an issue that is of growing concern to American families: The issue of child care for the school age children of working parents.

There are at least 13 million children age 13 and under whose mothers are employed full time. By 1990, it is expected that 60 percent of school-age children will have mothers in the labor force. The children of working parents require care and adult supervision during the after school hours before their parents return home from work. Unfortunately, our Nation's existing child care resources are not nearly sufficient to meet the needs of these children. For many families, there are few good, affordable child care options. Many have only been able to arrange inadequate, makeshift care for their school-age children. Some children have only the irregular care of a relative or sitter. Others are under the supervision of older siblings. Over 1.8 million are known to be latchkey children who care for themselves without any supervision. The actual number of latchkey children is thought to be much greater.

The economic realities of today, which dictate that all the adults in a family must work full time, place a great strain upon children who come home to an empty house every afternoon and upon parents who feel uneasy about their child-care arrangements. The Senate Children's Caucus recently held a policy forum on the issue of latchkey children where children talked about the fear and boredom they experience when they are at home alone. Rather than acquiring a sense of independence, children who must care for themselves, or for younger children, may feel overwhelmed by their responsibilities if those responsibilities come too early. Their anxiety is not unfounded. Many children who are unsupervised do find themselves in dangerous or emergency situations. In Newark, N.J., one in six calls received by the fire department involve children at home alone.

Fortunately, the children who spoke before the children's caucus are no longer latchkey kids. They are now involved in after school programs located at their schools. Programs are beginning to appear all over the country which strive to provide quality, inexpensive care for school-age children. Some are sponsored by schools themselves, others by nonprofit organizations that take advantage of school facilities. In after school programs, children are able to play safely with other children under adult supervision. They are able to receive extra help with their studies, lessons, and other learning opportunities they might otherwise miss as the children of working parents. Parents are given the security of knowing that their children are well cared for and safe.

The school-age child care bill would encourage the development of more after school programs by providing $15 million in Federal grants to public agencies and private nonprofit organizations involved in providing child care services in school facilities either before or after school hours. The bill would also establish a clearinghouse to provide information, training, and technical assistance to organizations involved in providing child care services for school-age children and those hoping to establish such programs.

The money that this Nation spends to improve the environment and education of children is well spent. Today's children will literally determine our country's future. The money we spend today in assuring that the needs of children are met will yield an enormous return as those children reach adulthood.

I commend S. 1531 to my colleagues as a bill which will answer a growing need of our Nation's children.●

FOR DEMOCRACY AND HUMAN RIGHTS IN URUGUAY

● Mr. KENNEDY. Mr. President, today marks the 10th anniversary of the coup d'etat in Uruguay—10 years of military rule, 10 years of human rights abuses, 10 years of press closures and harassments, and for tens of thousands of Uruguayan citizens, the

beginning of years of exile from their homeland.

Despite some recent events in Uruguay which appear to point toward the restoration of democracy in that country, I remain deeply concerned with continued abuses of human rights and the serious harrassment of Uruguayan writers, journalists, and editors.

Last April the Committee to Protect Journalists and the PEN American Center sent a delegation to Uruguay to investigate the situation facing journalists in that country. Their report, portions of which I submit for the RECORD at the conclusion of my remarks, gives disturbing testimony that the tentative move toward democracy in Uruguay has not been accompanied by a corresponding relaxation of restrictions on freedom of the press. Indeed, since the announced "transition to democracy" more than 2 years ago, the regime in Uruguay has taken over 35 punitive actions against the press. These actions range from the arbitrary closing of newspapers to the harrassment and detention of writers, journalists, and editors.

As the report convincingly details, many opposition papers have been temporarily closed for periods of 2 to 6 months. La Democracia, a weekly newspaper with ties to the opposition National Party, has alone been shut down five times since its first publication in June 1981. Though some topics forbidden in the past can now be discussed, it is still a criminal offense in Uruguay to criticize any aspect of the Government or any action by military personnel. Papers can be penalized for publishing information about Government policies, police practices, health programs, prison conditions, or social problems, and though there is no prior censorship, the ambiguity of measures related to publications and the threat of closings and detentions encourage severe self-censorship. Such restrictions have a chilling effect on free expression and represent a deplorable limitation of freedom of the press. This is in sharp contrast to the long tradition of press freedom that was so much a part of Uruguay's democratic history—and is particularly disturbing in light of the upcoming general election scheduled for 1984. Freedom of expression and its reflection in a free and open press are essential to achieving the return to democracy so clearly called for by the people of Uruguay in the 1980 plebiscite.

Repression in Uruguay does not stop at temporary closings and shutdowns of the press. Currently there are 1,000 political prisoners in Uruguay who, according to the International Committee of the Red Cross, are held under inhumane and degrading conditions that are bringing about their physical and mental breakdown.

The people of Uruguay desire an immediate return to democracy. The delays, the timetables, the restrictions on the press, and the chilling effects of political classification systems have made a mockery of the return to democracy. The May demonstration—the largest in Uruguayan history, shows how strongly the Uruguayan people demand democracy.

I believe we must continue to speak out for the return of a true democratic government in Uruguay. We must speak out against the torture and the summary shutdowns of opposition papers. We must speak out against the oppression of trade unions. We must continue to denounce the antidemocratic character of the Government of Uruguay until these gross violations of human rights and civil liberties are brought to an end.

We must do all we can to insure that fundamental political and human rights are practiced in Uruguay. This anniversary should inspire us to support the struggle for freedom, democracy, and an immediate return to civilian, democratic rule in that country and throughout the world.

The report follows:

A REPORT BY THE COMMITTEE TO PROTECT JOURNALISTS AND THE PEN AMERICAN CENTER, URUGUAY: DOES DEMOCRACY INCLUDE FREEDOM OF THE PRESS

SUMMARY AND RECOMMENDATIONS

The transition to democracy in Uruguay has not freed the press from repression. While discussion is now allowed of some topics forbidden in the past, newspapers continue to be closed frequently, and journalists are still detained and harassed.

Uruguay's press remains fettered in various ways. Decrees make it a criminal offense to:

Refer to the military regime as a dictatorship;

Attack the morale of the military, an offense that includes criticism of any aspect of the government or any action by military personnel;

Provoke contempt for the nation or its authorities;

Divulge false notices that could cause public alarm, threaten order, or prejudice national economic interests or credit;

Apologize for wanted, tried or condemned persons when that implies an indirect apology for their crimes; and

Attack moral values and the sanctity of the home.

Penalties may result from the publication of information about, among other matters, government policies, police practices, prison conditions, health issues, security operations, the activities of the military, economic policies, proscribed political leaders, disappeared citizens, social problems, crime and suicide.

There is no prior censorship, but the ambiguity of measures related to publications and the threat of closings and detentions encourage severe self-censorship.

The government's sophisticated system for classifying citizens deemed a threat to the state chills sources and limits access to information.

The government can use economic levers against the press, partly because it places much of the advertising in the nation's daily newspapers.

Virtually all professional associations and unions of journalists are banned. Recent efforts to set up an independent press organization were severely repressed.

At least 15 journalists seized since the early 1960s remain in prison; two of these were jailed after the transition was announced. Several hundred journalists have fled into exile; some were among the more than 100 Uruguayans who were murdered or "disappeared" in Argentina.

Limited discussion occurred in the press during the campaign preceding the plebiscite for the military-sponsored constitution, but several newspapers were closed for overstepping boundaries that had been left undefined. In the two-and-a-half years since, there has been a rash of newspaper closings and detentions of journalists.

Transition plans include no provision for the liberalization of press laws or for the release of imprisoned journalists.

Therefore, it is the recommendation of the Committee to Project Journalists and PEN American Center that

The government of Uruguay should lift all restrictions on the press, restoring to it the rights and privileges enjoyed under Uruguay's democracy prior to 1967.

The government of Uruguay should grant freedom and amnesty to all imprisoned journalists and immediately lift sanctions on those journalists currently subject to other restrictions.

The government of Uruguay should grant the press access to government meetings, forums and debates, and the right to report fully on these activities.

The government of Uruguay should end the proscription of the newspaper guild and accord journalists the right to form professional organizations.

The government of Uruguay should assure that journalists have access to professional training based on the principle of democratic standards and ethics.

The U.S. government should encourage the restoration of a free press and vigorously oppose all forms of repression against journalists in Uruguay.

The U.S. government should step from behind its stated policy of "quiet diplomacy" and be consistent in its Latin American foreign policy so that it vigorously protests rights violations of press freedom and other human rights in one country as it does in another and thereby make clear its commitment to those democratic ideals that are the foundation for a well-informed, enfranchised citizenry.

RECENT GOVERNMENT ACTIONS AGAINST THE PRESS

The approach of a new decade, and the proposed return to civilian government, brought a promise of change. With the setting of a timetable for approving a new constitution and holding elections, it seemed that press restrictions would be loosened as well. The only opposition publication, La Plaza, founded in November 1979, was allowed to appear during the 1980 plebiscite campaign. Press debate on the constitutional plebiscite was allowed in the 29 days preceding the vote, but all of the big dailies supported the military's proposed constitution. Some smaller papers, however, were closed for overstepping undefined boundaries.

However, a government-authorized television and radio debate on the plebiscite raised hopes for renewed freedom. And

after the plebiscite, a liberal faction of the Colorado Party started Opinar. Other publications followed: Carreo de los Viernes, also representing the Colorado liberals; La Democracia, voice of the liberal wing of the Blanco Party; Opcion, speaking for the Christian Democrats; Busqueda, a conservative economic weekly; and El Dedo, a magazine of political satire. Some daily journalists became bolder in their questions and commentaries. The Socialists or other groups on the left, however, remained without a voice.

Enrique Tarigo, editor of Opinar, observed, "The government says that this is a period of transition and that they will gradually lift restrictions. We say that by now, half the time has passed, and they haven't lifted any of the restrictions on the press."

Most journalists believe that the government is continuing its harsh controls over the press in order to control and limit the "opening." Dailies must still present the names of new employees to the police. DINARP, the National Office of Public Relations, still calls jounalists with instructions about what to write and what to spike. Dozens of incidents of arbitrary harassment, threats and closings have occurred since the transition to democracy began.

Still, there have been some improvements. Luis Hierro, deputy editor of Opinar, said that "between 1973 and '78 or '79, the dailies could say practically nothing. Then the weeklies appeared. Now one says much more than three or four years ago—and yet today there are more closings than before."

The publications closed and harassed since 1980 include some of the best in the country. Many are political weeklies seeking to expand the margins of acceptable debate. A chronology of the more serious actions follows.

CHRONOLOGY

November 1980: Radio Carve barred from broadcasting news for 48 hours.

November 1980: Editor of La Nueva Idea, a daily, detained for more than six hours.

April 1981: Luis Antonio Hierro, deputy editor of Opinar, a weekly, jailed for 17 days.

April 1981: Opinar closed for four editions.

September 1981: La Democracia, a weekly, closed for four editions.

October 1981: La Democracia, a weekly, closed for eight editions.

October 1981: Opcion, a weekly, closed for four editions.

January 1982: La Democracia closed for eight editions.

March 1982: Ramon Diaz and Danilo Arbilla, editors of Busqueda, a weekly, detained for questioning.

April 1982: Opcion closed for eight editions.

May 1982: La Plaza, a monthly, closed for eight editions; later closed permanently and its editors placed on trial.

July 1982: La Democracia closed for 24 editions; two editors placed on trial.

July 1982: La Razon, a weekly, closed for eight editions; later permanently closed.

August 1982: Julio Sanguinetti and Walter Nessi, editors of Correo de los Viernes, a weekly, detained.

August 1982: New trial against editor of La Democracia.

September 1982: La Democracia editor Alberto Zumaran jailed for nine days and stripped of political rights.

September 1982: Accreditation of El Dia journalist assigned to cover the Council of State withdrawn.

October 1982: Opcion closed permanently.

January 1983: Police interrogate Opinar journalists.

January 1983: Busqueda closed for five editions.

January 1983: Official "suggestion" that reports by various publications on the unhealthy state of Montevideo beaches not be published.

February 1983: El Dia editor and journalist placed on trial after 14-hour police grilling.

February 1983: El Dedo, a monthly, closed permanently; editor placed on trial.

March 1983: Radio Carve threatened by court action.

March 1983: Lealtad, a monthly, closed permanently.

DETENTIONS

There are currently almost 1,000 political prisoners in Uruguay. Despite the "opening," no move has been made to lessen any of the sentence of the 15 journalists in prison. Furthermore, the military is firmly opposed to a future amnesty for political prisoners.

The delegation was not given permission to visit any prisoners.

The International Red Cross, after its 1980 prison visit, said the prisoners were held under inhumane and degrading conditions aimed at bringing about their physical and moral breakdown. Following unofficial release of the report, Red Cross visits were barred until April 1983 when representatives of the organization were admitted back in.

Amnesty International reports the common use of torture and psychological abuse of prisoners.

Prisoners' relatives told the delegation of continuing abusive treatment, including the restriction of all speech, frequent prolonged solitary confinement, torture and systematic prison cell "inspections," during which guards literally tear cells apart, destroying family pictures and the few possessions and food supplies prisoners have been allowed to receive from the outside. Bedding is often left wet and unusable.

Three immediate family members are allowed to visit twice a month for 45 minutes. No private conversations are allowed; a guard is present at all times, and conversations are recorded. Visitors talk by telephone to prisoners seated behind glass or converse through a screen. Children under 13 may visit once a month, alone, for 45 minutes. Families say no physical contact is allowed except with children under two.

The delegation requested information about the imprisoned journalists from Major Juan J. Sosa, director of the Central Office of Information about [Imprisoned] Persons. He discussed several of the cases and agreed to mail information about the others. He maintained that jailed journalists were imprisoned for criminal, not political, activities.

Released prisoners, prisoners' families and human rights groups, including Amnesty International, report that prisoners have great difficulty obtaining medical care, cannot discuss their cases with doctors, and are forced to take medication distributed by untrained prison authorities. Sosa, however, praised the medical treatment provided prisoners, saying that they were taken to the best military hospital.

Prisoners are allowed little reading material; everything is censored by authorities. Philosophy, economies, psychology, physics and social and political science are forbidden subjects. Prisoners are not allowed to speak or leave their cells except for a one-hour recreation period. Even these rights are arbitrarily and regularly cut off. All mail is censored and frequently withheld.

The imprisoned journalists are:

Jaime Daniel Aljanati Beneditto (mid-20s), a correspondent for Noticias Aliades, a socialist magazine. In 1981, he returned to Uruguay from Peru, where he was living in exile and working as a sociologist, and was charged with "meeting with groups to commit crimes" because he had with him some reports about economic and social conditions in Uruguay.

Elsa Altuna Fernadez (66), former president of the newspaper guild, was kidnapped in Buenos Aires in 1976, kept "disappeared" for two years and then officially arrested in Uruguay on charges that included "subversive association" and "conspiracy against the constitution."

Helvecio Bonelia Arias (60s), a member of the last board of directors of the newspaper guild, was imprisoned, released, then arrested again in 1981 for trying to organize a new journalists organization. He was charged with "subversive association" and "attacking the constitution."

Jose Ruben Bottaro Giordano (early 50s), a member of the board of the newspaper guild and a writer for various left-wing newspapers, was arrested in 1972 on eight charges including "conspiracy against the constitution" and "delinquent association".

Miguel Carvajales, a photographer and journalist, worked for several papers, including the daily Ya.

Hiber Conteris (49), a journalist and playwright, was correspondent and editor for Marcha and won numerous international writing awards. A former Methodist minister, he was arrested on his return to Uruguay following attendance at a Christian Peace Conference meeting in Czechoslovakia. He was severely tortured.

Ester Gerber (mid-60s) wrote mostly for women's magazines. The government says it has no record of her.

Sigifrido Guridi Rodriguez was a journalist for El Diario and La Mañana and was on the board of directors of the press association.

Rita Ibarburu de Suarez (66), editor of Nosotras, a women's magazine, and editing secretary of Estudios, a Communist Party publication, was arrested in 1975 for "subversive association." She has been severely tortured and suffered a heart attack in 1978 and a stroke in 1981, which left her partially paralyzed.

Francisco Laurenzo Pons (35), a cartoonist for Marcha, was first arrested in 1973 and, after severe torture, released. In 1976 he was denounced on radio and television as a wanted communist. He lived underground for two years, then was arrested in 1978 and charged with "subversive association." He suffers from general ill health and, since 1979, a recurrent kidney infection that causes him almost constant pain and fever.

Lazaro Carlos Maman Ganone (42), a movie and theater critic for a radio station, was arrested in 1973 on eight charges, including Subversive association" and "conspiracy."

Jose Jorge Martinez (late 40s), deputy editor of El Popular, professor of economics at the University of Montevideo and author of The Banking Web, a book about the relationship between North American and Uruguayan banks, was arrested in 1975 and accused of publishing clandestine newspapers opposed to the military government.

Margarita Michelini (mid-20s) worked with her father, former Senator Zelmar Michelini (later murdered in Buenos Aires), on Hechos, a magazine he published. When the magazine was closed in the last 1960s, she worked for several publications on the left.

Hermino Osorio, a member of the National College of Journalists, was imprisoned in 1977.

Jose Posamay, worked as a cartoonist and graphic designer for several publications.

THE ROLE OF THE UNITED STATES

The 1973 coup, coming in the wake of growing anti-American sentiment in the southern cone, did not seem to displease the U.S. government. And, in its aftermath, charges surfaced tying the U.S. to the increased repression in Uruguay. Ernest Siracusa, U.S. ambassador in Montevideo at the time, was implicated in coups in Honduras, Guatemala, Peru and Bolivia. The Uruguayan congress accused the U.S. of helping establish a military death squad. And the U.S. Office of Public Safety, a division of AID, sent police experts to Uruguay and brought Uruguayans to the United States to study anti-terrorist techniques.

The Nixon and Ford administrations defended the Uruguayan government, continued to request military aid for it and argued before congressional committees that military rule in Uruguay was a temporary but necessary phenomenon in the fight against subversion. Congress' decision to cut military assistance in 1976 was strongly opposed by the Ford State Department.

American policy changed dramatically under the Carter administration. It ended U.S. aid to Uruguay because of human rights violations, even though there was then no congressional requirement for human rights certification. Jorge Batlle, leader of the Colorado Party, told the delegation, "All around the world, the Americans appear as champions of slavery and colonialism. Carter was the first one who changed that image. If you ask anybody in the streets what they think about the Carter government, they will say the Carter policy was good for us and for democracy all around the world."

Uruguayans still highly praise John Youle, political officer in the U.S. Embassy there under Carter. A leader of the National Party told the delegation, "John Youle was a great official. We went to him, and he intervened. In Libertad Prison, they were torturing a man. We told Youle. After the next visit, the family came to tell me the conditions of the prisoner had improved. When Youle left the embassy, we gave him a plaque in recognition of his services." Some Uruguayans felt differently. Before he left, Youle was attacked by thugs who tore a tendon in his shoulder, causing him permanent injury.

On taking office, President Reagan changed U.S. policy toward Uruguay once again, announcing that the United States would not withhold approval for loans from the Inter-American Development Bank or the World Bank to Urguay, Paraguay, Chile or Argentina, which, he said, were no longer considered gross violators of human rights.

The U.S. State Department's annual human rights report noted that the Uruguayan government had made 100 "national security" arrests in 1982, an increase over 1981. However, embassy staff have stopped pressing Uruguayan authorities on human rights violations. Opposition leaders, once welcomed at embassy functions, are now excluded.

Enrique Tarigo, a leader of the Colorado Party and editor of *Opinar* said human rights efforts are carried out by the International Red Cross and by European diplomats, "who visit jails and talk to prisoners and show the government that they are being watched."

John Graves, public relations counselor at the U.S. Embassy in Montevideo, told the delegation that the U.S. had sent critical notes to the Uruguayan government after incidents of press closings and said copies were available from the State Department. However, Paula Kuzmich, public affairs officer for the State Department's Bureau of Human Rights in Washington, said she knew of no public statements by U.S. officials about freedom of the press in Uruguay and that private communiques could not be released.

The U.S. administration takes credit for the announced opening to civilian rule. In May, Assistant Secretary of State for Human Rights Elliot Abrams said at a seminar sponsored by the Woodrow Wilson Center in Washington, D.C., "All the Carter administration did produced nothing; but now, there's going to be a return to democracy." He said, "We've got a better policy, because it works and what counts is not standing up and making speeches or inviting people to July 4th."

But there is a consensus among many of the people the delegation interviewed that the United States has significantly backed away from the defense of human rights. Batlle said the military was very happy at President Reagan's election. "When Carter was defeated, the commander-in-chief of the navy said, 'Finally, this devil is leaving the American government!'" He said the military was pleased by the appointments of General Vernon Walters as a roving ambassador to Latin America and of Jeane Kirkpatrick as ambassador to the United Nations.●

U.S. RELATIONSHIP WITH NATO AND JAPAN—SHARING THE BURDENS OF THE COMMON DEFENSE 1983 BURDEN-SHARING REPORT RELEASED

● Mr. LEVIN. Mr. President, this afternoon the Defense Department is releasing the unclassified version of the report on allied commitments to defense spending for 1983. As author of the statutory requirement for this annual report on defense burden sharing, I would like to comment on its findings.

As the United States continues its struggle toward economic recovery, it is both understandable and appropriate for American taxpayers and their elected representatives in the Congress to question increasingly whether this Nation is paying a disproportionate share of the common defense burden. These questions, and the pressures to encourage our allies, especially Japan, to increase significantly their mutual defense contributions, only will become more intense in the future.

There are great complexities in measuring the contributions to the common defense by ourselves and our allies. Major differences in the manner in which each of these nations structures and maintains its defense establishment and disparities in exchange rates and other economic measures of input, are but a few of these. Contributions may be more easily identifiable and direct, such as the size of a nation's annual defense budget; or they may be more subtle and indirect, such as the provision of land for military bases. However, when all is said and done, I believe that an examination of what nations have formally committed to doing for the common defense, in comparison to what they actually are doing, is a most useful way for Congress to assess relative burdensharing efforts.

In the case of our NATO allies, this commitment is represented by the solemn promise each member of the North Atlantic Alliance made in 1978, and reaffirmed yearly since then, to increase annually its defense budget by 3 percent after inflation and to undertake many initiatives in the long-term defense program (LTDP). With Japan, this commitment is embodied in the policy established in May 1981, by the government of then-Prime Minister Zenko Suzuki, that Japan would defend the air/sea lines of communication out to 1,000 miles from its home islands as part of its responsibilities under the Treaty of Mutual Cooperation and Security between our two countries. That commitment was forcefully reaffirmed earlier this year by the country's new Prime Minister, Yasuhiro Nakasone.

Measured against their commitments, the burden-sharing performance of our allies is, at best, mixed. At worst, especially in the case of Japan, it is both extremely disappointing and worrisome. There have been a few positive developments, but these have been more than offset by much more negative trends and occurrences. For example.

On a positive note, in 1982, the Federal Republic of Germany agreed to provide 93,000 reservists under the wartime host nation support program to perform essential stevedore, transportation, runway repair and other service functions for U.S. troops dispatched to Europe during mobilization. In 1983, NATO defense ministers approved a $500 million increase in the infrastructure program to fund important military construction projects benefiting all the allies. There have been positive developments in the contributions of our NATO allies to compensate for added American responsibilities for our mutual defense in the Persian Gulf/Indian Ocean, including direct contributions by the United Kingdom, France, and more recently Italy, through joint planning projects and force deployments to the region.

On the other hand, West Germany has refused to provide additional per-

sonnel for the peacetime host nation support program and has prevented meaningful progress in negotiations for satisfactory and equitable cost-sharing for the master restationing plan to redeploy American troops closer to the invasion corridors from East Germany. The Federal Republic also has refused to train and equip an additional 80,000 reservists to help defend its territory should American soldiers be redeployed for Southwest Asia duty. NATO's agreed to increase in infrastructure funding was only about half the amount recommended by the alliance's military committees and supported by the United States.

NATO's most disturbing burdensharing development was the persistent failure by most allies to keep consistently their commitment to increase annual defense spending by 3 percent after inflation, I will comment at length about this failure in a moment.

In the case of Japan, the forceful words and leadership on defense matters displayed by the new Prime Minister, Yasuhiro Nakasone are welcome. His statements during both his initial visit to the United States last year and during the recent Williamsburg economic summit stand in bold contrast to the vague formulations about Japan's defense responsibilities usually delivered by his predecessors. However, after the disappointing increases in Japan's defense budgets during the past 4 years for which Mr. Nakasone can only be held partially responsible for one, Japan is long overdue to back up her commitments with the commensurate financial resources. The magnitude of the forces Japan needs to develop to fulfill its 1,000-mile self-defense commitment is substantial. Unless Mr. Nakasone demonstrates a recognition of this by providing significant real increases in defense spending in 1984 and succeeding years—increases averaging 10 to 12 percent in real terms—the American people will be forced to conclude there is no difference between the new Prime Minister and his predecessors, and that Japan remains a nation unwilling to meet its solemn, sovereign commitments.

I also will address Japan's dismal burden-sharing performance, and the magnitude of the security tasks before it.

NATO'S 3-PERCENT COMMITMENT

Since 1978, when the 3-percent commitment was undertaken by the heads of government of NATO member nations, only the United States and Luxembourg have kept that promise each year. Three of NATO's richest nations—Denmark, Norway, and Belgium—have never achieved such annual real growth, and in any 1 year, at least half of the NATO membership has failed this basic test of political and military will.

Moreover, latest information from the Defense Department in testimony and in the 1983 burden-sharing report shows a deteriorating trend. The weighted average increases for all non-U.S.-NATO nations combined has steadily declined annually since 1981 and is expected to reach a new low; 2.2 percent in 1979, 2.7 percent in 1980 and 1981, 1 to 1.6 percent in 1982, and 0.7 to 1 percent in 1983. Besides those relatively prosperous nations already mentioned, the Federal Republic of Germany and the Netherlands showed particularly poor defense spending efforts in 1982.

This unhappy situation must be changed. In this regard, I should like to underscore the recent statements of U.S. Assistant Secretary of State for European Affairs, Richard R. Burt:

• • • Europeans cannot choose when they wish to enjoy the fruits of alliance and when they do not. There is room for disagreement and difference within the alliance but not for selective commitment.

JAPAN'S COMMITMENT AND THE TASK BEFORE HER

Japan's extremely disappointing burden-sharing performance has been highlighted by particularly strong testimony before our Armed Services Committee and by unsettling information contained in the latest version of the burden-sharing report.

Simply quoting this testimony and appropriate excerpts from the burden-sharing report can leave no doubt in the mind of any American or Japanese citizen, that Japan has failed to meet even its earlier commitments under the Treaty of Mutual Cooperation and Security, to say nothing of how much it must improve its present forces just to be able to carry out the 1,000-mile air/sea lane defense policy.

As it has in each of the two previous reports, the Defense Department declared:

Japan, the non-NATO country included in this report, ranks last or close to last on all the ratio measures surveyed and, thus, quite clearly appears to be contributing far less than its fair share.

For the first time, the report contains a severely critical assessment of Japan's past and present defense efforts, including the fact that that nation's adequate self-defense goal has never been achieved, even though it was formally adopted as national policy 27 years ago:

Despite sometimes impressive annual growth-rate in defense spending (almost 8 percent average real growth rate in the 1970s and at least 3 percent real growth in the 1980s), Japan started from a very low base and has never been willing to address defense expenditures from the point of view of actual requirements. The 1983-1987 Mid-Term Defense Plan (MTDP) is a good example. Japan's Ground Self-Defense Force has obsolete equipment. Its Ground, Maritime and Air Forces all have only token levels of ammunition, making them unable to sustain themselves in combat and therefore unable to defend Japanese territory against any serious incursion. The Air and Maritime Forces are too small to provide for defense against the large air threat which proximate Soviet Far East Forces pose and to protect the sea-lanes to 1,000 miles, respectively. The latter mission was put forth by Prime Minister Suzuki as national policy in 1981 and has been reaffirmed as such by his successor.

Until the advent of Prime Minister Nakasone's Cabinet in late November 1982, the government of Japan maintained that the MTDP would allow Japan to accomplish the goals of the 1976 National Defense Program Outline (NDPO). Any plan for review of that program's adequacy was denied. Ironically, the MTDP itself states that the world situation has greatly changed since 1976 and the international situation has seriously worsened. The 1976 NDPO did not address the serious issue of sustainability of Japan's defense forces; the requirement for sea-lane defense protection, and has otherwise also grown seriously out of date. The new Prime Minister has clearly affirmed the Japanese people's strong concern over the growing Soviet threat, whereas his predecessor shied away from doing so, less Japan be compelled to act.

The goal of adequate self defense was formally stated as Japan's national policy in 1956, but is yet to be achieved.

Separate testimony before our committee by senior U.S. civilian and military officials confirmed that, despite previous positive-sounding declarations from the executive branch, Japan's present self-defense improvement plans are hopelessly out-of-date and its 1982 and 1983 defense budget increases "were disappointing, despite their relatively large size compared to the increases of other Japanese ministries and agencies." After delivering the preceding evaluation, Assistant Secretary of Defense (International Affairs) Richard Armitage said this about the current Japanese 5-year defense plan:

The 1983-1987 Mid Term Defense Plan aims to accomplish the goals of the 1976 National Defense Program Outline which the U.S. judges to be outdated. The 1983 budget puts the Defense Agency behind schedule in achieving the 1976 levels. The 1983 budget does create slightly larger force levels, but the rate of progress is not adequate.

The commander-in-chief of all U.S. air, land, and naval forces in the Pacific region, Adm. Robert Long, USN, confirmed to the committee that Japan's 1983 defense budget increase actually represented the following negative developments:

Procurement of fewer F-15's for homeland air defense than were in both the 1982 and 1980 Japanese defense budgets, when an even lower percent of a lower GNP was devoted to defense;

Fewer major aircraft procured than in both 1980 and 1982; and

Lowest number of ships to be procured in the last 4 years.

After reviewing these statements, it is clear that Japan should accelerate its efforts to increase its contributions toward the common defense and to de-

velop the self-defense capabilities to keep its 1,000-mile commitment by deploying fully sufficient forces by 1990, at the latest.

As Assistant Secretary Armitage, stated, "Significant budget increases would be necessary to achieve the requisite capability by 1990." Japan would have to increase defense spending annually by about 10 to 12 percent after inflation for the remainder of this decade to accomplish this necessary task. Such increases would raise the portion of Japan's gross net product devoted to defense from 0.9 percent now to well over 1.5 percent annually. To achieve the capabilities to defend the air and sea lanes out to 1,000 miles, Japan would have to add the following, and other, forces to its present forces and to those improvements contained in the now-outdated 1976 program:

What Japan needs to add to achieve capabilities to defend self and sea-lanes of communication out to 1,000 miles—to present forces as to 1976 program:

Three to four squadrons with about 100 more F-15's as to same.

Six to eight squadrons with about 200 more F-15's as to same.

Two squadrons with 8 to 10 AWACS equivalent aircraft and 10 to 14 KC-10 equivalent tankers as to half this capability.

Three to four squadrons with 60 to 90 jets as to same.

Three to seven SAM groups with/improved HAWK and Patriot missiles as to same.

Ten to twelve subs or 8 to 10 subs.

About 20 frigates or destroyers as to frigates/destroyers.

About 130 high performance P-3C aircraft to replace entire existing force as to about 50 P-3C's.

Twenty-five thousand active plus about 30,000 reservists as to same.

Thousands of tons of ammo. Thousands of mines torpedoes, air-to-air missiles.

Mr. President, it is time for the executive branch to better delineate the direct role U.S. forces stationed in Japan have in the defense of that nation's territory, as opposed to the role these forces play in helping defend other Asian nations whose security is viewed as important to the United States. Congress should gain a better understanding of whether possibilities exist to limit the growth in the deployment of U.S. forces to Japan without negatively affecting our own security and that of other Asian nations allied to the United States. Congress should begin focusing, in the future, on the question of whether the force levels in Japan are appropriate for defending U.S. interests or whether they are contributing more to defending Japan alone than to maintaining our mutual security interests.

The patience of American taxpayers toward Japan's continued failure to contribute equitably to the common defense has been stretched close to the breaking point. The Senate's unanimous approval late last year of Senate Concurrent Resolution 46, which I authored, is a prime example of this. I hope that annual Japanese defense budgets reflect a recognition of this before more drastic legislative proposals are forthcoming.●

ORDERS FOR TUESDAY

ORDER FOR RECESS UNTIL 9:30 A.M. TOMORROW

Mr. STEVENS. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 9:30 a.m. tomorrow.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

ORDER FOR THE RECOGNITION OF CERTAIN SENATORS TOMORROW

Mr. STEVENS. Mr. President, I ask unanimous consent that on tomorrow, after the two leaders are recognized under the standing order, that there be special orders granted to the Senator from Washington (Mr. GORTON), and the Senator from Pennsylvania (Mr. SPECTER) for not to exceed 15 minutes each.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

SMALL BUSINESS ACCESS TO FEDERAL PROCUREMENT INFORMATION — CONFERENCE REPORT

Mr. STEVENS. Mr. President, I submit a report of the committee of conference on S. 272 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 272) to improve small business access to Federal procurement information, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of June 23, 1983.)

Mr. WEICKER. I am delighted that the Senate is today considering the conference report to S. 272, and I would like to congratulate Senator PRESSLER on bringing this bill to this point. This is his first bill as a member of this committee, and I compliment him on the fine work he has done in its behalf.

Briefly, the purpose of the bill is to improve small business access to Federal procurement information by changing the procedures for advertising in the Commerce Business Daily (CBD). S. 272 seeks to guarantee small business contractors their fair share of the Federal procurement dollar by establishing statutory time limits for publishing advance notice of government contracts and for bidding on them. This legislation also revises many of the current law exemptions from advertising in the CBD and addresses a longstanding need to make sole source contracting a more accountable process.

Mr. President, I would like to take this opportunity to point out the key differences between the Senate-passed version of S. 272 and the conference report on the bill. Let me just say, that while the bill does differ in several areas, the major provisions of this legislation are still the same. I wholeheartedly support the conference package before us today and urge my colleagues to do the same.

S. 272 basically restates existing law (Section 8(e) of the Small Business Act) concerning the publication of proposed procurement actions in the CBD. That law empowers the Secretary of Commerce to obtain and publish all proposed competitive and noncompetitive procurements for property, supplies, and services.

The House conferees receded to the Senate language which establishes a uniform threshold of $10,000 for such notices. Current law requires that military procurements in excess of $10,000 be synopsized, while the threshold for publication of civilian procurements has been $5,000 and over. The conferees believe that $10,000 is a proper threshold, but that any higher threshold would be totally unacceptable.

The Senate Committee on Small Business has created an extensive record on this issue. At three separate hearings, small business representatives were united in opposition to any increase of the synopsis threshold beyond $10,000. This continues to be the case.

Although it is true that the small business purchase threshold was recently raised by Congress to $25,000, this does not necessarily mean that the CBD threshold must follow. Some contracts in the range of $10,000 to $25,000 are precisely the ones on which small contractors can best compete, and since small purchase procedures are generally noncompetitive, it is critical in my opinion that all small contracts be advertised to promote more small business involvement in the procurement process.

Mr. President, the Senate conferees agreed to recede to existing law (the

House position) with slight modifications relating to exemptions from synopsis for utility services on a more limited bias and various types of orders against existing contracts. The House agreed to maintain the Senate provisions deleting current law exceptions from advertising professional and personal services.

The conferees then agreed to modify the existing law exemption for advertisement of procurements made to educational institutions by retaining the exception only for unsolicited sole source contracts that demonstrate a unique or innovative research concept. Language in the report of the conferees also directs Federal agencies to use their discretion to protect the originality of thought and innovativeness of unsolicited proposals submitted from other sources, especially small research and development firms. Awards made pursuant to the Small Business Innovation Development Act of 1982 are also exempt from the notice provisions of S. 272.

For all procurement notices not eligible for one of these exceptions, the legislation establishes two time periods for advertising and bidding on Federal contracts. Specifically, the bill prohibits a Federal department, agency, or establishment from issuing a solicitation for at least 15 days after the date of publication of the synopsis in the CBD. For contracts categorized as research and development procurements, this 15-day period is extended to 30 days.

Mr. President, S. 272 then provides that the Federal Government may not foreclose competition for an additional 30 days after either the issuance of the solicitation or—in the case of basic ordering agreements—the date of publication of a notice or intent to place the order. In the case of sole source contracts, the legislation provides that the procuring entity cannot begin negotiations for the award of the contract until at least 30 days have elapsed from the date of publication of a proper notice of the intent to contract. The conferees, however, have made it very clear that this particular provision in no way prohibits an agency from responding to individual requests for information about the procurement.

Mr. President, unlike the House-passed version of the legislation, the Senate-passed bill contained a provision relating to the content of CBD notices. The conferees elaborated on the requirements by stipulating that agencies must include the name, address, and phone number of the Federal employee who may be contacted to obtain a solicitation. The conferees also agreed to require agencies to include a statement saying that for sole source contracts, interested parties are invited to state their interest or to submit proposals within the timeframes established by this legislation. I believe that this provision will help make the notice procedures more accountable and provide small business owners with accurate information about individual contracts.

Mr. President, perhaps the most discussed provision of the bill is that relating to the award of sole source contracts. In response to concerns expressed by several departments and other congressional committees, the conferees agreed to increase the original dollar threshold over which sole source procurements must be approved by the head of a procuring agency. The original threshold of $100,000, offered by Senator LEVIN—the provision's sponsor, was increased in conference to $1 million for the first year, $500,000 for the second year, and $300,000 for the third year. The purpose of this compromise is to allow agencies time to phase in this sole source approval process, which the conferees firmly believe will make the sole source award process a far more accountable one. The conferees wish to make it clear, however, that this entire process will be reviewed after 3 years to ascertain if the original $100,000 mark is a realistic and perhaps better goal.

The conferees also agreed to a somewhat higher threshold for the postaward notice provisions in the bill. Unlike the synopsis requirement of $10,000, the committee believes that the requirement to publish notice of possible subcontracting opportunities is better set at $25,000 than $10,000. There are not many contracts between the $10,000 and $25,000 range that offer subcontracting opportunities. Again, let me emphasize, however, that in no way would I or the conferees consider a threshold over $10,000 for the original notice requirements.

Finally, the conferees agreed to exempt the Tennessee Valley Authority (TVA) from the provisions of the legislation only insofar as its procurements are made from ratepayer moneys. Contracts procured from federally appropriated funds will be covered by all of the provisions.

Mr. President, this concludes my brief description of S. 272 as agreed to by the conferees. I am extremely pleased that we are at the final stage in passing this much-needed legislation. Again, I thank my colleagues on the Senate Small Business Committee as well as my good friends on the House Committee for helping to make this bill a reality for the thousands of small business contractors who will benefit from it.

Mr. BOSCHWITZ. Mr. President, I rise in support of the conference report on S. 272—legislation which will improve the ability of small business to compete for Government contracts. I am proud to be a cosponsor of S. 272, and commend my colleagues on the Small Business Committee for the prompt action on this bill. As a conferee, I am particularly pleased with the leadership of the chairman of the committee and the ranking minority member in guiding this bill through conference.

We are all aware of the importance of small business to our national economy, and the competitive ability they bring to producing the goods and services that the Government buys. The Federal Government is a big buyer of goods and services from the private sector—over $100 billion a year. About 25 percent of that goes to small businesses. The primary way Government advertises its procurement contracts is through its publication, the Commerce Business Daily.

The Commerce Business Daily is used extensively by both large business contractors and small business contractors. Because of their greater resources and sophistication, big businesses are better able to respond to solicitation notices in the Commerce Business Daily in a timely manner. Small businesses, on the other hand, are often unable to prepare and submit timely bids for Government procurement contracts.

This legislation will provide small businesses better access to Government contracts in two ways. First, the bill requires agencies to advertise more contracts in the Commerce Business Daily. Under current law, agencies have used a number of broad exemptions as reasons for not advertising contracts in the Commerce Business Daily. This bill limits those exemptions, thus requiring agencies to advertise contracts unless they are:

First. Classified for national security reasons;

Second. Contracts for utilities;

Third. Contracts with another agency or where a mandatory source of supply is required by law;

Fourth. Contracts where the head of the contracting agency and the Administrator of the Small Business Administration both agree that advertising is not appropriate;

Fifth. Contracts that must be awarded because of an ususual and compelling urgency;

Sixth. Contracts for perishable goods;

Seventh. Contracts for research and development that have been awarded to small businesses under the small business innovation bill passed in 1982; and

Eighth. Contracts where foreign suppliers are required and specified by the terms of an international agreement or treaty.

I believe these exemptions are narrow enough to give small businesses better access to Government contracts. In my view, the narrow exemption for foreign suppliers is a great im-

provement. Under current law, advertising these contracts was not required if the agency only asked foreign suppliers to submit bids. When the Small Business Committee considered the bill, I offered an amendment to eliminate this exemption which I am pleased to say the committee adopted.

In the conference, we agreed that contracts with foreign suppliers do not have to be advertised if an international agreement or treaty required that the contract be awarded to foreign suppliers. As a result, the decision to award U.S. contracts to foreign suppliers has been raised to the level of an agreement between two governments—instead of a decision by an agency.

In addition, the legislation requires that all contracts over $25,000 be published if there are potential subcontracts. So, small businesses will benefit by the mere fact that their contracts with foreign suppliers will be published. Small businesses will have greater knowledge of Government contracts and the opportunity to identify potential subcontracts. Small businesses, not a Government agency, will decide whether the contract is worth pursuing. And, perhaps most important, small businesses will have the basic information necessary to challenge the propriety of contracts with foreign suppliers.

Second, small businesses will have a better chance to overcome the difficulties and complexities of Government contracts.

This legislation provides small business contractors the opportunity to submit timely bids. Small businesses will have 15 days to request copies of contracts advertised in the Commerce Business Daily. Small businesses then have an additional 30 days to submit their bid on a particular contract. In addition, it will be harder for agencies to award sole source contracts—without competitive bidding.

This legislation will allow small businesses a better opportunity to compete for Government contracts. As a result, small businesses will benefit by improving the market for their products and services, while the Government should realize a savings through increased competition for their contracts. I join my colleagues on the Small Business Committee in urging the Senate to adopt the conference report.

Thank you, Mr. President.

Mr. PRESSLER. Mr. President I am very pleased that the Senate is considering the conference report on my bill, S. 272, today. I believe this bill will provide important assistance to small businesses seeking Government contracts.

Small businesses account for approximately 90 percent of all businesses in this country, yet they receive only a quarter of all Government contracts. I believe that the changes resulting from my bill not only will benefit small businesses by expanding Federal procurement opportunities, but the increased competition will benefit American taxpayers as well.

The problem for small businesses is not that they cannot compete with larger businesses, but rather that they are too often denied the opportunity to compete altogether.

My legislation addresses three problems which have plagued small businesses attempting to bid on Government contracts. Small businesses depend heavily on the Commerce Business Daily (CBD) for news of available contract opportunities. Yet, small businesses, particularly in States like South Dakota, often have received notice of these opportunities after it is too late for them to bid. My legislation will increase the notice period from 10 to 15 days and the bid period from 20 to 30 days. These changes will allow small contractors adequate time to prepare their bid documents.

Second, bid information in the CBD has often been incomplete or inaccurate. My legislation will expand the reporting requirements and will mandate that the name and address of a contact person in the procuring agency be included for further information or questions.

Finally, more Government contracts will be advertised in the CBD as a result of my legislation. Currently, exemptions to the advertising requirement are loosely written and are seriously abused by procuring agencies. With tighter exemptions, small businesses will be notified of many more contracting opportunities.

I think these changes can be handled by Federal procuring activities. It will place on them certain added responsibilities. But in the long run, it will ensure that Federal procurement is conducted in a much more effective manner.

As a new member of the Senate Small Business Committee, this is my first piece of legislation reported out of the committee and passed by the Senate. I want to thank Senator WEICKER and his staff for their excellent assistance. I think it is an important piece of legislation and I hope my colleagues will join me in supporting it.

Mr. NUNN. Mr. President, I rise in support of the conference report on S. 272, a bill to amend the Small Business Act to improve small business access to Federal procurement information, and urge its adoption.

This is the second Congress that the Senate Small Business Committee has reported legislation amending the requirements of the Small Business Act relating to the notice of procurement required in the Commerce Business Daily. I believe this legislation is necessary to increase the opportunities for competition for the $150 billion spent annually in purchases of goods and services by the Federal Government. It is my expectation that, as a result of this legislation, competition for those procurements will increase, the Federal Government will get a better product at a better price, and the American taxpayer will see direct savings resulting from the Federal contracting process.

Mr. President, I want to compliment the chairman of the Senate Small Business Committee, Senator WEICKER, for his leadership on this important matter for the past 2 years. In addition, Senator LEVIN has been working tirelessly within the Small Business Committee, as well as within the Senate Armed Services and Governmental Affairs Committees, as an advocate for competition and for increasing the opportunities for small business participation in Federal procurement.

The requirement for publication of the Commerce Business Daily was begun in 1961. Under the law, the Secretary of Commere is directed to obtain information from each of the Federal procuring agencies on procurement actions that exceed a stipulated dollar threshhold. Working with the Government Printing Office for the production of the document, the Department of Commerce publishes this daily report on millions of dollars of Federal procurement opportunities that are open for competition.

This daily report has been very useful to the precurement community as the only regularly available, and reasonably priced, source of information on upcoming Federal procurements. Regrettably, the law has never been amended to take into account the rapidly expending Federal procurement effort, or the changes in contracting that have taken place since the first Commerce Business Daily issue was published in 1961. In my judgment, the amendments to the Commerce Business Daily that we have provided for in this conference report will fully meet the needs of the Federal procurement agencies in obtaining quality goods and services on time, and will greatly increase the likelihood that more small businesses will be able to compete for Federal contracts.

Mr. President, I believe that the statement of managers accompanying the conference report, and the statement by Chairman WEICKER in his opening remarks on this conference report, fully explain the changes that have been made to this legislation in conference. I did want to highlight just a few of the more important issues from my perspective.

The first issue that I would highlight is the time periods in the bill. Time after time, contractors and potential contractors complain about the

Federal procurement system; its complexities and regulations; its paperwork and detail. Certainly, a considerable amount of information is necessary for the procuring agency to insure that it is getting the product or service asked for, and that the potential contractor is fully complying with the various Federal statutes which have become an integral part of the Federal procurement process. However, for those thousands of Federal contractors who do not have Washington representatives, and must rely on the Commerce Business Daily as their prime, if not only, source of information, the present law is silent on the amount of time that contractors should have to learn of these procurement requests. Current Federal regulations do not provide much greater relief.

The notice requirements that we have established in this legislation are designed to insure that there is an equal and reasonable opportunity for all who are interested in doing business with the Federal Government to learn of the existence of Federal contracting opportunities, and have adequate time to collect the information and prepare the response to the Government notice of procurement opportunity in a timely fashion.

Time after time, procurement after procurement, General Accounting Office report after General Accounting Office report, we have documented instances where there is a preference to continue working with previous prime contractors, or a preference for relying on the large business against the small business, when neither proposition is justified by the facts of the specific procurement. These provisions will increase the market search for the Federal Government, provide information to potential contractors that the Government does buy a particular good or service, and may stimulate new entrants into that area of Federal procurement.

The second item of interest to me is the requirement for a more careful review of the authority to enter into sole-source contracts, and to insure that there is a process by which interested potential contractors can let the contracting officer know that there are others who have the interest and capability to meet the Government's needs.

This amendment was first adopted in our committee last year through an amendment Senator LEVIN and I offered. The Senator from Michigan has done a considerable amount of work on this important issue with us in the Senate Small Business Committee during the past 2 years. I believe that the results of those efforts will show a measurable decrease in the number of contracts that will be awarded on a sole-source basis without meaningful competition, but at the same time not unduly burdening procurement officials or delaying the procurement process.

According to information provided by the Federal Procurement Data Center, the executive branch entity which keeps track of procurement statistics, in fiscal year 1982, the Federal defense agencies spent almost $62 billion in sole-source awards, through a total of over 19,000 individual contracts; $58.6 billion was spent using just over 4,500 contracts in excess of $1 million. In the civilian agencies for fiscal year 1982, over $15 billion was awarded in sole-source contracts, with more than $14 billion awarded in a mere 827 contracts in excess of $1 million each.

The framework that we have established in this legislation for review and approval by senior level policy officials of the authority to enter into a sole-source contract on these major contracts is fully justified. In fact, the Senate has twice previously approved a more stringent version of this provision.

The improvements that the legislation makes in the treatment of exemptions from publication, in the establishment of minimum time periods between notice of procurement opportunity and the distribution of solicitations, and between soliciation and bid opening, accommodates the legitimate requirement that Federal agencies use the Commerce Business Daily as a means of meeting their procurement needs, while improving the Commerce Business Daily as a resource tool for the private sector contracting community.

With respect to the treatment of perishable subsistence, these purchases are not generally made by issuing orders under requirements or similar contracts by the Defense Department's Defense Logistics Agency, but rather by individual competitive purchases. DLA already provides an extensive outreach to the marketplace to insure the greatest competition for its purchases—and small business does provide a considerable share of DLA's requirements. In my view, any individual procurement action for perishable subsistence supplies in excess of $10,000—the statutory threshold for publication in the Commerce Business Daily—would be justified in relying on the exemption from publication under the proposed exemption for unusual and compelling urgency.

Mr. President, this legislation has been considerably strengthened from the version that passed the Senate last February. I regret that it has taken this long to bring back a conference report on it, but I believe the results fully justify the wait. The bill will increase the usefulness of the Commerce Business Daily to the entire procurement community. The bill will greatly increase the opportunities for small business participation in the Federal procurement process. The bill will help to reduce unnecessary sole-source contracting. The bill should save precious Federal dollars committed to the procurement process.

For all of these reasons, Mr. President, I urge my colleagues to support this conference report, and to assist in getting this legislation enacted quickly into law.

Mr. LEVIN. Mr. President, as a cosponsor of S. 272, I am pleased to rise in support of the conference agreement on the bill. This bill, with its provisions for publication of notice in the Commerce Business Daily of all Federal Government procurement actions, will enhance the present procurement process for both the Federal Government and for small business. From my vantage point on the Governmental Affairs Committee and the Senate Armed Services Committee, I have studied the procurement laws of both the Department of Defense and the civilian agencies, and as a member of the Small Business Committee I have become keenly aware of the fervent desire of thousands of businesses in this country simply to be able to compete for Government contracts. I have been involved in trying to find some way to inject more competition into all Federal Government procurements.

The publication and increased notice requirements in S. 272, combined with restrictions making it more difficult to award Government contracts on a sole-source basis, should result not only in more small business participation in Government procurement, but should result in lower prices for goods and services bought for the use of the Government.

In addition to two basic notice provisions there are two provisions in the bill related to sole-source procurements which I offered last Congress. First is a requirement that whenever an agency intends to award a sole-source contract, that agency must first comply with a 30-day notice of the impending awards and an opportunity to submit a bid to the appropriate contracting officer in the agency.

I have been fighting for this provison for years, along with Senator COHEN and Senator NUNN. It is a critically needed amendment.

For instance, in fiscal year 1982, Federal Government contracts worth $159 billion were awarded. Yet only 37 percent of this amount was awarded competitively; 63 percent or some $100 billion worth of Federal Government contracts were awarded on a sole-source basis. This amendment should help reduce the amount of wasteful, sole-source, noncompetitive contracts.

Second, whenever the value of the sole-source contract is over a certain threshold it must be approved by the

head of the procuring activity in the agency.

The conference committee compromised on a threshold for sole source contract approval of $1 million for the first year after enactment of the bill, $500,000 in the second year, and $300,000 in the third year. After that time the conferees have reserved the right to review the $300,000 permanent threshold with an eventual threshold goal of $100,000, the threshold contained in my original amendment and the Senate-passed version.

These two provisions, combined with the expanded notice provisions for sole-source awards, should work to decrease the number of sole-source contracts granted in the future.

Mr. President, I commend Senator PRESSLER for reintroducing this bill and Senator WEICKER, as chairman of the Small Business Committee and Senator NUNN as ranking minority member for guiding this bill along for two consecutive Congresses. I think the Small Business Committee, and the small business community in general is fortunate to have their leadership and wisdom. In addition, the committee staff of Senator WEICKER and Senator NUNN have been most helpful. I also want to thank my colleague on the Governmental Affairs' Subcommittee on Oversight, Senator COHEN for his excellent work on this legislation.

Mr. STEVENS. I move the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. STEVENS. Mr. President, I move that the Senate disagree to the House amendment to the title.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Alaska.

The motion was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

SMALL BUSINESS ACT AMENDMENTS—CONFERENCE REPORT

Mr. STEVENS. Mr. President, I submit a report of the committee of conference on S. 273 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 273) to amend section 8(a)(1) of the Small Business Act, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of June 23, 1983.)

Mr. WEICKER. Mr. President, I am pleased that the Senate is today considering the conference report on S. 273. It reauthorizes two Small Business Administration minority business development pilot programs: specifically, the 8(a) pilot procurement program and the pilot surety bond waiver program. Both programs expired in September 1981; the conference report would reauthorize them until September 30, 1985.

Under the regular 8(a) program, certified minority and disadvantaged small businesses are eligible to receive contracts offered by participating Federal agencies. The pilot program, however, gives the SBA the additional authority to go in and select contracts for 8(a) firms from among all of those offered by a Federal agency. The concept of the pilot program is to give the SBA greater say in the types of contracts chosen and to allow them to select contracts not normally offered for the 8(a) program in order to develop minority businesses in areas with high growth potential. As an experimental concept, this program has been limited to only one agency within the Federal Government.

Mr. President, the bill as passed by the Senate required the President to designate a civilian agency to participate in the program within 60 days of enactment, and it authorized the program for 20 months. The House bill would have extended the program for 2 years, beginning on October 1, 1983, and would not have limited the agencies from which the President could select. The compromise agreement reached in conference held to the Senate language on the matter of a civilian agency, accepted the 2-year authorization asked for by the House. The operative dates for the authority are from October 1, 1983, to September 30, 1985. Conferees agreed that this will allow the Congress time to examine the effectiveness of the pilot concept in a civilian agency.

The second pilot program, the surety bond waiver program, is also extended by the conference report. The Senate bill contained no language for extending this program. However, the House bill did. Under this authority the Administrator of SBA can waive surety bond requirements for 8(a) contractors in cases where the firms are startup businesses, which have not been participating in the 8(a) program for more than 1 year. During the program's initial 3-year authorization, the administration was slow to issue final regulations and the program was never, in fact, implemented. With this extension of the program Congress will have an opportunity to evaluate the effectiveness of this program in meeting the goal of developing minority contractors' businesses.

As some of my colleagues may be aware, last December 17 in a ceremony at the White House, President Reagan issued a statement on this administration's plans for promoting minority business development. In that speech he set a goal of $15 billion in Federal procurements of goods and services from minority businesses over the next 3 fiscal years. I understand that very soon he will issue an Executive order which will establish the framework for achieving these and other laudable goals set forth in his December statement. While these two pilot programs have limited scopes, they can be valuable tools for enhancing the skills of minority businesses and thus, will go far in aiding this administration to reach its goals.

Mr. President, I urge my colleagues to support the passage of this conference report.

8(a) PILOT EXTENSION

Mr. NUNN. Mr. President, I rise in support of the conference report on S. 273, a bill to amend section 8(a) of the Small Business Act, and urge its adoption by the Senate.

Mr. President, in February the Senate passed this legislation by voice vote. That bill extended a pilot procurement program giving the Small Business Administration authority to select contracts from another Federal procuring agency for use in SBA's 8(a) minority business development program.

Under the regular 8(a) program, procuring agencies are voluntarily permitted to contract with the Small Business Administration for their procurement needs; SBA is then given explicit statutory authority to subcontract that work to minority businesses which are determined by SBA to be eligible for participation in the 8(a) program. Under the 2-year pilot authority first enacted in 1978 in Public Law 95-507, and in 1980 extended for an additional year in Public Law 96-481, the Small Business Administration was given the authority to select contracts for a Presidentially designated agency for subcontracting under the 8(a) program to qualified participants. In 1978, the President chose the Army as the designated pilot agency.

Mr. President, the Small Business Committee has carefully reviewed the progress that SBA and the Army made in carrying out this pilot program. While I am a strong supporter of the regular 8(a) program, I believe that the 3-year test of this authority dem-

onstrated that it was not in the best interest of the 8(a) program, or of the Army's procurement effort, to shift the authority for selecting contracts for the 8(a) program from the procuring agency itself to the Small Business Administration.

However, SBA Administrator Sanders, in his testimony before the Senate Small Business Committee earlier this year when we considered S. 273, was emphatic that he believed that the problems with the earlier pilot program would not be repeated, and he asked the committee, and the Congress, for an opportunity to operate the pilot program under his leadership.

With the inclusion of specific language in the Senate bill that the pilot program would be continued for another 18 months, but only in a nondefense agency, the bill was reported by the Small Business Committee, and passed the Senate on a voice vote.

The conference report that we are considering today continues the prohibition on the President's selection of a defense agency for the implementation of this extension of the 8(a) pilot program. Furthermore, it would be my expectation that the SBA Administrator would first work with the designated agency to increase the number, and change the nature of, the contracts that are voluntarily offered by that agency to SBA. Only then should the Administrator judiciously use his authority, if at all, to select a contract from the designated civilian agency.

However, there has been some uncertainty about the purpose of the 8(a) pilot program. Repeated testimony indicates that the program is to be an addition to the regular 8(a) program, not a substitute for it. It is my view that the Small Business Administration should limit the use of the authority in this pilot procurement program to technically sophisticated procurements not traditionally offered by the designated agency through the regular 8(a) program.

I believe that the timeframes established in this bill for the designation of the agency to participate with SBA in the pilot program, and the duration of the experiment, should clearly and finally determine whether Congress should permit this method as an appropriate way for the Small Business Administration to obtain contracts for the 8(a) program.

In addition, this conference report extends an additional pilot program on surety bonds that was established in 1978. Under that law, the Small Business Administration was given authority to waive a surety bond that may be required on a Federal contract for certain participants in the 8(a) program. In the 3 years that this program authority was in force, the Small Business Administration did not waive a single surety bond for an 8(a) contract. The failure to waive any bonds was caused in part by the Small Business Administration's delay in establishing rules and regulations for the pilot program. There was a disagreement within the agency itself as to which division, minority small business or surety, had responsibility for this program.

This provision was not in the bill that passed the Senate in February, but this provision has been included in the conference report.

Again, Mr. President, it would be my expectation that the Small Business Administration would carefully establish the procedures and safeguards under which this pilot authority may be used, and would be very careful in selecting those instances where the authority to waive a surety bond for an 8(a) contractor is invoked.

Mr. President, I urge my colleagues to adopt this conference report.

Mr. LEVIN. Mr. President, I would also like to say a few words in support of the conference agreement on S. 273, the Minority Small Business Pilot Procurement Act of 1983. Under this agreement, the SBA's 8(a) pilot procurement program would be reopened for an additional 2 years beginning October 1, 1983. It would further require the President to designate a new Federal agency, other than the Department of Defense or a component thereof. However, in keeping with an amendment I offered in the Small Business Committee, the conference agreement would require the President to designate that agency within 60 days of enactment. This should provide SBA and the newly designated agency with a limited amount of time to develop an interagency agreement setting forth the formal terms for the joint implementation of the program prior to the October 1 starting date, and thereby avoid a repetition of the difficulties that shortened the duration of the original pilot program with the Department of Army—the first Federal agency designated by the President.

In closing Mr. President, I believe the conference agreement is a good one. It will provide the SBA with another opportunity to test its ability to select and negotiate contract requirements with a newly designated Federal agency, other than one within the Department of Defense. I urge Senate passage.

Mr. STEVENS. Mr. President, I ask for the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

EDUCATION OF THE HANDICAPPED ACT AMENDMENTS OF 1983

Mr. STEVENS. Mr. President, I ask the Chair to lay before the Senate Calendar No. 219, S.1341.

The clerk will report.

The assistant legislative clerk read as follows:

A bill (S. 1341) to revise and extend the Education of the Handicapped Act, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Alaska?

There being no objection, the Senate proceeded to consider the bill.

AMENDMENT NO. 1436

(Purpose: To provide for a by-pass for handicapped children enrolled in private elementary and secondary schools)

Mr. BYRD. Mr. President, on behalf of Mr. EAGLETON, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. BYRD), on behalf of Mr. EAGLETON, proposes an amendment numbered 1436.

Mr. BYRD. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 3, between lines 9 and 10, insert the following:

BYPASS PROVISION

SEC. 4. Section 613 of the Act is amended by adding at the end thereof the following new subsection:

"(b)(1) If a State educational agency is prohibited by law from providing for the participation in special programs for handicapped children enrolled in private elementary and secondary schools as required by subsection (a)(4), the Secretary shall waive such requirement, and shall arrange for the provision of services to such children through arrangements which shall be subject to the requirements of subsection (a)(4).

"(2)(A) When the Secretary arranges for services pursuant to this subsection, the Secretary shall, after consultation with the appropriate public and private school officials, pay to the provider of such services an amount which may not exceed the amount provided per child to all handicapped children enrolled in the State for services for the fiscal year preceding the fiscal year for which the determination is made.

"(B) Pending final resolution of any investigation or complaint that could result in a determination under this subsection, the Secretary may withhold from the allocation of the affected State educational agency the amount the Secretary estimates would be necessary to pay the cost of such services.

"(C) Any determination by the Secretary under this section shall continue in effect until the Secretary determines that there will no longer by any failure or inability on the part of the State educational agency to meet the requirements of subsection (a)(4).

"(3)(A) The Secretary shall not take any final action under this subsection until the State educational agency affected by such action has had an opportunity, for at least forty-five days after receiving written notice thereof, to submit written objections and to appear before the Secretary or his designee to show cause why such action should not be taken.

"(B) If a State educational agency is dissatisfied with the Secretary's final action after a proceeding under subparagraph (A) of this paragraph, it may within sixty days after notice of such action, file with the United States court of appeals for the circuit in which such State is located a petition for review of that action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary. The Secretary thereupon shall file in the court the record of the proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

"(C) The findings of fact by the Secretary, if supported by substantial evidence, shall be conclusive; but the court, for good cause shown, may remand the case to the Secretary to take further evidence, and the Secretary may thereupon make new or modified findings of fact and may modify his previous action, and shall file in court the record of the further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

"(D) Upon the filing of a petition under subparagraph (B), the court shall have jurisdiction to affirm the action of the Secretary or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.".

Redesignate the succeeding sections accordingly.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (No. 1436) was agreed to.

Mr. BYRD. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. STEVENS. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 1437

(Purpose: To make a technical correction in the bill)

Mr. STEVENS. Mr. President, on behalf of the Labor Committee, I send a technical amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes an amendment numbered 1437.

On page 2, between lines 6 and 7, insert the following:

(c)(1) Section 604(a) of the Act is amended by striking out "Office" and inserting in lieu thereof "Department".

(2) The fourth sentence of section 604(b) of the Act is amended to read as follows: "The Secretary shall transmit each such report, together with such comments and recommendations as the Secretary may deem appropriate, to the Congress.".

Mr. WEICKER. Mr. President, today I am very pleased to recommend to my colleagues passage of S. 1341, Education of the Handicapped Act Amendments of 1983.

This legislation is the result of 2 days of hearings held earlier this year by the Subcommittee on the Handicapped. Throughout these hearings the necessity of maintaining and improving special education support and demonstration activities was fully established and I am pleased to report, Mr. President, that S. 1341 was reported unanimously by both the Subcommittee and the Labor and Human Resources Committee.

In addition to extending the life of these discretionary programs for 3 years, the amendments expand the range of children served, both in terms of age and type of disability. Provisions are made for intervention beginning at birth under the preschool and early childhood programs, while postsecondary programs are broadened to include all disabilities.

A new demonstration activity dealing with the critical transition from school to employment has been established and the need to train parents to participate in their children's special education has been emphasized.

Federal data collection and evaluation responsibilities are strengthened and provisions for reporting to the Congress are improved. Overall authorizations have been increased to account for inflation both for special education and the special institutions such as Gallaudet College and the National Technical Institute for the Deaf.

More than 4 million disabled youngsters are receiving services under our Nation's special education law. The law focuses on these youngsters' abilities and seeks to develop them fully. The education of the handicapped amendments will continue these services, improve them and at the same time give new opportunities for us to learn how these services can be further strengthened.

I ask, Mr. President, that the technical amendments to S. 1341 be accepted with the bill as well as an amendment requested by Senator EAGLETON clarifying the existing passthrough provisions of the act.

I urge my colleagues to support S. 1341.

Mr. HATCH. Mr. President, I request permission to consider S. 1341, a bill to extend and revise the Education of the Handicapped Act (EHA). Although this bill deals only with section 618 and 619 of part B and discretionary programs, they are essential in guaranteeing that a comprehensive range of services are available for all handicapped children. By targeting areas that warrant special consideration, these discretionary programs complement the other provisions contained within Public Law 94-142, the Education for All Handicapped Childrens Act and allows successful implementation of the statute.

S. 1341 as approved by my Labor and Human Resources Committee extends the authorization for Federal activities relating to the evaluation component of part B, the incentive program of part B and the discretionary programs of parts C, D, E, and F which includes regional resource centers, centers and services for the deaf-blind, early childhood programs, and postsecondary education program, training of personnel and parents, recruitment and information, and instructional services. The authorization level for fiscal year 1984 have been raised 5.3 percent above the 1981 reconciliation ceiling to allow for increased child count while other programs have been adjusted for inflation and other factors. For the other 2 years, authorization ceilings have been adjusted for inflation.

This legislation has recognizable bipartison support as evident by the fact that it was unanimously approved by both the Subcommittee on the Handicapped and my full committee. In addition, I remind by colleagues that a vote in the affirmative for S. 1341 is a vote for providing services to 4 million handicapped children of our Nation.

At this time, I would like to commend Senator WEICKER for his efforts in initiating this legislation. His fine leadership deserves our recognition. I now yield the floor to my colleague from Connecticut.

Mr. STAFFORD. Mr. President, as a cosponsor of the education of the Handicapped Act Amendments of 1983, I wholeheartedly support the Senate passage of this legislation. Since the enactment of this landmark bill in 1975 millions of handicapped school-aged children and youth have gained access to a free and appropriate public education. The Federal mandate that this legislation represents has helped school districts around the country to provide vital services to children who were previously denied them.

The progress that has been made in the past 7 years has been noteworthy. Disparities, however, still exist. These amendments include new initiatives in the areas of early intervention, programs for secondary students, and provision of technical assistance that bring us closer to our goal.

I look with pride to my own State of Vermont, which has been a leader in providing public education services to

handicapped children for many years now. The specific programs authorized under these amendments have been particularly successful. The regional resource center located in Vermont has given invaluable technical assistance to State education agencies throughout the New England region. Similarly, the early education outreach projects have enabled special education personnel to serve handicapped preschoolers early enough in their lives to dramatically affect their future educational success.

The discretionary programs serve a unique purpose within the context of the education of the Handicapped Act. They are the vehicle through which educators are able to conduct vital research; disseminate information about successful practices and new technologies; and receive the necessary training to provide the full range of services needed by handicapped children and youth. The programs reauthorized by these amendments help to insure that services provided to handicapped students nationwide are of the highest quality.

The Federal commitment to these programs has been substantial in the past. Their success has been well documented. Our passage of this legislation today will allow them to continue in their efforts toward providing appropriate education services to all children.

Mr. DOLE. Mr. President, I rise in support of the passage of S. 1341, the extension of the Education of the Handicapped Act—Public Law 94-142. The Senator from Kansas is pleased to be a primary cosponsor of this legislation and to have had the opportunity to work with members of the Senate Committee on Labor and Human Resources on some constructive changes in part B and the discretionary programs contained in this act.

PROGRAMS EXTENDED

S. 1341 extends discretionary programs and project grants authorized under the Education of the Handicapped Act. These programs provide supplemental services to handicapped children served under part B. This includes in-service and special education training for teachers and classroom assistants. It also provides funds for regional resource centers.

About 4 million children in this country are being served by programs under this act at the preschool, elementary and secondary school levels. A new feature of this extension is that S. 1341 establishes a transitional secondary education program which emphasizes services to secondary school children in order to help them make the necessary transition to higher education or the employment world. The Senator from Kansas views this as a very positive change. Also this extension includes a change in the preschool incentive grants program that would allow children from birth on to participate in this program—the earliest age for participation now is 3 years old. There needed to be some kind of rational continuum of services, and these changes have been made.

APPROPRIATE FEDERAL ROLE

Mr. President, although primary responsibility for educational policy should remain with State and local governments, there is a need for a Federal role in the American education system. I believe that assisting States in providing educational services for children with special needs—like handicapped children and those who are gifted and talented—is an appropriate role for the Federal Government. One of the major areas for Federal responsibility lies in promoting and assuring equal access to educational opportunity for all American children. Because providing educational opportunity for children with special needs often requires special services and specialized teacher training, the Federal Government has given its support to State and local efforts to enhance educational services for handicapped children, and it should continue to do so.

CONCLUDING REMARKS

If we do not help handicapped children at the beginning stages of their lives, they will never be able to catch up to those who were born without disabilities. Dealing with these children requires a special understanding of their needs and potential, and teachers who specialize in this area are to be commended for their dedication. Through programs under this legislation, handicapped children are given the assistance they need in order to become integrated in our society—and later to participate as productive adults who have managed to overcome their handicaps through the learning process.

I commend the distinguished chairmen and ranking minority members of the Labor and Human Resources Committee and the Handicapped Subcommittee, as well as all those members who have actively participated in this program reauthorization—especially the distinguished Senator from Vermont, Mr. STAFFORD, and the Senator from West Virginia, Mr. RANDOLPH. It has always been a pleasure working with these colleagues on issues affecting handicapped Americans.

Mr. RANDOLPH. Mr. President, I am pleased to support Senate bill 1341, a measure to revise and extend the Education of the Handicapped Act. The bill extends the discretionary programs of the act for 3 years through fiscal year 1986 and establishes new program initiatives to improve special education services for handicapped children.

These discretionary programs, centers, and services to meet special needs of the handicapped, training for the education of the handicapped, research, and demonstration projects, and instructional media and materials are a valuable component in the Federal strategy to assure all handicapped children an opportunity to receive a free appropriate public education. The supportive services and activities authorized by the discretionary programs undergird the State grant initiative and assist the States in their efforts to provide a free appropriate public education to all handicapped children.

I commend the chairman of the subcommittee, the Honorable LOWELL WEICKER, the chairman of the Labor and Human Resources Committee, the Honorable ORRIN HATCH, and the other members of the committee, for their efforts on behalf of this Nation's handicapped children.

The measure before us today takes under consideration the changes that have come about in this country since the enactment of Public Law 94-142 in 1975. That landmark law established as a goal the provision of special education and related services to all handicapped children. As the years have gone by and the States have increased their capacity to provide services to these handicapped children, State needs for assistance and resources have in some instances shifted. This bill responds to the need for additional initiatives in the education of handicapped children.

Amendments have been made to the evaluation section of the Education of the Handicapped Act to focus evaluation activities more on assessing the quality of special education services being provided. In addition the measure amends the incentive grant authority to permit States to provide special education services to children from birth to 3 years of age. Changes have also been made to Part C: Centers and Services To Meet Special Needs of the Handicapped, so that resources can be targeted more effectively on the present needs of State and local educational agencies, handicapped children, and parents of handicapped children and youth. Part C also now contains a new initiative entitled "Secondary Education and Transitional Services for Handicapped Youth" which addresses the unique needs of handicapped youth as they move toward adulthood and greater independence.

Another major initiative, the parent training and information program, is established under the Part D: Training Authority. This new program is to be designed to inform and train parents of handicapped children and youth so that they may participate more effectively with professionals in meeting the special educational needs of their handicapped children and youth.

The Education of the Handicapped Act is an important law, and the activities authorized by the act have over the years resulted in the development of many programs and services for our handicapped children. This measure will continue our efforts to provide a quality special education program to the handicapped children of this Nation.

The PRESIDING OFFICER. Without objection, the pending amendment is agreed to.

The amendment (No. 1437) was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, third reading.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and the third reading of the bill.

The bill (S. 1341) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 1341

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Education of the Handicapped Act Amendments of 1983".

ADMINISTRATIVE AMENDMENT

SEC. 2. (a) The Education of the Handicapped Act (hereafter in this Act (other than section 10) referred to as the "Act") is amended by striking out "Commissioner" wherever it appears and inserting in lieu thereof "Secretary".

(b)(1) Section 602(2) of the Act is repealed.

(2) Section 602(14) of the Act is amended by striking out "the Secretary of Health, Education, and Welfare" and inserting in lieu thereof "the Secretary of Education".

(c)(1) Section 604(a) of the Act is amended by striking out "Office" and inserting in lieu thereof "Department".

(2) The fourth sentence of section 604(b) of the Act is amended to read as follows: "The Secretary shall transmit each such report, together with such comments and recommendations as the Secretary may deem appropriate, to the Congress.".

DESIGNATION OF AN AGENCY FOR SPECIAL EDUCATION PROGRAMS

SEC. 3. Section 603 of the Act is amended to read as follows:

"DESIGNATION OF THE AGENCY FOR SPECIAL EDUCATION

"SEC. 603. (a) There shall be, within the Office of Special Education and Rehabilitative Services in the Department of Education, an Office of Special Education Programs which shall be the principal agency in the Department for administering and carrying out this Act, and other programs and activities concerning the education and training of the handicapped.

"(b)(1) The Office established under subsection (a) of this section shall be headed by a Deputy Assistant Secretary who shall be selected by the Secretary and shall report directly to the Assistant Secretary for Special Education and Rehabilitative Services. The position of Deputy Assistant Secretary shall be in grade GS-18 of the General Schedule under section 5104 of title 5, United States Code, and shall be a Senior Executive Service position for the purposes of section 3132(a)(2) of such title.

"(2) In addition to such Deputy Assistant Secretary, there shall be established in such Office not less than six positions for persons to assist the Deputy Assistant Secretary, including the position of Associate Deputy Assistant Secretary, and such positions shall be in grade GS-15 of the General Schedule under section 5104 of title 5, United States Code.".

BYPASS PROVISION

SEC. 4. Section 613 of the Act is amended by adding at the end thereof the following new subsection:

"(b)(1) If a State educational agency is prohibited by law from providing for the participation in special programs for handicapped children enrolled in private elementary and secondary schools as required by subsection (a)(4), the Secretary shall waive such requirement, and shall arrange for the provision of services to such children through arrangements which shall be subject to the requirements of subsection (a)(4).

"(2)(A) When the Secretary arranges for services pursuant to this subsection, the Secretary shall, after consultation with the appropriate public and private school officials, pay to the provider of such services an amount which may not exceed the amount provided per child to all handicapped children enrolled in the State for services for the fiscal year preceding the fiscal year for which the determination is made.

"(B) Pending final resolution of any investigation or complaint that could result in a determination under this subsection, the Secretary may withhold from the allocation of the affected State educational agency the amount the Secretary estimates would be necessary to pay the cost of such services.

"(C) Any determination by the Secretary under this section shall continue in effect until the Secretary determines that there will no longer be any failure or inability on the part of the State educational agency to meet the requirement of subsection (a)(4).

"(3)(A) The Secretary shall not take any final action under this subsection until the State educational agency affected by such action has had an opportunity, for at least forty-five days after receiving written notice thereof, to submit written objections and to appear before the Secretary or his designee to show cause why such action should not be taken.

"(B) If a State educational agency is dissatisfied with the Secretary's final action after a proceeding under subparagraph (A) of this paragraph it may, within sixty days after notice of such action, file with the United States court of appeals for the circuit in which such State is located a petition for review of that action. A copy of the petition shall be forthwith transmitted by the clerk of the court of the Secretary. The Secretary thereupon shall file in the court the record of the proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

"(C) The findings of fact by the Secretary, if supported by substantial evidence, shall be conclusive; but the court, for good cause shown, may remand the case to the Secretary to take further evidence, and the Secretary may thereupon make new or modified findings of fact and may modify his previous action, and shall file in the court the record of the further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

"(D) Upon the filing of a petition under subparagraph (B), the court shall have jurisdiction to affirm the action of the Secretary or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.".

EVALUATION

SEC. 5. Section 618 of the Act is amended to read as follows:

"EVALUATION

"SEC. 618. (a) The Secretary shall collect data, and conduct studies, investigations, and evaluations—

"(1) to determine the progress of implementation of this Act, the impact of this Act and the effectiveness of State and local efforts to provide free appropriate public education to all handicapped children and youth; and

"(2) to provide Congress with information relevant to policymaking and provide the Federal, State, and local educational agencies with information relevant to program management, administration, and effectiveness with respect to such education.

"(b)(1) The Secretary shall carry out the provisions of this section directly or by grant, contract, or cooperative agreement.

"(2) In carrying out the responsibilities under this section, the Secretary shall provide to the appropriate committees of each House of the Congress and to the general public, on at least an annual basis, information concerning programs and projects assisted under the Act and other Federal programs relating to the education of handicapped children and youth, and such information from State and local educational agencies and other appropriate sources as is necessary for the implementation of the Act, including—

"(A) the number of handicapped children in each State, within each disability, by age group who require special education and related services;

"(B) the number of handicapped children in each State, within each disability, by age group receiving a free appropriate public education and the number of handicapped children who need and are not receiving a free appropriate public education in each such State;

"(C) the number of handicapped children in each State, within each disability, who are participating in regular educational programs, consistent with the requirements of section 612(5)(B) and section 614(a)(1)(C)(iv), and the number of handicapped children who have been placed in separate classes, separate school facilities, or who have been otherwise removed from the regular education environment;

"(D) the number of handicapped children who are enrolled in public or private institutions in each State and who are receiving a free appropriate public education, and the number of handicapped children who are in such institutions and who are not receiving a free appropriate public education;

"(E) the amount of Federal, State, and local expenditures in each State specifically

available for special education and related services; and

"(F) the number of personnel, by disability category served that are employed in the education of handicapped children, and the estimated number of additional personnel needed to adequately carry out the policy established by this Act.

"(3) In developing and furnishing information under clause (E) of paragraph (2) of subsection (b), the Secretary may base such information upon a sampling of data available from State agencies, including the State educational agencies, and from local educational agencies.

"(c)(1) The Secretary shall, by grant, contract, or cooperative agreement, provide for indepth evaluation studies (both quantitative and qualitative) to determine the impact of this Act. Each such evaluation shall include recommendations for improvement of the programs under this Act. The Secretary shall submit not later than January 30 of each year a set of evaluation priorities to the appropriate committees of both Houses of the Congress for review and comment.

"(2)(A) The Secretary is authorized to enter into cooperative agreements with State educational agencies to carry out studies to assess the impact and effectiveness of programs assisted under the Act.

"(B) Such agreements shall—

"(i) provide for the payment of not to exceed 60 per centum of the total cost of studies conducted by a participating State educational agency to assess the impact and effectiveness of programs assisted under the Act; and

"(ii) be developed in consultation with the State Advisory Panel established under this Act, the local educational agencies, and others involved in or concerned with the education of handicapped children and youth.

"(C) The Secretary shall provide technical assistance to participating State educational agencies in the implementation of the study design, analysis, and reporting procedures.

"(D) In addition, the Secretary shall disseminate information from such studies to State educational agencies and, as appropriate, others involved in, or concerned with, the education of handicapped children and youth.

"(3)(A) At least one evaluation study shall be a longitudinal study of a sample of handicapped students encompassing the full range of handicapping conditions examining their educational progress while in special education and their occupational, educational, and independent living status after graduating from secondary school or otherwise leaving special education.

"(B) At least one study shall focus on obtaining and compiling current information available through State educational agencies and local educational agencies and other service providers, regarding State and local expenditures for educational services for handicapped students (including special education and related services) and gather the information needed in order to calculate a range of per pupil expenditure by handicapping condition.

"(d)(1) Not later than 120 days after the close of each fiscal year, the Secretary shall publish and disseminate an annual report on the progress being made toward the provision of a free appropriate public education to all handicapped children and youth. The annual report is to be transmitted to the appropriate committees of each House of the Congress and the National Council on the Handicapped and published and disseminated in sufficient quantities to the education community at large and other interested parties.

"(2) The Secretary shall include in each annual report—

"(A) an index and summary of each evaluation activity and results of studies conducted under subsection (c);

"(B) a compilation and analysis of data gathered under section 618(b)(2);

"(C) a description of findings and determinations resulting from monitoring reviews of State implementation of this Act;

"(D) an index of all current research projects being conducted under part E (including the name of each research project and the name and address of the funded organization);

"(E) data reported under sections 635 and 653;

"(F) an analysis and evaluation of the effectiveness of procedures undertaken by each State educational agency, local educational agency, and intermediate educational unit to assure that handicapped children and youth receive special education and related services in the least restrictive environment commensurate with their needs and to improve programs of instruction for handicapped children and youth in day or residential facilities; and

"(G) any recommendations for change in the provisions of the Act or any other Federal law providing support for the education of handicapped children and youth.

"(e) There are authorized to be appropriated $3,100,000 for the fiscal year 1984, $3,270,000 for the fiscal year 1985, and $3,440,000 for the fiscal year 1986 to carry out the provisions of this section.".

INCENTIVE GRANTS

SEC. 6. Section 619(c) of the Act is amended by adding before the period at the end thereof a comma and the following: "and for providing special education and related services for handicapped children from birth to 3 years of age.".

CENTERS AND SERVICES TO MEET SPECIAL NEEDS OF THE HANDICAPPED

SEC. 7. Part C of the Act is amended to read as follows:

"PART C—CENTERS AND SERVICES TO MEET SPECIAL NEEDS OF THE HANDICAPPED

"REGIONAL RESOURCE CENTERS

"SEC. 621. (a) The Secretary is authorized to make grants to, or to enter into contracts, or cooperative agreements with institutions of higher education, State educational agencies or combinations of such agencies and institutions, combinations may include one or more local educational agencies, within particular regions of the United States, to pay all or part of the cost of the establishment and operation of regional resource centers. Each regional resource center shall provide technical assistance, including but not limited to consultation and training, to State education agencies and to local educational agencies relating to educational programs and services for handicapped children and youth. The State educational agency shall disseminate information obtained through such technical assistance to appropriate local educational agencies. In order to assure that State and local educational policies and procedures result in quality educational programs and services for handicapped children and youth, each center established or operated under this section shall—

"(1) assist State educational agencies and local educational agencies in identifying and solving persistent problems in providing quality educational programs for handicapped children and youth;

"(2) assist State educational agencies and local educational agencies in developing, identifying, and replicating successful programs and practices which will improve educational and related services to handicapped children and youth and their families; and

"(3) gather and disseminate information and coordinate its activities with other centers assisted under this section and with other relevant projects conducted by the Department of Education.

"(b) In determining whether to approve an application for a project under this section, the Secretary shall consider the need for such a center in the region to be served by the applicant and the capability of the applicant to fulfill the responsibilities stated in this section.

"CENTERS AND SERVICES FOR DEAF-BLIND CHILDREN AND YOUTH

"SEC. 622. (a) It is the purpose of this section to provide, through a limited number of model centers for deaf-blind children and youth, a program designed to develop and bring to bear upon such children and youth, beginning as early as feasible in life, those specialized, intensive professional and related services, methods, and aids that are found to be most effective to enable them to achieve their full potential for communication with and adjustment to, the world around them for useful and meaningful participation in society, and for self-fulfillment. Each such center may also serve individuals with other handicapping conditions of the greatest degree of severity.

"(b) Upon such terms and conditions as the Secretary deems appropriate to carry out the purposes of this section, and subject to the provisions of subsection (d)(1) of this section, the Secretary is authorized to make grants or contracts with public or nonprofit private agencies, organizations, or institutions to pay all or part of the cost of the establishment and operation of centers for deaf-blind children.

"(c) In carrying out this section the Secretary shall take into consideration the need for a center for deaf-blind children and youth in the light of the general availability and quality of existing services for such children and youth in the part of the country involved.

"(d)(1) A grant or contract pursuant to subsection (b) shall be made only if the Secretary determines that there is satisfactory assurance that the center will provide such services as the Secretary by regulation prescribes, including—

"(A) technical assistance to public agencies and private organizations which are involved in the education or care of deaf-blind children and youth;

"(B) comprehensive diagnostic and evaluative services for deaf-blind children and youth;

"(C) a program for the adjustment, orientation, and education of deaf-blind children and youth which integrates all the professional and related services necessary therefor; and

"(D) effective consultative services or specialized training for parents, teachers, interpreters for deaf-blind individuals, and other individuals who play a direct role in the lives of deaf-blind children and youth to enable such parents, teachers, and interpreters of such pupils to understand the special problems of such children and youth

and to assist in the process of their adjustment, orientation, and education.

"(2) Any such services may—

"(A) be provided to deaf-blind children and youth (and, where applicable, other handicapped individuals) regardless of whether they reside in the center,

"(B) be provided at some place other than the center, and

"(C) include the provision of transportation for any such children (including an attendant) and for parents.

"EARLY EDUCATION FOR HANDICAPPED CHILDREN

"SEC. 623. (a) The Secretary is authorized to arrange by contract or grant with appropriate public agencies and private nonprofit organizations, for the development and implementation by such agencies and organizations of experimental preschool and early education programs for handicapped children which the Secretary determines show promise of promoting a comprehensive and strengthened approach to the special educational problems of such children. Such programs shall be distributed to the greatest extent possible throughout the Nation, and shall be carried out both in urban and in rural areas. Such programs shall include activities and services which—

"(1) are designed to facilitate the intellectual, emotional, physical, mental, social, and language development of such children;

"(2) encourage the participation of the parents of such children in the development and operation of any such program; and

"(3) acquaint the community to be served by any such program with the problems and potentialities of such children.

"(b)(1) Programs authorized by this section shall be coordinated with similar programs in the schools operated or supported by State or local educational agencies of the community to be served by such a program.

"(2) No arrangement pursuant to this section shall provide for the payment of more than 90 per centum of the cost of developing, carrying out, or evaluating such a program. Non-Federal contributions may be in cash or in kind, fairly evaluated, including, but not limited to, plant, equipment, and services.

"(c) The Secretary is authorized to—

"(1) arrange by contract or grant with State educational agencies for developing and implementing a State plan to provide special education and related services to handicapped children; and

"(2) disseminate information on successful models and practices of the programs authorized under this section in order to promote the basis for other early education programs for handicapped children.

"(d) For the purpose of this section, handicapped children includes children from birth to 8 years of age.

"RESEARCH, TRAINING, AND DISSEMINATION ACTIVITIES IN CONNECTION WITH CENTERS AND SERVICES FOR THE HANDICAPPED

"SEC. 624. (a) The Secretary is authorized, either as part of any grant or contract under this part or by separate grant to, or contract with, an agency, organization, or institution operating a center or providing a service which meets such requirements as the Secretary determines to be appropriate, consistent with the purposes of this part, to pay all or part of the cost of such activities as—

"(1) research to identify and assist in meeting the full range of special needs of handicapped children and youth;

"(2) development or demonstration of new, or improvements in existing, methods, approaches, or techniques, which would contribute to the adjustment and education of such children and youth;

"(3) training of special education and related services personnel engaged in programs specifically designed for such children and youth; and

"(4) dissemination of materials and information about practices found effective in working with such children and youth.

"(b) In making grants and contracts under this section, the Secretary shall insure that the activities funded under such grants and contracts will be coordinated with similar activities funded from grants and contracts under other parts of this Act.

"(c) In carrying out the provisions of this section the Secretary is authorized to address the needs of the severely handicapped.

"POSTSECONDARY EDUCATION PROGRAMS

"SEC. 625. (a) The Secretary is authorized to make grants to, or contracts with, institutions of higher education, including junior and community colleges, vocational and technical institutions, and other appropriate nonprofit educational agencies for the development and operation of specially designed programs of postsecondary, vocational, technical, continuing, or adult education for handicapped individuals.

"(b) The Secretary shall make grants and enter into contracts under this section on a competitive basis. In making grants or contracts under this section the Secretary shall give priority consideration to four regional centers for the deaf and to model centers and programs for individuals with handicapping conditions other than deafness—

"(1) for developing and adapting programs of postsecondary, vocational, technical, continuing, or adult education to meet the special needs of handicapped individuals; and

"(2) for programs that coordinate, facilitate, and encourage education of handicapped individuals with their nonhandicapped peers.

The total amount of payments in any fiscal year under this subsection for the four regional centers for the deaf shall not be less than $2,000,000.

"(c) The Secretary shall make grants or enter into contracts for a national clearinghouse on postsecondary education for handicapped individuals for the purpose of providing information on available services and programs in postsecondary education for the handicapped.

"SECONDARY EDUCATION AND TRANSITIONAL SERVICES FOR HANDICAPPED YOUTH

"SEC. 626. (a) The Secretary is authorized to make grants to, or enter into contracts with, institutions of higher education, State education agencies and local education agencies and other appropriate public and private nonprofit institutions or agencies to—

"(1) strengthen and coordinate education, training, and related services for handicapped youth to assist in the transitional process to postsecondary education, vocational training, competitive employment, continuing education, and adult services; and

"(2) stimulate the improvement and development of programs for secondary special education, including—

"(A) specially designed vocational programs which will increase the potential for competitive employment for handicapped youth; and

"(B) research and development projects for exemplary service delivery models and the replication and dissemination of successful models.

"(b) Projects assisted under this section may include—

"(1) developing strategies and techniques for transition to independent living, vocational training, postsecondary education, and competitive employment for handicapped youth;

"(2) establishing demonstration models for services and programs which emphasize vocational training, transitional services, and placement for handicapped youth;

"(3) conducting demographic studies which provide information on the numbers, age levels, types of handicapping conditions and services required of handicapped youth in need of transitional programs;

"(4) initiating collaborative models between educational agencies and adult service agencies, including vocational rehabilitation, mental health, mental retardation, public employment, and employers which facilitate the planning and development of transitional services for handicapped youth to postsecondary education, vocational training, employment, continuing education, and adult services; and

"(5) developing appropriate procedures for evaluating vocational training, placement, and transitional services for handicapped youth.

Projects described under clause (4) shall be coordinated with projects developed under section 311 of the Rehabilitation Act of 1973.

"(c) An evaluation of this section shall be conducted in a manner consistent with section 627 of this part and shall be submitted to the appropriate committees of each House of Congress not later than January 1986.

"(d) For the purpose of this section, 'handicapped youth' means any handicapped individual who has attained 12 years of age or is enrolled in the seventh or higher grade in school, and has not attained 22 years of age, except when State law permits attendance in secondary schools for handicapped individuals over 22 years of age.

"EVALUATIONS

"SEC. 627. The Secretary shall conduct, either directly or by contract, a thorough and continuing evaluation of the effectiveness of each program assisted under this part. The results of the evaluations shall be analyzed and submitted to the appropriate committees of each House of Congress.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 628. There are authorized to be appropriated to carry out the provisions of section 621, $5,700,000 for the fiscal year 1984 and for the succeeding fiscal year, $6,000,000 for fiscal year 1985, and $6,300,000 for fiscal year 1986. There are authorized to be appropriated to carry out the provisions of section 622, $16,000,000 for fiscal year 1984, $16,000,000 for fiscal year 1985, and $16,000,000 for fiscal year 1986. There are authorized to be appropriated to carry out the provisions of section 623, $21,100,000 for fiscal year 1984 and $22,200,000 for fiscal year 1985, and $23,400,000 for fiscal year 1986. There are authorized to be appropriated to carry out the provisions of section 624, $5,000,000 for fiscal year 1984 of which $3,000,000 shall be available for subsection (c) of such section, $5,300,000 for fiscal year 1985 of which $3,200,000 shall be available for subsection (c) of such section, and $5,600,000 for fiscal

year 1986 of which $3,300,000 shall be available for subsection (c) of such section. There are authorized to be appropriated to carry out the provisions of section 625, $5,000,000 for the fiscal year 1984, $5,300,000 for the fiscal year 1985, and $5,500,000 for the fiscal year 1986. There are authorized to be appropriated to carry out the provisions of section 626, $6,000,000 for the fiscal year 1984, $6,330,000 for the fiscal year 1985, and $6,660,000 for the fiscal year 1986.".

TRAINING FOR THE EDUCATION OF THE HANDICAPPED

SEC. 8. (a) Section 631 of the Act is amended to read as follows:

"GRANTS TO INSTITUTIONS OF HIGHER EDUCATION AND OTHER APPROPRIATE INSTITUTIONS OR AGENCIES

"SEC. 631. (a) The Secretary is authorized to make grants to, or enter into contracts with, institutions of higher education and other appropriate nonprofit institutions or agencies to assist them—

"(1) in providing training for preparation as special education personnel and related services personnel for service to handicapped children and youth (including a limited amount of special education training for regular education personnel) such as—

"(A) teachers of handicapped children and youth,

"(B) adaptive physical education and recreation personnel,

"(C) personnel serving the speech, language, and hearing impaired children and youth,

"(D) personnel preparing to engage in related services to handicapped children and youth,

"(E) special education personnel preparing to engage in educational research for handicapped children and youth,

"(F) special education personnel as part of an interdisciplinary team for use in the university affiliated facilities program under the Rehabilitation Act of 1973 and the satellite network of the developmental disabilities program, and as part of an interdisciplinary team for use in research and training centers under section 204(b) of the Rehabilitation Act of 1973; and

"(2) in providing demonstration and model programs for the preservice training described in clause (1);

"(3) in providing demonstration and model programs for inservice training of special education personnel, including classroom aides, related services personnel and regular education personnel who serve handicapped children and youth; and

"(4) in establishing and maintaining scholarships, with such stipends and allowances as may be determined by the Secretary, for training personnel engaged in or preparing to engage in educational services, educational research, or employment as teachers of the handicapped or as related services personnel serving handicapped children and youth.

The Secretary shall reserve not to exceed 5 per centum of the amount appropriated and available in each fiscal year for this subsection for contracts to target training personnel in underserved areas.

"(b)(1) The Secretary is authorized to make grants to private nonprofit organizations for the purpose of establishing and operating parent training and information programs. Each program established under this section shall be designed to inform and train parents so that the parents can participate effectively with professionals in meeting the educational needs of their handicapped children. In order to receive a grant under this section each private nonprofit organization shall—

"(A) be governed by a board, the majority of which is parents of handicapped children and include professionals from special education and related fields who serve handicapped children and youth;

"(B) serve the parents of children with the full range of handicapping conditions; and

"(C) demonstrate the capacity and expertise to effectively conduct the training and information activities authorized under this section.

"(2) The Secretary shall assure that grants under this subsection will—

"(A) be distributed to the greatest extent possible throughout the United States; and

"(B) be targeted to parents of handicapped children in both urban and in rural areas, or on a State, or regional basis.

"(3) The parent training and information programs assisted under this section shall assist parents to—

"(A) understand better the nature and needs of the handicapping conditions of their children;

"(B) provide followup support for their handicapped children's educational programs;

"(C) communicate more effectively with special and regular educators, administrators, related services personnel, and other relevant professionals;

"(D) participate in educational decisionmaking processes including the development of their handicapped child's individualized educational program;

"(E) obtain information about the program's services and resources available to their handicapped child, and the degree to which the program's, services and resources are appropriate; and

"(F) understand the provisions for the education of handicapped children as specified under part B of this Act.

"(4) Each private nonprofit organization operating a program receiving assistance under this subsection shall consult with appropriate agencies which serve or assist handicapped children and youth and are located in the jurisdictions to be served by the program.

"(5) The Secretary shall provide by grant or contract technical assistance for establishing, developing, and coordinating parent training and information programs.

"(6) The Secretary shall reserve 10 per centum of the funds appropriated and available for this section in each fiscal year for the activities authorized under this subsection.".

(b) Section 633 of this Act is amended to read as follows:

"RECRUITMENT OF EDUCATIONAL PERSONNEL AND THE PROVISION OF INFORMATION CONCERNING THE EDUCATION OF HANDICAPPED INDIVIDUALS

"SEC. 633. (a) The Secretary is authorized to make a grant to or enter into a contract with a public agency or institution or a private nonprofit organization or institution for a national clearinghouse. The national clearinghouse shall—

"(1) disseminate information on a national basis to parents, professionals, and other interested parties about—

"(A) the programs authorized under this Act and other relevant provisions of Federal law; and

"(B) how to participate in such programs including referral of individuals to appropriate national, State, and local agencies and organizations that can provide further assistance; and

"(2) encourage students and professional personnel to seek and obtain careers and employment in the various fields relating to the education of handicapped children and youth.

In awarding the grant under this section, the Secretary shall give particular attention to the demonstrated experience at the national level to carry out the functions established in this section and ability of grant applicants to conduct the clearinghouse, communicate with the intended consumers of information and maintain the necessary communication with other agencies and organizations.".

(c) Section 635 of the Act is amended to read as follows:

"REPORTS TO THE SECRETARY

"SEC. 635. (a) Each recipient of a grant under subsection (a) of section 631 during any fiscal year shall, after the end of such fiscal year, prepare and submit a report to the Secretary. Each such report shall be in such form and detail as the Secretary determines to be appropriate, and shall include—

"(1) the number of individuals trained under the grant, by category of training and level of training; and

"(2) the number of individuals trained under the grant receiving degrees and certification, by category and level of training.

"(b) Each recipient of a grant under subsection (b) of section 631 during any fiscal year shall, after the end of such fiscal year, prepare and submit a report to the Secretary. Each such report shall be in such form and detail as the Secretary determines to be appropriate and shall include the number of parents trained under the grant.

"(c) The data required by this section shall be included in the annual report required under section 618(d) of this Act.".

(d) Section 636 of the Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 636. There are authorized to be appropriated to carry out the provisions of this part (other than section 633), $58,000,000 for the fiscal year 1984, $61,150,000 for fiscal year 1985, and $64,370,000 for fiscal year 1986. There are authorized to be appropriated to carry out the provisions of section 633, $1,000,000 for fiscal year 1984, $1,050,000 for fiscal year 1985, and $1,110,000 for fiscal year 1986.".

(e) The heading of part D is amended to read as follows:

"PART D—TRAINING FOR THE EDUCATION OF THE HANDICAPPED"

RESEARCH IN THE EDUCATION OF THE HANDICAPPED

SEC. 9. (a) Section 641 of the Act is amended to read as follows:

"RESEARCH AND DEMONSTRATION PROJECTS IN EDUCATION OF HANDICAPPED CHILDREN

"SEC. 641. (a) The Secretary is authorized to make grants to, or enter into contracts with, State and local educational agencies, institutions of higher education, and other public agencies and nonprofit private organizations for research and related activities, to assist special education personnel, related services personnel, and other appropriate persons, including parents, in improving the education and related services for handicapped children and youth. Research and related activities assisted under this section shall be designed to—

"(1) increase knowledge and understanding of handicapping conditions and teaching, learning, and education-related practices and services for handicapped children and youth;

"(2) develop techniques and devices for improving the education and related services for handicapped children and youth;

"(3) demonstrate exemplary educational programs and practices; and

"(4) disseminate appropriate information on the research and related activities conducted under this part to interested individuals and organizations.

"(b) The Secretary shall publish a proposed set of research priorities in the Federal Register every 2 years and allow a period of 60 days for public comments and suggestions. After analyzing and considering the public comments the Secretary shall publish a final set of research priorities in the Federal Register not later than 30 days after the close of the comment period.

"(c) The Secretary shall provide an index (including the title of each research project and the name and address of the researching organization) of all research projects conducted in the prior fiscal year in the annual report described under section 618(d). The Secretary shall make reports of research projects available to the education community at large and other interested parties.

"(d) The Secretary shall encourage the coordination of research priorities established under this section with research priorities established by the National Institute of Handicapped Research and shall assure that information as to research priorities established under this section is provided to the National Council of the Handicapped.".

(b) Section 643 of the Act is amended to read as follows:

"PANELS OF EXPERTS

"SEC. 643. The Secretary shall from time to time appoint panels of experts who are competent to evaluate various types of proposals for projects under parts C, D, E, and F, and shall secure the advice and recommendations of one such panel before making any grant or contract under parts C, D, E, and F of this Act. The panels shall be composed of—

"(1) individuals from the field of special education for the handicapped and other relevant disciplines who have significant expertise and experience in the content areas and age levels addressed in the proposals; and

"(2) handicapped individuals and parents of handicapped individuals when appropriate.".

(c) Section 644 of the Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 644. For the purposes of carrying out this part, there are authorized to be appropriated $20,000,000 for the fiscal year 1984, $21,100,000 for the fiscal year 1985, and $22,200,000 for the fiscal year 1986.".

INSTRUCTIONAL MEDIA

SEC. 10. Section 654 of the Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 654. For the purposes of carrying out this part, there are authorized to be appropriated $19,000,000 for the fiscal year 1984, $20,000,000 for the fiscal year 1985, and $21,100,000 for the fiscal year 1986.".

AMENDMENTS TO THE OMNIBUS BUDGET RECONCILIATION ACT OF 1981

SEC. 11. (a) Section 602(a)(1) of the Omnibus Budget Reconciliation Act of 1981 is amended by striking out "each of the fiscal years 1983 and 1984" and inserting in lieu thereof "the fiscal year 1983, and $1,071,850,000 for the fiscal year 1984".

(b) Section 605 of such Act is amended by striking out ", 1983, and 1984" and inserting in lieu thereof "and 1983, and $5,500,000 for fiscal year 1984".

(c) Section 605(b) of such Act is amended by striking out ", 1983, and 1984" and inserting in lieu thereof "and 1983, and $56,000,000 for the fiscal year 1984".

(d) Section 605(c) of such Act is amended by striking out ", 1983, and 1984" and inserting in lieu thereof "and 1983, and $28,000,000 for the fiscal year 1984".

REPEALERS

SEC. 12. (a) Section 634 of the Act is repealed.

(b) Part G of the Act is repealed.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ARCTIC RESEARCH AND POLICY ACT

Mr. STEVENS. Mr. President, I ask that the Chair lay before the Senate Calendar Order No. 255, S. 373.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 373) to provide comprehensive national policy dealing with national needs and objectives in the Arctic.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Governmental Affairs with amendments:

On page 1, line 4, strike "1982"." and insert "1983"."

On page 2, line 22, after "human" insert "health and".

On page 9, line 7, after "biological," insert "health,".

On page 12, line 16, strike "March 31, 1983," and insert "September 30, 1984,".

On page 16, line 4, strike "(d)(1) There is authorized to be appropriated for the Arctic Research Fund for the fiscal year beginning October 1, 1983, and for each succeeding year thereafter, $25,000,000." and insert "(d)(1) there is authorized to be appropriated for the Arctic Research Fund an amount not to exceed $25,000,000 per fiscal year for the fiscal years ending September 30, 1985, September 30, 1986, September 30, 1987, September 30, 1988, and September 30, 1989."

Mr. STEVENS. Mr. President, I move that the committee amendments be agreed to en bloc.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Alaska.

The motion was agreed to.

AMENDMENT NO. 1438

(Purpose: Technical amendment)

Mr. STEVENS. Mr. President, I send to the desk a technical amendment on behalf of Mr. MURKOWSKI.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS), for Mr. MURKOWSKI, proposes an amendment numbered 1438.

On page 12, line 17, strike "1984", and insert in lieu thereof: "1985".

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (No. 1438) was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, I rise in support of passage of the Arctic Research and Policy Act of 1983, S. 373. The adoption of this bill by the Senate is an important step for both Alaska and the Nation.

I want to commend my colleague from Alaska, Senator MURKOWSKI, for his initiation and pursuit of this legislation both this year and during the past Congress. He has been a driving force behind legislation to establish an Arctic policy since his arrival in the Senate.

Passage of this bill, which is similar to S. 1562 which we passed in the closing days of the 97th Congress, signifies again the Senate's commitment to the development and adoption of a comprehensive Arctic policy. This bill is the culmination of an objective the Alaska congressional delegation has since the mid-1960's. At that time, then Senator E. L. "Bob" Bartlett urged the establishment of a policy. Here we are almost 20 years later and Congress is now taking up legislation which will provide the framework for establishment of an Arctic policy.

This legislation is significant in that it does not attempt to dictate an Artic policy, rather it sets up a framework for the involvement of Federal, State, and local officials involved in the Arctic to work together with the people of the Arctic to develop a policy which allows development but takes into account the needs and heritage of the people.

It should also be noted that the House of Representatives Committee on Science and Technology is considering similar legislation. I take this as an encouraging sign that the Congress

may finally be on the way to establishing an Arctic research and policy.

Mr. MURKOWSKI. Mr. President, I rise in support of the Arctic Research and Policy Act, S. 373. This important legislation will provide the framework for the scientific research effort we need to undertake in the Arctic.

There are three major reasons the United States must embark on a sustained, policy guided, comprehensive research effort in the Arctic:

First, the Arctic represents our last, great storehouse of strategic and energy minerals. It is also a unique, hostile, and fragile environment that challenges responsible exploration and development. If we intend to continue the development of these Arctic resources, we must undertake a research initiative that will provide the data and information needed to insure that development will proceed in an expeditious yet environmentally sound manner.

Second, the development of a sustained, comprehensive Arctic research effort will help provide answers to some of the global problems that are just beginning to be recognized in the Arctic. For example, the Arctic air mass has been found to contain a surprising amount of industrial pollutants which originate in the Soviet Union and Northern Europe. Some scientists believe these pollutants, together with the increasing amounts of carbon dioxide known to be collecting in the atmosphere, could produce a catastrophic "greenhouse effect" which could warm the Arctic, melt portions of the Arctic icecap, raise sea levels, and alter global weather patterns. We need to know more about these phenomena, and a comprehensive Arctic research effort is a step in the right direction.

Third, the strategic significance of the Arctic is enormous. The Arctic represents our only common border with the Soviet Union. And yet, the Navy has closed the only full-scale research facility we have in the true Arctic—the Naval Arctic Research Laboratory near Barrow, Alaska. What research, for instance, is being done relevant to the defense of the Trans-Alaskan Pipeline and the Prudhoe Bay oil facilities? We have done a superb job of equipping our Armed Forces to fight in the desert climate of the Persian Gulf, from which we are currently receiving about 500,000 barrels of oil daily. But what have we done to prepare our Armed Forces to defend the facilities and the pipeline that supply us with over 1½ million barrels of our own oil daily? Are we simply hoping that combat will never take place in the Arctic?

Mr. President, we have no real policy and no approach toward Arctic research. Fifteen or more Federal agencies are involved in a number of ad hoc research efforts—while those efforts are individually useful, can they provide a complete, comprehensive data base on which we can base decisions of immense financial and strategic consequence? To what extent do these independent, uncoordinated Federal research efforts duplicate one another or those in the private sector? Since no clearinghouse dedicated to the collection and cataloging of Arctic scientific data exists, what means other than informal channels are available for an Arctic researcher to discover what other researchers are doing?

It is also very troubling to compare our Arctic research program with those of other circumpolar nations. Of all the countries bordering on the Arctic, only the United States lacks a national institute, laboratory, or any other central organization dedicated to the sustained planning and support of Arctic research. Most of the Arctic is composed of ice-covered seas. how many ice-worthy research ships does the United States have exclusively available for research efforts? The Soviet Union has more than 20 such vessels; Canada has 9; Norway, 8; Denmark and Japan each have 2; East Germany has 3, and the United Kingdom, 4. How many do we have? One wooden trawler which operates solely in the Antarctic. We have actually had to use Soviet research vessels for United States federally funded research.

Mr. President, together with Senators STEVENS, JACKSON, GORTON, and Congressman YOUNG, I introduced this legislation to address these vital needs. Our bill, the Arctic Research and Policy Act, would create an Arctic Science Policy Council and an Arctic Research Commission. The Policy Council would be made up of five members appointed by the President and charged with development of and responsibility for a comprehensive Arctic research policy.

Responsibility for implementation of the policy articulated by the Council would lie with a nine-member Arctic Research Commission. The Commission would survey the existing research undertaken in both the public and private sector, establish a central data collection and retrieval center to serve as a clearinghouse for nonproprietary and unclassified research data, and make research grants in an effort to fill the gaps in our knowledge of the Arctic.

The bill authorizes $25 million per year to fund the Council, the Commission, the Data Center, and the research grants that would be targeted toward filling the gaps in our knowledge of the Arctic. I want to stress that $25 million is a minimal investment when compared with the value of Arctic resources and the Federal revenues which are derived from those resources. The U.S. Treasury receives $3 for every $1 of Federal money spent in Alaska. In any given year more than $3 billion accrues to the Federal Treasury as a result of the petroleum income taxes and windfall profit taxes resulting from Alaskan oil production. Nearly $3 billion additional went to the Federal Treasury as a consequence of the past three Alaskan OCS lease sales held in the past 8 months. This type of return will only continue so long as Alaskans are convinced that the development of the State's resources are proceeding in a responsible manner.

Now you may ask, what good will it do to create another governmental entity to address the fragmented nature of our approach toward Arctic research? One important answer lies in the fact that many significant Arctic research needs do not always fall logically into existing funding and organizational structures. It is a rule of thumb that if something that requires funding does not lie within the responsibility of a single Federal agency, it will be ignored. Even more shortsighted is the notion that since Alaska is the only State of the Union with territory in the Arctic and Subarctic, research may be written off as being of purely local interest, and funding is expected to come from State sources.

For these and other reasons, I believe a separate entity must be created which is dedicated to the development and implementation of an Arctic research plan. I do not believe we could strengthen existing programs in say, the National Science Foundation, and expect to attain the same result. Funding and resources for Arctic research would be easily diverted to other research initiatives—perhaps in the Antarctic and elsewhere. I believe that research in the Arctic, where our citizens live and our resources lie, has been shortchanged in favor of the comprehensive, policy guided research program we do undertake in the Antarctic. I feel that our dedication to research in the Antarctic is motivated by the mere existence of the Antarctic treaty. The judgments which have shifted research moneys away from the Arctic and toward the Antarctic have been based on diplomatic considerations rather than scientific criteria. The policy, and the mandate for the continuation of the Antarctic research program, appears to come from the executive level in the pursuit of foreign policy. I hope my remarks are not misinterpreted—I am not a critic of the Antarctic research program. I do believe, however, that the Arctic deserves better for all the reasons I have given.

I wish to commend Senator ROTH, chairman of the Governmental Affairs Committee for the fine job he and his staff have done on the legislation. I would also like to thank Senator STE-

VENS, Senator JACKSON, and Senator GORTON for their assistance and guidance. Senator STEVENS and his staff have spent many hours in hearings, markups, and other preparations in anticipation of this day, and I am deeply indebted to him and his staff for assisting me in moving this bill along to its final Senate passage.

Thank you, Mr. President.

Mr. STEVENS. Mr. President, I ask for a third reading.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 373

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Arctic Research and Policy Act of 1983".

FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds and declares that—

(1) the Arctic, onshore and offshore, contains vital energy resources that can reduce our dependence on foreign oil and improve the national balance of payments;

(2) as our only common border with the Soviet Union, the Arctic is critical to national defense;

(3) the renewable resources of the Arctic, specifically fish and other seafood, represent one of the Nation's greatest commercial assets;

(4) Arctic conditions directly affect global weather patterns and must be understood in order to promote better agricultural management throughout the United States;

(5) industrial pollution not originating in the Arctic region collects in the polar air mass, has the potential to disrupt global weather patterns, and must be controlled through international cooperation and consultation;

(6) the Arctic is the only natural laboratory for research into human health and adaptation, physical and psychological, to climates of extreme cold and isolation and may provide information crucial for future defense needs;

(7) atmospheric conditions peculiar to the Arctic provide a unique testing ground for research into high-latitude communications, which is likely to be crucial for future defense needs;

(8) Arctic marine technology is critical to cost-effective recovery and transportation of energy resources and to the national defense;

(9) most Arctic-rim countries, particularly the Soviet Union, possess Arctic technologies far more advanced than those currently available in the United States;

(10) Federal Arctic research is fragmented, uncoordinated and undercapitalized at the present time;

(11) such fragmentation has led to the neglect of certain areas of research and to unnecessary duplication of effort in other areas of research;

(12) there is an immediate need to formulate a comprehensive national policy to organize and fund currently neglected scientific research with respect to the Arctic;

(13) the Federal Government, in cooperation with State and local governments, should focus its efforts on the collection and characterization of basic data related to biological and geophysical phenomena in the Arctic, directing special attention to the broad accumulation of data related to sea-ice dynamics;

(14) research into the long-range health environmental and social effects of development in the Arctic is necessary to mitigate the adverse consequences of such development to the land and its residents;

(15) Arctic research has significant value for expanding knowledge of the Arctic which can enhance the lives of Arctic residents, increase opportunities for international cooperation among Arctic-rim countries and foster a national policy for the Arctic; and

(16) the Alaskan Arctic provides essential habitat for marine mammals, migratory waterfowl, and other forms of wildlife which are important to the Nation and which are essential to Arctic residents.

(b) The purposes of this Act are—

(1) to establish an Arctic Science Policy Council and an Arctic Research Commission to promote Arctic research;

(2) to establish a centralized system for the collection and retrieval of scientific data with respect to the Arctic; and

(3) to establish priorities and provide financial support for basic and applied scientific research with respect to the Arctic that is currently being neglected and is essential to our Nation's needs.

ARCTIC SCIENCE POLICY COUNCIL

SEC. 3. (a) There is established a council to be known as the Arctic Science Policy Council (hereafter in this Act referred to as the "Council").

(b) The Council shall be composed of the following members:

(1) A chairperson appointed by the President, with the advice and consent of the Senate.

(2) Two individuals from the State of Alaska who have demonstrated a knowledge and interest in the field of Arctic research, appointed by the President from a list of individuals submitted by the Governor of the State of Alaska. The President in his or her discretion may request additional names to be submitted.

(3) Two individuals who have demonstrated a knowledge and interest in the field of Arctic research, appointed by the President from lists submitted by the Secretary of Commerce, the Secretary of Defense, the Secretary of the Interior, the Secretary of the Department of Energy, the Secretary of State, the Secretary of Transportation (on behalf of the Coast Guard), and the Director of the National Science Foundation. The President in his or her discretion may request additional names to be submitted.

(c) Each member shall have an equal vote on matters decided by the Council.

(d)(1) Except as provided in paragraph 2, the term of office for a member of the Council shall be two years.

(2)(A) Of the members of the Council originally appointed under paragraphs (2) and (3) of subsection (b), one member appointed under paragraph (2) of such subsection, and one member appointed under paragraph (3) of such subsection shall be appointed for a term of one year.

(B) A member may serve after the expiration of his term of office until the President appoints a successor.

(e)(1) A member of the Council not otherwise employed by the United States shall be compensated at a rate equal to the daily equivalent of the rate for level V of the Executive Schedule under section 5316 of title 5, United States Code, for each day such member is engaged in the actual performance of his duties as a member of the Council.

(2) A member of the Council who is an officer or employee of the United States or of the State of Alaska shall serve without additional compensation.

(3) All members of the Council shall be reimbursed for travel (in accordance with 5 U.S.C. 5701) and other necessary expenses incurred by them in the performance of their duties as members of the Council.

(4) No member may be compensated for more than ninety days of service each year in performance of his or her duties as a member of the Council.

DUTIES OF COUNCIL

SEC. 4. (a) The Council shall—

(1) facilitate cooperation between the Federal Government and State and local governments with respect to Arctic research;

(2) coordinate and promote cooperative Arctic scientific research programs with other nations (in consultation with the Secretary of State);

(3) develop and supervise an integrated national Arctic science policy (except with respect to the areas of authority specifically reserved to the Arctic Research Commission under section 7 of this Act);

(4) appoint the members of the Arctic Research Commission; and

(5) cooperate with the Governor of the State of Alaska and with such agencies and organizations of the State as the Governor may designate with respect to the formulation of Arctic science policy.

(b) Not later than January 31 of each year, the Council shall—

(1) publish a statement of goals and objectives with respect to Arctic research to guide the Arctic Research Commission in the performance of its duties; and

(2) submit to Congress a report describing the activities and accomplishments of the Council during the immediately preceding calendar year.

COOPERATION WITH THE COUNCIL

SEC. 5. (a)(1) The Council may acquire from the head of any Federal agency unclassified data, reports, and other nonproprietary information with respect to Arctic research which the Council considers useful in the discharge of its duties.

(2) Each such agency shall cooperate with the Council and furnish all data, reports, and other information requested by the Council to the extent permitted by law.

(b) The Council may utilize the facilities and services of any Federal agency (with the consent of the appropriate agency head, with or without reimbursement), taking every feasible step to avoid duplication of research and effort.

ARCTIC RESEARCH COMMISSION

SEC. 6. (a) There is established a commission to be known as the Arctic Research Commission (hereafter in this Act referred to as the "Commission").

(b)(1) The Commission shall be appointed by the Arctic Science Policy Council and shall be composed of the following members:

(A) Four members shall be appointed from among individuals with expertise in representative areas of research relating to the Arctic (including, but not limited to, the physical, biological, health, and social sci-

ences), at least one of whom shall be employed by the University of Alaska.

(B) Two members shall be appointed from among residents of the Arctic who are representative of the needs and interests of Arctic residents and live in areas directly affected by Arctic resource development.

(C) Two members shall be appointed from among individuals familiar with the Arctic and representative of the needs and interests of private industry undertaking resource development in the Arctic.

(D) One member shall be appointed from among individuals familiar with the Arctic and employed by the United States Coast Guard.

(2) Upon the appointment of the members of the Commission pursuant to paragraph (1), the Council shall designate a member of the Commission to be chairperson of the Commission.

(c)(1) Except as provided in paragraph (2), the term of office for a member of the Commission shall be four years.

(2) Of the members of the Commission originally appointed under paragraph (1) of subsection (b)—

(i) two shall be appointed for a term of one year;

(ii) two shall be appointed for a term of two years;

(iii) two shall be appointed for a term of three years; and

(iv) three shall be appointed for a term of four years.

(3) A member may serve after the expiration of his term of office until the Council appoints a successor.

(d)(1) A member of the Commission not otherwise employed by the United States shall be compensated at a rate equal to the daily equivalent of the rate for GS-16 of the General Schedule under section 5332 of title 5, United States Code, for each day such member is engaged in the actual performance of his duties as a member of the Commission.

(2) A member of the Commission who is an officer or employee of the United States or the State of Alaska shall serve without additional compensation.

(3) All members of the Commission shall be reimbursed for travel (in accordance with section 5701 of title 5, United States Code) and other necessary expenses incurred by them in the performance of their duties as members of the Commission.

(4) No member may be compensated for more than one hundred and eighty days of service each year in performance of his or her duties as a member of the Commission.

DUTIES OF COMMISSION

SEC. 7. (a) The Commission shall—

(1) survey Arctic research conducted by Federal and State, and local agencies, the University of Alaska and other universities, and other private and public institutions to determine priorities for future Arctic research, and make recommendations thereon to the Council and other interested parties;

(2) establish a data collection and retrieval center for Arctic research (which shall be located in the State of Alaska) and promulgate guidelines for the use and dissemination of Arctic research information;

(3) make grants for such Arctic research as the Commission deems necessary and desirable to further the goals and objectives published annually by the Council pursuant to section 4(b)(1), with special consideration being given to studies in neglected areas of Arctic research; and

(4) consult the Council with respect to—

(A) all proposed, ongoing, and completed research programs and studies funded by the Commission,

(B) recommendations proposed by the Commission with respect to future Arctic research, and

(C) guidelines for awarding and administering Arctic research grants.

(b)(1)(A) Not later than December 31 of each year, the Commission shall transmit to the Council a report describing the activities and accomplishments of the Commission during the immediately preceding calendar year and making recommendations with respect to future Arctic research policy.

(B) Such report shall be available for public inspection at reasonable times.

(2) Not later than September 30, 1985, the Commission shall submit to Congress and to the Legislature of the State of Alaska a report making recommendations with respect to the continued operation of Government-operated laboratory facilities conducting Arctic research, taking into account the efficiency and effectiveness of such facilities and the degree to which the operation of such facilities would result in the duplication of research and effort.

(c) The Commission shall cooperate with the Governor of the State of Alaska, and with such agencies as the Governor may designate with respect to—

(1) the recommendations proposed by the Commission pursuant to section 7(a)(4)(B);

(2) the planning, funding, and logistical support of Arctic research; and

(3) the storage, transfer, and dissemination of Arctic scientific and technological knowledge and data.

ADMINISTRATION OF THE COMMISSION

SEC. 8. The Commission may—

(1) in accordance with civil service laws and subchapter III of chapter 53 of title 5, United States Code, appoint and fix the compensation of an Executive Director and such additional staff personnel as may be necessary;

(2) procure temporary and intermittent services as authorized by section 3109 of title 5, United States Code;

(3) enter into contracts and procure supplies, services, and property; and

(4) enter into agreements with the General Services Administration for procurement of necessary financial and administrative services, for which payment shall be made by reimbursement from funds of the Commission in such amounts as may be agreed upon by the Commission and the Administrator of the General Services Administration.

STATE ELECTION

SEC. 9. (a) The State of Alaska may elect to participate or not to participate in the activities of the Council and the Commission.

(b) Failure of the State of Alaska to contribute to the Arctic Research Fund (established by section 10 of this Act) for a fiscal year an amount equal to one-quarter of the amount appropriated to such Fund by the United States for the previous fiscal year shall constitute an election by such State not to participate in the Council and the Commission.

(c) Upon an election by the State of Alaska not to participate in the Council and the Commission pursuant to subsection (b)—

(1) appointments to such Council or Commission which are required to be made from among individuals—

(i) employed by the State of Alaska, or

(ii) nominated by the Governor of the State of Alaska

shall be vacated; and

(2) an appointment to fill a vacancy created by such election shall be made in such manner and from among such individuals as other appointments to such Council or Commission are required to be made (as determined by the chairperson of the Council or Commission).

(d) An election by the State of Alaska not to participate in the Council and the Commission pursuant to subsection (b) shall not affect the powers or duties of those bodies.

(e) Should the State of Alaska wish to reinstate its participation following an election not to participate, it may do so by meeting the funding requirement for the year in which reinstatement is sought.

ARCTIC RESEARCH FUND

SEC. 10. (a) There is hereby created a trust fund to be known as the Arctic Research Fund (hereafter in this Act referred to as the "Fund"), to be available for the support of the activities of the Arctic Science Policy Council and the Arctic Research Commission.

(b) Such Fund shall consist of—

(1) amounts appropriated to such Fund;

(2) amounts contributed to such Fund by the State of Alaska; and

(3) amounts contributed by private individuals and organizations.

(c) Amounts in the Fund shall be available, until expended, for the purposes of this Act, to the extent and in such amounts as are provided for in advance in appropriation Acts.

(d)(1) There is authorized to be appropriated for the Arctic Research Fund an amount not to exceed $25,000,000 per fiscal year for the fiscal years ending September 30, 1985, September 30, 1986, September 30, 1987, September 30, 1988, and September 30, 1989.

(2) In determining the amount contributed to such Fund by the State of Alaska for a fiscal year—

(A) the fair market value (as determined by the Council in good faith) of all facilities, services, materials, and other support contributed to the Fund by the State of Alaska during such fiscal year, and

(B) all amounts contributed by private individuals and organizations,

shall be taken into account.

DEFINITION

SEC. 11. The term "Arctic" shall mean all United States and foreign territory north of the Arctic Circle and all United States territory north and west of the boundary formed by the Porcupine, Yukon, and Kuskokwim Rivers; all contiguous seas, including the Arctic Ocean and the Beaufort, Bering, and Chukchi Seas; and the Aleutian chain.

Mr. STEVENS. Mr. President, may I inquire from my good friend from West Virginia if he has anything further to come before the Senate?

Mr. BYRD. Mr. President, I thank the distinguished acting majority leader for his inquiry. I have nothing further.

ORDER DESIGNATING A PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS ON TOMORROW

Mr. STEVENS. Mr. President, when we convene tomorrow at 9:30, the two leaders will be recognized under the

standing order and then there will be two special orders.

I ask unanimous consent that following the two special orders, there be a period for the transaction of routine morning business, not to extend beyond the hour of 10:15 a.m. in which Senators may speak for not to exceed 2 minutes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

RECESS UNTIL TOMORROW AT 9:30 A.M.

Mr. STEVENS. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in recess until tomorrow at 9:30 a.m.

The motion was agreed to, and the Senate, at 6:14 p.m., recessed until Tuesday, June 28, 1983, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate June 27, 1983:

IN THE AIR FORCE

The following-named officer under the provisions of title 10, United States Code, section 601, to be assigned to a position of importance and responsibility designated by the President under title 10, United States Code, section 601:

To be lieutenant general

Maj. Gen. Leo Marquez, [redacted] FR, U.S. Air Force.

IN THE NAVY

The following-named officer to be placed on the retired list in the grade indicated under the provisions of title 10, United States Code, section 1370:

To be vice admiral

Vice Adm. Thomas J. Bigley, [redacted] 1110, U.S. Navy.

UNITED NATIONS

Jose S. Sorzano, of Virginia, to be the Deputy Representative of the United States of America to the United Nations, with the rank and status of Ambassador Extraordinary and Plenipotentiary.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Warren T. Lindquist, of Maine, to be an Assistant Secretary of Housing and Urban Development, vice Geno Charles Baroni.

IN THE AIR FORCE

The following-named officer for appointment to the grade of lieutenant general on the retired list pursuant to the provisions of title 10, United States Code, section 1370:

To be lieutenant general

Lt. Gen. Richard E. Merkling, [redacted] FR, U.S. Air Force.

IN THE AIR FORCE

The following-named officers for permanent promotion in the U.S. Air Force, under the appropriate provisions of chapter 36, title 10, United States Code, as amended, with dates of rank to be determined by the Secretary of the Air Force.

LINE OF THE AIR FORCE

To be colonel

Guyse, Barry D., [redacted]
O'Connor, Paul B., [redacted]
Scheyd, Fredric J., [redacted]
Smith, Ronald E., [redacted]
Sparks, Robert C., [redacted]

IN THE AIR FORCE

The following officer for appointment in the Regular Air Force under the provisions of section 531, title 10, United States Code, with grade and date of rank to be determined by the Secretary of the Air Force provided that in no case shall the officer be appointed in a grade higher than that indicated.

LINE OF THE AIR FORCE

To be lieutenant colonel

Cobean, James E., [redacted]

IN THE ARMY

The following-named officers for promotion in the Reserve of the Army of the United States, under the provisions of title 10, U.S.C., sections 3366, 3367 and 3370:

To be colonel

Basista, James P., [redacted]
Geriner, Henry B., [redacted]
Mencer, John F., [redacted]
Morris, Charles B., [redacted]
Orr, Thomas L., [redacted]
Pixley, Morris H., [redacted]
Stauber, Jerome E., [redacted]
Stevens, Jack D., [redacted]
Vitzthum, Edward F., [redacted]
Wiltshire, James R., [redacted]

Allen, Gary William
Allen, Mark Edward
Allison, Harry Kent
Alpeter, William Charles
Altizer, Robert Dale
Amundson, Robert James
Andersen, Richard Francis
Anderson, Jonathan Lee
Anderson, Kenneth Noel
Anderson, Marc Eric
Anderson, Samuel Kaaloa
Anderson, Terence Lee
Anglim, Edward Patrick
Antrim, Stanley Robert, Jr.
Arbiter, Jerome Lawrence
Archambo, Hubert Edward, Jr.
Armstrong, William Eric
Athow, Lewis Keith
Augustus, James Robert
Auriemma, John Charles
Avila, Richard Frank
Bacon, William Bradley
Baker, Stephen Hall
Balke, Phillip Lynn
Ballew, William Thomas
Banks, Richard Allen
Bankston, Victor Joseph
Barasha, Lewis Michael, Jr.
Barbero, Mark
Barker, Frank Elmer, Jr.
Barnes, John Roger
Barnes, Thomas Daniel
Barrett, Frank Oliver, III
Barrow, Ronnie Lee
Bathgate, John Craig
Batteen, Earl R., Jr.
Baylis, Robert Owen
Beaugureau, Denis Francis
Bell, Howard Franklin
Bellamy, Malcolm Edwin, Jr.
Bennett, Albert Eugene, Jr.
Benson, Rodney Lingo
Bepko, John Joseph, III
Bergo, Dennis Michael
Bernsen, Thomas Jerome, Jr.
Berree, Norman G.
Berthiaume, William F. Halsey
Bertsch, Roger Brian
Bethea, William Dallas
Bianco, Bernard Michael
Bieda, George Edward
Biggers, Edward Milton
Bingay, Charles Pierson
Blanchard, Frank Medford, Jr.
Bogosian, David Edward
Bohman, Richard Bursey
Bolt, Billy Frank
Bone, John Francis
Bonnett, John William
Bouchoux, Donald Robert
Boucree, Raymond John
Bounds, Lee E.
Boyd, William Linwood
Bozin, William George
Branch, Malcolm Parker
Bratzler, David Karl
Breese, Jack Richard
Brenner, William Rush, Jr.
Briggs, Steven Eric
Brink, Gale Dean
Brookbank, Michael Andrew
Brown, Fred Douglas
Brown, Gregory Charles
Brown, James Michael
Browning, Jonathan Edward
Bryant, Stanley Walter
Buelow, John Peter
Bunnell, David Lee
Burbrink, Roger Ronald
Burlin, David Stevenson

Burson, Jacquelyn May
Bush, Frank Joseph, Jr.
Butler, Charles Thomas, III
Byrne, Neil Francis
Byrne, Thomas Michael
Callahan, Roy Howard
Campbell, Craig Vanharten
Campbell, Robert Stephen
Capansky, Mark Alan
Carey, Goeffrey M.
Carroll, Charles Richard
Carroll, James William
Carter, Dennis Charles
Carter, John Michael
Cash, Paul David
Cassidy, John Alexander, Jr.
Cast, Frederick Allan, Jr.
Cataldi, Richard Anthony
Cech, Kenneth Charles
Chambless, James Earl
Champney, Robert Keith
Chaplin, Robert Charles
Chewning, Warren Craig
Christensen, Sandra Lynn
Christenson, Ronald Lee
Christian, Roy Calvin
Church, Albert Thomas, III
Cipriani, Alfred Louis
Clapsadl, Michael Ray
Clark, George Chester
Clark, Frederic T., Jr.
Clayton, Richard Eldon
Clement, Orrin Pierce
Cleverdon, Thomas Frederick
Cochrane, John Mackay
Colantoni, Anthony Vincent
Coleman, Richard George
Coll, William Francis
Commons, Norbert Anthony, Jr.
Compton, James Lawrence, Jr.
Conallen, Michael James
Conrad, John Woeppel
Consaul, Harry Parker, III
Conway, Michael R.
Cook, Virgil Griffith, Jr.
Corbin, Ridgeway W., II
Corbitt, James Allen, Jr.
Corcoran, Thomas Joseph
Corley, Gwinn Ellis
Cottle, Joseph Archie, Jr.
Covington, Clifford Craig
Cox, Richard Stedman
Coxe, William Kenneth, Jr.
Coyle, Barry John
Crandall, Charles Kenneth, Jr.
Crandall, Scott Michael
Crecelius, Frederick E.
Creekman, Charles Todd, Jr.
Crenshaw, Keith Virgil
Crisp, Dale William
Croake, John Michael
Cruser, Thomas Paul
Culpepper, James Clayton
Culwell, Joe Mark
Cummings, Walter James
Curry, Dennis Patrick
Curtis, John MacRae
Curtis, Kendall William
Dahl, Donald Leon
Dame, Roderick Winstead
Daniels, James Norman, Jr.
Darling, Larry Wayne
Davis, Robert Bewick
Davis, Roderick Franklin
Davis, William Oris
Davison, Henry Gordon
Dawson, Donald Ray
Day, Robert Stephen
Dean, Thomas Roger
Demlein, John Joseph, Jr.
Dempsey, Peter Michael
Despain, William Michael

EXTENSIONS OF REMARKS

AMEND THE BANKRUPTCY CODE WITH REGARD TO CERTAIN REPURCHASE AGREEMENTS

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. FAUNTROY. Mr. Speaker, I have today introduced legislation which I believe is critically needed to assure the continued smooth functioning of the Nation's Government security markets and the open market operations of the Federal Reserve System. This legislation would amend the Bankruptcy Code to exempt from its automatic stay provisions certain repurchase agreements.

These amendments to the Bankruptcy Code (the "Code") regarding repurchase agreements (sometimes referred to herein as "repos") [1] have been proposed to deal with the considerable uncertainty that has arisen in recent months as to how repos may be treated in a bankruptcy proceeding. This uncertainty was emphasized by Anthony M. Solomon, president of the Federal Reserve Bank of New York—the New York Fed—in testimony, April 25, 1983, before the Subcommittee on Domestic Monetary Policy of the House Committee on Banking, Finance and Urban Affairs.

Use of repos has grown rapidly in recent years. Repos are now considered to be a principal means of financing the market for U.S. Government securities and money market instruments. As Mr. Solomon testified, repos have emerged over the years as a particularly useful tool in conducting Federal Reserve open market operations. A diminution in the liquidity of the repo market could hamper the conduct of monetary policy.

Recently, however, a serious question has arisen whether the securities and commodities amendments to the Bankruptcy Code (the "Code"), enacted last year as Public Law 97-222, adequately cover the repo market. As a first step, the proposed amendments to the Code would address this question:

First, by providing new definitions of "repo participant" and "repurchase agreement" in section 101, and

Second, by creating a new section at the end of chapter 5 and making conforming amendments to sections 362(b), 546, 548(d)(2) and 553(b)(1) of the Code to insure there is no question that repo participants are afforded the same treatment with respect to the stay and avoidance provisions of the Code in connection with repurchase agreements, as newly defined, which Pubic Law 97-222 explicitly provided stockbrokers, securities clearing agencies, commodity brokers, and forward contract merchants in connection with securities contracts, commodity contracts and forward contracts.

These amendments would taken an important first step in resolving the recent uncertainty about whether the provisions of Public Law 97-222 adequately cover the repo market. This uncertainty largely stems from litigation in the Lombard-Wall case, as described below, and has introduced considerable confusion in the use of repo transactions in financial markets.

These amendments are offered as an emergency measure to deal with the effect of the present uncertainty on the repo market only in respect of U.S. Government and agency obligations, certificates of deposit, and eligible bankers' acceptances.

II. DESCRIPTION OF THE REPO MARKET

As indicated above, repo transactions provide one of the major mechanisms for limited-term investment involving all U.S. Government and agency securities, mortgage-related instruments, commodities and all money market instruments—for example, certificates of deposit, bankers' acceptances, and commercial paper.

The volume of repo transactions is very large. The 36 members of the primary dealers committee of the Public Securities Association (the "Primary Dealers") alone engage in repo transactions amounting to about $25 billion to $30 billion each day. It is difficult to determine the total size of the repo market, but one can safely estimate that the aggregate daily amount of repo transactions amounts to several hundred billion dollars. This should come as little surprise, since the financial assets that are the subject of repos include a substantial part of the approximately trillion dollar U.S. public debt.

The repo market serves a crucial function for both parties to the repo transaction. The country's major institutional and fiduciary investors make heavy use of repos. For these investors, including such entities as State and local governments, public and private pension funds, money market and other mutual funds, banks, thrift institutions, and large corporations, repos have become a vital tool of cash management.

The repo is particularly well-suited to the needs of these investors. Receipts of taxes and the proceeds of bond issues in the case of State and local governments, cash flows from corporate operations, and liquidity needs of thrift institutions and money market funds often fail to coincide with the planned expenditures of such funds, thereby creating the need for such entities to invest idle funds for short periods in as risk free a manner as possible.

Repos generate income for the supplier of funds while at the same time providing flexibility, since they can be arranged for periods which match the supplier's cash flow needs, including periods as short as 1 day. Few, if any, other investment vehicles have this feature. Government securities or other financial assets can be bought and held for short periods other than in repo transactions, but the transaction costs can be relatively high. Moreover, the possibility of capital loss due to market rate volatility or the risk of reinvestment at a lower rate of return significantly reduces the attractiveness of investment alternatives.

For the primary dealers in the Government-related securities market, the repo market has become the principal means of financing their positions. Repos provide dealers with the financing that is essential for them to buy newly issued Government securities. Repos also enable other dealers to obtain these newly issued securities from the primary dealers. If repo financing becomes unavailable or more costly due to adverse interpretations of the code, the distribution system for newly issued Government securities and the Federal Government's ability to raise funds in a cost-effective manner will be adversely affected. This would in turn increase the cost of Government borrowing and the level of interest rates generally.

Wide public and private sector participation is important to the reliable functioning of the repo markets and permits the U.S. Treasury and other Federal agencies to finance the country's public debt at rates of interest lower than otherwise would be possible. Moreover, it provides additional

[1] A repo represents a transfer of a financial instrument—often government securities—by one party to another party for payment, with a simultaneous agreement by the second party to retransfer securities to the first party on demand or on a date certain against payment which reflects a rate of interest. A reverse repo is the mirror image of a repo, generally initiated by the party originally transferring the securities.

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

incentive for foreign central banks and other foreign holders of U.S. dollar reserves to participate in financing the Nation's public debt.

Just as important, the repo market plays an important role in the conduct of monetary policy. The Federal Open Market Committee, through the trading desk at the New York Fed, makes extensive use of repos in regulating the supply of funds in the execution of monetary policy. Repos have become a highly flexible and effective short-term tool for the Federal Reserve System, allowing the System to adjust reserves for short periods of time without disruption of the Government securities market. The effectiveness of the repo market as a tool of monetary policy depends in turn upon broad-based public participation.

As indicated above, the efficient functioning of the repo market also facilitates substantial involvement by foreign central banks, monetary authorities, and international institutions in financing the U.S. public debt. The New York Fed maintains accounts for approximately 140 foreign central banks, monetary authorities, and international institutions. With such large international holdings of the dollar, it has become important to the orderly financing of the public debt that these institutions purchase U.S. Government securities. In 1982, for example, the dollar volume of investment activity for these foreign accounts alone at the New York Fed exceeded $1.4 trillion, most of which involved U.S. Government securities. A substantial amount of this activity was in repos.

Finally, the existence of an efficient repo market in U.S. Government securities enhances the attractiveness of the U.S. dollar as an international reserve currency. The dollar is the principal reserve currency in the world.

III. REPO MARKET IN JEOPARDY

The effective functioning of the repo market can only be assured if repo investors will be protected against the risk of open-ended market loss arising from the insolvency of a dealer or other counterparty in the repo market. As Mr. Solomon testified on April 26, 1983, the possibility that market participants might prove incapable of using either their funds or their securities upon the insolvency of a counterparty weakens confidence in the repo market.

The repo market is as complex as it is crucial. It is built upon transactions that are highly interrelated. A collapse of one institution involved in repo transactions could start a chain reaction, putting at risk hundreds of billions of dollars and threatening the solvency of many additional institutions.

Since the repo market is important to the health of the country's financial system, it is desirable that the Code be interpreted and implemented in a manner which protects that market without creating an unfair result for debtors. Similar concerns led to Public Law 97-222. Despite Public Law 97-222, investors in the repo market have in the last several months found themselves faced with considerable uncertainty about the treatment of repos in bankruptcy proceedings. The provisions of Public Law 97-222 are not believed adequate to protect liquidations of repos in the event of the insolvency of a dealer or other participant in the repo market, even though the principal objective of Public Law 97-222 was to prevent the insolvency of one commodities or securities firm from spreading to other firms and possibly threatening the stability of the affected market. H.R. Rep. No. 97-420, 97th Congress, 2d Session 1 (1982).

The uncertainty was highlighted by the filing in the Bankruptcy Court in the Southern District of New York of a chapter 11 bankruptcy petition by Lombard-Wall, Inc., in August 1982.[2] A bench decision in the Lombard-Wall case held that the holder of securities subject to a repurchase agreement was subject to the automatic stay of the Code, and that this holder was precluded from closing out its position with the debtor without approval of the Court. *Lombard-Wall Incorporated* v. *Columbus Bank & Trust Co. et al.* (In re Lombard-Wall, Incorporated), No. 82 B 11556, Bankr. Ct., S.D.N.Y., bench decision, September 16, 1982. This holding made clear the risks to the market created by the Code's stay and avoidance provisions and demonstrated that Public Law 97-222 is not sufficient in scope to protect the market from major dislocations caused by bankruptcy of market participants.

The Lombard-Wall proceedings and their extensive press coverage have had an adverse impact on the financial markets and undermined the primary purposes of Public Law 97-222 because the repo market is subject to the same ripple effect as other securities markets.[3]

President Solomon of the New York Fed testified that if the interpretation in the Lombard-Wall decision were to prevail, he is confident that some deterioration could result in the Government securities market. He added:

> Indeed, there has already been some deterioration [in the market], which might well have gone further but for the anticipation by many market participants that the legal questions overhanging the status of repos will be favorably resolved. At the least, the market would lose a significant measure of liquidity as some risk-averse participants withdrew or reduced their exposure; the interest rate paid on such transactions would rise to reflect the greater risk and lessened willingness of temporary investors to participate; and the market participants with less-established track records would experience some loss of business and higher financing costs.

Uncertainty as to the scope of coverage of Public Law 97-222 with respect to the repo market has already caused special problems for certain categories of investors. The U.S. Department of Housing and Urban Development has recently decided not to permit further investment in repos by Public Housing Authorities, Indian Housing Authorities, and FHA-Approved Mortgagees for Multifamily Projects. Standard & Poor's has indicated that it will not rate "structured municipal issues," which permit investment of municipal bond or note proceeds in repurchase agreements, with stockbrokers, other than those subject to a liquidation under the Securities Investor Protection Act of 1970, unless they themselves are rated by Standard & Poor's because of the questions raised by the Lombard-Wall bankruptcy about the ability of a bond or note trustee to liquidate, in a timely manner, securities held under a repurchase agreement where the seller-repurchaser files for protection under the Code.

Open-ended mutual funds, particularly the money market funds, use repos on a short-term basis to assist in managing their portfolios, to provide flexibility and to provide higher return with relative safety. As of April 30, 1983, money market funds held repo agreements totaling approximately $13.5 billion.

The recent focus on safety and liquidity of repos in the event of a bankruptcy filing by a participant to a repo has raised concerns about their use by the mutual fund industry in light of the regulatory standards under the Investment Company Act of 1940. On February 2, 1983, in Investment Company Release No. 13005, the Securities and Exchange Commission announced the revision of a previous "no action" position taken by the Division of Investment Management regarding repos. Under its revised policy, the Division requires that investment company boards of directors evaluate the creditworthiness of the brokers or dealers with which they propose to engage in repo transactions. In addition, the Division indicated, in a November 4, 1982, memorandum to Chairman Shad, that it would require that Government securities money market funds which advertise that their portfolio securities are Government guaranteed to disclose substantial investments in repos.

---

[2] Some question about the legal status of repos in the bankruptcy context had also been raised earlier in 1982 with the collapse of Drysdale Government Securities, Inc., even before the enactment of Public Law 97-222. Drysdale's failure has also had a wide impact on the repo market and in fact contributed to Lombard-Wall's problem.

[3] See Carrington, "Securities in Lombard-Wall Case Termed Loan Collateral by a Bankruptcy Judge," Wall St. J., Sept. 20, 1982, at 10, col. 2.

While these concerns are currently being addressed within the mutual fund industry, the proposed amendments to the Bankruptcy Code would assure protection to mutual funds which engage in repos. If a bankruptcy filing does occur, the proposed legislation would protect the liquidity of a fund's repo with a debtor, and permit the fund to achieve its bargained-for contract rights.

Safety and the ability to specify term are the key elements of repos which make them attractive to funds. Both elements promote liquidity for funds. Money market funds, by their nature, are required to be highly liquid and are used by millions of investors on a daily basis for investment in and redemption of fund shares. The ability to redeem promptly, at net asset value, is crucial to the operation of these funds and the maintenance of investor confidence. The filing of a case under the Code by a Government securities dealer, or other party which holds a repo with a fund, puts these key elements in some doubt. Although there is little likelihood that bankruptcies involving fund repos would occur with any frequency, the mere possibility, under present law, raises significant issues as to the safeguards and circumstances under which funds should utilize repos in their investment portfolios.

The proposed amendments to the Code, described below, will help assure that the objective of Public Law 97-222 to minimize the displacement caused in the commodities and securities markets in the event of a major bankruptcy (128 CONGRESSIONAL RECORD 1262 (daily ed. February 9, 1982) (statement of Republican Edwards)) is carried out be expressly providing the repo market the same protection.

IV. PROPOSED REPO AMENDMENTS

The proposed amendments will take an important first step toward meeting the full objective of Public Law 97-222 by expressly providing that similar protections apply to the crucial portions of the repo market involving U.S. Government and agency obligations, certificates of deposit, and eligible bankers' acceptances. The structure of the proposed amendments is based upon the addition to the Code of new definitions of "repo participant" and "repurchase agreement" and the making of conforming changes in relevant provisions of the Code. The proposed amendments are intended to afford participants in the repo market the same treatment with respect to the stay and avoidance provisions of the Code that Public Law 97-222 explicitly provided stockbrokers, securities clearing agencies, commodity brokers, and forward contract merchants in connection with securities contracts, commodity contracts, and forward contracts.

The amendments would apply only to certain repurchase agreements, namely, those involving certificates of deposit, eligible bankers' acceptances, or securities that are direct obligations of, or that are fully guaranteed as to principal and interest by, the United States or any agency of the United States. These amendments are not intended, however, to affect the status of repos involving securities or involving commodities as securities contracts, commodity contracts, or forward contracts, and their consequent eligibility for similar treatment under other provisions of the Code, such as the provisions giving protection to stockbrokers, securities clearing agencies, commodity brokers, and forward contract merchants for liquidation and setoff in respect of securities contracts, commodity contracts, or forward contracts. In particular, a repurchase agreement as defined in the amendments, insofar as it applies to a security, would continue to be a securities contract as defined in the Code and thus also would be subject to the Code provisions pertaining to securities contracts. Similarly, insofar as a repurchase agreement as defined by the amendments applies to a commodity, it would continue to be a forward contract for purposes of the Code and would be subject to the Code provisions pertaining to forward contracts.

H.R. 3418

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Repurchase Agreements Bankruptcy Amendments of 1983".

SEC. 2. Section 101 of title 11, United States Code, is amended—

(1) by redesignating paragraphs (35), (36), (37), (38), (39), (40), and (41), as paragraphs (37), (38), (39), (40), (41), (42), and (43), respectively,

(2) by inserting after paragraph (34) the following new paragraph:

"(35) 'repo participant' means an entity that, on any day during the period beginning 90 days before the date of the filing of the petition, has an outstanding repurchase agreement with the debtor;", and

(3) by inserting after paragraph (35) the following new paragraph:

"(36) 'repurchase agreement' (which definition also applies to a reverse repurchase agreement) means an agreement, including related terms, which provides for the transfer of certificates of deposit, eligible bankers' acceptances, or securities that are direct obligations of, or that are fully guaranteed as to principal and interest by, the United States or any agency of the United States against the transfer of funds by the transferee of such certificates of deposit, eligible bankers' acceptances, or securities with a simultaneous agreement by such transferee to transfer to the transferor thereof certificates of deposit, eligible bankers' acceptances, or securities as described above, at a date certain not later than one year after such transfers or on demand, against the transfer of funds;".

SEC. 3. Section 362(b) of title II, United States Code, is amended—

(1) by redesignating paragraphs (7) and (8) as paragraphs (8) and (9), respectively, and

(2) by inserting after paragraph (6) the following new paragraph:

"(7) under subsection (a) of this section, of the setoff by a repo participant, of any mutual debt and claim under or in connection with repurchase agreements that constitutes the setoff of a claim against the debtor for a margin payment, as defined in section 741(5) or 761(15) of this title, or settlement payment, as defined in section 741(8) of this title, arising out of repurchase agreements against cash, securities, or other property held by or due from such repo participant to margin, guarantee, secure, or settle repurchase agreements;".

SEC. 4. Section 546 of title 11, United States Code, is amended by inserting after subsection (d) the following new subsection:

"(e) Notwithstanding sections 544, 545, 547, 548(a)(2), and 548(b) of this title, the trustee may not avoid a transfer that is margin payment, as defined in section 741(5) or 761(15) of this title, or settlement payment, as defined in section 741(8) of this title, made by or to a repo participant, in connection with a repurchase agreement and that is made before the commencement of the case, except under section 548(a)(1) of this title.".

SEC. 5. Section 548(d)(2) of title 11, United States Code, is amended—

(1) in subparagraph (A) by striking out "and" at the end thereof,

(2) in subparagraph (B) by striking out the period at the end thereof and inserting in lieu thereof "; and", and

(3) by adding at the end thereof the following new subparagraph:

"(C) a repo participant that receives a margin payment, as defined in section 741(5) or 761(15) of this title, or settlement payment, as defined in section 741(8) of this title, in connection with a repurchase agreement, takes for value to the extent of such payment.".

SEC. 6. Section 553(b)(1) of title 11, United States Code, is amended by inserting ", 362(b)(7)," after "362(b)(6)".

SEC. 7. (a) Chapter 5 of title 11, United States Code, is amended by adding at the end thereof the following new section:

"§ 557. Contractual right to liquidate a repurchase agreement.

"The exercise of a contractual right of a repo participant to cause the liquidation of a repurchase agreement because of a condition of the kind specified in section 365(e)(1) of this title shall not be stayed, avoided, or otherwise limited by operation of any provision of this title or by order of a court or administrative agency in any proceeding under this title, unless, where the debtor is a stockbroker or securities clearing agency, such order is authorized under the provisions of the Securities Investor Protection Act of 1970 (15 U.S.C. 78aaa *et seq.*) or any statute administered by the Securities and Exchange Commission. In the event that a repo participant liquidates one or more repurchase agreements with a debtor and under the terms of one or more such agreements has agreed to deliver assets subject to repurchase agreements to the debtor, any excess of the market prices received on liquidation of such assets (or, if any such assets are not disposed of on the date of liquidation of such repurchase agreements, at the prices available at the time of liquidation of such repurchase agreements from a generally recognized source or the most

recent closing bid quotation from such a source) over the sum of the stated repurchase prices and all expenses in connection with the liquidation of such repurchase agreements shall be deemed property of the estate, subject to the available rights of setoff. As used in this section, the term 'contractual right' includes a right set forth in a rule or bylaw, applicable to each party to the repurchase agreement, of a national securities exchange, a national securities association, or a securities clearing agency, and a right, whether or not evidenced in writing, arising under common law, under law merchant, or by reason of normal business practice.".

(b) The analysis of sections for chapter 5 of title 11, United States Code, is amended by adding at the end thereof the following new item:

"557. Contractual right to liquidate a repurchase agreement."

SEC. 8. The amendments made by this Act shall become effective upon the date of the enactment of this Act, except that such amendments shall apply only to cases commenced on or after such date.

SECTION-BY-SECTION ANALYSIS

SECTION 1—SHORT TITLE

Section 1 provides that the act may be cited as the "Repurchase Agreements Bankruptcy Amendments of 1983."

SECTION 2—DEFINITIONS

Section 2(1) makes conforming redesignations of subsequent definitions.

Section 2(2) provides a new definition for "repo participant" in section 101. "Repo participant" includes any entity that, on any day during the period beginning 90 days before the date of the filing of the petition, (has one or more outstanding repurchase agreements with the debtor.) The 90 day period is based on the preference period set forth in section 547 of the Code. This definition is intended to include an entity acting for its own account or for the account of one or more other entities (whether as custodian, trustee, fiduciary, agent or in any other capacity).

It is not intended by the provisions of this definition to affect the status of repurchase agreements under other provisions of the Code, such as those, for example, protecting securities contracts and forward contracts.

Section 2(3) provides a new definition for "repurchase agreement" in section 101. "Repurchase agreement" means any agreement which provides for the transfer of certificates of deposit, eligible bankers' acceptances or securities that are direct obligations of, or that are fully guaranteed as to principal and interest by, the United States or any agency of the United States against the transfer of funds by the transferee of such certificates of deposit, eligible bankers' acceptances, or securities with a simultaneous agreement by such transferee to transfer to the transferor thereof certificates of deposit, eligible bankers' acceptances, or securities as described above, at a date certain not later than one year after such transfers or on demand (regardless of by whom made), against the transfer of funds. This definition also applies to a reverse repurchase agreement. It also covers any related terms in a repurchase agreement (such as mark-to-market provisions). For purposes of this definition an "eligible bankers' acceptance" is either (i) an acceptance by any institution of a draft or bill or exchange drawn on itself which, if drawn on a member bank, would be eligible for acceptance under the criteria established in subparagraph (A) of the seventh paragraph of section 13 of the Federal Reserve Act, 12 U.S.C. § 372, or (ii) an acceptance which, on the date the repurchase agreement is entered into, is eligible for purchase under the rules of the Federal Open Market Committee.

While repurchase agreements may be open to various kinds of characterizations and are characterized in market practice under various legal relationships, it is intended by this section that any agreement that meets the terms of the definition of repurchase agreement shall receive the treatment in bankruptcy that is provided for in this subtitle.

The definition does not require (or prevent) the original and reverse transfers to be provided for in separate agreements or confirmations. A repurchase agreement may be either written or oral.

In accordance with market practice, some repurchase agreements permit certain substitutions of the assets subject to the repurchase agreement. Accordingly, under agreements covered by this definition, the transferor may make certain substitutions of assets, but only assets of at least equal market value to those originally transferred and falling within the same one of the three enumerated categories (i.e., certificates of deposit, eligible bankers' acceptances, or U.S. government and Federal agency issued or guaranteed securities). The transferee may return only assets that are the same in all material respects as those last transferred or substituted by the transferor.

Repurchase agreements for only certificates of deposit, eligible bankers' acceptances, and U.S. government and Federal agency issued or guarenteed obligations are afforded the amendment's treatment under the Code. As provided in section 102(5) of title 11, United States Code, the enumeration of the underlying types of property in the alternative is not exclusive; a repurchase agreement can involve the transfer or re-transfer of a combination of the enumerated kinds of property. It is not intended by the enumeration in this definition to affect in any way the status of repurchase agreements for any item, whether or not covered by the definition, under other provisions of the Code, such as those, for example, protecting securities contracts and forward contracts.

In particular, a repurchase agreement as defined in this subtitle, insofar as it applies to a security, would continue to be a securities contract as defined in the Code and thus also would be subject to the Code provisions pertaining to securities contracts. Similarly, insofar as a repurchase agreement as defined in this subtitle applies to a commodity, it would continue to be a forward contract for purposes of the Code and would be subject to the forward contract provisions of the Code.

The reference to "direct obligations of, or that are fully guaranteed as to principal and interest by, the United States or any agency of the United States" is based on section 14(b) of the Federal Reserve Act, 12 U.S.C. § 355, and is intended to include all obligations of, or that are fully guaranteed as to principal and interest by, any entity whose obligations are determined by the Board of Governors of the Federal Reserve System to be eligible for purchase by Federal Reserve banks under the similar language of section 14(b) of the Federal Reserve Act.

SECTION 3—AUTOMATIC STAY

Section 3(1) makes conforming redesignations of subsequent paragraphs.

Section 3(2) is intended to clarify that, despite the automatic stay of section 362(a), a repo participant may set off a claim for a margin or settlement payment arising out of repurchase agreements against the repo participant's obligations to the debtor in respect of cash, securities or other property that the repo participant is holding, or that is due to the debtor, to margin, guarantee, secure or settle repurchase agreements, notwithstanding the bankruptcy of the party for whose account such cash, securities, or property is held. This provision is essentially parallel to the one in existing Code section 362(b)(6).

This section refers to settlement payments as defined in section 741(8). It is intended for purposes of this section and the other provisions added by this subtitle that any amount paid or payable with respect to any interest, dividend or other distribution in respect of the certificate of deposit, eligible bankers' acceptance, or security that is the subject of the repurchase agreement and any amount paid or payable with respect to any interest, rebate or other fee in respect of the repurchase agreement, regardless of whether the amount is paid or payable on a settlement date or a different date, constitute a settlement payment within the meaning of that term as defined in section 741(8). Such items serve the same function as other, more conventional types of settlement payment and are commonly used in the securities trade. This assures consistency of treatment, since it is understood that similar amounts paid or payable with respect to securities contracts likewise come within the definition of settlement payment as defined in section 741(8) for purposes of the Code provisions relating to securities contracts.

SECTION 4—AVOIDING POWERS

Section 4 creates a new subsection to section 546 which, together with provisions of section 548, clarifies that a trustee is prohibited from avoiding a transfer that is a margin payment or settlement payment made by or to a repo participant in connection with a repurchase agreement, except where the transfer was made with actual intent to hinder, delay or defraud other creditors and the property transferred was not taken in good faith. This prohibition is parallel to the one in existing Code section 546(d).

SECTION 5—PAYMENTS TAKEN FOR VALUE

Section 5 creates a new subsection to section 548(d)(2) to clarify that all margin or settlement payments made in connection with a repurchase agreement are taken for value to the full extent of such margin payments. This new provision is parallel to the one in existing Code section 548(d)(2)(B).

SECTION 6—SETOFFS

Section 6 makes a conforming change in Section 553(b)(1) of the Code.

SECTION 7—PROTECTION FOR LIQUIDATION OF A REPURCHASE AGREEMENT

Section 7(a) adds a new section to the end of Chapter 5 of title 11 to clarify that the exercise of a contractual right of a repo participant to cause the liquidation of a repurchase agreement, because of a condition of the kind specified in section 365(e)(1) of title 11, shall not be stayed, avoided or otherwise limited in any proceeding under title 11 by a court or administrative agency,

unless, where the debtor is a stockbroker or securities clearing agency, such order is authorized under the provisions of the Securities Investor Protection Act of 1970 (15 U.S.C. 78aaa et seq.) or any statute administered by the Securities and Exchange Commission. This provision would confirm that the liquidation would terminate any right of the debtor's trustee to affirm an executory contract in respect of a repurchase agreement. The prompt liquidation of an insolvent's position is generally desirable to minimize the potentially massive losses and chain reaction of insolvencies that could occur if the market were to move sharply in the wrong direction. This provision is parallel to the one in existing Code section 555.

The amendment also contains an excess proceeds provision applicable in the event that a repo participant liquidates one or more repurchase agreements with a debtor and under the terms of one or more such agreements has agreed to deliver assets subject to such agreement or agreements to the debtor. In such an event any excess of the market prices received on liquidation of such assets (or if any such assets are not disposed of on the date of liquidation of such repurchase agreements, at the prices available at the time of liquidation of such repurchase agreements from a generally recognized source or the most recent closing bid quotation from such a source) over the sum of the stated repurchase prices and all expenses (including such items as brokerage fees, bank charges or fees for legal services) in connection with the liquidation of such repurchase agreements shall be deemed property of the estate, subject to the available rights of setoff. It is intended that the rights of setoff and other remedies permitted elsewhere in the Bankruptcy Code and under other law are not to be limited by this provision.

The new section includes a definition of the term "contractual right" in respect of repurchase agreements to make explicit that this term includes rights arising under common law, under law merchant or by reason of normal business practice whether or not evidenced in writing, as well as a right set forth in a rule or bylaw, of a national securities exchange, a national securities association, or a securities clearing agency that is applicable to each party to the repurchase agreement. It is understood and intended that such a rule or bylaw would be applicable to each party to the repurchase agreement only if each of them is a member of the exchange, association or agency promulgating the rule or bylaw or has agreed to be bound by such rule or bylaw.

Section 7(b) makes a conforming change.

SECTION 8—EFFECTIVE DATE

Section 8 provides that these amendments shall become effective on the date of enactment but shall not apply to cases commenced before the date of enactment.●

AMERICAN IDEALS

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. PORTER. Mr. Speaker, I am proud to share with my colleagues the speech of Walter Cherry, a long-time Winnetka, Ill., resident and former village trustee, delivered at the Winnetka 1983 Memorial Day observance on the green. Mr. Cherry's speech underscores the importance of our most cherished American ideals; patriotism, progress, and sacrifice, and in so doing, most eloquently reaffirms the meaning behind our observance of Memorial Day.

MEMORIAL DAY ADDRESS BY WALTER L. CHERRY

Good morning to my neighbors of Winnetka, and welcome to any visitors who may be with us. I am deeply honored to join with you in celebrating this important occasion.

Memorial Day is a very special kind of religious observance. It possesses a marked difference from traditional religious holidays, which commemorate events and honor people from distant lands and ancient times. Memorial Day commemorates America's own sons and daughters, members of our own families, or our forefathers' families, who gave their lives for their country. It is a solemn and tender time.

Those whom we honor today died for America, for you and me. They gave their lives that we might live ours. There is no way any of us can directly repay their gift, of course. But we can strive to make America, the country they gave to us, a better place each day.

All of us, at various times, have entertained thoughts on the strengths and weaknesses of our country and her people, and what might be done to improve our land to the benefit of all. I have collected some of these and would like to present them to you. I'm sure you will recognize many of them as your own. Please join me now in this, a Layman's Prayer for America.

Lord, you have given us a land endowed with unmatched natural resources and singular beauty. For the benefit of those millions among us who have not yet achieved a full life may we discover sensible means to exploit these resources, while retaining nature's grandeur. Neither the unbridled lust for financial reward, nor the tyranny of those who have already arrived and would do nothing, should determine our actions. Reasonableness must prevail.

We are a land of many races, many origins. In our ethnic diversity resides our vitality. Few of our families have been American for more than a generation or two. Yesterday's penniless immigrants are today's leaders. It has been, and always will be thus. Yet each succeeding generation of us has found a social group to rail against and to exploit. Instead of welcoming them as equal partners, we still fear them and look down upon them. But we have made great headway. Surely our outstanding progress of the last three decades was not marked by the development of the computer, trips to the moon, or unlocking the secrets of genes. Incredible as these towering achievements were, they were dimmed in importance by an event that was almost totally non-intellectual—the beginning of the true emancipation of America's disenfranchized, and a general acceptance into brotherhood of all whose skin is other than pure white. We have far to go. Speed us in our quest for fair play and equal opportunity, first, because it is morally right, and second, because it is simply practical. But in our quest for equanimity and equal opportunity, let us not stifle the gifted and dedicated, upon whom we depend to lead our country to greatness.

America has slipped from its position of eminence. We lack the credibility and substance, both domestically and internationally, that we once possessed. Our leaders, and we citizens in our daily lives, must reestablish this position. Help us to make decisions based not on expediency and ideologies, but on high principals, truth, and sound judgement, even though we may risk loss of popularity in so doing. Guide us, lest we substitute opinion for fact, and demagoguery for true leadership. Lead us in the quest for excellence.

We are a vital and dynamic people. Our urge to succeed is strong, and our opportunities to do so are great. We are competitors. Show us how to use our competitive vigor to rebuild America and bring a rewarding life to all her people. Divert us from the current non-productive vogue of adversarial personal relationships with any who may disagree or compete with us.

May all of us seek not a life of ease. We were never supposed to have all our problems solved, have no right to expect it, and, in the final analysis probably wouldn't even want it. Let the less burdened share the load of the afflicted.

Give to each of us a sense of humor. Laughter is a tonic, when done at oneself and not at the expense of another. Let us not take ourselves too seriously, but make certain we assume full responsibility for the duties which befall us. To each of us grant self esteem seasoned with humility.

We thank you, dear Lord, for our great country. Care gently for its fallen sons and daughters, who have given to it its greatness. Make each of us daily mindful of the unpayable debt we owe to our departed loved ones. Lead us in our eternal quest for excellence for America, in their name. May our dedication ultimately lead to peace and dignity for all humanity, for only then will we know they have not died in vain.

Amen.●

SOLARZ ATTACKS SOVIET USE OF YELLOW RAIN

HON. BARNEY FRANK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. FRANK. Mr. Speaker, our colleague, the gentleman from New York (Mr. SOLARZ) published in today's Washington Post a compelling analysis of the use of chemical warfare by the Soviet Union and its ally, Vietnam. The Soviet Union and Vietnam must be told that their inhuman tactics are widely condemned, and all possible pressure must be brought to bear by those who oppose the use of chemical weapons. In particular, those of us who voted last week to prevent the development of chemical weapons in the United States have, in my view, a particular responsibility to speak out as strongly as we can against the terror now being inflicted on the people of Southeast Asia and Afghanistan.

It is typical of the strong leaderhip which Mr. SOLARZ has provided in defense of human rights across the globe that he has spoken out so clearly on this issue. I ask that his article be reprinted here so that all of our colleagues may benefit from it.

MAKE NO MISTAKE: THEY'RE USING YELLOW RAIN

(By Stephen J. Solarz)

There may be reasons for doubting that the Soviet Union is involved with illegal chemical warfare in Asia, but the facts of the case aren't among them. No matter how hard those who prefer to see and hear and speak no evil may try, the evidence simply cannot be explained away.

It is not just the United States but also Canada, Britain, Australia, China and Thailand, among others, which have found that illegal chemical warfare is being used in Asia. Even the Socialist foreign minister of France, who is no enemy of Vietnam, recently announced that France on its own had "firm and convincing evidence" of the use of these weapons in Southeast Asia and Afghanistan.

Yet it is to understand why so many good people resist this conclusion. When former Secretary of State Alexander Haig first aired the charge that the Soviet Union was violating treaties prohibiting chemical and biological warfare, his publicly presented evidence—a twig—seemed so thin that Haig's claim appeared to be more an exercise in Cold War propaganda than a presentation of carefully compiled scientific data. Many people here and abroad also worried that Haig's accusation was part of a Reagan administration attempt to justify its hostility to arms control agreements with the Soviet Union.

The initial skepticism which greeted Haig's accusation notwithstanding, the use of chemical warfare by the U.S.S.R. and Vietnam has now been established beyond doubt. Not only is there persuasive, if highly classified, technical data indicating Soviet involvement in the manufacture, supply and use of chemical weapons, but peer reviews of the U.S. evidence by a panel of American scientists and a leading Japanese authority on the subject have independently confirmed that the chemical agents discovered were indeed man-made, prohibited substances. In addition, there is publicly available medical testimony, hundreds of firsthand reports from the victims of "yellow rain," and laboratory analysis of samples taken from areas in which these prohibited toxins have been found.

Doctors from France, India, the United States, the Philippines and Canada who work with refugees along the borders to which the victims of chemical warfare have fled almost uniformly report finding symptoms in victims of attacks which aren't consistent with any known disease, but which do conform to symptoms associated with illegal chemical weapons.

The stories of the victims are compelling in themselves. Contrary to what some doubters imply, these reports do not come from a handful of able-bodied, politically committed Meo leaders, but from a wide variety of Khmer, Hmong and Afghan refugees, ranging from little children to the elderly.

Their accounts of "yellow rain" attacks are particularly convincing in that they are usually not volunteered, but are revealed only when a doctor asks the refugees directly about their symptoms.

Refugee reports are dismissed by many people as inherently unreliable. This is exactly what happened when the first stories began to come out of Nazi-occupied Europe about the Holocaust. In fact, refugees have a record of being excellent sources of information on inaccessible societies and situations.

The Chinese who fled to Hong Kong in 1962 carried reports of mass famine. Even experts dismissed their testimony. Yet it is now known that at least 10 million people perished.

Cambodian refugees fleeing Pol Pot's minions after the fall of the Lon Nol regime in 1975 related harrowing accounts of autogenocide. Many people dismissed the bloody truth as a Cold War lie invented to discredit Vietnam, which was seen as supporting Cambodia. Yet we now know that about a third of the Khmer people lost their lives during Pol Pot's brief period in power.

The reports of Afghan refugees fleeing Soviet tyranny and of Guatemalan refugees fleeing their own army, which has gone on a rampage in the countryside, are now widely accepted. It strains credulity to believe that the refugees escaping "yellow rain" in Asia, alone among all the victims of repression, are uniquely engaged in a monumental hoax.

For those not fully convinced by the testimony of independent doctors or the reports of victimized refugees, even more definitive proof is available in the form of laboratory analysis. Samples obtained from areas in which "yellow rain" has been reported reveal combinations of trichothecene toxins not found in nature. Since Hanoi doesn't have the scientific or technical capacity to manufacture these illegal substances, it is clear that Vietnam must be receiving them from the Soviet Union.

The only explanation of these manmade poisons that would exculpate the Soviet Union is that the CIA or some other foreign agency planted the evidence. But not even the U.S.S.R. has suggested such a conspiracy theory as a way of explaining the undeniable existence of these toxins.

In its formal response to the U.S. charges, the Soviet Union has acknowledged the existence in Laos and Cambodia of these prohibited chemicals. But it has claimed that they are due to U.S. use of Agent Orange in Vietnam, which, according to the Soviet argument, destroyed the natural vegetation and led to the growth of elephant grasses that produced the toxins in question. These deadly poisons, the Soviets go on to claim, are being carried into hostile Hmong and Khmer regions by monsoon winds that, somehow or other, deposit them nowhere else. So far not a single serious independent scientist, or even Rube Goldberg, has lent any credence to this Soviet invention of inherently implausible interrelations, and a U.N. team of experts found no validity in the Soviet hypothesis.

The latest effort to explain away the damning evidence asserts that the trichothecenes found in Southeast Asia grew on bee defecations. Since bees have presumably long been indigenous to the region, it is odd that these deadly manifestations show up only now. The incredible bee hypothesis, unlike the one advanced by the Soviet Union, does not even pretend to explain why these poisonous substances did not appear in earlier years or in other places.

Some people resist the compelling evidence of Soviet violation of chemical and biological arms accords out of a fear that such a conclusion would jeopardize prospects for reaching future arms control agreements. But the conclusion which the evidence compels is not that the United States should refrain from entering into such agreements with the Soviets, but that any such treaties must have adequate provisions for verification, in contrast to the chemical-war conventions which lack them.

Arms limitation agreements with the Soviets are essential if we are going to bring the arms race under control. But it is absolutely imperative that, in the midst of such efforts, we don't turn our backs on another helpless group of victims. Otherwise the crime will spread. Reports are now coming in of similar chemical attacks in Eritrea. This outrage must end.●

STAR WARS

HON. MIKE LOWRY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. LOWRY of Washington. Mr. Speaker, I take this time to bring to the House of Representatives attention an outstanding sermon given by the Reverend Peter Raible at University Unitarian Church in Seattle this past May 29.

STAR WARS

Of a recent week, our President enunciated a new approach to the Cold War. In a speech to the nation, he declared:

"I have become more and more deeply convinced that the human spirit must be capable of rising above dealing with other nations and human beings by threatening their existence. Feeling this way, I believe we must thoroughly examine every opportunity for reducing tensions and for introducing greater stability into the strategic calculus on both sides. One of the most important contributions we can make, of course, is to lower the level of all arms and particularly nuclear arms. . . .

"Would it not be better to save lives than to avenge them? Are we not capable of demonstrating our peaceful intentions by applying all our abilities and our ingenuity to achieving a truly lasting stability? I think we are—indeed we must." (page 8, New York Times, March 24, 1983)

At first blush, these remarks seem pointed toward a dramatic turn away from the dominant doctrine of mutually assured destruction, which has been the capstone of the Cold War for three decades. What a fresh breeze into moldering closets of thought that we should, as the President suggested, rise above dealing with other nations and human beings by treatening their existence. Our President brought us new hope of turning away from the sterile and dangerous policies of neclear deterrence.

But the new promise the President extended with one hand, he more than swept away with the other. He was not announcing bold initiatives for arms control; instead he suggested a vast new military program. He wants a massive effort for a defense system against Soviet missiles, which basically means the ability to destroy the Russian weapons as soon as they are launched. What this would mean is the creation of dozens of United States' space stations, which could hone in on Soviet missiles and be ready to blast them from the skies, probably through the use of laser beams. The result, of course, would be a mammoth new escalation of our military preparedness and the full utilization of space in that effort. Certainly, the Soviets would not sit idly by, as we set new weapons into an array of space stations.

Besides a fearsome new weaponry and vast increases in our military spending, what the President signaled is that space is about to become the new frontier in our planning for battle—a Star Wars scenario! What the President brought into the open is the mostly secret planning for a space war. Before we tumble willy-nilly into this dangerous policy we need public discussion and debate, for the arming of space promises only to increase the awesome dangers of all out war (pages 200-01, Thomas Karas, "The New High Ground"; Simon and Schuster, 1983).

Back in the Eisenhower era, the United States supported the doctrine of "freedom of space"—an equivalent to the old "freedom of the seas," once staunchly upheld by this nation. In essence, freedom of space meant that it should be an international ocean and not the domain of earthly powers with the most sophisticated weaponry. In 1961, the United Nations adopted unanimously a resolution on the uses of outer space. Both superpowers pledged that they would not put weapons into space. The glaring loophole was, however, that there was no ban on military systems in orbit, only weapons. The International Outer Space Treaty of 1967 left open the way for launching all kinds of weapons into space, as long as they contained no nuclear explosives (Chapter V, "Let Our Foes Know" in David Ritchie, "Space War"; Atheneum, 1982).

The most immediate military development of space was for spy satellites, which have now reached a sophistication, which virtually makes it possible for a space camera to read the headline on Pravda, as held by a reader in Moscow's Red Square (ibid., page 4). All in all, the spy satellites were in themselves a good development, since they markedly reduced the possibility of surprise military build-ups, the hidden production and deployment of new weapons, or sudden attacks without the other side having ample warning. But in military preparedness, one system leads to another. The next development was in killer satellites, weapons that could be launched to knock the opponent's spheres from the skies. This is a system in which the United States is far advanced over the Soviets and poses a dual danger (ibid., Chapter VII, "The Shooting Gallery" and Karas, op. cit., pages 149ff).

First, killer satellites are hardly defensive, since their aim is to prevent intelligence through spy satellites by the other side. Such a move would be necessary only if one power was about to attack the other. So with good reason, the Soviets see our increased work on killer satellites as an offensive move, going hand-in-hand with the growing idea among United States military leaders that a nuclear war can be won. Second, killer satellites can be aimed not just at spy satellites, but at anything in space, thereby threatening communications systems and any space vehicle. The destroying of satellite communications poses a dire threat to control of our widespread nuclear forces, particularly our nuclear submarine forces, which might be left in the peculiar quandry of suddenly being left without means of knowing what was taking place in the rest of the world. The potential peril in knocking out space vehicles with their human crews needs no further discussion, for it would simply lead to escalation into all out war. As famed astronomer, Carl Sagan, recently urged: "the United States and Soviet Union act immediately to head off an arms race in space. This may be the last moment in which this can be done." (Post Intelligencer, May 13, 1983, page A2).

But the killer satellite is only the tip of military thrusts into space. The Air Force has recently codified its space work into a new Space Comman and the Pentagon budget requested for space work is eight and a half billion dollars, up fifty percent from a year ago (Karas, op. cit., pages 19-20). At one time, some years back, the creation of the National Aeronautics and Space Administration seemed to assure that our moves into space would be guaranteed to civilian control. But in recent years, the NASA budget has been such that it has become a liege vassal to the Pentagon. Our primary program at the moment, the space shuttle, is more and more a military mission. Those perceptive about our space program have said that only the support of the Pentagon is keeping NASA alive at all (Ritchie, op. cit., page 143). As one writer puts it:

As a result of this shift in resources, not only our space exploration programs but also research and development in communications and earth resources monitoring satellites are suffering. . . . As we struggle to pull ahead in the military race in space, we are in danger of falling behind in the civil one." (Karas, op. cit., page 203).

Utilizing technology we developed, the French and Japanese, free of space military programs, are moving ahead in the commercial uses of space; so that we are threatened once again with our nation lagging badly in international economic competition (ibid.).

The major potential horror, however, was that suggested by the recent speech of the President—the stationing of military weapons in space. The possibilities are almost endless, for even though nuclear arms are banned in space, there is no bar to the development of nuclear space weapons, which could be quickly launched should war seem in the offing. But what seems to dominate military thinking at the moment is space lasers. Since the research is secret, the public knows not how advanced is our research in surmounting the formidable technical issues of laser weapons. Simply put, lasers attempt to concentrate intense light in a way so that missiles could be destroyed or thrown off course, once they are launched. The President's speech suggests that at the highest levels of our government, there is belief that the technology is possible. In turn, lasers lead to anti-laser efforts—ways to protect against the beams through decoy missiles and weapons to destroy laser stations in space. The basic idea of defensive lasers, as suggested by our president, would require scores of permanent satellites, posed to knock out Soviet missiles as soon as they are launched, or perhaps before they are launched (Karas, op. cit., page 180). Besides being costly in ways beyond reckoning, there is no guarantee that such a system would be fully effective and every probability that it would not (Richard Garwin, defense expert and professor of physics at Columbia University, quoted in Post-Intelligencer, May 13, 1983, page A2). If even one percent of the missiles reached their targets, the destruction would be immense. Such a defense system also encourages the opponents to deploy more missiles and to develop new tactics, say via submarines, to launch their missiles close in to the prime targets of the other.

What is so ultimately dangerous in the whole Star Wars approach goes far beyond costs, dangers, and escalation. What the arming of space underlines is the increasing belief that we can move out of mutually assured destruction to a nuclear war that can be won. Pentagon thinkers relish the thought that we might have the capacity to launch our weapons against the Soviets, while protecting ourselves from theirs. This concept is undoubtedly absurd, given the history of the Cold War in which each new supposed advantage on one side is countered by some new development by the other. But absurd or not, it is deluded, for it shows how riveted our whole national policy is on military preparedness and thus the constant search for initiatives by which nuclear war might be won. Our total approach remains bogged in the fetid swamp of thought about how to win wars, rather than to prevent them. Our government gives vast attention to new military weapons and virtually none to disarmament and control. What this declares, more than anything else, is that we will not try to explore fully the alternatives to military preparedness. As long as this is so, I foresee little hope that we can break the deadlocks of the Cold War.

Our President is absolutely right that we must rise above dealing with other nations and human beings by threatening their existence. Yet, he is insane if he thinks some new weapons system will open the way. Such approach is madness, simply madness, madness! Our President has set the issue clearly, as he puts it, "We must reach beyond assured destruction if we want peace to prevail." But there has been and remains only one fundamental way of moving assured destruction and that is removing the instruments of destruction. How ironic that President Reagan sees the issue so clearly, but is so warped in his thinking that he cannot see the obvious pathway to his goal. We should continue to press him and all our elected officials to pursue vigorously, the arms limitation and disarmament talks.

In the last century, the British statesman, William Gladstone declared: "We have no adequate idea of the predisposing power which an immense series of preparations for war has in actually begetting war." (Ritchie, op. cit., page xi)

Our problem is that we keep preparing for war, while mouthing words of peace. Thereby, slowly but irrevocably, war comes to dominate our thought. Since no one not psychotic could advocate all out destructive war, our military leaders have to believe that war is winnable, and so they more and more look to hopeful, even if silly, scenarios in which the United States could emerge from nuclear battle, as a functional, mainly preserved nation. The Nazi propaganda minister, Goebbels, once noted that if you tell people something often enough and long enough, they come to believe it. Our military leaders, today, are entrapped by their own propaganda and thus are a menace to us all.

The delusion that war is winnable is a growing threat; and it is coupled with a second delusion right out of Orwell's 1984, namely that "War is Peace!" We have an administration, which again and again has enunciated the doctrine that every other aspect of our government must give way before the priority of arms. The carnage in human suffering caused by this approach is immense, but it reaches even further. We are slowly sapping our technology, or governmental viability through giant deficits, our concerns for education, transport, health, and environment, all to feed the Moloch of the military. We will soon reach the point, where the fabric of our government is rent asunder by this terrible misplacement of national priorities. To let people go hungry or suffer in pain or accept the humiliation of being without a job in

order to embark upon vast new weaponry systems in space is such a bizarre inversion of intelligence that future historians will wonder if we, as a people, did not share some self-destructive urge.

Finally, we talk in aseptic words about weapon systems, destruction, preparedness, as if we were never speaking of human lives. Within the last few days, the World Health Organization of the United Nations reported that half the world's population would be immediate victims in an all out nuclear war. The first death toll would be over one billion persons, and WHO noted that this did not include extreme views. The report said further, "Money, banking, investments and all the trappings of advanced economies would disappear" (Seattle Post-Intelligencer, May 11, 1983, page A2). This might suggest that those of conservative mien, who are often concerned with property rights, ought to be as worried about nuclear war as those of more humanitarian bent.

How can anyone reading such warning hold an iota of faith in a winnable nuclear war? We must see that we are all human beings embraced within the ecology of this globe. We are together on spaceship earth and we cannot risk mortal wounds to it. No wonder that religious leaders of all persuasions are increasingly coming to the fore to warn of the futility of nuclear preparedness. We must move in new ways! In his recent speech, the President called on us to have "the purpose of changing the course of human history" (New York Times, March 24, 1983, page 8). He must harken to his own words and cease saber-rattling and ambitious new arms plans. What we need is leadership in destroying the instruments of destruction, which are ever a peril to every human being and all life, as long as they stand poised at the ready.

We know in our own very personal lives, as well as from history, that hatred, destruction, and anger are easy responses. What is harder, yet ever more fulfilling and life-sustaining is to seek solutions, new possibilities, and human reverence. But only as we have the capacity to see the creative can we open the roadways to peace and enable our selves to have life and life more abundantly.●

THE POPE'S MESSAGE TO POLAND

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1983

● Mr. FASCELL. Mr. Speaker, as Chairman of the U.S. Helsinki Commission, I am pleased to join Congresswoman KENNELLY and our other colleagues in expressing support for the extraordinary message of truth, liberty, justice, and social solidarity, which Pope John Paul II brought home to the Polish people during his pilgrimage. The Pope's inspiring words speak to the essence of the Helsinki Final Act, which recognizes that true peace cannot exist without respect for human rights and fundamental freedoms.

It is clear that the people of Poland have rejected the assertions of their military rulers that freedom must be sacrificed in order to achieve social peace; that economic progress can be gained only at the expense of workers' rights; that military dictatorship and not representative government is the answer to Poland's current crisis. Instead, the Polish people overwhelmingly have embraced the Pope's peaceful prescription for national salvation—social peace through social justice; economic recovery through request for the dignity of human labor; restoration of public trust through honest dialog between rulers and ruled.

In newscast after newscast we have witnessed Poles who lack basic necessities demanding justice as well as bread. The Polish nation defiantly exercises its moral independence and spiritual freedom despite externally and internally imposed repression. Living in the midst of lies, Poland and her Pope courageously bear witness to the truth.

We in the West, who cherish freedom, have a moral obligation to follow John Paul II's righteous example. We must continue to speak out strongly against violations of human, civil, and trade union rights; demand the release of prisoners of conscience; call for a return to the social reforms begun under Solidarity; and, urge the renewal of dialog between the State and society in Poland. To do less would be to betray the very values we hold most dear.●

SPECIAL ACTION ON TORTURE IN CHILE

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. PATTERSON. Mr. Speaker, as many of the Members are aware, Amnesty International is currently undertaking a special international action on Chile. Amnesty International is an international organization which examines and reports on human rights conditions in virtually every country in the world, ranging from Afghanistan to Zaire and from Cuba to Argentina.

In May 1983, Amnesty published a report on the findings of its delegation sent to investigate human rights conditions in Chile in 1982. The report was based on extensive medical examinations of former Chilean prisoners as well as on written testimonies and other evidence provided by people who told Amnesty that they had been tortured. The report, "Chile: Evidence of Torture," includes several detailed discussions of specific cases of torture and other mistreatment of prisoners. I would like to include, for the RECORD, one specific case of mistreatment discussed in the report. In my view, this case, while not unique, demonstrates that torture and mistreatment of prisoners in Chile continues to be a serious problem.

CHILE: EVIDENCE OF TORTURE—CASE NO. 2

ANONYMOUS

Personal details

He is 21, unmarried and lives with his parents. He went through high school and is now doing a course in journalism. While he was a student he was also for a time a telephone operator but was dismissed before being detained. He is supported by his parents.

State of health before arrest

When he was two he had tonsillitis, which was apparently complicated by endocarditis. Prophylactic penicillin was prescribed during the subsequent 10 winters.

Time and place of arrest and detention

He was arrested in the first quarter of 1982. He was held at the CNI centre in Santiago for 19 days then transferred to the *Cárcel Pública* (Public Prison), where he stayed until his release on bail, 45 days after arrest.

Duration of alleged torture

He said he was tortured on 19 days. On the last 14 the torture was exclusively psychological.

Interrogation and torture

His account of events was as follows:

About 12 people in civilian clothes broke into his home in the first quarter of 1982. No arrest-warrant was shown. They searched the premises for two hours and arrested him, his father and another relative. They hooded and handcuffed him, then drove him to the CNI centre.

For the first five days he was interrogated several times a day, and simultaneously tortured, mainly physically. He was slapped and struck on the head, mouth, body and genitals, and his buttocks and extremities were kicked. He was also electrically tortured on two occasions, each lasting five minutes. He was made to sit on a chair and electric current was applied to his back via a cable conducting current from a machine he thought was hand-driven.

The interrogations continued for the next 14 days he spent at the CNI centre. They included threats, including threats of execution (a pistol was aimed at his temple) and threats to arrest his family.

He often heard his father and relative screaming while they were being tortured. And he heard the voice of a woman who was not his mother, although he was told it was her voice so frequently that eventually he believed it was. (She has not been imprisoned.)

He was held incommunicado throughout the 19 days in a 2m by 2m concrete cell containing a concrete bunk plus a thin mattress. He wore overalls and *zapatillas* and was forced to wear a mask except when alone in his cell. His cell light was always on.

Medical examination and/or attention during detention

Both before he was tortured at the CNI centre and before he left he was given a superficial medical examination, by a doctor, he thought. It included measurement of blood pressure and auscultation of the chest.

His pulse was taken every day he was at the CNI centre. On one occasion he was given tablets for diarrhea.

Early symptoms described

He had aches and pains and felt weak all over, especially in his arms and legs.

After being hit on the mouth he lost an upper tooth, No. 24, and the frenulum of his lower lip bled.

He had diarrhea for three or four days while at the CNI centre. He had pain in the buttocks and near the anus (as a result of kickings, he said). His left testicle too was painful (because of the beatings, he thought).

Throughout his detention he had headaches every day. After being allowed to remove the mask he found his vision was impaired. Periodically he had double vision and his eyes got tired when he read (the letters began to blur after about 10 minutes).

He got retrosternal pain several times a week, and palpitations of the heart lasting for about 15 minutes, when resting. (This was related to anxiety, he thought.) He had never had such symptoms before. While he was at the CNI centre he lost his sense of time—could not tell night from day. He felt suicidal because of anxiety lest he reveal information. He suffered from insomnia and nightmares and was gloomy, emotionally labile and indifferent.

Present symptoms described

He feels unusually tired and weak and still has pain in his left testical, although this is diminishing. He gets headaches starting at about noon every day. They are exacerbated by reading, and he still has vision problems: periodic double vision and blurring of letters on the page after he has been reading for about 10 minutes.

He still feels gloomy, emotionally labile and indifferent. He stays at home most of the time and is not involved in anything (partly because he is under surveillance and cannot meet his former friends outside his home).

He suffers from continuing, though less frequent, episodes of precordial pain and palpitations of the heart while resting (probably due to anxiety), and from serious insomnia and nightmares.

Clinical examination

He seemed depressed. Although prepared to cooperate, he was passive, slow and hard to make contact with. He had difficulty expressing himself.

The clinical examination revealed bad teeth, many of them decayed. There was a large cavity in No. 24 and the crown was almost completely gone (see photograph). The lower frenulum of the lip was irregular and had small sores on it. He had muscular pains in the left flank and tenderness in the epididymis.

Conclusion

The medical delegates found consistency between the torture alleged, the symptoms described and the results of the physical examination.

As a long-time observer of human rights conditions in Chile and elsewhere, I find Amnesty's latest report especially troubling. During this time of civil disturbance in Chile, I urge my colleagues to watch very closely for human rights violations within that country.●

1983 CONGRESSIONAL CALL TO CONSCIENCE VIGIL FOR SOVIET JEWS

HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. KOSTMAYER. Mr. Speaker, I am honored to participate in this year's congressional call to conscience vigil for Soviet Jews. As elected representatives in the world's guardian nation of freedom, we have the moral responsibility to keep the flame of hope brightly burning for the most persecuted group of people in the history of the world.

Less than 40 years after the near total annihilation of European Jewry in the Holocaust, we are now witnessing a renewal of persecution of people in the Soviet Union who are asking for nothing more than to be permitted to emigrate to their ancient homeland of Israel to freely exercise their religious faith and, in a great many instances, to be reunited with members of their family.

The number of Soviet Jews who are affected by the cruel and inhumane system that their country's political system subjects them to is very significant as evidenced by the sharp decline in the number of these refuseniks permitted to emigrate in the last few years. In 1979, more than 51,000 Soviet Jews were granted emigration visas while last year only 2,670 were permitted to leave. The difficult circumstances faced by individual refuseniks are often blurred by the large numbers and statistics involved, but the case of one refusenik family, whom I have adopted and written to, serves to illustrate the agonizing plight of all refusniks.

Yakov Kogan, his wife Tatiana and their daughter Olga presently reside in Leningrad and have applied to emigrate to Israel to be reunited with Tatiana's parents, Mr. and Mrs. Efim Zagnitovsky and with her sister. Yakov had served in the Soviet Army in the rocket division, completing his military service in 1969. At the time he signed a document stating he would not go abroad for 5 years because of his prior access to secret military information. Yakov complied with the provisions of that document but when he and his family applied for permission to emigrate to Israel in 1976, they were refused when authorities cited his previous army service. The Kogans were told to reapply again in 6 months and after having done so, they were again refused without any reason given. Yakov is a mechanic by trade but has had to work at odd jobs, when he can get them, since his army service. Tatiana lost her position at a scientific research institute when it was learned that she had applied to emigrate. Thus denied of their livelihood and having complied with the requirement that they not travel abroad for 5 years after Yakov completed his military service, there is no reason why the Kogan family should not be permitted to emigrate. I wrote to the Soviet Ambassador, Anatoly Dobrynin, requesting his assistance in gaining a favorable ruling on the Kogans' application for a visa allowing them to emigrate to Israel. I subsequently received a terse, unsigned, one sentence reply informing me that the Soviet Embassy in the United States does not involve itself in the cases of Soviet citizens who apply to emigrate to Israel.

I hope that at least in some small way, the attention I have drawn to the plight of Yakov, Tatiana, and Olga Kogan today will help to bring their freedom one step closer. Their release and that of all refuseniks is essential to gaining the peace and understanding that we in the United States and the people of the Soviet Union must have for the survival of all mankind.●

WATER SUPPLY SYSTEM VITAL TO WISE-NORTON RESIDENTS

HON. RICK BOUCHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. BOUCHER. Mr. Speaker, the House Appropriations Committee has approved a 1984 appropriations bill for the Department of Interior and related agencies. The report accompanying that bill is of crucial importance to the citizens of Wise County and the city of Norton, Va.

I would like to thank the distinguished chairman of the Interior Appropriations Subcommittee, the gentleman from Illinois, Mr. YATES, for assisting my request for funding of the Wise County regional water project.

For nearly a decade, the citizens of Wise County and Norton have been seeking moneys to replace a water supply system badly damaged by past mining practices. One obvious source of assistance, the Office of Mining's abandoned mine reclamation fund, has previously been denied to these residents. Language approved by the Appropriations Committee now clears past impediments to the use of this fund and directs the expenditure of $1.3 million for the Wise water project.

This southwest Virginia community, which has contributed so substantially to satisfying the Nation's energy needs through its long history of coal production, is now presented with a critical need for a clean and reliable source of drinking water. The lack of potable water for residents of Wise County and the city of Norton constitutes both a severe impediment to economic

development and a pressing public health concern.

Surface and underground mining in this the third largest coal producer of the Appalachian counties has had an adverse effect on the area's water resources. Previously unregulated mining and some 14,000 acres of abandoned mine workings have degraded surface waters with siltation and heavy metals. Disruption of underground water sources has dried up private wells and damaged community reservoirs. The extent of the damage is such that construction of a new water system is the only viable option.

With determination and dedication, the citizens of Wise County and Norton have been seeking a solution to their water supply problem. The community has committed itself to alleviating the shortage by identifying the most cost-effective solution and obligating $3.6 million of its own funds. Another $1.2 million has been secured from the Appalachian Regional Commission and community services block grant program.

When I met with representatives of the Wise County Public Service Authority earlier this year, it was clear that the project had strong support from both the local community and the State, and I was pleased to pledge my efforts to help find additional funding for the water project.

I am pleased to support the Interior appropriations measure, which includes $1.3 million for the Wise County water supply project, and I commend the Appropriations Committee for its sensitivity to the needs of this deserving community.●

FRED HARTMAN'S WRITING

HON. JACK FIELDS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. FIELDS. Mr. Speaker, for years the residents of Baytown, Tex., have awakened each morning with Fred Hartman's daily column on the front page of the Baytown Sun. Hartman, who for over four decades has been a major force in the shaping of Texas journalism, recently went into semiretirement. While he will continue to write in an emeritus capacity, Hartman has stepped down as chairman of the board of Southern Newspapers, Inc., a corporation that at one time owned · more newspapers than any other in the State.

Hartman's writing abilities emerged during his school days at Baylor University in Waco, Tex. He and his roommate, Price Daniel, Sr., who went on to become Governor of Texas, worked on the student newspaper together, where Hartman eventually became editor. Four years later, in 1935, Hartman joined the Baytown Sun, and in 1944 was made editor of the Baytown paper. When the Sun was purchased by Southern Newspapers, Inc., Hartman worked his way up through the operation until he became chairman of the board of that company.

During these years, Hartman actively participated in community and statewide affairs. He has received numerous honors, including Baylor's Distinguished Alumni Award, and has served on important State committees under five Texas Governors. The following article, written recently in the Houston Chronicle, tells of Mr. Hartman's accomplishments through the years as a journalist, editor, and Texan.

The article follows:

FRED HARTMAN, 75, FIRST A PRINTER, NOW HE "OWNS THE PLACE"

(By Cindy Horswell)

It was 1929, Prohibition, when the four students at Baylor University—a Baptist school sometimes dubbed Jerusalem on the Brazos for its religious strictness—decided to "manufacture some fun."

The young men smuggled into a dorm room whiskey that had been homemade at an out-of-town moonshine still. When the party spilled out into the nearby courtyard, the four were caught.

"Dean W. S. Allen never exactly kicked us out," recalls one of the conspirators, Fred Hartman of Baytown. "He just said Baylor would be better off if we were some place else."

Today, 75, Hartman jokes that he's the only one of the conspirators, who were forgiven and readmitted to Baylor the next semester, who did not amount to anything. It's not really true. Until this month, he was board chairman of a corporation that at one time owned more small newspapers in Texas than any other corporation.

The other three students were James Roberts, a U.S. Air Force general, now deceased; Dr. Clarence Haden, a retired Episcopal bishop of the northern California diocese; and Price Daniel Sr., who has held five different elected Texas offices, including governor and state Supreme Court justice.

In addition, both Daniel and Hartman have since been named Distinguished Alumni of Baylor—one of the school's most prestigious honors.

Hartman says he learned something from the drinking episode: Thou shalt not disobey anyone who owns the place.

And since then, he and his corporation have always tried to "own the place." Southern Newspapers Inc. has bought and sold as many as 75 different small newspapers in the South over the last three decades, he says.

A portly man, recognizable by his ever-present bow tie and Will Rogers style wit, Hartman celebrated his 75th birthday May 20, and this month he officially went into semi-retirement.

He was born in Marlin, the son of a dry goods store clerk who later became a Presbyterian missionary in the Ozarks.

His inclination for journalism first surfaced in high school in Springfield, Mo. It was his junior year and he needed an elective.

"I had no aptitude for woodworking. So I took a printing course that was being offered," Hartman recalls. "I got some ink under my fingernails and I've been involved up to my ears ever since."

After high school, he worked his way through college as a journeyman printer. He never really learned to type properly, still relying on a hunt-and-peck method. But he says he has developed lightning speed with his two index fingers.

Hartman began college at Southwest Missouri State College, before transferring to Baylor where he received both a bachelor's and master's degree in journalism.

Ten years later, he also earned a law degree from Houston Law School.

While at Baylor, Hartman went from sports editor to editor of the student newspaper, the Lariat.

Like all young editors he sometimes tried to buck the university administration. Once he wrote editorials demanding that female students be allowed to ride a train to the Baylor-Arkansas football game along with the male students.

In those days, Hartman said, female students were not even allowed to be in an automobile with a male student after 6 p.m. Actually, Hartman says the car rule was "a godsend" for him because he didn't own a car. He felt, however, that the train rule had breached the rule of reason.

But, the college president had his way and Hartman was again reminded that he wasn't the one who "owned the place."

It is a lesson he's interpreted to fit journalistic realities. "If the publisher, in this case the university president doesn't want to print something, that's not censorship, to me; but if some guys from the outside try to tell the owner not to print it—that is censorship."

Hartman and Price Daniel worked on the Lariat together, becoming best friends and roommates. Daniel recalls: "It was Fred who convinced me to use the same Price. I was using my initials, M.P., when I came to Baylor."

Fred said the initials just didn't sound right on a byline and that no one would go very far using those initials. So he told me to use Price.

Even so, Hartman never called his friend "Price." "I always called him 'governor' because that was always his ambition," recalls Hartman. "I still call him that."

Hartman—a staunch Democrat—has always been in the thick of politics. He is fond of saying that he could never get elected to anything but he won appointments under five Texas governors.

He has been on the Lamar University board of regents, Texas Historical Commission, Texas Library Commission and San Jacinto Battleground Commission. And today, he still serves as a Texas Air Control Board member and board chairman of the Harris County Appraisal District.

His biggest political coup probably was when he urged the late Albert Thomas to run for a seat in the U.S. House of Representatives against then-Houston Mayor Oscar Holcombe. At that time, Thomas was an assistant U.S. attorney with no money and his only newspaper backing came from small papers like the Baytown Sun.

"He was the darling of Baytown and opened his campaign here and in the end he won. It was the little guys against the big guys," says Hartman, noting Thomas went on to serve 28 years in the House and have a Houston convention center named after him.

Hartman has been a friend to presidents, like Lyndon Johnson, and even had an audience with a pope. He recalls that though

most of the others meeting Pope Pius XII were kneeling and kissing his ring, Hartman didn't feel comfortable doing that. He simply said he was from Texas and shook the pope's hand.

After Hartman was graduated from Baylor, he did a short stint as the university's business manager of student publications and taught an introductory course in journalism.

When that job ended, in 1931 Hartman landed what he felt was "about the only job on the planet," becoming editor-business manager of a news publishing company in La Porte. It printed for the area along the Houston Ship Channel six newspapers: La Porte News, Pasadena Record, Harrisburg Pilot, Baytown News, Pelly Herald and Goose Creek Tribune.

"I was a jack-of-all trades. I'd sell the ads, write stories and make up the pages. We only had a total staff, including secretaries, of about seven," he recalls.

Then four years later, he joined the staff of the Baytown Sun as sports editor. He wanted to get on a daily newspaper and sports had always held a special fascination for him.

"His love affair with sports started when he was a boy," says Hartman's son. Bill, now president of Hartman Inc. which owns a string of nine Texas newspaper. "He would walk the railroad tracks to the ball park in Marlin every day to watch John McGraw and the New York Giants in spring training."

To this day, the elder Hartman rarely misses an Astros game and until recently traveled to Florida to write about their spring training camp every year for the Baytown Sun. Of all his honors, Hartman is probably proudest of his charter membership in the Houston Chapter of the Baseball Writers of America.

In 1944, Hartman was made editor of the Baytown newspaper—an accomplishment he says probably was the turning point in his career.

Carmage Walls, now of Houston, who is a newspaper investor with a fortune estimated at $10 million, offered to buy the Baytown paper to add to his collection. The owners agreed to sell, but insisted Hartman be kept on as editor.

Hartman says he and Walls seemed to have "the same chemistry." When Walls needed somebody to manage his Texas holdings, Hartman got the job and gradually worked his way into the Walls operation until he was board chairman of Southern Newspapers Inc. and had a minor interest in most of the Texas holdings.

His recipe for success was simple: Don't spend more than you take in.

He also stressed that each newspaper should be autonomous and emphasize hometown news—not try to compete with big city dailies for national coverage.

At the corporation's peak, it owned more than two dozen papers in Texas alone.

The biggest news story of Hartman's career, he says, occurred in the late 1930s when his newspapers promoted the idea of the east end of Harris County seceding and forming a separate county from the San Jacinto River to the Trinity River. "We kept it going wild for nearly a month. But it never made it past the headlines because the Harris County auditor showed us a tremendous bonded indebtedness that we would also have to assume. That killed it."

Another editorial crusade by Hartman's Baytown Sun that took five years, however, was successful. That was when three separate communities were consolidated in 1948 to form what is now the city of Baytown.

Today, Hartman says his battle days are over. This month he has stepped down as head of Southern Newspapers, and traded his interest in a dozen newspapers for controlling interest in four—the Brenham Banner-Press, Port Lavaca Wave, Rockport Pilot and Madisonville Meteor.

"I'm through with expansion," said Hartman, who professes not to know the amount of his wealth, "and I'm looking forward to horizontal retirement."

His new chain is called Port Lavaca Newspapers Inc. and will be managed for him by Charles Moser of Brenham.

Hartman will still be writing some in an emeritus capacity for the Baytown Sun. He will continue writing his daily quip which has appeared on the Baytown Sun's front page for years. "If I see something funny, I write it down and then try to give it a Baytown twist," he says.

"If you go to the library and copy what a dozen people say, that's research. If you only take down what one person says, then that's plagiarism!"

Also, he will occasionally cover sports events at the Astrodome. "I started out as a sports writer and now, I guess, I'm graduating back to one."●

CONSERVING ENERGY ON COLLEGE CAMPUSES

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. CORCORAN. Mr. Speaker, as a member of the Energy and Commerce Committee, I was recently heartened to learn that, even though we are not now in the midst of an energy crisis, some college campuses are seriously and systematically trying to conserve.

Twelve colleges and universities around the country, including Lincoln Land Community College in Springfield, Ill., are participating in a demonstration energy management and financing program that is expected to cut their exorbitant energy costs by up to 25 percent. Sponsored by the Higher Education Energy Task Force, the program will be transferred to other campuses nationwide at the end of the development period next year.

In recent years higher education's energy and other costs have soared. As a result, tuition is so high that many bright students simply cannot afford to attend college. Conserving energy is one important way campuses can keep down their costs.

Printed in the March 25 Chicago Tribune, the following article by Chris Crittenden, director of the Energy Task Force, tells more about the need and opportunity for colleges to embark on a course of conservation.

[From the Chicago Tribune, Mar. 25, 1983]

EDUCATION'S HIGH COST OF ENERGY

(By Christopher E. Crittenden)

Our nation's 3,250 colleges and universities are in trouble financially. Their energy costs rose from $700,000 in 1974 to $3.2 billion last year, an increase of 457 percent. Despite the temporary oil glut, their energy bill this year is expected to be upwards of $3.5 billion. Compounding higher education's financial problems have been inflation and the recent drastic cuts in Federal aid.

When our campuses suffer financially, students also suffer. The $3.2 billion they spent on energy last year would have been enough to pay the salaries of 129,000 full-time teachers. It is one-and-a-half times what higher education spends for libraries each year, and more than is spent on scholarships and student services.

Saving energy on a college campus is particularly hard: Students in dormitories burn the midnight oil; libraries and laboratories must be heated and lighted seven days a week; the academic year runs through the coldest and darkest months. This constant drain on energy resources is aggravated by the configuration of the typical campus: many scattered buildings, some designed in the last century with no thought to saving energy.

Despite soaring costs, most campus administators have taken a piecemeal approach to energy conservation. Much more can be done than just turning down the thermostats and dimming the lights. They need an overall energy management plan.

Through a demonstration energy management and financing program funded by the John A. Hartford Foundation of New York City, the Higher Education Energy Task Force is helping 12 colleges and universities develop energy master plan of their own. The plan is expected to save them up to 25 percent of their energy costs.

Chosen as a representative sample, the campuses include both public and private, large and small, from New Hampshire to California. Lincoln Land Community College in Springfield is one of those participating in the program.

The Energy Task Force is helping the campuses monitor and reduce their energy use at modest additional expense, largely through coordinated management and a computerized energy information management system. At the same time, the project is developing some innovative methods to assist campuses to afford the expensive equipment and controls they will need to achieve maximum energy efficiency.

At the end of the demonstration period late next year, the comprehensive energy management and financing system will be transferred to other campuses nationwide through publications and workshops for campus administrators.

Overall, the program is designed to enable campus administrators to embark on an efficient, systematized approach to energy management. In light of soaring costs in every area of their budgets, our nation's campuses can no longer afford to let extra dollars go up in smoke.●

REVITALIZE INDUSTRIAL BASE

HON. JAMES R. JONES

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. JONES of Oklahoma. Mr. Speaker, I am today introducing legislation with my colleague from New York (Mr. CONABLE), aimed at revital-

izing our Nation's industrial base, where the need for plant and equipment rebuilding is greatest and unemployment is highest.

Our legislation, the Work Opportunities and Renewed Competition Act of 1983 (WORC), is designed to make certain that the nescent economic recovery we have underway will be built and sustained by growth in capital investment. WORC will allow companies to modernize now so that we can emerge from the recession with a competitive industrial and service economy.

History tells us, Mr. Speaker, that if we are to retain our position as the world's leading industrial power, ready to flex our economic muscles, we cannot be a land of smokeless smokestacks. We must explore entrepreneurial frontiers, but we must also retool our vital, basic industrial foundation. To accomplish this goal, we are proposing a one-time program structured to unlock earned, but unused, investment tax credits when there is reinvestment in new equipment and plants.

The reason we need this legislation is quite simple. Today, the investment tax credit is not functioning as an incentive for capital investment for many companies, particularly those in the basic industries. The problem is that while these companies have continued to make heavy investment which generate the credits, in fact $94.64 billion in 1981, the companies have not had sufficient profits recently to absorb the credits against their tax liability. Indeed, nearly 20 percent of the top 500 industrial corporations and two-thirds of the major transportation industries have not been able to utilize fully all of the investment tax credits which have been earned through 1982. By restricting these companies from access to the ITC's, the after-tax cost of their capital is increased and they are placed at an automatic competitive disadvantage.

WORC would end this inequity by allowing companies with unused investment tax credits prior to 1983 to obtain 85 percent of the value of their credits if and when they reinvest in new plants and equipment. In order to insure immediate help to the economy, the reinvestment would have to be made between October 1, 1983, and December 31, 1984. WORC contemplates that the remaining 15 percent of the credit value be dedicated for assistance to workers in industries affected by the recession. WORC requires that companies which obtain these funds pay back to the Treasury not only 85 percent, but the other 15 percent as well. The principal steps in the operation of the new reinvestment credit mechanism can generally be described as follows:

First. Reinvestment credit election. Anticipating its inability to use its accumulated ITC's in 1983 through 1985, the company elects to treat all of its 1982 carryovers as the reinvestment credit. These ITC's then cannot be used as carryovers in such years even if the company's tax liability increases due to higher profits.

Second. Reinvestment. As the company reinvests in kinds of machinery and equipment in which it has previously invested—not in new business ventures—the Treasury will pay the company an amount equal to 85 percent of the costs of such reinvestments, but not more than 85 percent of the total reinvestment credit relinquished to Treasury.

Third. Mandatory repayment. Beginning in 1986 and continuing through 1990, the company must repay the full amount of the reinvestment credit—not just the 85-percent payments—at a rate of 20 percent per year. It is possible that the company will repay a portion of the reinvestment credit prior to the 5-year payback schedule. This can result from an increase in profits in the mid-1980's that raise tax liability in the absence of the foregone ITC's. This higher tax will reduce the mandatory taxes payable in 1986 through 1990.

Fourth. Reinstatement of credits. As the company makes its mandatory repayments in 1986 through 1990, an equal amount of the reinvestment credit will be reinstated as ITC's. However, such reinstated ITC's will have lost the same number of years from the normal 15-year carryover period as though they had been available in every year since 1982.

Fifth. Penalties. Companies claiming more reinvestment credit than the amount to which they are entitled will be penalized. Companies that elect less than the maximum reinvestment credit will also be penalized.

The concept is that of a discounted loan through the tax system. The payback mechanism insures higher revenue—which would be reflected in the budget—in the later years—at a time when it is critical that we contain and conquer our massive Federal deficits.

Mr. Speaker, the legislation we are introducing today can swiftly and decisively turn around the decline in our aging industrial sector. It responds to the fear that our Nation is losing the battle for our economic future. The proposal is important for a variety of reasons.

A defense force second to none can only be realized if we are an industrial power second to none. It is folly to think that we can rely on other countries to supply our material demands in times of national emergency. Our defense posture must be built on an industrial base that is capable of quick expansion to support the mobilization required for national security needs.

Second, as the many newfound gurus of high-tech policies trumpet their buzzwords about how our future lies in the aggressive pursuit of high-technology industries, I think it is abundantly clear one sector cannot survive or flourish without the other. High tech is not a panacea. Our Nation is one of goods and services, and we must create an environment where both work together in harmony.

Moreover, 4½ million Americans rely on jobs in the basic industry sector; writing off the basic industries such as steel, automobiles, mining, transportation, and chemicals will mean writing off millions of jobs. Other employment sectors in our economy cannot absorb most of these workers.

This legislation is vital to all industries in our effort to regain our competitive edge in world markets. Years of anemic productivity, sagging profits, and protractedly high interest rates have led to a decline in our ability to compete abroad. The call for trade restrictions to protect our industry from foreign competitors will make our industry less competitive and may cut off the fragile recovery we are seeing globally. Our bill will allow us to meet our competitors outright with better products and technology.

The legislation we are introducing today is not a veiled attempt to give industry a tax break. It is nothing more than a proposal which unlocks earned tax credits and creates more jobs, making these American industries more productive.

WORC has been widely endorsed by both labor and management. The House Steel Caucus has already endorsed our bill, and I expect many other groups and organizations to come forward with their comments on how the proposal will foster a healthier, more productive industrial and service economy.

I hope we will act quickly on the legislation so that we may put the tools in the hands of the millions of Americans who want to work now.●

DR. KARL PLATH: A TRIBUTE TO AN EDUCATOR COMMITTED TO EXCELLENCE

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. PORTER. Mr. Speaker, on June 30, 1983, Dr. Karl Plath will resign after 17 years as superintendent of Deerfield and Highland Park High Schools.

Throughout his distinguished career, Dr. Plath has devoted considerable time and energy to bettering the high schools of School District 113 by developing programs which have given students, staff, and other community members a greater opportunity to par-

ticipate in the different phases of educational process.

These accomplishments include initiating summer workshops for teachers and administrators to improve existing courses and develop new ones, formulating a staff development program, and adding student and teacher representatives to the board of education. Dr. Plath has also overseen additions to and remodeling of both high schools, encouraged community involvement in the schools through volunteers, advisory councils, and adult attendance of high school classes, as well as establishing the Lake County Area Vocational Center and developing the Northern Suburban Special Education District.

More than these accomplishments, the tenor of excellence and the obvious personal commitment that has characterized all that Dr. Plath has done in an area of our country known for quality public education is the real legacy he leaves to his profession. I first knew Dr. Plath at the beginning of his career when he was coaching football and teaching at Evanston Township High School. Throughout his exemplary career, I know of no person more highly respected for his dedication to making things better. No better inheritance to those who follow him could possibly be left. I commend to my colleagues in the Congress the record of understanding accomplishment in public education of Dr. Karl Plath and honor and pay tribute to him for a job well done.●

NATIONAL ACID DEPOSITION CONTROL ACT OF 1983

HON. GERRY SIKORSKI

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. SIKORSKI. Mr. Speaker, this morning I joined with Congressman HENRY WAXMAN, chairman of the House Subcommittee on Health and Environment, and Congressman JUDD GREGG in introducing H.R. 3400. I believe the introduction of this bill is an historic occasion in the battle to protect our environment. We can control acid rain without cutting jobs or causing skyrocketing utility rates.

I urge my colleagues to review this proposal and join me in advocating its adoption.

STATEMENT OF CONGRESSMAN GERRY SIKORSKI

"Compressed and placed on the balance tray of a mammoth, imaginary scale, the daily North American emissions (of the oxides of sulfur and nitrogen) would weigh in at more the 165,750 tons—the equivalent, by weight, of 4,144 railroad freight cars fully loaded with potentially caustic material being levitated into the air every 24 hours."

Acid rain has been called the most serious environmental problem facing the North American continent. It affects our lakes and streams, our forests and farms, our wildlife and the health of our citizens. We've lost hundreds of lakes, thousands of trees, and now threaten millions of acres of land. According to the National Academy of Science, it costs Americans over $5 billion a year. Recently, acid rain was linked to brain degeneration and premature deaths, and the scientific evidence that acid rain is a major environmental, economic and health threat mounts daily. That is why I am joining today with Congressman Henry Waxman, Chairman of the Health and Environment Subcommittee of the Energy and Commerce Committee, and Congressman Judd Gregg to introduce legislation to control this devastating problem. It is the "National Acid Deposition Control Act of 1983".

The sponsorship of Congressman Waxman of California, Congressman Gregg of New Hampshire, and myself shows that concern about acid rain crosses party lines and regional boundaries. I believe there is a growing consensus that it is time to enact acid rain control legislation. In the past few days, according to press accounts, senior officials of the Environmental Protection Agency, including Administrator Ruckelshaus, have begun moving towards a serious acid rain control strategy. I welcome the Administration's willingness to work with the Congress to enact an acid rain bill—now, before it is too late.

Our legislation recognizes that acid deposition is a national problem. For too long the debate has construed the problem as solely one facing states in the Northeast, and the solution an Eastern one. We are now beginning to see the impact of acid rain beyond the Northeast, and into the Midwest, including my home state of Minnesota. According to even the Reagan Administration's Interagency Task Force on Acid Precipitation, vast areas of the South, Southwest and Western regions of the country are also vulnerable to acid rain.

Our bill goes beyond previous legislative proposals in other important aspects. Other solutions would address the problem in a manner that would lead to skyrocketing utility rates while adding tens of thousands to the unemployment rolls. Our bill protects jobs and spreads the costs of acid rain control.

Our proposal has five basic components:

(1) The 50 utility plants that are the largest emitters of sulfur dioxide will be required to install scrubbers to reduce these emissions. These scrubbers will reduce sulfur dioxide emissions by 7 million tons by 1990.

(2) The 48 contiguous states will be required to make an additional 3 million ton reduction of SO2 based on each state's proportion of the total American SO2 emissions. States could decide how they would meet these reduced levels, in a manner similar to Senator George Mitchell's acid rain legislation of last year.

(3) Funding for this program will be provided by imposing a 1 mill per killowatt hour user fee on non-nuclear electricity generation. A trust fund would be established that would be used to reimburse utilities for 90 percent of the capital costs of installing pollution control technology on the 50 specified plants and for part of the costs of pollution controls on other power plants.

(4) The New Source Performance Standard (NSPS) for stationary sources of nitrogen oxide will be reduced to .3 pounds per million BTUs for bituminous coal and .4 pounds for subbituminous coal. This will bring about an additional 1.5 million tons reduction of NOx by 1995.

(5) Tightened standards will be codified for light and heavy truck emissions of nitrogen oxide. This provision, which will begin with the 1986 model year, will reduce 2 to 3 million tons of nitrogen oxide by 1995.

The total sulfur dioxide and nitrogen oxide emission reductions provided for by our legislation are about 14 million tons.

This bill, therefore, meets the goals which we had when we began developing new acid rain control legislation:

It is a national bill which addresses the problem of acid rain for the entire continental United States;

No region will suffer from dramatic increases in utility rates because of the cost of reducing emissions (our bill will increase the average consumer's monthly utility bill by only fifty cents to one dollar);

Jobs in the coal industry and related industries will be protected because utilities will not be switching to low-sulfur coal to achieve reduced sulfur dioxide emissions.

I'd like to turn now to the various graphs which illustrate the provisions of our bill. I have had prepared a number of charts to display some of the features of this bill. One chart, titled, "Total Tons of Sulfur and Nitrogen Oxide Reduced," compares our bill to the Mitchell bill and the Reagan Administration position. We are hoping that we can shortly remove the question mark and hear from the Administration concerning its plans to combat acid rain.

A second chart compares the total production of high sulfur coal under our proposal to the 1980 production level. As you can see, we believe that we have achieved a level of high sulfur coal production under our bill that will ensure 1980 employment levels. In fact, the Office of Technology Assessment information indicates that we might even improve upon the 1980 levels, perhaps significantly.

The final chart sets forth the schedule of compliance under the bill for existing stationary sources. As you can see, we have set an ambitious schedule for achievement of the reduction goals. By 1990 about 7 million tons of sulfur dioxide will be removed from the air and additional three million tons will be removed by 1993. A revised New Source Performance Standard for power plants will also achieve an added 1½ million tons of nitrogen oxide reductions by 1995. Finally, we can expect about 2½ million tons of nitrogen oxide reductions by codifying the standards for light and heavy trucks.

SUMMARY OF SIKORSKI/WAXMAN/GREGG ACID RAIN CONTROL PROGRAM

The program would require a fourteen million ton reduction in emissions of sulfur dioxide and nitrogen oxides through the following steps:

(1) Federally-mandated emission limitations for the largest sources of sulfur dioxide. The fifty largest emitters among power plants that burn medium- or high-sulfur coal would be required to install scrubbers by 1990. This would reduce sulfur dioxide emissions by about seven million tons. Scrubbers are now required of new plants, and have been installed on many existing plants. The use of scrubbers to reduce emissions would mean that utilities would have no incentive to switch to low-sulfur coals. Thus, current employment levels in the high-sulfur coal mining industry would be largely preserved, and could be increased

with projected growth in electricity generation.

(2) State-developed strategies to reduce further sulfur dioxide emissions. States would have until 1995 to reduce emissions by ten million tons below 1980 levels. (States would not be required, though, to obtain costly and possibly unavailable offsets for growth.) Each State would be assigned a required share of reductions in proportion to its present emissions. A State could take credit for the reductions achieved by the Federally-mandated program above.

(3) Nation-wide financing of pollution control equipment. A fee of one mill (one-tenth of a cent) would be levied on the generation or import of a kilowatt hour of most electrical energy. For the average family using 500 kilowatt hours of electricity each month, this would mean approximately fifty cents extra on a monthly bill. This fund would pay ninety percent of the capital costs of installing scrubbers or other control equipment required of utilities to reduce emissions. The fee would automatically end in 1995.

(4) Tougher standards for new power plants. The New Source Performance Standard would be tightened for nitrogen oxide emissions from new power plants. This tightening would reduce nitrogen oxide emissions by about one and one/half million tons by 1995. A study by the Congressional Research Service indicates these tighter levels can be achieved at minimal cost.

(5) Tighter standards for new trucks. Beginning in model year 1986, new light-duty trucks and heavy-duty trucks would have to meet tighter standards for nitrogen oxide emissions. The levels required for light-duty trucks would be comparable to those already being achieved by new cars. For the first time, controls to reduce nitrogen oxides would be required on heavy-duty trucks. These standards would reduce projected nitrogen oxide emissions by two and one/half million tons by 1995.●

THE POPE'S VISIT TO POLAND

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1983

● Mr. OBERSTAR. Mr. Speaker, all people who value democracy, human rights, freedom of religion, and the right of workers to organize free trade unions have drawn great inspiration and encouragement from the visit of His Holiness Pope John Paul II to Poland. Speaking as a priest, religious leader, and Pole, the Pope offers a message that transcends political ideologies and nationalist confrontation.

The Pope's pilgrimage and the emotional response of the people of Poland have shamed the Governments of Poland and of the U.S.S.R. The oppression of Solidarity and the denial of worker rights and basic freedoms is a disgrace of the civilized world. That oppression contrasts starkly with the message of hope offered by His Holiness and by the people of Poland.

The Pope's visit offers inspiration to all of us who live in hope for a world where governments respect the spiritual and political integrity of their peoples.

I want to commend the gentlewoman from Connecticut (Mrs. KENNELLY) for her sensitivity in leading this special order today. It offers all of us in this House who care about the future of Poland and about human rights to express our deep concern for the people of Poland and to pay tribute to a very remarkable man, His Holiness, Pope John Paul II.●

COLLECTION PROGRAM UNFAIR TO DISABLED MINERS

HON. RICK BOUCHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. BOUCHER. Mr. Speaker, in recent months, the Social Security Administration has identified some 1,800 individuals nationwide whose social security disability benefits were not reduced when they began receiving additional benefits under the black lung program. These individuals are now receiving orders for repayment involving amounts in the thousands of dollars. According to the notices sent by the Social Security Administration, repayments must be made within 30 days in order to avoid the substantial reduction or elimination of future benefits.

The overpayments in question were made to disabled miners suffering from black lung disease over a period of many years and were received through no fault of the recipients. Now, these individuals are receiving from the Social Security Administration a frightening notice ordering the repayment of the full amount within 30 days. If payment is not made in full within 30 days, the Social Security Administration threatens to reduce or eliminate the benefits of these individuals who are suffering from black lung disease, who are unable to work, and who depend for their family's income almost entirely on their benefit payments.

Since these former coal miners received the overpayments through no fault of their own, since they had no prior notice of the offset requirement, and since repayment of these substantial sums would be virtually impossible given their already difficult financial circumstances, I have asked Mr. John A. Svahn, the Commissioner of the Social Security Administration, to suspend immediately the repayment program and to relieve those who have already received orders for repayment of the obligation to reimburse the Federal Government for the amounts in question.

The individuals receiving disability payments never had the benefit of reasonable notice from the Social Security Administration of any requirement that black lung benefits must be reported to the Social Security Administration or that their disability benefits should be reduced upon the receipt of black lung benefits.

Nowhere on the social security disability claim form used prior to 1975 is there any suggestion that social security disability benefits will be reduced if the claimant is also awarded black lung benefits, and nowhere does the form advise the claimant to report the receipt of black lung benefits to the Social Security Administration.

Between 1975 and 1979, a second form was used which asks the disability claimant if a black lung claim has been filed, but it also fails to advise the claimant either to notify the Social Security Administration if black lung benefits are received or that disability benefits may be reduced when black lung benefits are awarded.

Beginning in 1979, a third form was used for filing disability claims. This form, which replaced the earlier forms, is also silent with respect to any offset of black lung benefits against disability benefits. The form does state in two places that the application for award of black lung benefits should be reported to the Social Security Administration. These provisions are inconspicuous and are placed among five pages of other provisions and questions. It is little wonder that the provision was not brought to the attention of applicants for disability benefits.

Whichever form was used by the disability claimant, no notice of the offset provision was ever given. Moreover, the Department of Labor gave no notice of the offset requirement when black lung benefits were awarded. Therefore, it is apparent that these claimants received overpayments without notice of the offset and through no fault of their own.

It was, or should have been, the responsibility of the Federal agencies involved to compute disability benefits correctly. In no case is there any justification for ordering individuals who are disabled victims of black lung disease to repay to the Government amounts averaging $10,000 and in some cases exceeding $30,000.

The Veterans' Administration sends a yearly questionnaire to VA benefit recipients asking whether any additional governmental benefits are being received. Proper adjustments are then made by the Veterans' Administration in the veterans' VA benefit award. This is the procedure which the Social Security Administration should have followed to insure the proper and timely adjustment in disability benefits due to the receipt of black lung benefits. Such a procedure would prevent the surprise, anguish, and monumental financial hardship which the

Social Security Administration's current procedure imposes.

The basic question is fairness. I believe it is unfair to send a threatening order to reimburse the Government for thousands of dollars in overpayments to a disabled coal miner who through no fault of his own has received overpayments for several years.

I believe it is unfair to subject these individuals to the emotional and financial trauma associated with the receipt of so severe a notice from the Social Security Administration.

For these reasons, I sincerely hope that the Social Security Commissioner will suspend immediately the collection program and issue a general forgiveness of all amounts allegedly received in excess of the benefit to which these individuals and others similarly situated were entitled.

An editorial in the June 22 Roanoke Times & World-News stated that expecting a disabled former coal miner to understand the legal complexities associated with black lung and social security disability benefits is as unreasonable as expecting a lawyer to descend into a mine and to emerge with a full day's production of coal. The Roanoke Times editorial supporting my call for an immediate suspension of the collection program is reprinted below:

[From the Roanoke Times & World-News, June 22, 1983]

TREATING COAL MINERS LIKE LAWYERS

You wouldn't hand a lawyer a coal miner's gear, send him down the shaft and expect him to emerge safely with a full day's production of high-grade coal. It's just as unreasonable to expect a coal miner to dig clear-cut guidelines out of lawyerly regulations.

But the feds seem willing to place that burden on about 1,800 black-lung sufferers. They are expected to cough up an average of $10,000 apiece in money the Social Security Administration paid them by mistake over a period of years. Not only that, the Social Security Administration sent out letters demanding reimbursement in full within 30 days.

9th District Rep. Frederick Boucher has asked the Social Security Administration to forgive the miners their debts. The forgiveness would cost Social Security $12 million. Money has been poured down less deserving drains.

The problem arises because a miner may be eligible for both Social Security disability benefits and black-lung benefits. The Social Security Administration sends him one check. The Labor Department sends him the other. When a miner receives both Social Security and black-lung benefits, a portion of his black-lung payment is supposed to be deducted from his Social Security check.

This isn't accomplished by Social Security computers talking to labor Department computers. The miner is supposed to remember. This requires great feats of recall and comprehension on his part. Although the miner may apply for both benefits simultaneously, the black-lung application takes longer to process. In some cases it may be years before the miner gets his first check for black lung.

At that point he is supposed to remember signing a form certifying that he had no other income or workman's compensation coming. He is supposed to know that black-lung benefits are a form of workman's compensation. He is supposed to know, therefore, that he is legally required to tell the Social Security Administration to start adjusting his benefits. He is supposed to know and remember the kind of things corporations hire legal staffs to know and remember.

We are not talking about people growing fat on government largesse. Black-lung benefits come to $533.60 a month for a miner with a wife and child. Social Security benefits vary, depending upon a miner's earnings in the years before he becomes disabled. A range of $400 to $500 a month is not uncommon.

The offset against Social Security is computed by one of a number of complicated formulas. What it comes down to is a final benefit that may be on the order of $600 to $1,000 a month. That doesn't leave much room for reducing benefits to compensate for past overpayment.

Boucher suggests that a cutoff date be set and all overpayments prior to that date be forgiven. It's not an outrageous suggestion. Collecting the money from those disabled miners would be costly, time-consuming and mean-spirited. Forgiving them would be unfair to others who have been drawing the proper amount of Social Security disability benefits. But it's too late to be fair. The proper course is the one that would result in the least human suffering.

We could deduct token amounts from the disability benefits—not enough to inflict real pain but enough to make the point that the recipient is legally liable for repayment. or we could identify the bureaucrats responsible for the oversight, hand them picks and shovels, and let them dig coal until they had repaid the $12 million. That might impress upon them the fact that they are dealing with humans, not statistics.●

MODERNIZE AMERICA'S BASIC INDUSTRIES

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. CONABLE. Mr. Speaker, I am today joining with the gentleman from Oklahoma (Mr. JONES) in the introduction of legislation which should help America's basic industries become more modern in order that they can be more competitive.

The legislation simply would allow companies with unused investment tax credits accumulated prior to 1983 to obtain 85 percent of the value of these credits if they reinvest in new plant and equipment prior to 1985. It further requires that the companies which elect to use these credits pay back to the Treasury the basic 85 percent used and an additional 15 percent as well.

Beginning in 1986, the electing companies would pay back this amount at the rate of 20 percent per year, and this repayment could not be offset by any other tax benefits—such as net operating loss carryovers—which the company might possess. The payback feature assures higher revenue to the Government in the critical later budget years.

Mr. Speaker, this legislation is important for a number of reasons.

First, it is apparent to all that our industries—particularly basic manufacturing—have serious competitive problems vis-a-vis their foreign counterparts. Lower labor rates, government subsidies, less stringent antitrust laws, and more favorable tax provisions in other countries all have contributed to this competition problem. Many sectors of our economy have called for trade restrictions in an effort to protect the domestic market against foreign competition. I don't believe that is either an answer or a solution. Protectionism will not make American industry more competiitive; it will make it less competitive. Only when our businesses are as modern and efficient as their competitors will they be able to compete.

Efficiency requires modern equipment and plant, and that costs money. Many of our basic industries have been in a declining mode for some years, and they have simply not been able to finance the kind of new plant and equipment needed to modernize. One of the reasons for this has been historically high, long-term interest rates. The other, in my opinion, is the lack of access many of these firms have had to tax incentives like the ITC. The legislation I have today introduced will give these companies the ability to utilize the unused ITC credits they have accumulated as long as they reinvest it. As a result, it should be a stimulus to new investment.

Second, we must have basic industries to remain a strong economic society. No country can be a world political and military force in the absence of a strong industrial sector. In the case of the United States, basic industries in 1981 contributed 14 percent to our GNP; shipments by basic industries provided $977.1 billion to our economy. These companies exported 20.7 percent of our total exports and employed 4.5 percent of our people. If they were to close down completely, 4½ million Americans would be unemployed—more than the combined populations of Atlanta, Buffalo, Dallas, Milwaukee, and San Francisco.

Third, this legislation is important to focus attention on a serious tax and economic question we have not completely addressed.

For many companies, the investment tax credit, and to an extent, accelerated depreciation really works backwards. These companies must spend money on capital equipment to survive, and they do. In 1981, basic indus-

tries spent $42.4 billion—10 percent—of the total capital expenditures made in America. Yet, ironically, because of declining profits, they were unable to utilize the ITC or accelerated depreciation. While they can carryover these tax benefits into future tax years, these benefits continually decline in value, and their nonutilization increases the cost of capital thus rendering the products of these companies less competitive. Our proposal deals with part of this problem by giving these firms partial access—at a cost—to these tax benefits. The greater question is how ultimately to neutralize the economic effects of these tax benefits. I am hopeful that the debate which will ensue will shed some light on this serious problem and bring forth some solution.

Finally, Mr. Speaker, we are facing a world economic restructuring in which we are no longer the sole preeminent power. Our laws and our attitudes just as our private sector factories must be modernized if we are to continue to be a competitive world power. The proposal embodied in the legislation I am today introducing is a necessary and important step in achieving those dual goals.●

ADDRESS BY JUDGE HAROLD H. GREENE AT THE DISTRICT OF COLUMBIA JUDICIAL CONFERENCE

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. EDWARDS of California. Mr. Speaker, the principal speech at the recent District of Columbia Judicial Conference was delivered on June 3, 1983, by U.S. District Court Judge Harold H. Greene. His speech criticized both Attorney General William French Smith's position that the courts should abdicate much of their judicial roles and defer to political judgments, and the bills to restrict the jurisdiction of Federal courts, as being efforts to subject constitutional rights to transient political majorities. He pointed to the many areas—such as those involving race discrimination, reapportionment of voting districts, criminal cases, and so forth—where individual rights guaranteed by the Constitution were, and are being, protected judicially, but which political action could not, or would not, protect.

Judge Greene's speech also discussed the importance of confidentiality in communications between attorney and client, and emphasized that the American legal system helps to improve not only the Nation's economy and its system of justice, but also the freedoms and well-being of the American people.

Judge Greene's speech received a standing ovation from the hundreds of judges and lawyers who participated in the District of Columbia Judicial Conference. I believe Judge Greene's message will interest and help Members of Congress, as well as the general public, in their thinking about these issues. I therefore request that his speech be printed at this point in the CONGRESSIONAL RECORD.

Judge Greene's speech of June 3 follows:

ADDRESS BY JUDGE HAROLD H. GREENE

I expect to talk to you for the next few minutes about the status of the legal profession in our society. One might think that the significance of the profession and its status are selfevident, and I am certain that to this audience they are. However, many influential opinion-makers, probably reflecting the views of a considerable part of the public, question that conclusion. Three recent events bring that attitude forcefully to our attention.

There is, first of all, a speech made last fall by Attorney General William French Smith which dealt with the responsiveness or lack of responsiveness of the courts to public sentiment. Next, I would like to consider the public and media reaction to rules adopted by the American Bar Association's House of Delegates which require confidential treatment of statements made by a client to his attorney. Finally, we have the report made last month by the President of Harvard University which bemoaned the fact that many outstanding students elect the study of law rather than such disciplines as science or engineering. I believe that all of these statements and events betray a disturbing lack of confidence in our profession, and should be examined on that basis.

Let us first consider the speech of the Attorney General. Basically, what he said was that courts should stay our of many subjects which they currently consider and leave their decision instead to the political branches, and that if they do become involved, they should more closely than now follow the wishes of the electorate as it may have been most recently expressed. According to the Attorney General, should such an approach be followed in the future, the courts would reconsider their decisions which define fundamental rights as including the right to marry, to procreate, to have sexual privacy, and to travel; they would cease applying strict equal protection tests to distinctions based on gender, legitimacy, national origin, and alien status; and they would curtail their practice of fashioning broad remedies in the areas of employment, schools, prisons, and public housing.

Attorney General Smith is obviously not alone. Bills pending in Congress to restrict the jurisdiction of the courts and the tenure of federal judges likewise have as their purpose the limitation of the role of the Judiciary. A similar attitude prevails at the local level: when a question arose recently about a lawsuit in a politically sensitive area, the Mayor was quoted as commenting that he did not want the courts to run the city.

All of this amounts to an attempt to keep the courts out of contentions areas in which they have long exercised jurisdiction. To evaluate the soundness of that effort, we must ask ourselves first of all why the courts are involved with these various subjects. One answer is—and I do not mean here to comment on the legal issues involved in regard to specific matters—because the Constitution says so. It does not say so specifically, to be sure, but ever since the days of Chief Justice Marshall and the decision in *Marbury* v. *Madison* it has been recognized that the interpretation of the Constitution and laws is judicial business.

But there is a reason that is perhaps even more important, and it revolves around the question—what would happen if the courts stayed out of these controversies? The Constitution, including the Bill of Rights, is just a piece of paper unless someone enforces it. We may note, for example, the Soviet Constitution, which is impressive in language but of little practical meaning because there is no real power to enforce it when enforcement is opposed, either in a particular case or in general, by powerful interests, such as the Party or the government.

In theory, enforcement of our Constitution could be vested in the Congress rather than in the courts. Britain, France, and a number of other western nations operate under just such systems; their basic charters, whether written or unwritten, mean essentially what the legislature says they mean. However well such an arrangement may work in relatively small countries with homogeneous peoples, it is not practical in a national spanning a continent, with a broad distribution of population, differing regional interests, and enormous differences in ethnic, religious, and racial backgrounds. If the rights of all these groups were at the mercy of transient political majorities, neither those rights nor indeed the nation would have lasted very long.

Yet if the courts were to follow the political will, we would wind up in practice with just such a system. The Judiciary would then tailor its decisions to the majority in Congress, or perhaps even to the wishes of a President with a strong electoral mandate. The effect of such a change would be as dramatic as it could be detrimental, particularly where courts had to define ultimate rights and responsibilities—prayers in schools, abortion, busing, the rights of criminal defendants, to name some current topics.

A few examples from the past will illustrate what I mean. Take *Brown* v. *Board of Education.* Surely, there was no political majority in 1954 for doing away with segregation in schools and other public institutions. Yet such a step was clearly right and necessary, and it was called for by any sensible interpretation of the equal protection clause in light of twentieth century conditions. Another example is *Baker* v. *Carr* and the related reapportionment and redistricting decisions. Again, no political measures were and would have been available to deprive sitting politicians of their "rotten boroughs" and gerrymandered districts; legislators would hardly have reapportioned themselves on their own out of their safe seats.

Fair treatment for criminal defendants and for prison inmates is another, and continuing example. The right to such treatment should not be solely at the mercy of a political process which, by and large, focuses on two aspects: the public clamor for law and order and budgetary considerations. These factors are not insubstantial by any means, and they are worthy of the most serious consideration; but at the same time the rights of individuals to be protected from improper conduct must remain a prime factor. Realistically, only the courts can ensure that procedures will be applied which embody that protection, and the

courts are more likely than other institutions to see to it that funds are made available for jails which meet civilized standards to house those whom the public wants incarcerated.

When the Attorney General advocates that we should leave all these issues and problems to the political process, he is essentially saying that nothing needs or should be done about them. That is not the way in which the system has traditionally worked, and such a course would not accord to the laws the place they were intended to occupy.

I do not mean to suggest that the courts should make all or most of the difficult decisions in this Republic—far from it. Courts, too, make mistakes. To verify that, we need only to remind ourselves of such disastrous decisions as *Dred Scott* which extended slavery and helped bring about the Civil War; *Plessy* v. *Ferguson* which enshrined the separate-but-equal doctrine in our laws; *Lochner* v. *New York* which held that the states lack the power to set maximum hours of employment; and many others. Beyond that, in a democratic society, policy matters should be decided by legislators and executive officials ultimately responsible to the electorate rather than by non-elected judges.

Contrary to what we are often told, that is what we have now, for judicial decisionmaking is far less pervasive than the public imagines. The courts do not get involved—and properly so—in matters relating to inflation, unemployment, budgets, appropriations, interest rates, foreign policy, defense, tax rates, highways, city planning, to name but a few. All of these involve policy considerations and the making of value judgments for which the courts are ill-equipped, and for which they have no constitutional power or jurisdiction.

By the same token, where under the Constitution the courts have a legitimate role they should not hesitate to play it. A principal purpose of the Bill of Rights is to protect the minority, often a small and unpopular one, from the tyranny of the majority. The potential for action by an intolerant majority is always present, and it is particularly acute when economic troubles or powerful emotions sweep the country for one reason or another. Instant emotional decisions are made especially likely by instant communications, such as nationwide television, which may shortly include even the capability of viewers to vote approval or disapproval of a powerful speech or program simply by pushing a button, in decisionmaking not unlike that which prevailed in the Coliseum in ancient Rome.

What we need is a sturdy brake, not directly responsive or responsible to a transient majority, which is able to safeguard fundamental rights in the face of these pressures, and the Republic is ill-served by suggestions from our leaders to the contrary. It is especially ironic that these suggestions often come from what is generally regarded as the conservative side of the ideological spectrum, for it is precisely conservative thinkers—from Alexander Hamilton on—who have insisted on brakes on the potential excesses of majorities. Those who seek to undermine the balance weight that the legal process and legal decision-makers provide do not understand their value to our society.

Let me go on to my second example. In February, the ABA House of Delegates recommended retention in the code of ethics of the prohibition on revelations by an attorney of confidences imparted to him by his client, with the exception only where there is a threat to life or serious bodily injury. If the potential injury is to property, the attorney must keep silent.

There was a tremendous hue and cry. Patt Derian, former Assistant Secretary of State for Human Rights, wrote that she thought an attorney who learned that his client was committing a crime or a fraud should "act like a good citizen and turn the rascal in to the authorities." Talking about lawyers she went on to say, "those birds have been on their own long enough. These officers of the court belong in the regular system of accountable statute-making and out of their squalid world of separate morality." The *Washington Post* chimed in by way of an editorial that the vote in the House of Delegates "offends 'common sense and common morality,'" and that there is still time for the ABA "to do the right thing and adopt a code that puts the public interest first."

There are a couple of things to be said about that. It is strange that a leading human rights crusader would feel that informing on someone who provides confidential information is the highest form of morality. One may wonder whether Ms. Derian believes that a physician or minister should be guided by the same principle in Chile, or that a journalist should betray his sources in Argentina or El Salvador if he learns that they may have plans to commit an offense.

It is equally wondrous that the media—which see a danger to the First Amendment in any effort to ascertain the identity of a confidential source under any circumstances—should be so cavalier about deciding that such protections are not necessary in the attorney-client context and so ready to ascribe selfish motives to lawyers who advocate preservation of the principle that client confidences should remain confidential. Mark Twain said, "To do good is noble. To advise others to do good is also noble, and much less trouble."

The idea that there is no pressing need for a confidential relationship between lawyer and client is just plain wrong. Absent confidentiality, many individuals would be inhibited from seeking legal advice, and they certainly would not be candid—as they must be if they are to be properly assisted by counsel—if they felt that the conversation would be, or might be, reported to the authorities. Just as First Amendment rights are "chilled" when a burden is placed on their exercise, so the right to counsel would be chilled if the client had to be constantly on guard that what was said could be construed as leading to a future criminal act and on that basis reported to the district attorney. We do not impose such a burden on the priest-penitent relationship or on that between a physician and his patient; there is no reason why it should be otherwise in the legal context. Here again, the fact that such a distinction is being advocated indicates a pattern of scepticism regarding the values of the law and of lawyers that appears to be as entrenched as it is unreasoned.

That brings me to my third example, one that illustrates perhaps most vividly how little the role of the legal process in American society is appreciated by some segments of the intellectual community.

President Derek Bok of Harvard submitted a report earlier this year to the Board of Overseers of that institution in which he wrote that far too many outstanding individuals become lawyers rather than business executives, engineers, or teachers. In this view, the net result of such choices is a massive diversion of exceptional talent into pursuits that "add little to the growth of the economy, the pursuit of culture, or the enhancement of the human spirit." Quoting a Japanese source, President Bok said that engineers make the pie grow larger; lawyers only decide how to carve it up.

There is some problem with this assertion even in its most immediate sense. The antitrust laws, for example, have far broader consequences than the division of a particular pie. Lawsuits based on the Sherman Act are designed to bring about more competition and hence lower prices, better quality, and more demand, and to contribute in this way to the expansion of the economy. Similarly, one might wonder whether the president of Harvard would feel that the New Deal laws, which put America back to work and its stagnant economy on its feet, did nothing more than to divide an existing pie. These examples could of course readily be multiplied. The point is that these statutes, which assist in economic growth and well-being, largely depend for their vitality on enforcement by legal talent—private and government counsel, administrative law judges, and courts.

Laws and lawyers generate something else that also has economic consequences even if that something is more difficult to quantify. I speak of rights, of equality of opportunity, and of plain fairness. I do not know precisely what these intangibles are worth in financial terms, but I suspect that it is far more than many would assume. In fact, we do have some circumstantial evidence to support that contention. Why is it that scientists such as Einstein, engineers such as Roebling who designed and built the Brooklyn Bridge we heard so much about last week, and many, many other productive individuals came to this country and continue to come from all corners of the world? Economic considerations are not the only answer, because if they were, there would be a flood of immigration into Switzerland or West Germany or wherever else the gross national product happened to be highest at the moment or where it was most likely to rise in the future, as perhaps in Hong Kong or Taiwan. These people came in the past and they continue to come now because of the intangibles I have mentioned, and after arriving they add to American society, including its economy.

More fundamentally, I venture to suggest that people who live in this country and have always lived here produce better, more efficiently, more contentedly because they feel that they are part of a just society. The relative prosperity of the United States and its industrial and agricultural output are not merely products of size and natural resources. Brazil, Argentina, China, to name just a few, have similar advantages, yet they never matched the American economic achievements. The difference, I submit, lies in not inconsiderable part in a secure system of justice, in rights, and in equality. In short, contrary to the thesis of the president of Harvard University, there is a close relationship between what lawyers and judges do and the economic pie that is available for the cutting.

But even if we completely lay aside the economic benefits, is there nothing to be said for the legal process and the profession which serves that process? Man does not live by bread alone. This is a time when people have become increasingly disenchanted with purely material things, when they want what is called a better quality of life, what President Bok describes as the en-

hancement of the human spirit. This broad category includes not merely matters of pleasure, entertainment, arts, and culture but also the great abstractions which are most aptly summarized under the general heading of freedom—the environment which leaves individuals to be what they want to be.

President Bok—and he is far from alone—castigates the adversary process which is a part of the general system of competition and individualism. It is fashionable these days to long instead for the Japanese model where everyone seems to work harmoniously together for joint goals or for the traditional British attitude where the legal process is controlled by respect for authority and there is accordingly less dissension and contentiousness.

There are drawbacks to the broad availability of access to courts and to relatively open judicial procedures. Some lawsuits are brought or maintained which are silly or vexatious. Civil discovery is often misused, not as a tool to secure information but as a means for wearing out a less affluent adversary. Some manage to trivialize even the most solemn laws, by suits such as the one brought here some time ago which charged unlawful discrimination because men but not women were required to wear jackets in certain restaurants. But these deficiencies—and others—are the price we pay for a larger good, just as in the name of academic freedom we tolerate professors who teach or write rubbish, and as in the name of the First Amendment we protect alike the National Enquirer, The New York Times, and Hustler magazine.

The Japanese, surely, are doing very well with their joint enterprises and cooperative efforts. However, I suspect that even in that country, as affluence spreads and as the memory of the defeat and deprivation of World War II dims, there will be growing demands for greater recognition of the individual and his private needs and wants. In any event, what works elsewhere will not necessarily work in America. History is on the side of the individual assertion of individual rights; they will triumph when not artificially held back. And the protection of these rights depends to a not insignificant degree on the processes of the law, with the assistance of the legal profession.

The streamlining that the Attorney General would have us do by eliminating in important areas the cumbersome check of possible lawsuits, thus centralizing power in the political branches, or that the president of Harvard would have us do, by cooperation Japanese-style, might in the short run be more efficient. but surely these changes would involve the abandonment of values which have been on this continent from the days a handful of individualists first arrived from England in the 17th century, and which have been perpetuated by other individualists who since then left more structured, more traditional ways behind.

Much of what judges and lawyers do, and the reasons why they do it, has always been misunderstood. It requires the study of history to appreciate why there is a need for the separation of church from state, and that to allow the police to search a drug dealer's house on mere suspicion will endanger the privacy of all our homes. What is troublesome today is that those who should know better—some of our leaders—have joined in the chorus which minimizes the basic tenets of the legal profession. We have an obligation, of course, not to be influenced by the clamor, but to do our best to carry out the responsibilities entrusted to us, whether as lawyers or judges. We likewise have an obligation to keep trying to educate the public on values which not only are dear to us as members of the legal profession but which are also a vital ingredient in the way of life in America as we know it.●

SECRETARY OF THE INTERIOR JAMES G. WATT'S 5-YEAR OIL AND GAS LEASING PLAN FOR THE OUTER CONTINENTAL SHELF

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. MARKEY. Mr. Speaker, this morning I released a report on Secretary of the Interior James Watt's 5-year oil and gas leasing program for the Outer Continental Shelf, prepared by the staff of the Subcommittee on Oversight and Investigations, Committee on Interior and Insular Affairs.

The results of this study show clearly that the Secretary has based this vital program on false economic assumptions, has misrepresented important energy policy and national security issues, has fostered an atmosphere of confrontation with the States, and has violated the spirit of the Outer Continental Shelf Lands Act Amendments. His program will result in delay and uncertainty in Outer Continental Shelf development, rather than in the expedited and evenly paced exploitation Congress envisioned when it passed the amendments in 1978.

This report will allow the Congress to embark on extensive oversight and legislative activities relevant to the exploitation of energy resources on submerged public lands. To this end, legislative recommendations are included.

A summary of the report follows:

A STAFF REPORT OF THE SUBCOMMITTEE ON OVERSIGHT AND INVESTIGATIONS, HOUSE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

The Subcommittee on Oversight and Investigations of the House Committee on Interior and Insular Affairs has reviewed the Secretary's 5-year leasing plan for the Outer Continental Shelf since he submitted his proposed program to Congress in July, 1981. Five hearings on the plan and on specific lease sales have been held since October, 1981.

The Subcommittee repeatedly invited Secretary Watt to explain his program and answer his critics before the Congress. Chairman Markey opened the Subcommittee calendar to the Secretary's convenience. The Secretary refused to appear personally, and approved the controversial plan without addressing the concerns presented to the Subcommittee by articulate representatives of states, local governments, environmental groups, industry, and academia. The leasing plan has not come before the Congress for formal approval.

The Subcommittee has reviewed the testimony presented before it, and has made the following findings:

Secretary Watt has failed to develop a leasing plan that conforms with the guidelines and requirements of the Outer Continental Shelf Lands Act Amendments.

The Secretary has refused to cooperate with coastal states and to allow them the meaningful participation in decisionmaking that the law requires.

The plan is unlikely to assure fair market value for public resources, and may result in massive losses to the Treasury.

The Secretary has manipulated the balancing of environmental and energy needs mandated by law to justify an accelerated leasing program throughout all areas of the Outer Continental Shelf.

The program is not based on a rational economic or energy policy.

The Secretary's intransigence will produce an avalanche of litigation, which will delay the expedited exploitation of OCS resources the Congress envisioned when it passed the Outer Continental Shelf Lands Act Amendments.

BALANCING OF ENERGY AND ENVIRONMENTAL CONCERNS MANDATED BY SECTION 18 OF THE OUTER CONTINENTAL SHELF LANDS ACT AMENDMENTS

Secretary Watt has improperly given more weight to his stated desire for rapid oil and gas development on the OCS than to the interest in preserving and protecting the environment.

The Watt program does not designate the size and location of proposed lease sales as precisely as possible. It fails to notify state and local governments of impending OCS activities off their shores in order to enable them to prepare for the impacts of development.

Secretary Watt did not properly consider other uses of the sea—including the needs fo the commercial fishing industry, the tourism industry, the subsistence culture of Alaskan natives, and the National Marine Sanctuaries program—when he scheduled sales on the OCS.

Section 18 of the Outer Continental Shelf Lands Act Amendments requires the Secretary to achieve a proper balance between the potential for environmental damage, the potential for discovery of oil and gas, and the potential for adverse impacts on the coastal zone. To obtain this balance, the Secretary must weigh the benefits of leasing against its costs. Secretary Watt apparently designed his cost-benefit analysis to reach a predetermined conclusion—that leasing should take place everywhere on the OCS, and that it should be done at an accelerated pace. The Secretary made two major errors—first, he did not properly consider the effects of delaying sales, and second, he did not measure costs and benefits on the same basis. These errors created a bias in favor of accelerated leasing.

STATE AND LOCAL GOVERNMENT PARTICIPATION IN DECISIONMAKING

Secretary Watt is violating the intent of Congress that states and local governments be allowed meaningful participation in the OCS policy process. During the development of his leasing program, and during the individual lease sales held under his supervision, the Secretary has done only the bare minimum required under the law to allow state participation, and has fostered an atmosphere of confrontation with the coastal states.

The Secretary has pursued a policy of brinkmanship with the coastal states over individual lease sales, by refusing to delete

tracts the states request, therefore forcing the states to delay sales with litigation.

The process by which the Secretary has consulted with the states has been a meaningless exercise. Merely receiving state and local government recommendations is quite different from actually incorporating them into the decision-making process. It appears that the Secretary's "good neighbor" policy of cooperation with the states is largely rhetoric, and that the idea of states' rights is applied only when the state is already in agreement with the Secretary's decisions.

The Secretary's attitude only serves to inspire litigation and unnecessarily delay the development of OCS resources.

LITIGATION

The major stated goal of Secretary Watt's leasing program is to accelerate and expedite leasing of resources on the Outer Continental Shelf. It is therefore ironic that the Secretary's attempts to insure acceleration result in major delays from litigation and confrontation with the coastal states and environmental groups. Because the Secretary has failed to properly interpret the requirements of section 18 of the Outer Continental Shelf Lands Act Amendments and to involve the states in meaningful participation in the OCS decision-making process, his intent and the intent of Congress that OCS leasing be expedited is thwarted.

Secretary Watt is not allaying the fears and concerns of groups affected by his program. He has been obstinate and unyielding, and has seemed to encourage a fight with his critics. The Secretary's attitude has apparently compelled critics of the program to resort to the courts so their concerns may be heard.

FAIR MARKET VALUE

Secretary Watt's plan floods the marketplace with large offerings and changes the bid acceptance procedures formerly used to determine fair market value. These changes will reduce competition on individual tracts, will not give the government revenues equal to those the Department of the Interior would have considered appropriate under past practice, and may not assure fair market value for the resources leased. These problems will threaten congressional and public confidence in the program and will impair the expedited leasing Congress intended in the Outer Continental Shelf Lands Act.

It is obvious that the Department will have less knowledge of the value of OCS resources under the new procedures than it had under the traditional method of evaluating bids. It is highly questionable whether this lessened knowledge will enable the Department to be a knowledgeable seller under its own definition of fair market value. This doubt will likely shake the confidence of the public that the Secretary's program will indeed assure a fair return for publicly-owned resources. The Congress should carefully study the new procedures to insure that fair market value is in fact obtained.

ECONOMIC JUSTIFICATIONS FOR THE 5-YEAR PLAN

Secretary Watt has repeatedly claimed that his program will increase Treasury revenues (and thus lower the national deficit), will result in lower energy prices for consumers, and will increase production of oil and gas on the Outer Continental Shelf. These economic justifications for accelerated leasing are based on questionable assumptions and overly optimistic estimates of Treasury revenues, market prices, and industry capabilities. In fact, the Secretary's program may well result in fewer revenues to the Treasury than a prudent program would produce; no real impact on consumer oil prices; and little or no effect on the production of OCS oil and gas.

ENERGY POLICY AND NATIONAL SECURITY

The Secretary has misinterpreted the nation's energy and national security concerns. His plan is not grounded in sound energy policy.

The Secretary has claimed that the only alternative to increased dependence on foreign oil is the development of oil and gas production on public lands. This view inflates the value of OCS resources to the nation's energy future.

It is clear from the testimony presented to the Subcommittee that the Watt program will have serious consequences to the nation's energy future. There are many alternatives to increased dependence on foreign oil. These alternatives range from increased offshore production to greater energy efficiency. No one energy source provides an answer to the nation's energy problems.

The Watt program propagates the myth that there is no energy problem in the world today. Americans own plenty of resources, the Secretary claims; what is needed is the will to develop these resources. This attitude ignores reality. It is significant that as the Reagan Administration promotes expedited exploitation of public resources, it has cut back on plans and budgets for the development of alternative sources of energy.

A more rational approach would be the development of a diversified, balanced portfolio of energy options. OCS resources could be an important element in a rational energy mix. They are not the sole solution to our energy problems, however, and it is dangerous for the Secretary to advertise them as such.

The Secretary has gained media attention by repeatedly questioning the patriotism of his critics. Such statements are irresponsible. When made by a United States Cabinet Secretary, they are outrageous. Secretary Watt's ad hominem attacks on his critics betray a deepseated lack of confidence in the substance of his arguments, and demmonstrates that his plan is based on ideology rather than on the law or on rational economic and energy justifications. Such attacks preclude a reasoned debate on the issues.

RECOMMENDATIONS TO THE CONGRESS

Congress must address the questions raised by Secretary Watt's five year oil and gas leasing plan quickly and comprehensively. The Subcommittee on Oversight and Investigations therefore makes the following recommendations to be undertaken by the Committee on Interior and Insular Affairs and presented to the Congress as a whole:

The Outer Continental Shelf Lands Act must be amended to narrow the scope of discretionary determinations currently reserved to the Secretary. The Congress should clarify the procedures required to achieve a proper balance between energy and environmental concerns, and should retain authority to veto the plan if important considerations are not reconciled and the spirit of the law is circumvented.

The Congress must ensure, through legislative and oversight measures, that coastal states are allowed meaningful participation in OCS policy and decision-making. The provisions of the Outer Continental Shelf Lands Act which have been narrowed by court decisions must be broadened by Congress to restore the protections of the original aims to the statute.

Continuing oversight should be undertaken to assure the American people that the Department of the Interior's method of assuring fair market value for OCS resources is reasonable and workable. In the event that such oversight demonstrates that the new screening procedures will not assure an adequate return for public resources, the Committee and the Congress should consider legislation which establishes a fair and equitable procedure.

Finally, the Congress should mandate a return to the use of the nomination procedure previously used to choose tracts for leasing. This procedure encouraged industry to focus its resources on high potential areas, while at the same time allowing states and other affected parties to request that certain tracts be withheld from the sale. The nomination process provided conflict resolution at a very early stage in the leasing process. A return to this procedure would allow industry to conduct an adequate inventory of OCS resources while at the same time insuring that the environment and marine resources are protected.

Oil and gas from the Outer Continental Shelf will be a part of our nation's energy mix until alternative sources of energy are developed. In order to provide these resources, it is essential that a rational leasing program be developed which fairly weighs environmental concerns, allows states to participate in the planning process, and insures responsible stewardship of public resources.

It is clear that Secretary Watt's 5-year schedule is not such a plan. It is apparent, therefore, for the reasons outlined in this report, that Congress must act surely and decisively to correct serious deficiencies in the Secretary's five year oil and gas leasing program.●

PROMOTING CULTURAL UNDERSTANDING

HON. BILL RICHARDSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. RICHARDSON. Mr. Speaker, there are certain people who do special things for others and many times their work does unnoticed. Eliu Martinez of Alcalde, N. Mex., in my district has made a hobby out of promoting cultural understanding among native Americans and Hispanics in his community.

Mr. Speaker, on July 9 the people of Espanola, N. Mex., and surrounding communities will celebrate the annual Don Juan De Onate Fiesta. It is a festival that has been observed in northern New Mexico for the past 50 years. It has come to my attention that this year's fiesta committee chairman, Eliu Martinez, has a vision of making the fiesta a day for members of the San Juan Pueblo, Santa Clara Pueblo, and Espanola community to celebrate living together in harmony as one. Espanola Mayor Consuelo Thompson and other members of the Onate Fiesta Committee share in the spirit

of making the fiesta a time for community unity.

When Don Juan De Onate arrived at the San Juan Pueblo in 1598 the Indians received the Spanish explorer with open arms. It is that initial spirit of openness that Eliu Martinez would like the Onate Fiesta to recapture today—Hispanics and native Americans living together as one.

The best avenue to understanding, compassion, and cooperation today is by learning from the past. Eliu Martinez' idea is for people to reach out to each other and acknowledge both the respect they have for each other as human beings and to appreciate the unique contributions of differing cultures in their communities.

Mr. Speaker, today in our schools very little is mentioned about the role of native Americans or Hispanics in American history. That history is something that Eliu Martinez is trying to promote. I applaud his efforts to educate his community on the early history of the area and his determination to point out the special relationship shared by native Americans and Hispanics in Espanola, N. Mex.●

THE CHAPPELL/BADHAM BOMBERS

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. CHAPPELL. Mr. Speaker, I rise today to salute an achievement of which I take great pride. I share this pride with my colleague and good friend, Congressman BOB BADHAM of Florida's sister State, California.

All too often we in Congress fail to note the good works of our staff members, both in the office and in the community. I should like therefore, to enter into the RECORD at this time, the following tribute to a group of brave competitors:

While the President and Mrs. Reagan were sitting down to dinner at the White House . . .

While the Supreme Court labored over the making of a landmark decision striking down decades of legislative veto . . .

While His Holiness Pope John bade farewell to millions of his Polish faithful . . .

While the Congress of the United States sat in late-night session, diligently at work upon the Budget and the Tax Cap . . .

On the Mall in front of the Air and Space 'Museum, at the corner of Jefferson Drive and 7th . . . a truly momentous event took place.

The softball team known as "The Chappell/Badham Bombers" took on the very best team that the entire Florida delegation could muster. There, upon the field of spherical combat, the stalwart Bombers, in a last-minute, breathtaking thrust of undeniable athletic prowess, beat the living daylights out of the gargantuan opposition: 13 to 10.

This, for the benefit of any who may question this entry, is included as a matter of morale; a record of staff member accomplishment in which we may take justifiable pride.

We salute each member of the championship Chappell/Badham Bombers. Well done. My compliments to the all-Florida team of which I am always a member both in spirit and in fact. To the players: This was truly a bipartisan effort.●

FAULTY TEST DATA: THE PUBLIC MUST BE PROTECTED

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. LEVITAS. Mr. Speaker, I would like to bring to the attention of my colleagues an article which appeared in the Atlanta Journal/Constitution, on June 19, 1983, which describes the horrors of faulty and invalid laboratory testing which is sometimes submitted as evidence on the health and safety effects of drugs, pesticides, and other chemical products. During the debate on the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) last year, the concerns over the validity of tests on the health and safety effects of pesticide products was a major issue, and was one of the reasons why the House voted to assure adequate public disclosure of health and safety testing data. Without public disclosure, the falsified and fraudulent studies could go undetected. We cannot take such risks.

I would like to submit for the RECORD, the article, "Scientists' Trial Questions System of Regulating Labs." This article emphasizes the need for scientists and the public to scrutinize test data.

[From the Atlanta Journal/Constitution, June 19, 1983]

SCIENTISTS' TRIAL QUESTIONS SYSTEM OF REGULATING LABS

The toxicology lab was cold and humid, the result of a chronically malfunctioning watering system that drenched some test animals while leaving others to die of thirst.

Technicians at Industrial Bio-Test Laboratories, once regarded as the biggest and best independent lab in the United States, called the dank and disagreeable room "the swamp" and refused to work there without rubber boots and masks to filter the stench of dead animals. Many test mice ran free in the lab after escaping from their cages. And when white-smocked workers mounted periodic mouse hunts armed with chloroform spray containers, they could not be certain to which scientific study the recaptured mice belonged.

"The whole thing was a mess," testified Manuel Reyna, a former toxicologist who worked in the swamp.

Hundreds of studies conducted at the Chicago-area lab were ruled scientifically invalid when federal regulatory agencies finally investigated. The government found tests riddled with flaws, tests that were supposed to determine whether new drugs and pesticides might, for example, cause cancer or birth defects, tests the government relied upon when it approved uses of the potentially dangerous products.

Perhaps most troubling to investigators was the discovery that scientists, attempting to protect the lab's reputation and avoid costly retesting, had falsified test data.

Today, four of the laboratory's top scientists are on trial in a Chicago federal court, accused of fraud in a criminal case that is expected to last through the summer.

But on trial with them is the system that is supposed to protect the public from health and environmental hazards, the regulatory system that for several years failed to spot fraudulent or shoddy lab work not only at Industrial Bio-Test but at other testing facilities across the country.

"Consumers are exposed to hundreds of pesticides whose safety has yet to be proven," said Adrian Gross, senior toxicologist with the Environmental Protection Agency. The former Food and Drug Administration official, who was one of the original investigators to uncover conditions at Industrial Bio-Test, said also the EPA has "done very little" to protect the public from rogue laboratories.

"A lot of labs do shoddy work," he added. "But it is more often stupidity, not out-and-out fabrication."

Among public interest groups, there is growing outrage with the regulatory system that allowed lab conditions at Industrial Bio-Test to go unchecked for years.

INCREDIBLY GROSS MESS

"Why did it take so long to find such an incredibly gross mess?" asked Dr. Ellen Silbergeld, chief toxicologist for the Environmental Defense Fund in Washington and a critic of the EPA's role in the Industrial Bio-Test scandal.

The Industrial Bio-Test case sent shock waves through the scientific community, but it turned out to be but one in a series of lab scandals brought to light through the late 1970s. They were uncovered by accident.

Gross, then with the FDA, was conducting random audits of drug toxicology tests and stumbled upon a new drug for treating arthritis that had been tested prior to public sales at Industrial Bio-Test labs. To Gross, the final test reports appeared to be "too good to be true." He looked deeper into the test data and found "outright falsification." Tumors found in some test animals, for example, were not mentioned in final reports.

Based on his investigation, the FDA declared the lab tests invalid and advised physicians treating arthritis patients to use other drugs until new tests could be completed.

Such discoveries inspired sweeping review of work done by the nation's 380 testing laboratories and prompted a Senate investigation into pesticide and drug regulation.

"Inaccurate science, sloppy science, fraudulent science, these are the greatest threat to the health and safety of the American people," asserted Sen. Edward M. Kennedy (D-Mass.), who chaired the hearings.

Testimony at the hearings described widespread problems in the testing industry. For example:

Biometric Testing Inc., of Englewood Cliffs, N.J., tampered with test data, switched test animals and invented results

for tests that were never conducted, according to federal prosecutors. The company and two of its officers were found guilty of fraud charges.

G. D. Searle & Co. of Skokie, Ill., was accused in a 1976 FDA report of withholding potentially adverse test results. An FDA task force that investigated the lab reported finding an "attitude of disregard" for public safety and "a pattern of conduct which compromises the scientific integrity of the studies."

LABS COULDN'T BE TRUSTED

Subsequently, an EPA investigation of laboratories from Glendale, Calif., to Florida found deficiencies so serious that the agency announced that tests conducted by numbers labs could not be trusted without first being confirmed by another source.

The Chicago trial of Industrial Bio-Test scientists has disclosed that officials at some companies hiring the lab knew about the conditions there. Congressional critics contend that the chemical and drug industries should more carefully monitor the work of contract labs.

But industry officials complain that they, too, are victims of the poor work of outside labs. Monsanto, for example, a major client of Industrial Bio-Test, says it will spend more than $12 million to replace invalidated tests. It also says that the lab scandal has cost it more than $50 million in lost sales.

A number of inadequately tested toxic products are being sold, according to a former EPA official, who blames not only poor lab work but outdated studies and inadequate government review procedures.

"There are too many pesticides out there that do not have an adequate data base," said Steven Jellineck, former head of the EPA's pesticide and toxic stustances division during the Carter administration.

Private labs are the wellhead of scientific information upon which federal regulators set the acceptable levels of public exposure of drugs and pesticides. The Government does not conduct its own tests on new products, so it relies on the scientific integrity of reseach done by industry labs such as Monsanto and Dow and by independent contract labs such as Industrial Bio-Test.

The role of the EPA and FDA is to monitor the labs and to analyze and validate test results. However, in the early 1970s the understaffed EPA decided to leave the test evaluations up to industry, according to Senate investigators.

Governments around the world use test results from American labs to measure the safety of potentially hazardous compounds. That has sometimes proved to be an international mistake.

DRUG FOUND DANGEROUS

Phosvel, for example, an insecticide that Industrial Bio-Test analysis indicated was safe, was used by Egyptian cotton farmers more than 10 years ago until hundreds of water buffalo were paralyzed and died. Farmers exposed to Phosvel use brought reported hallucinations, slurred speech and vision problems. And populations of entire villages were affected, according to American researchers who alerted the EPA.

The chemical compound was being used in 25 countries at the time although it was not yet licensed for use in America where it was being manufactured in a Texas plant. Still, U.S. consumers were eating Phosvel residue on tomatoes imported from Mexico.

Just as the EPA was about to license the hazardous compound, even in the face of the Egyptian experiences and because of favorable test results primarily from Industrial Bio-Test, a number of Phosvel factory workers were stricken with severe neurological damage. With their nerve systems and muscle coordination impaired, they became known as "the Phosvel zombies" and launched legal action against the pesticide maker.

At that point, the EPA refused to approve domestic use of the pesticide.

Industrial Bio-Test helped keep the fungicide Captan on the market, providing pivotal testing data that government regulators used to set acceptable public exposure levels when it is used on crops such as strawberries, tomatoes, lettuce and spinach.

CANCER FOUND DESPITE OK

National Cancer Institute test data provided the first clue that Industrial Bio-Test studies were flawed when it reported that Captan-fed mice developed cancers, contrary to earlier findings by the Illinois laboratory. And after the EPA subsequently ruled that Industrial Bio-Test's Captan studies were scientifically invalid, new tests confirmed the cancer institute's troubling results.

"There is no question it is a carcinogen," said the EPA's Gross.

Now, environmentalists and public interest groups are trying to have Captan banned—along with hundreds of other pesticides that were approved for use based on invalid lab tests—until it is proved safe.

"Fraud and data gaps are enough to invalidate a pesticide's (license) under California law," contends Ralph Lightstone, an attorney for California Rural Legal Assistance, a public interest law firm that represents farm workers.

But an official of the California Department of Food and Agriculture said that the state lacks the resources to prove that the pesticides tested by Industrial Bio-Test are not safe.

Today, a $100 million industry retesting program is under way to fill the data gaps. The 7-year-old effort is only half complete, according to EPA officials, who point out that under U.S. law the agency cannot ban a pesticide without first proving it is hazardous—even if it was licensed for use based on invalid testing.●

SURVEY REVEALS YOUTHS' FEAR OF NUCLEAR WAR

HON. JOHN F. SEIBERLING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. SEIBERLING. Mr. Speaker, the Akron Beacon Journal of Tuesday, June 21, contains a very interesting article about the way the presence of nuclear weapons has altered the way children view the world.

The survey was conducted by Stephan Douglas Hanna, the chief resident in family practice at Akron City Hospital. He interviewed 700 Akron students between the ages of 11 and 19 and concluded that adults must address the fears expressed by their children.

The survey showed that more than 50 percent believe a nuclear war will occur in their lifetime and more than 75 percent believe that civil defense will not help. One student responded, "Civil defense is a hollow sham." I can only agree with him.

Dr. Hanna concluded that if adults deal with the threat of nuclear war "in a healthy, constructive way, we offer hope to our children."

Mr. Speaker, I can think of nothing more important for Members of Congress than to deal with the threat of nuclear war in a healthy, constructive way. I am sorry to say that the kind of militaristic rhetoric, as well as action, that all too often accompanies the Congress approach to dealing with that threat is not the kind of constructive action that is needed. Children are not easily deceived. The hope that we hold out must be a hope based on affirmative action toward peace and disarmament.

The full text of the Akron Beacon Journal article follows these remarks:

[From the Akron Beacon Journal, June 21, 1983]

SURVEY REVEALS YOUTHS' FEAR OF NUCLEAR WAR

(By Jim Carney)

More than half of the Akron youths questioned in a recent survey believe there will be a nuclear war in their lifetime.

Seventy percent think they would not survive a nuclear war and 60 percent believe the United States would not survive one.

"The presence of nuclear weapons in the world has altered the way children view the world," concluded Stephan Douglas Hanna, who conducted the survey of youths' attitudes toward the threat of nuclear war.

Hanna, chief resident in the family practice residents' program at Akron City Hospital, interviewed 700 Akron students and concluded that adults must address the fears expressed by their children.

Hanna, who is active in Physicians for Social Responsibility, a group dedicated to education about the medical consequences of nuclear war, questioned students ages 11 to 19 at five Akron schools in February and March.

Here are some results of the survey:

Of the more than 50 percent who believe a nuclear war would occur in their lifetime, about 33 percent thought it would occur within 10 years.

More than 75 percent said civil defense would not help in a nuclear war. "Civil defense is a hollow sham," one student responded.

Most students said their plans for marriage, children and the future have not been influenced by the threat of nuclear war. Many said there was no use in worring about nuclear war because there was nothing they could do about it.

More than 75 percent said nuclear weapons have affected their way of thinking about the future.

"I am afraid for my future and wonder how we as a country, could let this self-destruction go on," one participant said.

"I just want to say if (President Ronald) Reagan is going to have a war, just let him think about how many dreams he will shatter," another said.

Hanna found it significant that so many children felt civil defense would not help. A study in Massachusetts three years ago found only a small percentage of children questioned the value of civil defense.

"This shift in attitude once again probably reflects the increasingly sophisticated exposure of children to the knowledge of the destructiveness of nuclear weapons," Hanna said.

He added that if adults deal with the threat of nuclear war "in a healthy, constructive way, we offer hope to our children."●

DOC HOLLAND, "FATHER OF ROWING," HONORED IN ATLANTIC CITY, N.J.

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1983

● Mr. HUGHES. Mr. Speaker, an overwhelming number of people will gather on Thursday evening, June 23, at Resorts International Hotel & Casino in Atlantic City to honor a true one-of-a-kind human being.

Dr. John Holland, a native of the South Jersey Shore, will be joined by over 1,000 of his friends at a testimonial dinner in his honor. As a man who has devoted over 35 years of his life to youth development, Doc Holland is loved and respected by a great number of people.

Born in Ventnor in 1916, Doc Holland graduated from Franklin & Marshall College and Hahneman Medical College. As an Army captain, he served in World War II and in the Korean conflict. He is a general practitioner in Margate and is a former chief of the Atlantic City Medical Center staff.

But to thousands, Doc Holland is best known as the father of rowing in southern New Jersey. It was his inspiration, enthusiasm, and generosity which brought interscholastic and club-type sculling and crew competition into the area. He founded the Viking Rowing Club and donated the club headquarters, once his personal property, for youth development projects and rowing purposes.

An athlete himself, Doc Holland is enshrined in both the Ocean Rowing and the Boardwalk Running Halls of Fame. In December 1982, at the age of 67, he completed the Atlantic City Marathon in his first attempt, with the respectable time of 4 hours and 41 minutes. His famous row to the ocean bell buoy—2.5 miles out—which he still practices 6 days a week, is a legend up and down the coast.

A genuinely humble man, Doc Holland put up a struggle with the dinner committee before granting his consent to this tribute. His selfless dedication and service to others have earned him a venerable position in his community and I am pleased to see tribute paid to this remarkable man.●

HOW CAN WE BEAT THE UPCOMING INCREASES IN LOCAL PHONE BILLS?

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1983

● Mr. MARKEY. Mr. Speaker, on the past two Mondays I have offered suggestions for possible congressional action to beat the upcoming increases in local phone bills. Today, I offer a third recommendation for a House initiative to deal with this pressing problem.

First, we must take a look at what a local phone bill is. In fact, most consumers see a lot more than just a basic monthly rate when they pay their bills. They see message unit billing, equipment charges, and fees for directory assistance calls. They also see something that may make them see red—a bill for local and intrastate toll calls.

Why would this enrage them? Because these rates are ridiculously inflated. Though this is true of many States, let me use my home State as an example. An evening call from Boston to Springfield—across the State—is more expensive than a call from Boston to Seattle—across the country. During the day time, it costs more to call from Boston to Cape Cod than it does to call from Boston to Colorado. In fact, the Bell intrastate rate runs 10 to 25 times as high per mile as the Bell interstate rate. For consumers who use one of the long distance competitors—like MCI or Sprint—the differential is even higher.

These toll calls—often within the same area code, sometimes even within the same metropolitan area—are regulated by State public utility commissions, or PUC's. PUC's have agreed to inflate these rates at the request of local phone companies under the presumption that such inflation helps keep down the cost of basic monthly service.

The cure for this rate inflation is simple: competition. Anyone who uses a competitive long-distance phone company knows what such competition has done for his or her long-distance phone bill—it has driven it down multifold. The call for competition, then is not some theoretical approach based on economic principles alone. It is not a call for competition based on a "model" of a free market. It is a demand which is the product of the success of competition in the market for long-distance service.

Now, the same competition should be brought to local toll calls. The restructuring of local areas in the Bell System divestiture into new divisions known as LATA's provides the perfect opportunity to undertake steps to bring this part of local phone bills under control.

What then can we do?

My suggestion, one which has been embodied in the initial draft of every major common carrier bill considered by the Congress in the past few years, is to move regulatory authority away from State PUC's to the Federal level. For while the FCC has often been slow in bringing about competition, the State PUC's have been even slower.

I urge the Congress to transfer jurisdiction for ratemaking on inter-LATA, intrastate routes to the FCC. This would be a critical first step in bringing down the overall local phone bill. And while a purist might claim that this is not a local phone bill issue, and that such calls are actually long distance in nature, I contend that to consumers, a call from Quincy to Brockton looks local and costs too much—semantic differences notwithstanding.

Competition must be introduced into the local toll call market. Its absence has contributed to outrageous intrastate phone call rates, and consumers will not stand for being told that this is not a local phone bill problem. If we take action to address the phone rate issue, and exclude this matter, we will have a serious day of reckoning with our constituents ahead. As competition develops for federally regulated services, like international calling, prices for such service will continue to drop. How will we explain our failure when someone can call from Boston to Dublin for less than they can call from Boston to Pittsfield?

And for those of you who doubt that we will see a day when this comes to pass, let me point out that right now—without major international competition—3 minutes from suburban Boston to Dublin—at night—costs $2.40. Three, 1-minute daytime calls across Massachusetts cost $2.31.

Providing for competition in the intrastate markets, through changes in the location of regulatory authority for such markets, is the third thing we can do to beat the upcoming increases in local phone bills.●

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, June 28, 1983, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

JUNE 29

8:30 a.m.
Labor and Human Resources
To hold oversight hearings on the Department of Labor's law enforcement activities, focusing on the organized crime and racketeering section of the Department of Labor's Office of Inspector General's investigation of allegations involving the International Brotherhood of Boilermakers.
SD-430

9:30 a.m.
Banking, Housing, and Urban Affairs
To resume oversight hearings on condition, structure, and competition within the domestic financial services industry.
SD-538

Judiciary
To hold hearings on S.737, S. 568, and S. 1383, proposed Joint Research and Development Ventures Acts.
SD-226

10:00 a.m.
Appropriations
Defense Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1984 for the Department of Defense, focusing on defense intelligence matters.
S-407, Capitol

Energy and Natural Resources
Business meeting, to consider pending calendar business.
SD-366

Environment and Public Works
Business meeting, to consider pending calendar business.
SD-406

Finance
To continue hearings on the administration's budget proposals for fiscal year 1984 for programs within the committee's jurisdiction, focusing on tax expenditures.
SD-215

Foreign Relations
To hold hearings on the nomination of David M. Abshire, of Virginia, to be U.S. Permanent Representative on the Council of the North Atlantic Treaty Organization, with the rank and status of Ambassador.
SD-419

Governmental Affairs
To resume hearings on S. 121, to establish a U.S. Department of Trade as an executive department of the Federal Government.
SD-342

Small Business
Small Business: Family Farm Subcommittee
To hold hearings on the impact of Canadian agricultural imports and their effect on the small business community.
SR-428A

Joint Economic
To resume hearings on industrial policy, economic growth, and competitiveness of U.S. industry.
2168 Rayburn Building

1:30 p.m.
Governmental Affairs
Intergovernmental Relations Subcommittee
To hold hearings on the proposed Uniform Single Audit Act of 1983.
SD-342

2:00 p.m.
Appropriations
Defense Subcommittee
To continue closed hearings on proposed budget estimates for fiscal year 1984 for the Department of Defense, focusing on defense intelligence matters.
S-407, Capitol

Judiciary
To hold hearings on pending nominations.
SD-226

3:00 p.m.
Judiciary
Courts Subcommittee
Business meeting, to mark up S. 645, proposed Court Improvements Act.
SD-226

JUNE 30

9:30 a.m.
Labor and Human Resources
Business meeting, to resume consideration of S. 564, to establish the U.S. Academy of Peace.
SD-430

Rules and Administration
Business meeting, to consider H.R. 3034, to provide for the appointment and education of Congressional pages, Senate Resolution 150, to authorize the printing of additional copies of the Joint Economic Committee print entitled "Changing Economics of Agriculture: Challenge and Preparation of the 1980's," and pending legislative and administrative business.
SR-301

10:00 a.m.
Agriculture, Nutrition, and Forestry
Business meeting, to mark up S. 1101, to authorize funds for fiscal years 1983, 1984, 1985, and 1986 for certain fishery programs, and S. 663, to prohibit the payment of certain agriculture incentives to persons who produce certain agricultural commodities on highly erodible land.
SR-328A

Energy and Natural Resources
Business meeting, to consider pending calendar business.
SD-366

Finance
Business meeting, to mark up proposed legislation to extend the revenue sharing program for local governments.
SD-215

Judiciary
Business meeting, to consider pending calendar business; to be followed by the Subcommittee on Separation of Powers to mark up S. 462, to clarify certain provisions of the Hobbs Act relating to Federal jurisdiction over labor extortion matters.
SD-266

Joint Economic
To continue hearings on industrial policy, economic growth, and competitiveness of U.S. industry.
2168 Rayburn Building

JULY 1

9:30 a.m.
Judiciary
To hold oversight hearings on the effects of antitrust laws on the domestic steel industry.
SD-226

JULY 12

9:30 a.m.
Judiciary
Juvenile Justice Subcommittee
To hold hearings on juvenile offenders involved in serious and violent crimes.
SD-226

Labor and Human Resources
Told hold oversight hearings on activities of the Legal Services Corporation.
SD-430

2:00 p.m.
Labor and Human Resources
Aging Subcommittee
To hold hearings to examine the use of the judicial system by the elderly.
SD-430

JULY 13

9:00 a.m.
Select on Indian Affairs
To hold hearings on S. 1148, to provide for the use and distribution of funds awarded the Assiniboine Tribe of the Fort Belknap Indian Community, Montana, and the Assiniboine Tribe of the Fort Peck Indian Community, Montana by the U.S. Court of Claims
SD-628

9:30 a.m.
*Commerce, Science, and Transportation
To resume hearings on S. 1108, proposed Highway Safety Act, focusing on title IV, to provide for increased coordination between Federal, State, and local governments in the transportation of hazardous materials.
SR-253

Labor and Human Resources
Business meeting, to consider pending calendar business.
SD-430

10:00 a.m.
Foreign Relations
Business meeting, to consider certain arms reduction proposals, including Senate Resolution 57, Senate Joint Resolution 2, Senate Joint Resolution 29, Senate Resolution 159, Senate Joint Resolution 74, Senate Concurrent Resolution 46, Senate Resolution 107, and Senate Resolution 83.
SD-419

Labor and Human Resources
To hold hearings on home health care services.
SD-430

Veterans' Affairs
To hold oversight hearings on certain health issues affecting veterans, focusing on the recruitment and retention of VA medical staff, and to examine

the location of certain VA facilities to rural areas.
SR-418

Joint Economic
To resume hearings on industrial policy, economic growth, and competitiveness of U.S. industry.
2168 Rayburn Building

2:00 p.m.
Foreign Relations
Business meeting, to continue consideration of certain arms reduction proposals, including Senate Resolution 57, Senate Joint Resolution 2, Senate Joint Resolution 29, Senate Resolution 159, Senate Joint Resolution 74, Senate Concurrent Resolution 46, Senate Resolution 107, and Senate Resolution 83.
SD-419

JULY 14

10:00 a.m.
Labor and Human Resources
Aging Subcommittee
To hold hearings on future directions in nursing home health care.
SD-430

Joint Economic
To continue hearings on industrial policy, economic growth, and competitiveness of U.S. industry.
2168 Rayburn Building

3:00 p.m.
Select on Ethics
Closed meeting to consider pending committee business.
S-207, Capitol

JULY 15

9:30 a.m.
Finance
Savings, Pensions and Investment Policy Subcommittee
To hold hearings to examine trends in the projected life expectancy of U.S. citizens.
SD-215

JULY 19

8:30 a.m.
Small Business
To hold oversight hearings on the Small Business Administration's small business development center program.
SR-428A

9:30 a.m.
Labor and Human Resources
To hold hearings to examine fire safety issues.
SD-430

10:00 a.m.
Energy and Natural Resources
Water and Power Subcommittee
To hold hearings on S. 752, to provide for certain measures to reduce the salinity of the Colorado River.
SD-366

2:00 p.m.
Small Business
To continue oversight hearings on the Small Business Administration's small business development center program.
SR-428A

JULY 20

9:00 a.m.
Labor and Human Resources
Business meeting, to consider pending calendar business.
SD-430

9:30 a.m.
Labor and Human Resources
To hold oversight hearings to explore problems affecting the quality of education.
SD-430

JULY 21

10:00 a.m.
Labor and Human Resources
Education, Arts, and Humanities Subcommittee
To hold hearings on the proposed Alien Education Assistance Act.
SD-430

Veterans' Affairs
Business meeting, to mark up S. 1388, to increase the rates of disability compensation for disabled veterans and to increase the rate of dependency and indemnity compensation for surviving spouses and children of veterans, and related proposals, including S. 859, S. 995, S. 1187, S. 1318, S. 1371, S. 1401, S. 1402, and S. 1403, and other pending calendar business.
SR-418

JULY 22

9:30 a.m.
Labor and Human Resources
To hold hearings to receive a task force report on the vaccine for pertussis.
SD-430

10:00 a.m.
Energy and Natural Resources
To resume oversight hearings on the geopolitics of strategic and critical minerals.
SD-366

Joint Economic
To resume hearings on industrial policy, economic growth, and competitiveness of U.S. industry.
2168 Rayburn Building

JULY 25

10:00 a.m.
Energy and Natural Resources
To hold hearings on S. 1132, to establish a maximum ceiling on the annual charge to be fixed by the Federal Energy Regulatory Commission for a licensee's use of a government dam or other structures owned by the United States.
SD-366

JULY 26

9:00 a.m.
Office of Technology Assessment
The Board, to meet to discuss pending business matters.
Room to be announced

9:30 a.m.
Labor and Human Resources
Labor Subcommittee
To hold hearings on S. 1173, proposed Federal mine safety and health amendments.
SR-485

10:00 a.m.
Labor and Human Resources
Aging Subcommittee
To hold hearings on proposed legislation authorizing funds for nutrition programs of the Older Americans Act.
SD-430

JULY 27

9:30 a.m.
Judiciary
Juvenile Justice Subcommittee
To hold hearings to examine the problem of runaway and homeless children.
SD-226

Labor and Human Resources
Business meeting, to consider pending calendar business.
SD-430

10:00 a.m.
Judiciary
Administrative Practice and Procedure Subcommittee
To hold hearings on S. 1520, to authorize redress payments to certain residents of the United States of Japanese-American, Aleut, or other ancestry who were interned, detained, or forcibly relocated by the U.S. Government during World War II.
SD-562

JULY 28

9:30 a.m.
Labor and Human Resources
Labor Subcommittee
To hold hearings on S. 19 and S. 918, bills to revise current Federal pension law with respect to the rights and benefits of working and nonworking women, and related measures.
SD-430

9:30 a.m.
Labor and Human Resources
To resume hearings on health care cost issues.
SD-430

SEPTEMBER 8

10:00 a.m.
Labor and Human Resources
Family and Human Services Subcommittee
To resume oversight hearings on the breakdown of the traditional family unit, focusing on the historical perspective and societal implications.
SD-430

SEPTEMBER 15

10:00 a.m.
Labor and Human Resources
Family and Human Services Subcommittee
To resume oversight hearings on the breakdown of the traditional family unit, focusing on causes and remedies.
SD-430

SEPTEMBER 20

11:00 a.m.
Veterans Affairs
To hold hearings to receive legislative recommendations for fiscal year 1984 from the American Legion.
SR-325

CANCELLATIONS

JUNE 30

10:00 a.m.
Environment and Public Works
Environmental Pollution Subcommittee
Business meeting, to resume markup of S. 757, authorizing funds for fiscal years 1983 through 1987 for programs of the Solid Waste Disposal Act.
SD-406

SENATE—*Tuesday, June 28, 1983*

(Legislative day of Monday, June 27, 1983)

The Senate met at 9:30 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray.

*Eternal God, "who made the world and all things therein * * * Lord of heaven and earth * * * who giveth to all life and breath and all things * * *"* (Acts 17: 24, 25), we need Thy counsel as the Senate considers a very heavy matter. Our forebears believed that Thou art the Lord of Life: "We hold these truths to be self evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty * * *". Jefferson understood this when he said, "God who gave us life, gave us liberty."

Now Lord, the Senate confronts head-on the basic issues of life and liberty. Make Thy presence felt here and let Thy will be done in the Senate today. We pray in the name of Him who is the Way, the Truth and the Life. Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The majority leader is recognized.

SENATE SCHEDULE

Mr. BAKER. Mr. President, let me outline the program as I see it at this moment.

I hope that, after the two leaders are recognized and the special orders are executed and morning business has expired, we get on with the business of debating the abortion amendment without delay. There are 2 hours and 49 minutes remaining under the order previously entered.

ORDER FOR RECESS TODAY FROM 12 NOON TILL 2 P.M.

Mr. President, today is Tuesday. I feel like the sailor who is tied to the mast on Tuesdays because there is so much going on and so little time in which to do it. One of the things we must do is conduct the regular weekly caucuses of Senators on both sides of the aisle. Those caucuses are of a quasi-official nature. They are held away from the Senate, though they are instrumental in setting the policy by both parties on matters which are debated in the Senate. In order to accommodate those caucuses, Mr. President, it has become our custom of late to recess the Senate for 2 hours. Therefore, today, I ask unanimous consent that the Senate stand in recess from the hour of 12 noon until 2 p.m.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Mr. President, according to my calculations, we will either finish or just about finish the debate on the abortion resolution by the time we recess. That is going to leave us a lot of time between then and 5 p.m. For a man who is hungry to do as much as he can before we go out for the Fourth of July recess, I find that a disturbing prospect. When the minority leader returns, I intend to consult with him, as indeed I have done privately before this, as to the possibility of doing one or the other or at least beginning one or the other of the two remaining items which must engage our attention before we go out for the Fourth of July recess.

One is the so-called tax cap sent us by the House of Representatives, which we almost got a time agreement on yesterday. The other is the agriculture appropriations bill, which may or may not be a highly controversial item.

I get mixed signals on that. I see the distinguished Senator from Mississippi here. He has a particular interest in that matter and he advised me last evening, as I recall, that he thought there was some possibility that the differences could be worked out and we could pass it in fairly short order. I prefer that interpretation to a later one I received from the minority leader, who thought there might still be problems.

In any event, Mr. President, I would propose, if we may do so, that if we run out of time for debate on the abortion resolution before 5 p.m., and we vote at 5 p.m.—it is not later than 5 p.m., but at 5 p.m.—that we fill in that time on the agriculture appropriations bill or on the tax cap. So Members should be aware of that possibility—that is, that the time between 2 p.m. and 5 p.m. may be devoted in part, at least, to debate on some other matter besides the abortion resolution, since the time for debate will have expired and the time for the vote will not have arrived.

I have no desire to shorten the time for debate on the abortion resolution. I suppose if there is a substantial reason to extend the time for debate, the leadership on both sides will consider that. I hope that will not occur. I think the time we have remaining is short enough that we could serve the purposes of the country and the Senate well by using the remaining time this afternoon to get started, at least, on one or the other of the two items.

Mr. President, I announced yesterday that it was the hope and ambition of the leadership on this side that we could finish for the Fourth of July break on Thursday instead of Friday. Far be it from me to entice Members to do anything against their will, but let me suggest that if we can finish the agriculture appropriations bill and the tax cap proposal, we might go out of here Wednesday. Having baited that trap, Mr. President, I shall await eagerly the response of my distinguished and outstanding colleagues.

ORDER TO VITIATE ORDER FOR RECOGNITION OF MR. GORTON

Mr. BAKER. Mr. President, I am advised that the distinguished junior Senator from Washington (Mr. GORTON), who has a special order this morning, has no need for that order. I ask unanimous consent that the time allocated to the Senator from Washington be vitiated.

The PRESIDING OFFICER (Mr. COCHRAN). Without objection, it is so ordered.

WILLIAM E. MILLER WILL BE REMEMBERED AND MISSED

Mr. BAKER. Mr. President, today at Arlington Cemetery, William E. Miller, former Congressman and former Republican nominee for Vice President, will be laid to rest, and on behalf of my colleagues, I want to extend to his wife Stephanie, and the rest of his family, my deepest sympathies. Bill Miller was a good man and a fine public servant—he will be missed.

I listened over the weekend to reports of the death, and I heard my good friend Senator GOLDWATER call Bill Miller one of the greatest men I have ever known. BARRY GOLDWATER does not talk like that about everyone.

Bill Miller served in Congress with my father, and I remember watching him avidly play cards. He was an outstanding bridge player, and he loved golf and billiards.

In 1960, Bill Miller was elected chairman of the Republican Congressional Campaign Committee, and that year,

the Republicans gained 22 seats in the House. The following year, Bill became the Republican National Chairman, and was according to Senator GOLDWATER one of the best chairmen we ever had.

In 1975, Bill made a television commercial in which he joked that he was not recognized without his American Express card. My only reflection today is that he will be remembered and missed regardless.

RECOGNITION OF THE MINORITY LEADER

The PRESIDING OFFICER. The minority leader is recognized.

Mr. BYRD. Mr. President, I have no need for my time.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, there is a remaining order in favor of Senator SPECTER, who is not yet here. He is depending, I am sure, on the Senator from Washington speaking first. Therefore, on the time remaining to the two leaders, I am about to suggest the absence of a quorum, which we shall not charge against the Senator from Pennsylvania.

Mr. President, on the time remaining for the two leaders and in order to gain time to permit the Senator from Pennsylvania to arrive, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL JULY 11, 1983

Mr. BAKER. Mr. President, I have consulted with the minority leader on the matter I am about to address, and he is agreeable to the course of action I will now propose.

I have before me a Senate concurrent resolution dealing with adjournment. I now send it to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The concurrent resolution will be stated.

The legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 48) providing for an adjournment of the Senate from June 29, 1983, June 30, 1983, or July 1, 1983 to July 11, 1983, and an adjournment of the House from June 30, 1983 to July 11, 1983.

Mr. BAKER. Obviously, the meaning of this resolution is that the Senate has the option of adjourning tomorrow, Thursday, or Friday, until July 11. The House has the option of adjourning from June 30 until July 11.

As I said, I have consulted with the minority leader, who is agreeable to the passage of this resolution. I ask the Chair to put the question.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution was agreed to.

The concurrent resolution reads as follows:

S. CON. RES. 48

Resolved by the Senate (the House of Representatives concurring), That when the Senate adjourns on Wednesday, June 29, 1983, Thursday, June 30, 1983, or Friday, July 1, 1983, pursuant to a motion made by the Majority Leader in accordance with this resolution, it stand adjourned until 12:00 noon on Monday, July 11, 1983, and that when the House adjourns on Thursday, June 30, 1983, it stand adjourned until 12:00 noon on Monday, July 11, 1983.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, the Senator from Pennsylvania is now present. May I inquire if he is ready to claim his time for the special order?

Mr. SPECTER. Yes, Mr. President, I am pleased to respond to the majority leader that I am.

Mr. BAKER. I thank the Chair.

Mr. President, I yield the floor.

RECOGNITION OF SENATOR SPECTER

The PRESIDING OFFICER. Under the previous order, the Senator from Pennsylvania (Mr. SPECTER) is recognized for not to exceed 15 minutes.

PRESIDENT URGED TO ADOPT RECOMMENDATIONS OF THE INTERNATIONAL TRADE COMMISSION ON SPECIALTY STEEL

Mr. SPECTER. Mr. President, I rise today to urge action by the President on a matter now pending before him involving the specialty steel industry of the United States. By July 5, a week from today, the President must act on certain recommendations on specialty steel which have been presented to him by the International Trade Commission.

I wish to focus attention on this matter because it is of urgent interest to 30,000 Pennsylvanians once employed in the specialty steel industry centered in my State, and also because it is of great importance to all Americans in all States in all industries in which U.S. companies lose money and U.S. workers lose jobs because of unfair competition from foreign firms that are subsidized by their governments. The recommendation of the International Trade Commission to the President is to limit imports of specialty steel. Then U.S. firms could use their respite to complete their modernization programs.

After 18 months of painstaking review, the Commission found that these imports have been substantially subsidized for years and have materially injured U.S. companies. The President must decide by July 5 whether to accept or reject the Commission's recommendation for a 3-year period of restricted imports. The industry asserts that it needs 5 years.

At the outset, it is vital to note that the issue before the President is not a request for protectionism, but a request that specialty steel enjoy the benefits of free trade uninhibited by subsidies of foreign governments which now create unfair competition with specialty steel.

Last Friday, I took the occasion of our day off from the Senate to visit the Allegheny-Ludlum steel mill in Brackenridge, Pa.

Allegheny-Ludlum is the largest U.S. producer of specialty stainless and electrical steels. I saw a modern continuous caster installed recently as a result of earlier limitations on unfair foreign trade practices. This enormous device provided cost savings that minimized layoffs and kept the company competitive with foreign producers. It represents the state of the art. With a further period of limits on imported specialty steel, which now holds 20 percent of the U.S. market, the company would be justified in completing the second stage of its modernization with a $100 million investment that would buy a second continuous caster which would greatly increase the plant's output. Then the company could hope to reemploy its furloughed workers, increase its sales, recapture part of the domestic market from foreign suppliers, and expand its exports.

Yesterday, when there were no votes, I took the occasion to visit the Bethlehem Steel mill in Steelton, Pa., in order to be in a better position to comment on these issues and to make these requests to the President which I shall do formally by letter today.

The distinction between protectionism and free trade, in my judgment, is absolutely vital because there are sound reasons why free trade should be maintained. But free trade means fair trade and that means the absence of foreign government subsidies. But today American specialty steel is being victimized by subsidized European, Brazilian, and Japanese importers, in a way which makes it an impossibility for them to compete fairly on the international market.

I will paraphrase the famous statement of President Kennedy and put the proposition this way: As to specialty steel and the entire American steel industry, they ask not what protection their Government can give them; they ask only that their Government not permit or assist others to engage in unfair and illegal trade practices.

Specialty steel is not asking for protection from competition. Specialty steel is asking only that the U.S. Government not permit or assist foreign competitors to engage in unfair and illegal trade practices that inevitably result from government subsidies. That there are massive foreign subsidies is plain beyond any doubt.

So the specialty steel industry is not asking for protection but is asking only that the Government not permit the unfair competition which results when foreign companies receive subsidies from their governments but domestic companies do not receive subsidies from our Government.

Beyond merely permitting illegal practices, regrettably, the U.S. Government actually assists in these unfair trade practices through policies which we have adopted concerning the International Monetary Fund.

It is a fact of record that Brazil has subsidized steel with funding obtained from the International Monetary Fund and, as a result, has put American steelworkers out of work. Nothing, in my judgment, could be more unfair. Consider that you have this situation: A steelworker at a plant such as Allegheny-Ludlum's in Brackenridge, Pa., is paying taxes to the U.S. Government. The U.S. Government is then appropriating money for the International Monetary Fund, as we did in the supplemental appropriations 2 weeks ago—$8.5 billion. The International Monetary Fund is then advancing money to Brazil. Brazil is then giving subsidies to its steel industry; and its steel industry, including specialty steel, is then exporting steel to the United States and causing that steelworker at Allegheny-Ludlum to lose his job. That cycle is factual, that cycle is complete, and that cycle is fundamentally unfair.

When Treasury Secretary Regan appeared before the Appropriations Committee, I asked him that specific question. I urged that the International Monetary Fund, if it is to be supported by the U.S. Government, not permit those subsidies. Treasury Secretary Regan responded that it would cause thousands of Brazilian steelworkers to be thrown out of work. My reply to that was, "Well, how about thousands of American steelworkers?"

Treasury Secretary Regan replied that there were other factors involved in the problems of the American steel industry—all of which is true. But if even one American steelworker is losing his job because of subsidies which are permitted by the U.S. Government through the International Monetary Fund going to Brazil, then that should be stopped. Simply stated, it is unfair and immoral.

That is why I rise today to focus attention on this matter, which I believe is of great national concern. In urging that these considerations be met by the executive branch, I speak as a U.S. Senator as well as a Senator from the Commonwealth of Pennsylvania. I make the distinction because it is in the national interest that the steel industry in the United States be strong. If we are to be prepared on national defense—and the steel industry is vital to the national defense—then we will have to maintain a strong steel industry. If we permit the steel industry to disintegrate, then we can expect ourselves to be at the mercy of foreign steel producers. In the mode of OPEC oil, when the going gets tough, they will raise prices and exploit the United States, and we will find ourselves without a steel industry to provide the necessary national defense or domestic production.

I speak also as a Senator from the Commonwealth of Pennsylvania, which is enduring massive unemployment, especially in western Pennsylvania and other parts of the State which rely on the steel industry. Steel in the United States has traditionally been concentrated in western Pennsylvania, particularly in the Pittsburgh area, but we also have steel mills in the Johnstown and the Harrisburg areas, as well as Coatesville, near Philadelphia, and in Fairless Hills and Bethlehem. So it is a matter of tremendous importance throughout the State of Pennsylvania, where steel has been the No. 1 industry which in its heyday has employed some 14 percent of the Pennsylvania work force.

In looking toward this decision which the President of the United States must make by July 5, I submit that there must be a proper focus and fairness as applied to the specialty steel industry.

On Monday when I visited the Bethlehem Steelworks at Steelton, Pa., it was represented to be the oldest steel mill in the United States, a source of rail since the mid-1800's, which provided the track for the expansion of the American rail industry. At this aged Bethlehem steel plant, I was pleased to see massive new machines, representing an investment of some $85 million, and high technology equipment being applied with computerization to increase the production of steel from that plant and to produce a superior product.

While that is not an illustration of the specialty steel industry, it is an illustration of a part of the American steel industry which has also been victimized by unfair foreign competition from subsidized companies, such as British Steel Corporation, which the International Trade Commission last year found to be subsidizing steel at the rate of some $250 a ton.

I am going to ask the President of the United States to meet personally with representatives of the specialty steel industry before reaching his decision because of the apparent controversy among Cabinet level officers. It has been reported that a debate among Cabinet level officers is taking place over the fate of the specialty steel industry, with representatives of the Justice Department, the Treasury Department, the State Department, and the Council of Economic Advisers urging that the President place no restrictions on specialty steel imports.

It is further reported that some members of those departments feel that restrictions should not be imposed because they do not wish to alienate U.S. allies who make money here by selling specialty steel here. Mr. President, this is another example of the sacrifice of vital American industrial interests on the altar of foreign policy. More than steel is involved. Involved is virtually every product which is made in the United States.

We have seen the demise of many of our industries because foreign governments are exporting their unemployment to the United States. Stated simply, the U.S. Government is not only letting them get away with it, but the United States is also aiding and abetting and conspiring in that effort.

Markets in third countries are also affected. Recently, I had an opportunity to look at the imports of poultry into Egypt. There again, the practice was the same: Brazilian poultry was being exported to Egypt, defeating an opportunity for American farm products because of subsidies being given by the Brazilian Government to its poultry industry.

Similar incidents could be related almost endlessly. It is not just Pennsylvania's problem. It is the problem of every State in the United States. It is not just steel's problem. It is the problem of every industry which makes products, seeks to sell them in competition with foreign firms, and is being victimized by these unfair foreign trade practices.

Thus, on this early morning in the Senate, where, in accordance with our custom, only two of us are present—our colleagues being busy with committee work and the other endeavors of the U.S. Senate—I urge those who will review this RECORD, as many of our colleagues customarily do, and I urge those who can hear these comments on the radio system, to join in this appeal to the President, to assure fundamental fairness for the specialty steel industry in the United States. It is an industry which is not asking for favors, but which is asking only for fairness. That fairness requires the stopping of those unfair foreign trade practices which are threatening to destroy the specialty steel industry and are threatening to destroy the steel industry generally in the United States.

Mr. President, American specialty steel achieves quality unexcelled any-

where in the world. Its equipment is not outmoded. The industry has made excellent use of the respite provided by an earlier decision of the International Trade Commission and ratified and continued under two prior administrations. Companies invested in plant and installed state-of-the-arts equipment like the continuous caster I saw in operation.

Companies like Allegheny-Ludlum ask only for enough further time to complete their modernization programs. Unlike their foreign competitors, they are not asking for subsidies. The money they want to invest in additional new equipment is their own. They have done and want to continue doing just what the Government should expect of them: modernize so they can compete effectively. Under these circumstances, what more do we want from them? Do they not deserve temporary protection from unfair competition?

Mr. President, when you drive around communities like Brackenridge, Pa., and talk to the residents, you cannot fail to see that the entire economy of the area is dependent on the prosperity of the local steel mill. In Pennsylvania, as throughout many States, particularly in the northeast and midwest regions, there are scores of communities like Brackenridge. When there are layoffs at the mill, everyone in the community suffers; businesses of all types are harmed.

It is fundamentally unfair for these Americans to suffer when the cause is the policy of foreign governments to subsidize basic industries like steel. Why should our country allow foreign nations to export unemployment, along with subsidized steel, to the United States? Why should we tolerate unemployment levels of 20 percent and higher in steel communities while subsidized foreign firms steal 20 percent of the U.S. specialty steel market?

Mr. President, I urge all my colleagues to recognize the general threat to all represented by this case.

S. 1551—PREVENTION OF CRIMINAL INFILTRATION OF LABOR UNIONS REPRESENTING CASINO EMPLOYEES

Mr. SPECTER. Mr. President, I am today introducing a bill to permit States which have legalized casino gaming to impose measures to aid in the prevention of criminal infiltration of labor unions representing casino employees.

This legislation is prompted by a recent U.S. Court of Appeals ruling that the State of New Jersey may not impose rules and regulations designed to prevent criminal elements from infiltrating legitimate casino operations through labor unions representing casino employees. The court ruled that Federal labor law statutes preempt the field in this area, to the exclusion of State law.

I cannot disagree with that portion of the court's opinion which emphasizes the need to preserve a fundamental principle of Federal labor law: the employees' right to form their own organization and select their own leadership. Yet what New Jersey and other similarly situated States are attempting to do is not inconsistent with that principle. The State laws in question cannot be viewed as attempts to regulate labor unions in a manner inconsistent with Federal law. In fact, these State laws are not even labor laws at all, but comprehensive casino control laws that impose the same standards on management as on labor in pursuing the important State goal of keeping all elements of casino gaming free from criminal influence. In New Jersey, for example, the law is not only written evenhandedly, it is administered that way as well. Major officers and shareholders of casinos have been required to disassociate themselves from some companies; in one instance a company even was ordered to turn over to another company the operation of its casino.

There is no question that casino gambling is particularly attractive to organized crime because of the vast amounts of cash and gaming chips that are constantly changing hands on the casino floor. We can count on organized crime to look for any avenue of infiltration, be it in management, labor, or related operations. States legitimately require all those involved in the unique business of legalized casino gaming to subject themselves to strictest scrutiny, precisely to avoid this danger and to keep the industry clean. New Jersey has simply retained the right to disqualify union officials who have associations with organized crime. Maintaining the public's trust requires no less.

Surely Congress, in enacting Federal labor laws, did not intend to preclude the States from adopting comprehensive and nondiscriminatory rules designed to keep all elements of casino operations free from criminal infiltration. My bill simply makes clear that States are not barred by Federal law from applying those rules in these special circumstances.

Mr. President, in submitting this proposed legislation I join with my colleague, the distinguished Congressman from New Jersey (Mr. HUGHES), who has introduced such legislation in the House of Representatives.

It is a bill which has national importance. The issue is one which has been the subject of many decisions in the constitutional law field. Pennsylvania has a special interest in this issue because of the proximity of Atlantic City, N.J., to Pennsylvania. There is a national interest as well, since New Jersey's experiment with legalized gaming casinos in the effort to revitalize that part of New Jersey provides a national example.

And on a personal note I might say I have had a special interest in New Jersey. I took the bar examination there in 1979, some 23 years out of law school, with an interest in practicing law in Atlantic City, N.J.

Then I found the superior profession of U.S. Senator in 1980, and that has occupied my time instead. Nonetheless, I have observed rather closely the proceedings in progress in New Jersey, and I submit to this body that this legislation is very important.

Mr. President, I ask unanimous consent to have printed in the RECORD the full text of the bill on the Atlantic City casino issue.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1551

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 504 of the Labor-Management Reporting and Disclosure Act of 1959 (29 U.S.C. 504) is amended by adding at the end thereof the following new subsection:

"(d) Nothing in this section or in any other Federal labor law shall be deemed to preclude any State from enacting, as a part of a comprehensive statutory system for regulating the operations of licensed casinos and casino hotels, standards which—

(1) govern service in any position described in paragraph (1) or (2) of subsection (a) with respect to a labor organization representing employees of such a casino or casino hotel;

(2) are based on criminal conduct or associations; and

(3) are more restrictive than those which would apply under this section, or would impose different sanctions than this section would impose.".

S. 1552—OPERATION OF PASSENGER VESSEL "HIAWATHA" ON THE SUSQUEHANNA RIVER

Mr. SPECTER. Mr. President, today I am introducing legislation to allow the Williamsport-Lycoming County Chamber of Commerce of Williamsport, Pa., to operate its passenger vessel, *Hiawatha,* on the Susquehanna River.

The *Hiawatha,* a 65-foot, diesel-driven, replica of a 19th century paddlewheeler initiated tourist traffic on the west branch of the Susquehanna River last summer. Operating only 10 weeks, the vessel carried 15,000 passengers and raised $18,981.50 last year. The Williamsport community raised nearly $500,000 in materials, labor, services performed and cash to build the *Hiawatha* and inaugurate service. During construction of the vessel, the Pennsylvania Fish Commission, which inspects 17 similar vessels throughout the Commonwealth, periodically checked to insure that the chamber

met commission standards. Subsequently, the fish commission certified the *Hiawatha* to operate passenger service for hire on the Susquehanna.

In December of 1982, the Philadelphia Inquirer published an article noting the success of the *Hiawatha*, and applauding the chamber's ability to gather community support for the project. Coincidentally, a Coast Guard official noticed this piece, and questioned whether the Pennsylvania Fish Commission had appropriately exercised jurisdiction over the *Hiawatha*.

The Coast Guard retains jurisdiction over the navigable waters of the United States. The west branch of the Susquehanna has been determined to be navigable and subject to Coast Guard supervision. Hence, the *Hiawatha* was designated as Coast Guard responsibility and required to meet its regulations before serving passengers for hire.

Since this determination, the Williamsport-Lycoming Chamber of Commerce has pursued Coast Guard certification without success. While review has proceeded steadily, analysis of the vessel's hull structure remains an obstacle to timely certification. The chamber has already spent nearly $30,000 to produce detailed blueprints of the hull and to continue operating the *Hiawatha* without charging admission.

As an alternative to these extensive hull review procedures, the Coast Guard, within the scope of its regulations, may accept evidence demonstrating that comparable vessels have operated under similar conditions with a time-honored record of safety. In accordance with these regulations, the chamber has provided the Coast Guard information regarding several craft of approximately the same size, power and displacement that have carried passengers with at least 5 years without significant complications.

In spite of this compliance, final certification has not been granted. The chamber projects its costs to be $83,000 in the course of the *Hiawatha's* 6 months of operation this season. Originally, the chamber expected to recoup its expenses through passenger admissions; however, its protracted negotiations with the Coast Guard have drowned these expectations.

According to information provided to me by the chamber, the *Hiawatha* has operated safely and without complication. Based on this record, and the past certification by the Pennsylvania Fish Commission, I am asking the Congress to resolve this jurisdictional dispute and permit the *Hiawatha* to run, for hire, on the west branch of the Susquehanna—so long as it continues to maintain the standards established by the fish commission.

The *Hiawatha* has served to promote tourism in a county that suffers from 16-percent unemployment. I am confident that continued operation will only spur economic development in the area, and ask my colleagues to give speedy relief to the community of Williamsport.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of the bill.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1552

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding sections 2 and 4 of the Act entitled "An Act to require the inspection and certification of certain vessels carrying passengers", approved May 10, 1956 (46 U.S.C. 390a and 390c) and section 3 of such Act (46 U.S.C. 390b) as regards inspection and certification, the Williamsport-Lycoming County Chamber of Commerce of Williamsport, Pennsylvania, may operate the passenger vessel *Hiawatha* on such segment of the west branch of the Susquehanna River as may be designated by the Pennsylvania Fish Commission, Bureau of Waterways, if the Williamsport-Lycoming County Chamber of Commerce prior to the operation of such vessel—

(1) complies with any inspection and certification law or regulation of the State of Pennsylvania applicable to the operation of a passenger vessel; and

(2) maintains certification for the *Hiawatha* as required by the State of Pennsylvania for the operation of the vessel.

Mr. SPECTER. Mr. President, I thank the Chair and I yield the floor.

ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order there will now be a period for the transaction of routine morning business for not to extend beyond 10:15 a.m. with statements therein limited to 2 minutes each.

CONFERENCE ROUNDTABLE

Mr. THURMOND. Mr. President, I want to take a moment to direct the Senate's attention to an article which appeared in the June 23, 1983, New York Times concerning the public affairs television program, "Conference Roundtable," produced by the Senate Republican Conference.

The Times article provides an accurate assessment of the purpose of "Conference Roundtable": to keep the American people well informed of the activities of the U.S. Senate.

Senator MCCLURE, Chairman of the Senate Republican Conference, is to be commended for his leadership in this effort, as well as the other vital communications activities of the Conference.

Mr. President, I ask unanimous consent that the Times article appear in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 23, 1983]

SENATE G.O.P. PLAYS CABLE TV CIRCUIT

WASHINGTON, JUNE 22.—A pop version of one of the Brandenburg Concertos plays in the background as the camera pans to portraits of John C. Calhoun, Henry Clay and Abraham Lincoln and moves to shots of the Capitol. "This," the announcer says in a grave voice, "is Conference Roundtable."

It is also the latest effort to mix politics and television on Capitol Hill. For the last year, the Senate Republican Conference has sponsored a television show resembling interview programs produced by the commercial networks, including the appearance of questioners from some of the nation's leading newspapers and magazines. The only difference is all but one of the guests have been Republicans.

These shows, produced fortnightly in the Senate recording studio in the basement of the Capitol, are offered without charge to 333 cable stations and 60 Public Broadcasting System stations, which can use them on their menu of public affairs broadcasting. The programs usually are identified only as productions of the "Senate Conference of the Majority," subtly avoiding the word Republican.

NEW AVENUES OF INFLUENCE

"Conference Roundtable" constitutes an early thrust in the battle to harness the power of cable television and satellite communication for partisan politics, a process that may transform how the parties and members of Congress communicate with constituents and bid for their approval.

"It's an interesting use of public monies, and it's one we may be forced to emulate," said Robert A. Neuman, director of communications for the Democratic National Committee. "It may raise questions of propriety, but state-of-the-arts communications being what they are, Democrats will probably take to using such a thing."

The shows have considerable appeal to local cable television stations because they are free and provide them with rare noncommercial public affairs programming from Washington. The interchange has included journalists from publications such as The Washington Post, The Baltimore Sun and, for a debate on gun control last week, a magazine called Gun Week. The reporters are not paid for appearances and some publications, including The New York Times, do not permit their correspondents to appear as a matter of policy.

"The television stations need public affairs programming," said Senator Richard G. Lugar of Indiana, who is to to appear on a program on the International Monetary Fund, "and we always benefit from the exposure."

Television executives are impressed with the shows, but some are troubled that the programs, which are financed by the office expense funds of Senate Republicans, are not balanced because they are produced by a Republican organization and leave out the point of view of the Democrats.

"It would be nice if it were more of a balanced treatment," said Mark F. Roehm, studio and remote operations supervisor for Syracuse New Channels, which has broadcast the program since it began in March 1982. "But I'm concerned with presenting good public affairs programming, and this is good programming. We're always looking

for programming that tells about Washington."

ALMOST ALWAYS REPUBLICANS

Beth Huggins, program director of Cable TV-Puget Sound, which reaches 80,000 households south of Seattle, also has reservations. "It's good technically and the show does deal with controversial subjects, but I'm concerned that the picture isn't as complete as it might be," she said. "It is almost only Republicans."

The programs are not, however, dry recitations of ideology. A program on prayer in public schools, for example, presented a showdown between two Republicans of vastly different perspectives, Senator Lowell P. Weicker Jr. of Connecticut, part of the party's liberal wing, and Senator Jesse Helms of North Carolina, one of the leaders of the so-called new right in Congress. In the course of the debate, Mr. Helms, in an allusion to Mr. Weicker's education at the Lawrenceville School and Yale University, said, "I don't know if Lowell even went to public school" and then challenged Mr. Weicker, "Name me one child who has ever been harmed by prayer."

Senator James A. McClure of Idaho, chairman of the Senate Republican Conference, said that the programs do not stress a party line on issues but demonstrate the breadth of thinking within the Republican Party. "It gives the public a chance to hear different viewpoints and to see Republicans in action," said Mr. McClure, who has appeared on the program six times. "It's good for Republicans, even if sometimes we disagree."

NO REAL OPTION TO THE NUCLEAR FREEZE

Mr. PROXMIRE. Mr. President, one of the most depressing stories to come along in quite a while was reported Thursday from West Berlin by Allan Otten of the Wall Street Journal. Mr. Otten wrote that about 30 specialists in arms control from the United States and Western European countries have just spent 2 days privately assessing the chances of reaching an arms control agreement between the United States and Russia this year. One of the participants—an American official—said he estimated the chances of reaching such an accord to be about 10-to-1 against. He added that was his estimate and he added that he is the optimist of the group.

And as they say—that is the comparatively good news. For the bad news consider Otten's last paragraph. It reads:

> And what if, against all odds, there are agreements on limiting both intermediate and long-range missiles? "No conceivable agreement," one American said, "is going to reduce the U.S. Soviet arms competition very much, going to save military costs very much, going to reduce the risk of war very much." Sadly, practically everyone around the table nodded agreement.

Now Mr. President, it would be a mistake to assume that this is the sole fault of either side. In fact Otten reports that U.S. negotiators have been sincerely trying to reach an agreement with the Soviet, but had run into a barrage of nyets. It now appears fairly certain that we will indeed begin installing our intermediate nuclear missiles in Europe at the end of this year. Our position is complicated by the flip-flop of the West German Social Democratic Party which had been leading advocates of the missile deployment. In fact its leader Helmut Schmidt more than anyone else had led the international fight for them. Now—out of power—the party has swung to the other side and opposes the deployment. As some of the participants in the recent West German discussion noted this is precisely the kind of conduct that makes it unlikely we will reach an agreement in time to forestall the deployment.

Mr. President, the sorry state of these arms negotiations, as I say, is not an indictment of President Reagan's sincere desire to succeed in negotiating. It is more profound and serious than that. It represents an example of how very difficult and probably impossible are arms negotiations based on limited, fragmented objectives. Those who oppose the nuclear freeze have argued that we can do far better than we would do if we tried to negotiate a compromising nuclear freeze if we take short steps. Their advice: Aim at limited agreements. Slowly, patiently build on those limited agreements. Then rely on the confidence, the momentum, the process to permit us to bring the arms race under control. Nice theory. Obviously it does not work.

Mr. President, it may be necessary to wait until after the Reagan administration has left office to push for a comprehensive, mutual, verifiable freeze on nuclear weapon testing, production, and deployment. Presidential leadership and Presidential conviction is probably critical if we are to have any real chance of success. Let us hope and pray that in the meanwhile, the hair trigger power that could shoot this world into the ultimate tragedy of nuclear war today, tomorrow, next week, next month can somehow hold off.

Anyone still skeptical about a nuclear freeze should ponder long and hard on the alternative: a stalemate that the experts say probably cannot be reconciled at Geneva. And even if somehow we reach an agreement with the Soviet Union, the assurance that we and the Russians, too, will proceed pell-mell with the arms race at breakneck speed. That means we will spend the immense sum of $50 billion per year for each of the next 5 years refining and extending our nuclear arsenal, and the Russians will do the same. Negotiations like the START talks—no matter how successful cannot halt that. Then what can? The answer: The nuclear freeze, which is now supported by an overwhelming majority of the American people.

Mr. President, I ask unanimous consent that the Wall Street Journal article by Alan Otten appearing in the June 23 issue headlined "U.S.-Soviet Arms Control Pact Unlikely This Year, West Berlin Parley Reasons" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, June 23, 1983]

U.S.-SOVIET ARMS CONTROL PACT UNLIKELY THIS YEAR, WEST BERLIN PARLEY REASONS

(By Alan L. Otten)

WEST BERLIN.—About 30 government officials and nongovernment arms control specialists from the U.S. and four major West European nations have just spent two days here privately assessing the prospects for U.S.-Soviet arms control agreements this year. The consensus: pretty bleak.

That means the deployment of American Pershing 2 and cruise intermediate-range nuclear missiles will probably begin in Western Europe later this year, with—a prediction the meeting also seemed to accept—large protest demonstrations in West Germany and possibly elsewhere as well. Some participants foresaw new strains on the Atlantic alliance, while others predicted nasty Soviet countersteps, such as accelerated development of new missiles or moving big missiles right up to the German border.

"The chances for agreement are about one out of 10," an American official said, "and I'm the optimist in my group."

"I am pessimistic about the Soviet desire for an agreement," a West German diplomat declared. "They may even want deployment to preserve this as a destabilizing element within the alliance."

The meeting, held in the home of the Aspen Institute Berlin, was cosponsored by the Aspen Arms Control Consortium, headed by Prof. Paul Doty of Harvard, and the German Institute of Foreign Affairs, directed by Karl Kaiser. Attending were officials and private experts in the arms control field from West Germany, France, Italy and Britain as well as from the U.S.

Discussion centered on the INF intermediate-range nuclear missile negotiations going on in Geneva between the U.S. and the Soviet Union, but the two-day talks also ranged across such other topics as the START negotiations in Geneva on strategic nuclear missiles, the nuclear-freeze movement in the U.S., and a possible buildup in the conventional forces of the North Atlantic Treaty Organization.

KOHL VISIT TO MOSCOW

Most participants seemed to agree that Paul Nitze and his delegation to the INF talks had been making serious efforts to reach some acceptable compromise agreement but had met with a consistent Soviet *nyet*—and that it's now up to the Soviets to give some sign that they're interested in an agreement. People at the meeting were told that, with the Soviets until now completely preoccupied with the just-concluded meetings of the ruling Politburo and central committee, no Soviet move could be expected at the arms control talks before September, though some inkling of Soviet intentions might emerge when German Chancellor Helmut Kohl visits Moscow early next month.

The few optimists in the crowd suggested that the Soviets' need for Western technolo-

gy and other help in modernizing the Soviet economy might yet bring sugnificant concessions. They had to admit, though, that there was certainly no sign of that yet anywhere—either in the two sets of Geneva negotiations or in U.S. Discussions with Kremlin officials about U.S.-Soviet tensions in other parts of the world.

Others argued it wasn't realistic to expect significant Soviet moves towards agreement. "It might be in the Soviet relations," one French participant said, "but the Soviets aren't ready to take any dynamic initiatives. This is a transition government—and a paralyzed transition, partly due to the resistance from the old Brezhnev followers partly due to the state of Mr. Andropov's health."

MERGING THE GENEVA TALKS

Participants frequently suggested that it would be necessary at some point to merge the two sets of Geneva negotiations—INF and START—since each had problems whose solution would depend on developments in the other. However as Prof. Doty told a news conference after the meeting, there was general agreement that political and technical difficulties ruled out such a merger at least until next year.

Considerable worry was expressed by many of those present over the way the German Social Democratic Party has turned against missile deployment now that it has lost control of the government, even though it was SDP's own Helmut Schmidt who first suggested that NATO needed new missiles and even though it was an SDP government that agreed in 1979 to have Pershing 2 and cruise missiles based in West Germany.

One German government official complained that the SDP flip-flop was exactly the sort of thing that would encourage the Russians to continue to resist any arms control agreement. "The success of the negotiations," he said, "depends on our (the Europeans) being able to convince Moscow that we won't be deterred from deployment by promises or threats."

SDP officials concede that the party will probably wind up opposing deployment if no arms control agreement has been reached by late this year, even if it's clear that it was the Soviets who blocked agreement. Party members at the meeting here warned of major protest actions by young people, church groups and others when deployment begins.

"In the long run," said one, "you might have the weapons in Europe but lose quite a bit of support for the alliance. If many young people turn away from the alliance, won't the alliance be worse off?"

NO SURPRISES, PLEASE

European government officials at the meeting generally applauded the way the U.S. has been keeping its allies informed on the Geneva talks, but even those friendliest to the U.S. complained that President Reagan frequently creates problems for his European friends with extreme anti-Soviet rhetoric and unexpected announcements.

"It is important that there be no surprise moves in this delicate field, like the Star Wars speech," a German said, referring to President Reagan's recent statement on researching space-based ballistic defense systems. A French participant declared that "Mr. Reagan gave a very great bonus to the Soviets in his Star Wars speech and opening the ABM defense issue again."

And what if, against all the odds, there are agreements on limiting both intermediate and long-range missiles? "No conceivable agreement," one American said, "is going to reduce the U.S.-Soviet arms competition very much, going to save military costs very much, going to reduce the risk of war very much." Sadly, practically everyone around the table nodded agreement.

UNKNOWN WAR, FORGOTTEN VICTIMS

Mr. PROXMIRE. Mr. President, Parade magazine recently published an article on the aftermath of the conflict in East Timor.

The situation in East Timor, one half of an island 400 miles north of Australia, is a case which falls into the cracks in international law. In August 1975, Portugal yielded its sovereignty over this territory. On December 7, of that same year, shortly after East Timor declared its independence, Indonesia invaded.

President Suharto's blitz of East Timor was an attempt to annex this region and present the world community with a fait accompli. Stiff resistance by nationalist guerrillas foiled this attempt. However, it has also prolonged the conflict. Today, Indonesia exercises only nominal control over the island.

As a consequence of the struggle between Indonesian and nationalist forces, the population of East Timor has fallen from 600,000 persons to as few as 350,000. The survivors risk disease, torture, and death in internment camps. Despite the gravity of the situation, food shipments from abroad have been permitted only intermittently since 1979; 1982 saw the first visits to political detainees by representatives of the Red Cross.

Mr. President, the Genocide Convention will not eliminate the horrors which persist in East Timor. Nor will it provide the solution to the world's problems in general. The Convention will, however, provide a first step toward the protection of various national groups which may be threatened by genocidal conduct. If only for this reason, we Americans have a moral obligation to condemn the actions of the Indonesian Government in East Timor and to give our support to the Genocide Convention. I urge my colleagues to join me in this effort.

REMARKS OF GOVERNOR BILL SHEFFIELD AT POSTMASTER GENERAL'S DINNER

Mr. STEVENS. Mr. President, on June 1, I hosted a dinner for Postmaster General William Bolger and his staff at the Captain Cook Hotel in Anchorage, Alaska. Our Governor, Bill Sheffield, was scheduled to attend but, unfortunately, at the last minute had to remain in Juneau on State business.

As his representative, Dan Casey, Commissioner of Alaska's Department of Transportation and Public Facilities, was kind enough to join us and present the Governor's talk. We were so impressed not only with Governor Sheffield's comments but the manner in which Dan Casey delivered them that I felt I should share the Governor's words with my friends in Congress.

I ask unanimous consent to insert at the end of my remarks the text of Alaska Governor Bill Sheffield's speech to those assembled at the Postmaster General's dinner.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF GOVERNOR BILL SHEFFIELD

It's my honor and pleasure on behalf of the Governor, to welcome you to Anchorage, Alaska. Or as a mailman might say—welcome to 99501.

The Governor sends his best regards. I can assure you he would much rather be here than battling the House Leadership over confirmations.

Even though we in Alaska are at the end of the zip code, it's comforting to know that we are not at the end of the line when it comes to improvements in mail service. Your announcement yesterday about upgrading service in Alaska is great news and we commend you for it.

During a visit by Postmaster General, prior to statehood, the Postmaster General happened to walk into the Girdwood Bar for a relaxing respite from his tour. As he stepped up to order a drink—there laid out at the end . . . was all the local mail for residents to stop by and pick out. I'm sure Girdwood service has come a ways since then, but many a mailman's kitchen counters in rural villages still have the mail laid out.

The creation of a separate postal service district in our state is yet another chapter in the 116-year history of the post office in Alaska. Those of you in the audience who are from Alaska may know the opening chapter—that was the creation of our first post office in 1867.

In fact, the opening of that post office in Sitka occurred while the territory was still in the hands of Russia. The Postmaster who was appointed to Sitka set up shop three months before Alaska was formerly transferred to American hands. His name was John Kinkead, and he later became the first Governor of the territory.

As far as I know, Mr. Kinkead was the first and only mailman to make a jump from the postal service to politics in Alaska. Before he did that however, Mr. Kinkead laid the foundation for what has evolved into a long and colorful history for the postal service in Alaska.

That history includes unique characters, as well as unique operating conditions. When the gold rush brought thousands of people thousands of miles to Alaska, some way had to be made for them to stay in touch with their friends and family. At least, most of them wanted to stay in touch.

So, the post office began expanding into Western Alaska. Dog teams, and sometimes reindeer, were used to haul the mail across the territory. Because of that, some rather interesting requests for mail-hauling contracts were advertised by the postal service.

For example, in July of 1913, the Post Office Department published this request of bids. I'll paraphrase it:

"Wanted: Anyone interested in hauling the mail between Valdez and Fairbanks. A

distance of 358 miles. The contractor will leave Valdez every Monday, Thursday and Saturday. Each mail run to Fairbanks shall be completed in 12 days by dog team. Three extra days will be allowed when the ice is forming in the fall and breaking up in the spring. You must be at least 21 years of age. Married women need not apply."

I suppose, considering Roxie Wood's recent dog sledding championships, we'd do well to drop that last qualifier today.

As you can tell from that advertisement, mail delivery in Alaska was unlike mail delivery anywhere else in the United States. Today, it doesn't take 12 days for the mail to get from Valdez to Fairbanks. At least I don't think it does. Otherwise, Bob Opinsky would be out of a job.

By the way, congratulations Bob on your new appointment.

But you should keep in mind that the days of delivering the mail by dog team and skin boat are not that far gone. In fact, it was just 20 years ago this month that the last mail route handled by a dog musher was phased out. That mail route was on Saint Lawrence Island.

The man who delivered the mail on Saint Lawrence was Chester Noongwook. And after he made his last mail run in June of 1963, the Postal Service presented an award to him. And with that, the last dog mushing mailman was replaced by an airplane.

As you may know, mail delivery by airplane was pioneered in Alaska by a mid-west farm boy named Ben Eielson. Eielson became famous around the world in 1928 for making the first non-stop flight over the North Pole, from Point Barrow to Norway. For this flight, he received aviation's highest award, the Harmon Trophy. That's the same trophy that Charles Lindberg received after his solo flight across the Atlantic in 1927, a year before Eielson's polar flight.

I mention Eielson and Chester Noongwook because they represent two very important parts of Alaska history, and the history of the mail service in our state. And because one man represents the beginning of an era and the other the end of an era, on behalf of the Governor, we think it's only appropriate that each be considered for a commemorative postage stamp.

I understand that Ben Eielson's name already has been submitted for consideration by the Post Master General and the Citizen Stamp Advisory Committee. If a postage stamp honoring Ben Eielson is approved, that would be great. We only hope that equal consideration can be given to the last dog-mushing mailman, Chester Noongwook.

With that request, I'll finish my welcome to you. Just let me say that it's my hope that your convention is going well and that you enjoy your stay in Alaska. The Governor wanted to make sure that you know all Alaskans appreciate your efforts to keep us in touch with ourselves. We are a big land, with mountain ranges and oceans separating our communities. But still the mail goes through, and for that we are all very grateful.

Thank you.

THE B-1 BOMBER

Mr. KENNEDY. Mr. President, I am concerned about the way the Armed Services Committee was used this morning by the Office of Management and Budget to ram through the B-1 bomber on the basis of new figures, that suddenly and conveniently arrived here at the last minute. The defense authorization bill, as it now stands, is the product of shameless budgetary manipulation.

I believe in a strong national defense. When I joined the committee, I also believed that we could work together in the spirit of cooperation, with the national security as our foremost concern. For the last week, we proceeded in that spirit—and although I had my strong disagreement with specific provisions of the bill, I was fully prepared to vote for it.

But suddenly this morning, Mr. David Stockman, whose reputation for integrity with respect to budget numbers is not as high as one might wish, sent over a new and convenient estimate of inflation. That estimate just happens, presumably by sheer coincidence, to accommodate the administration's fierce desire for multiyear funding of the B-1 bomber—without any offsetting reductions in other areas.

Faced with imminent defeat on the B-1, the administration rushed forward with this expedient. If, indeed, there is more money available, because a decline in inflation will lower the cost of certain weapons, we should decide rationally whether to allocate it to other defense systems, to readiness, or to reductions in a massive Federal deficit.

I share the attitude of one of my Republican colleagues on the committee, when he asked this morning after hearing Mr. Stockman's new estimate: "What did you know, and when did you know it?"

I am appalled by this flimflam. I regard this process as bad defense policy, bad budgetary policy, and an insult to the hard work of this committee over the past week.

I can understand why Mr. Stockman, who has practiced it before, seeks to engage in government by statistical trickery. I do not think we should permit this to happen once again.

I, therefore, object to the meeting of the committee scheduled for this afternoon, in order that all the members of this committee may have the opportunity to assess this development.

HAROLD WILLENS TESTIFIES FOR A NUCLEAR WEAPONS FREEZE

Mr. KENNEDY. Mr. President, an important contribution to the upcoming Senate debate on the Kennedy-Hatfield nuclear freeze and reductions resolution has been made by Harold Willens, a business executive and the leader of the successful California Bilateral Nuclear Weapons Freeze campaign, in testimony before the Senate Foreign Relations Committee. As a member of the board of the Nuclear Freeze Foundation in Washington, Mr. Willens has provided valuable experience and leadership on this critical issue in recent months.

In his testimony, Mr. Willens makes a strong and compelling case that if the Members of the Senate are truly to represent the American people, they should support a mutual and verifiable nuclear weapons freeze as the first step toward major reductions in the nuclear arsenal of both the United States and the Soviet Union. As Mr. Willens told the committee:

> The evidence is unequivocal and undeniable: regardless of party affiliation, the American people want a nuclear weapons freeze—and they want it now! The question is: Will Congress be accountable to the will—and the wisdom—of the people?

Mr. President, as we move toward Senate debate on the nuclear freeze and reductions resolution which Senator HATFIELD and I have introduced, I urge my colleagues to consider Mr. Willens remarks. A bilateral and verifiable nuclear weapons freeze will enhance America's security and reduce the risk of nuclear war. This proposal has the broad support of the American people, and it is up to the Senate to act.

I ask unanimous consent to have Mr. Willens' statement printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TESTIMONY OF HAROLD WILLENS BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE

I am honored to testify today as a businessman, as the leader of the California Bilateral Nuclear Weapons Freeze Campaign, as a delegate to the 1978 U.N. Special Session on Disarmament, and as a strong supporter of the Kennedy-Hatfield Nuclear Freeze and Reductions Resolution.

To me it seems the bottom line question before you is this: Will the Senate Foreign Relations Committee betray the right of the American people to have their elected representatives actually represent them? The people have made their position very clear. And I cannot believe this Committee would even consider rejecting what the American electorate so strongly favors. That would be a denial of democracy.

In the largest de-facto referendum on a single issue in our country's history, 60% of approximately 20 million Americans voted last year for a verifiable Soviet-American nuclear weapons freeze. This year—not many weeks ago—a Harris poll showed that by a 79 to 16 percent margin the American people want Congress to pass a resolution calling upon the U.S. to negotiate a nuclear freeze agreement with the Soviet Union. Republicans in that poll favor the freeze by a 72 to 23 percent margin. The evidence is unequivocal and undeniable: regardless of party affiliation, the American people want a nuclear weapons freeze—and they want it now! The question is: Will Congress be accountable to the will—and wisdom—of the people?

As head of the California Campaign, in which close to 4 million voters supported the freeze, I saw first-hand evidence of the deep concern felt by ordinary citizens in President Reagan's home state; citizens who

realize the arms race reduces our national security and weakens our national economy. I experienced the honor of a personal meeting with President Reagan to discuss the nuclear freeze. I regret to say that while he welcomed me graciously it was clear that the common sense case for a freeze had not been made clear by those around him. Mr. Reagan also seemed unaware of how strongly the American people feel that the way to stop the arms race is not build more, but to end it now, on both sides, across the board.

As part of the U.S. delegation to the 1978 U.N. Special Session on Disarmament, I was actively involved in discussing different alternatives for arms control. The distinguished chairman of this Committee also participated in the 1978 Special Session. This is the first time since then that I have had the opportunity to express my respect publically and directly to Senator Percy, who took the time to come to New York and participate actively in our discussions. I know how carefully he will listen and weigh the testimony and debate now underway before this Committee. And based on the concern he expressed then, I hope that Senator Percy himself will decide to support the freeze. I can personally testify to his real concern about the arms race—and as a leader on this issue, your Chairman and your Committee can open the path toward a businesslike, conservative, risk-free way to stop spending precious resources in a race that can't be won by either side. Senate approval of the nuclear freeze can be a historic first step toward incremental reduction of Soviet and American arsenals that are far too great even now.

I do not believe that any member of this Committee would want to tell the American people: despite the support millions of you gave to this issue at the ballot box and in subsequent opinion polls—I will not even vote to send the nuclear freeze resolution to the Senate floor. You have a rare opportunity to do both what is popular and what is right. I urge you to join with the people you represent by supporting the Kennedy-Hatfield Nuclear Freeze and Reduction Resolution.

FEW'S RESOLUTION ON EQUAL PAY

Mr. KENNEDY. Mr. President, more women are in the paid labor force than ever before. In 1965, only 39 percent of women were working, but the rate is 52 percent today and may well reach 65 percent by 1995.

Despite the passage of the Equal Pay Act and the Civil Rights Act, the pay cap between women's and men's wages has not decreased in the last 20 years.

The economic status of women and its effect on family income was the subject of congressional hearings before the Labor and Human Resources Committee, the Joint Economic Committee, and the Senate Finance Committee during the last Congress. These committees are considering legislative proposals meant to reduce or eliminate economic inequities American women are experiencing at home, at work, and in retirement.

The millions of women who joined the work force in the past decade have forced us to confront the reality of pay discrimination. Pay equity is not only a question of economic justice—it is a matter of economic necessity for women struggling to support themselves and their families.

A woman's rightful place in our society is wherever her talents can take her. And a woman's pay should be a full and fair share of the worth of her work. The women who constitute more than half of our whole country must no longer be treated as less than whole citizens in our economy.

Federally Employed Women, Inc., as a national organization representing over 800,000 Federal women workers has set as its goal, achievement of pay equity for women in both the public and private sectors by the end of the decade. I ask unanimous consent to have printed in the RECORD FEW's resolution, approved by its national board of directors calling for equal pay for work of comparable worth, and I urge my colleagues to consider it carefully.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION: EQUAL PAY FOR WORK OF COMPARABLE WORTH

Whereas, pay for women workers throughout the public and private sectors of the United States is not commensurate with pay for male workers in jobs involving equal work, similar work or work of comparable worth; and

Whereas, women workers are not compensated in an equitable manner for their expertise, knowledge, and responsibilities; and

Whereas, women workers of America earn 59¢ for every dollar men workers earn and this represents a regression from 1955 earnings when women earned 64¢ for every dollar men earned; and

Whereas, women workers in both the public and private sectors are segregated into some 20 plus occupations while male workers have access into over 400 occupations; and

Whereas, women workers retire and must live on annuities based on their lifetime of work within the federal government, an annuity which averages over $400 less per month than male retirees from the federal government; and

Whereas, in almost all white collar federal occupations, male workers out-earn women workers ranging from $2,000 to $12,000; and

Whereas, even in federal occupations where women workers outnumber male workers by large margins, male workers almost always earn substantially more (i.e., the library series); and

Whereas, the Heads of EEOC and OPM admitted at Congressional Hearings held on pay equity for women on September 30, 1982 that women are discriminated against in wages; and

Whereas, the Equal Pay Act of 1963 and the Civil Rights Act of 1964 have failed to eradicate the pay inequity suffered by women in the public and private sectors of the workforce; and

Whereas, enforcement of the Equal Pay Act of 1963 and the Civil Rights Act of 1964 seems to be deemphasized and there is dismantlement of the equal opportunity programs within various Executive Branch Agencies/Departments with a general trend to a structural organization from whence equal employment opportunity evolved and where it did not work years ago: Now, therefore, be it

Resolved, That Federally Employed Women, Inc. (FEW) fully supports the concept of equal pay for work of comparable worth, and supports all legal and legislative efforts to achieve this concept; and be it further

Resolved, That FEW encourages litigation, either in individual cases or class action cases, to force employes (the federal government) to compensate women workers for equal work, similar work, or work of comparable worth, in both the white collar and blue collar occupations.

Approved by FEW National Board of Directors, Indianapolis, Indiana, February, 27, 1983.

NATIONAL OUTDOOR RECREATION RESOURCES REVIEW ACT

Mr. PERCY. Mr. President, earlier today I submitted testimony to the Intergovernmental Relations Subcommittee which held a hearing on S. 1090, the National Outdoor Recreation Resources Review Act. This legislation was introduced by Senator WALLOP on April 19. I am a cosponsor of this bill and have urged in my testimony that the Intergovernmental Relations Subcommittee, chaired by Senator DURENBERGER, act swiftly in reporting this important measure to the full Governmental Affairs Committee for action.

Many of the major policy elements of outdoor recreation now in law are a result of a nationwide assessment of recreation undertaken in 1958 and completed in 1962. That assessment was done by the Outdoor Recreation Resources Review Commission (ORRRC), a bipartisan body consisting of eight Members of Congress and seven private citizens appointed by the President. Laurance S. Rockefeller served as Chairman of the Commission.

Since that time, there have been considerable changes in demographics, economic resources, and technology. There is a great deal of interest in creating a new Commission to make a comprehensive survey of recreation resources in the United States. Many people in Illinois have expressed an interest in this legislation; it enjoys strong bipartisan support.

Mr. President, I ask unanimous consent that my testimony before the subcommittee be printed in the RECORD at this point.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR PERCY

Mr. Chairman, I am delighted to offer a few brief remarks regarding S. 1090, the National Outdoor Recreation Resources Review Act of 1983. I am pleased to be a cosponsor of this important legislation which will create a forum for assessing alternative strategies for meeting our healthy appetite for outdoor recreation.

Recreation is part of the American character. Whether through the spectacular scenery of our western national parks or the trails in the forest preserves in Cook County, Illinois, more than 175,000,000 of us participate in outdoor recreation each year. The diversity of our outdoor fun is astonishing . . . from birdwatching to fishing, waterskiing to snow skiing, frisbee throwing to golf.

I've reviewed the statistics on recreation participation and come away struck by the fact that participation has increased faster than population growth, faster than the growth in discretionary income, faster than the growth of recreation facilities. Part of the reason is advances in technology, adding new recreation forms and making old recreation forms more enjoyable, safer and—in many instances—less expensive.

As economic recovery comes to our nation and consumer confidence rises, we are seeing a sharp upturn in purchases of recreational equipment and in visitations to recreation sites. Companies like Outboard Marine Corporation, Winnebago, Huffy, Coleman and many others are adding employees because consumers want the products which make leisure time fun for families. The Disney organization finds itself hard-pressed to serve the surge of people visiting EPCOT in numbers well above that corporation's expert projections.

Our national love affair with outdoor recreation is indeed demonstrated in the marketplace. In my state, we have a wide variety of recreation-based jobs. I once served on the Board of Directors of one fine Illinois company whose recreational products are household names: Outboard Marine Corporation, makers of Evinrude and Johnson engines. That one company employs some 10,000 persons and helps make recreational boating popular around the world. And it probably will soon be employing more people, since outboard motor shipments are running 11.4 percent ahead of 1982.

But we have a problem. Growing demand needs to be matched with growing opportunities. Yet today, we can see obstacles to expanded opportunities.

One key element is public recreation program budgets. Our national, state, and local parks and forests are key recreation sites. Today, funding for these programs must compete with the need for funding for education, and social security, and defense and medicare, and a multitude of other legitimate public programs. It is a competition where recreation is often disadvantaged, declared nice but not essential.

The result is a 16 percent closure of Corps of Engineers recreation sites last year—closures which resulted in protests and even a lawsuit in Texas—and shorter campground seasons in many national parks and national forests. The result is a deferral of capital improvements on public lands, improvements like boat ramps needed to facilitate recreation activities on public lands and waters. The result is a reduction in manpower in many recreation areas.

We need creative new responses to the challenges of outdoor recreation. And we learned through the Outdoor Recreation Resources Review Commission which worked from 1958 to 1962 that a bipartisan national commission can uncover and highlight creative responses. That is why the proposed legislation, S. 1090, makes sense.

The commission structure is a good one. It provides for direct Congressional involvement from both chambers, a pattern which has proven helpful to legislative consideration of resulting recommendations of the commission. It focuses Administration attention on recreation by establishing Presidential appointment of the non-Congressional commissioners, facilitating the necessary assistance of Executive branch officials as the commission proceeds. And it creates an advisory council which will help assure the widespread involvement of those who understand the workings of the recreation system today—public and private providers, equipment manufacturers and recreational enthusiasts, among others.

I close by noting the widespread support for the bill Senator Wallop has crafted. The co-sponsors include those probably most knowledgeable about federal outdoor recreation programs—including the senior Senator from Washington, who served on the first national commission on outdoor recreation twenty five years ago. It also includes top leaders of this chamber from both sides of the aisle. It is an idea whose time is at hand, providing us with a vehicle for good long-range policy-making and opening the door to improved understanding of the roles which can be played by government, by industry and by others to assure a rosy future for recreation in America.

I hope the Congress will act quickly so that the commission can be created and begin work soon, reporting back to us and to the Administration in early 1985 so that the 99th Congress can have adequate time to consider the commission's recommendations.

THE FFG-7

Mr. MITCHELL. Mr. President, in the current issue of the Proceedings of the U.S. Naval Institute, Lt. Comdr. Bruce R. Linder questions the utility to today's Navy of the *Oliver Hazard Perry* class (FFG-7) frigate. When Commander Linder's journal article recently was brought to my attention, I was concerned because, as most of my colleagues are aware, Maine's Bath Iron Works is the lead shipyard in the FFG-7 production effort. Other commercial shipyards involved in the production of FFG's are the Todd Corp.'s Seattle, Wash., yard and its San Pedro, Calif., yard. Those of us familiar with the program believe that the class is an effective one in which the U.S. Navy and U.S. people can be proud.

Commander Linder's article, entitled "FFG-7's: Square Pegs?" does not suggest that the builders of the class have erred in any way, or that the vessels are insufficient to fulfill the primary escort mission for which the Navy intends them. His point in the article is that during peacetime when they have no convoys to escort, FFG-7's are routinely deployed in carrier battle groups or surface action groups. He notes that the group's warfare commanders have difficulty integrating the vessels effectively into the group because the FFG's do not possess the hardware, personnel, and equipment redundancy necessary for them to contribute appreciably to the group's capabilities. Moreover, Commander Linder suggests that:

> Nagging questions remain. * * * Were our design presumptions correct? Does she have the right mix of capability and flexibility to be included as a functioning member of our deployed forces?

I applaud Commander Linder and the U.S. Naval Institute for questioning the existing rationale for deployed weapons systems, but I would remind everyone that the FFG's were designed in response to a specific, serious, deficiency in U.S. forces which began to develop during the Vietnam war. Capt. Walter R. Thomas—USN retired—in a September 1982 Seapower article described this situation well.

> In the period from 1970 to 1978, because of the Vietnam War, the U.S. Navy was depleted to an almost skeleton force of modern ships that could be dedicated exclusively to anti-submarine warfare and convoy tasks. These limited roles, in view of the Soviet submarine threat would become priority efforts to protect convoys in the event of a land war in Europe. There also was an increasing number of ocean zones to be covered as the United States became heavily committed to freedom of the seas and safe transit in and around the Indian Ocean, as well as in the Caribbean area, where insurgencies threatened the stability of southern neighbors.
>
> Although the FFG is not a capital warship . . . it enhances the credibility of decision makers who have been previously criticized for not preparing adequately for the vagaries of conventional war. . . . The FFG is a sorely needed weapon that has been developed and produced to accomplish certain necessary missions, and because of its availability in numbers it can accomplish them more readily than can other types of ships.
>
> In sum guided missile frigates can relieve capital ships in certain environments so that cruisers and carriers can do the tasks that capital ships do better, such as anti-air warfare and shore bombardment.

The FFG-7 is not a capital warship and was never intended to be. If Commander Linder is correct when he claims that existing surface-force-wide training, deployment and force structure objectives require the increasing FFG involvement in carrier battle groups and surface action groups, then perhaps some of the *Perry* class will have to be structurally altered and their systems supplemented or replaced. However, in the course of any modification effort, neither the Navy nor the Congress should lose sight of the fact that the builders of the FFG class have successfully built vessels which accomplish the program's identified objectives and fulfill the mission for which the class was designed. The vessels operate effectively and are among the soundest in the Navy. If our national security needs justify a change in the FFG's, then I will certainly support such a change. But in the meantime, let us not forget how successful the FFG-7 program has been and the degree to which this pro-

gram has contributed to the rejuvenation of the U.S. fleet.

FOR DEMOCRACY AND HUMAN RIGHTS IN CHILE

Mr. KENNEDY. Mr. President, in recent weeks there has been a renewed outpouring of support for a return to democracy and respect for human rights in Chile. Labor and democratic political leaders have joined with workers, students and other sectors of Chilean society to demand an end to the repressive dictatorship of the military regime of General Pinochet. Although the copper workers and truck operators have ended their strike action, there should be no mistake as to the historic importance of current developments in Chile, and there should be no doubt as to the strong support of the American people and Congress for freedom and democracy in Chile.

While welcoming the decision to permit the repatriation of 128 Chilean political exiles, we must make clear that this and related actions are not enough. Thousands of exiles are denied the right to return to their homeland. Nineteen labor leaders—including Rodolfo Seguel who heads the nation's largest union, the Copper Workers Confederation—are imprisoned for exercising legitimate labor rights guaranteed under the American Convention of Human Rights and the Universal Declaration of Human Rights. Their detention constitutes additional evidence of the antidemocratic character of the Pinochet government.

For 10 years trade unions in Chile have struggled for the right to elect freely their own officers and to bargain collectively in behalf of individual workers; and now they are not only uniting in this struggle but in the fight for a return to democracy. We admire the courage and hope that inspires the workers of Chile, and we urge unwavering international support for their cause and their commitment.

The unrest in Chile goes much deeper than economic concerns. It is widespread, affecting virtually every segment of Chilean society. Even El Mercurio, the nation's largest newspaper and traditionally a strong supporter of the Pinochet regime, acknowledges that the people of Chile are demanding an end to dictatorship and the restoration of democracy.

It has been nearly 10 years since the popularly elected government in Chile was overthrown by the military. Since that time gross violations of human rights and civil liberties have become commonplace. In 1976 and again in 1981, the Congress enacted legislation making clear that significant human rights progress would be necessary for any resumption of U.S. assistance for Chile. Nevertheless, the human rights situation in Chile has continued to deteriorate. The Chilean Commission on Human Rights reports that there were twice as many political arrests in 1982 as in 1981. Arbitrary detention, torture, internal exile and banishment remain common practices.

The regime in power in Santiago was found by a U.S. Federal district court in 1979 to be responsible for the Letelier-Moffitt terrorist murders on the streets of Washington. The court ordered the Pinochet government to pay the Letelier and Moffitt families $5 million in damages, a judgment which the Chilean regime continues to ignore. Administration spokesmen have acknowledged in public testimony that the Government of Chile has failed to investigate fully or prosecute those implicated in these brutal assassinations.

Together with others in Congress I have consistently opposed bailouts and back door efforts to assist this repressive, dictatorial regime. I have repeatedly brought my views to the attention of this and previous administrations. Whenever the administration acquiesces in or tacitly supports repression in Chile, it only emboldens the military dictators and signals to the people of Chile that the United States is against their cause. The recent arrests of union officials represent only the most recent of many examples. We must continue to do all we can to insure that U.S. policy assists in the promotion of democracy in Chile, not in its suppression.

Mr. President, the situation in Chile has reached yet another critical stage. Now, more than ever, we must stand behind the democratic forces in Chile, and we must insure that U.S. policy toward that country is squarely in support of their efforts.

Mr. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. The time for morning business has expired.

CONSTITUTIONAL AMENDMENT ON ABORTION

The PRESIDING OFFICER. The Senate will resume consideration of the pending business, which the clerk will report.

The assistant legislative clerk read as follows:

A joint resolution (S.J. Res. 3) to amend the Constitution to establish legislative authority in Congress and the States with respect to abortion.

The Senate resumed consideration of the joint resolution.

Mr. PACKWOOD. Mr. President, I yield such time to the Senator from Connecticut as he may need.

(Mr. PRESSLER assumed the chair.)

Mr. WEICKER. Mr. President, I thank my distinguished colleague from Oregon, both for the time yielded and also for the very consistent and courageous role that he has played in this matter over the years. I think it should be pointed out that even though this is probably the most publicized event in the sense of the constitutional amendment of the distinguished Senator from Utah, the fact is that the Senator from Oregon over the years has been the guardian of the privacy rights of women of this Nation and at times when that placed him into considerable political jeopardy. Therefore, this is just not a matter of the moment for him, but rather one of the years. There has been no one more articulate or eloquent in the sense of the position which he espouses.

Mr. President, during the 97th Congress, open season was declared on some of our fundamental rights, including the right of privacy. The attack came in the form of several legislative proposals to strip the Supreme Court of jurisdication where busing, school prayer, and abortion were concerned.

Again, I remind my colleagues this morning that even though this is the most publicized of the forums in the sense that we are debating a constitutional amendment, I fully expect before this Congress is over that we will have many legislative proposals not just in the sense of abortion but in the sense of these other "social issues," as well.

Fortunately, some of my colleagues in this Congress are now heeding that portion of George Washington's Farewell Address which states that:

> If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way in which the Constitution designates.

I therefore commend the authors of this resolution for realizing that Congress cannot amend the Constitution via a simple legislative majority. Perhaps the best thing I can say about this debate is that we now have the procedurally correct vehicle for attacking a woman's fundamental right to privacy. Now we must ask whether it is wise to pursue it on the basis of substance.

Mr. President, the amendment before us today is deceptive in its simplicity. It states simply this: "A right to abortion is not secured by this Con-

stitution." Why not? Because a majority of the American people want to ban abortion? No, that is certainly not the case. Every Harris, Gallup, New York Times, ABC—you name it—poll since 1973 has elicited roughly a 2-to-1 majority against a constitutional amendment to ban abortion. Whether or not these same respondents would choose abortion for themselves or a family member is another question—and one that might get a different answer. But they support the right to choose.

I cite these results not because I believe in deciding every issue via national referendum. Indeed, most of the times I stand on the floor of the Senate are in direct contravention as to what the national polls indicate on any position. Indeed, if we were poll takers, then my colleagues and I could all pack up our consciences and go home. It just seemed to me that many of the proponents of these measures have in the past been quick to cite the polls in support of school prayer and those against busing. Yet they fail to mention public opinion on abortion.

In the absence of majority support, this amendment must then cater to certain minorities, many of whom hold beliefs that are religiously based. If so, then the more direct tack to take would be to amend the first amendment, removing the language prohibiting the establishment of religion. As Justice Blackmun noted in Roe against Wade:

> One's philosophy, one's religious training (if any), one's attitude towards life . . . family and their values, and the moral standards one establishes and seeks to observe, are all likely to influence and to color one's thinking and conclusions about abortion.

One look at the long list of organizations belonging to the Religious Coalition on Abortion Rights will tell you that even the religious community in America does not speak with one voice on this issue.

If the opinions of any "minority" or subset of the American people deserve special emphasis in this instance, it should be the outlook of women, who, after all, have the most to lose if this amendment becomes law. And like the public at large, women surveyed have opposed an abortion ban by 2 to 1.

The papers lately have been full of talk about the so-called gender gap. Even those in the highest Government circles are beginning to acknowledge that it exists. Surely that gap widens every time a legislature overwhelmingly made up of men makes a law that primarily affects women. The decisions we make about abortion certainly fall into this category.

If we determine that this is a religious issue, then we must adhere to the constitutional requirement of separation of church and state. If we determine that this is a secular issue, then we must recognize that we are talking about public policy, and thus the balancing of conflicting interests. The issue, therefore, is not when does life begin or whether abortion is morally wrong. The ultimate issue is who decides if and when women will carry their pregnancies to term. Public policy is not based on one set of beliefs, but rather it encompasses the plurality of our citizens—including those women whose lives will be changed by it.

The proponents of this amendment have stated clearly that their purpose is to reverse the decision in Roe against Wade and its progeny in so far as those cases hold that the Constitution protects an abortion liberty. History is replete with attempts by Congress to "get at the Court's decision" or to "teach the Court a lesson." This tampering undermines the intent of our tripartite system of Government, a concept reiterated by the Court itself just last Thursday. The majority opinion found that:

> The Constitution sought to divide the delegated powers of the new Federal Government into three defined categories—legislative, executive, and judicial—to assure, as nearly as possible, that each branch of Government would confine itself to its assigned responsibility. The hydraulic pressure inherent within each of the separate branches to exceed the outer limits of its power even to accomplish desirable objectives must be resisted.

Congress is subject to popular elections and the pressures of countless interest groups. A neutral body it is not. We should not subject the courts to a popularity test simply because some Members of Congress are offended by their decisions. I am of the same school of thought as Judge Jose Cabranes, a distinguished judge from Connecticut, who commented recently that:

> When the Supreme Court has acted in a role seen as activist, it is because the States failed in the task of protecting individual rights even as they failed for generations to meet other articulated needs in an industrial democracy.

We need to remember why the Federal courts frequently go against the grain of popular sentiment. More often than not, they are doing what they alone among U.S. institutions were designed to do—safeguarding the fundamental rights of the individual against the potentially tyrannical attitudes of the majority—and in this particular case against the tyrannical attitudes of the minority.

Even if we could assume that the States and the Congress could be trusted to safeguard individual rights, that assumption would not be sufficient to justify the Congress in limiting the role of the judiciary. For to do so would be to overlook one of the strengths of our federal system—that it provides a two-tiered source of protection for our citizens, one State and one Federal. Federalism is not served when the Federal half of that protection is crippled. All three of its branches must be left intact.

The court is our barrier against tyranny. If that barrier is removed in this instance, we will have established a precedent for a series of amendments that would continue to undermine the independence of the judiciary.

Some people in this country found the Court's decision on miscegenation objectionable. Will we now have an amendment stating that a right to interracial marriage is not secured by this Constitution? Many found the decisions on equal protection objectionable. Will we now have an amendment saying that a right to equal employment opportunity or equal education opportunity is not secured by this Constitution? Do we now tell the handicapped that a right to be mainstreamed or to live independently is not guaranteed by this Constitution? If the constitutional right to privacy is declared to be objectionable, will we then have amendments stating that the right to contraception or private consensual sexual activity is not guaranteed by this Constitution and ad infinitum. As long as the Supreme Court is interpreting the Constitution, the possibilities are endless. One objective of the proponents appears to be to make Congress the final arbiter of the Constitution.

The other stated purpose of this amendment is to return us to the status quo before Roe against Wade. Perhaps the proponents will enlighten us as to which status quo we are returning to. When the Court decided Roe, it took a look at the history of abortion and how it had been treated by different cultures at different times. It found, for instance, that in ancient Greek and Roman times abortion was practiced and resorted to without scruple. In English common law, abortion performed before quickening—the first recognizable movement of the fetus in utero—was not an indictable offense. We in America initially adopted the common law approach—and thus the opportunity for a woman to make a choice was present in this country until well into the 19th century.

According to the Heritage Foundation, by the end of the 19th century all the several States had criminal penalties of some kind for abortion. And these, historians have shown, were largely the result of the antiabortion policy the American Medical Association enunciated in 1859. The AMA, it seems, was concerned about abortions administered by incompetent practitioners. In any case, abortion mortality was high and the States acted to protect the life of the pregnant woman from a procedure that placed her life in serious jeopardy. The Supreme Court in Roe reaffirmed

this role as proper for the States. But medical practice has changed and so has the mortality rate from abortion. And today, the American Medical Association supports a woman's right to privacy, as the Court has interpreted it to include the right to choose abortion.

It is only when women are forced to resort to back-alley abortions that mortality again becomes a concern. During the period 1958 to 1962, 350 women are known to have died from illegal abortions. We do not know how many others have died, since most of them do not have access to medical care where the statistics would have been recorded.

I repeat my question: To which status quo are we returning? Are we returning to the status quo when women died of illegal abortions? Are we returning to the status quo when the right to privacy surrounding procreative choices depended on which State a woman lived in? Or are we returning to the status quo when women had broad choices as to whether and when to have children? I submit to you that if abortion is illegal or immoral, it should be that way in every State of this Nation. If it is a private matter between a women and her physician, as the Court has held, then it should be that way in every State of this Nation.

The proponents of this amendment argue that its strength lies in its ability to clear from the legal landscape the dubious and objectionable holding in Roe against Wade. That the proponents find the holding objectionable, there is no doubt. That the holding is dubious is subject to personal interpretation. Even assuming for a moment that it is dubious, there is nothing in this amendment to clarify it.

The Supreme Court based its decision in Roe on the Constitution. The Court stated that the Constitution does not explicitly mention any right to privacy, but it is recognized that a right of personal privacy or a guarantee of certain zones of privacy does exist under the Constitution. The roots of that privacy are found in five amendments: the 1st, 4th, 5th, 9th, and 14th. Only personal rights that are deemed fundamental or implicit in the concept of ordered liberty are included in the guarantee of personal privacy. This right to personal privacy extends to activities relating to marriage, procreation, contraception, family relationships, child rearing, and education. It is certainly broad enough to include the decision whether to terminate a pregnancy.

However, the Court went on to say this right to choose is not absolute. That is why we do not have abortion on demand, despite assertions to the contrary by everybody, from the President on down, who is on the other side of this issue. We do not have abortion on demand in the United States of America. What we do have is guidance as to how and when the States may interfere in a woman's fundamental right to privacy.

This some may find objectionable, but it is certainly not dubious. As Justice Stewart said:

> The full scope of the liberty . . . cannot be found in or limited by the precise terms of the specific guarantees elsewhere provided in the Constitution. It is a rational continuum . . . which includes a freedom from all substantial arbitrary impositions and purposeless restraints. Great concepts like . . . liberty were purposely left to gather meaning from experience.

The concept of privacy underpins the entire notion of freedom and liberty. If the State can invade the most intimate sphere of a woman's life, then there is no such thing as privacy. No area of personal decisionmaking can be free from the threat of governmental interference. (3) It still amazes me, Mr. President, that many of this measure's proponents are the same people who have been talking about getting the Government off people's backs ever since they got into politics.

The prochoice rationale behind Roe squares fully with this system's broad philosophy of government. That philosophy is subservience to the people, freedom on the part of every individual, and liberty for all. Against that history, the only system with a chance to work is one with room for diverse moral choices on abortion by the woman faced with that decision. Under this system, abortion is barred to none who want it in the reasoned frame offered by the Court and forced on none who do not, and there is a role for the States to regulate it where there is a compelling interest.

The ultimate irony in this situation is that there are two possible interpretations to this amendment—and the Supreme Court will have the responsibility of determining just what it means. That is, of course, it will unless my colleagues come up with another amendment to preclude it from doing so. One possible interpretation is a total ban on abortion. This is favored by the proponents of this amendment. They may say otherwise.

I have heard them in the media of late. I have seen the graphs here, on the Senate floor. They may say otherwise. They may say that exceptions could be made here and there, but the truth is they have not voted that way in recent years. Little by little, this Congress has taken away the availability of medicaid abortions. To rape and incest victims too poor to pay for an abortion, this Congress has said, in effect, "tough luck."

I do not want to see any graphs and or statements by proponents of the measure giving the impression to the American people that, well, in the case of rape or incest, this is different. In their voting records, it is not different. They want a total ban. They want to sort of soften the public relations image right now, while we are debating this amendment. For they have stood up time and again on this floor and voted amendment after amendment to take the abortion argument to its ultimate limit—no abortion for anybody under any circumstances.

So, Mr. President, make no mistake about it: The proponents want a total ban. But since they do not have the votes for it, they have worded their amendment in this vague way.

Another possible interpretation is that the interests of the fetus would be weighed against those of the mother and the State in determining the legality of abortion. No one would suggest that either prior to or after Roe was the interests of the fetus considered. Under our Constitution, the legal status of the fetus is yet to be declared.

Mr. President, I oppose this amendment because it fails the fundamental test of any proposed amendment; it leaves the perceived problems unsolved and cannot possible culminate in the sense of resolution that an amendment ought to promote. (5)

The amendment is silent as to the matter of enforcement. Deleted are the earlier provisions which stated that "the Congress and the several States shall have concurrent power to restrict and prohibit abortion." Perhaps the enforcement provisions are deleted because they emphasized the court-stripping purpose of this amendment. All previous amendments to the Constitution have attempted to put in place an affirmative principle of constitutional law. This amendment attempts to remove a right that the Supreme Court has interpreted to be embodied in the Constitution in the right of privacy.

Harm to constitutionally protected interests occurs when controversial rights are singled out for exclusion from Federal jurisdiction. Where the specific circumstances surrounding Congress deliberations conspire to send an apparent message of congressional disapproval of Federal judicial doctrine, the harm is aggravated, especially when the motivation is political, not constitutional. I urge my colleagues to embrace another portion of George Washington's Farewell Address which reminds us that:

> It is important that the habits of thinking in a free country should inspire caution in those entrusted with its administration, to confine themselves within their respective constitutional spheres avoiding in the exercise of the powers of one department, to encroach upon another.

I urge my colleagues to oppose Senate Joint Resolution 3.

Mr. PACKWOOD. Mr. President, I thank my distinguished colleague from Connecticut with whom I have shared so many battles. I wish I could say to him that I think this is the last, but he and I have been involved in these struggles for a long time, and I am afraid his opening remarks were accurate; we may or may not win this afternoon, but I am afraid we shall be faced with court stripping amendments on other issues which may not involve abortion, but, one way or another, are attacks on the individual liberties of this country. I welcome his support now, but I assure him, we shall be back again and again, battling on this same question.

Mr. HATCH. Mr. President, I ask unanimous consent that I may proceed for 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATCH. Mr. President, when he appeared before my Subcommittee on the Constitution, Senator EAGLETON gave a concise definition of the purpose of the amendment before the Senate today. He stated that—

Senate Joint Resolution 3 is intended to reverse Roe against Wade and its companion Doe against Bolton insofar as these cases hold that the Constitution protects an abortion liberty.

He further explained that—

This amendment would wipe out the legal status afforded to the abortion right by Roe against Wade and return us to the legal status quo ante, when abortion was a matter for each of the States to decide.

Mr. President, I have listened to my dear colleague from Connecticut and his remarks were most interesting. I have been interested in the remarks of my friend and colleague from Oregon (Mr. PACKWOOD). Both of these fine Senators have indicated that we do not have abortion on demand in America today. Yet I suspect that it is very difficult for them to show me any cases which have granted the States rights to inhibit or limit any form of abortion at any time during a woman's pregnancy.

In the case of Akron against Akron Center for Reproductive Health, an abortion case decided by the Supreme Court in the last few weeks, Justice Sandra Day O'Connor articulated a strong argument in favor of the constitutional approach of Senate Joint Resolution 3:

We must keep in mind that when we are concerned with extremely sensitive issues, such as the one involved here, the appropriate forum for their resolution in a democracy is the legislature.

The Justice's next sentence provides a thoughtful response to those who might contend that returning abortion to the State legislatures would jeopardize important values:

We should not forget that legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts.

Indeed, for nearly two centuries of life under the Constitution the welfare of the mother and the unborn infant and any liberties at stake in the abortion question were governed solely by laws made by State legislatures.

This provides a compelling legal case for reversing Roe and restoring to the States authority to legislate. The social and moral cases for reversing Roe are just as compelling. That case was presented yesterday by the graphic visual charts which describe the extent of what some have called appropriately the American holocaust.

Once again, I would like to focus the attention of this body, which, for the first time, is debating the merits of abortion on demand, on those illustrations.

The effects of the tragic Roe decision are apparent from the numbers of unborn children whose lives were being terminated before they even had a chance to make a contribution to their families, to their schools, their industries, governments, and churches of America. More than 10 times the number of Americans lives lost in all of our Nation's wars lumped together have been taken by the abortion regime.

My distinguished opponent in this debate will try to maintain that Roe against Wade is a moderate compromise which permits some limitations on abortion. Our friend from Connecticut has indicated this as well. The abortion death rate in itself is enough to dispel that notion. We are daily performing abortions at a rate of nearly 5,000. That is hardly a figure that suggests moderacy in abortion policy.

Since Roe, the number of abortions has skyrocketed.

As I stated yesterday, only Communist China has a more permissive policy on abortion of all countries in the world today.

As I have stated earlier, this great loss of life can hardly be understood in other terms used in this debate to justify abortion; namely, the need to protect maternal life and health. Even ardent opponents of abortion such as Dr. Irvin Cushner confess that no more than 3 percent of all abortions have some link to maternal health.

I might add that this figure is obtained by construing maternal health in the broadest possible terms. The greatest numbers of abortions are performed solely for social, financial, or emotional reasons. They are performed because it is inconvenient to have the child, because it may be embarrassing, because it is expensive, because sonograms reveal the child to be a girl rather than a boy; 97 percent of all abortions are performed, not to preserve maternal health, but for a whole variety of other reasons, many of which are frivolous in nature.

A particularly tragic aspect of this spectacle is that many of those children killed by abortion are on the verge of viability when they can live outside the womb if delivered normally. These are children near their 20th week of growth.

The next particular chart, chart 4, displays the number of late term abortions.

Now, again, these are very conservative figures. Nonetheless the chart shows nearly 15,000 third-trimester abortions or abortions of infants in the last months of pregnancy. Their hearts have been beating for 12 weeks already. They have probably been sucking their thumbs for 8 weeks or more. They are appropriate candidates for fetal surgery to preserve their lives from natural threats.

Unfortunately, little can be done with present legal doctrines to preserve their lives from legal policies. These legal policies imposed by the court are particularly questionable when we realize how little they reflect the values of the American people. Eighty to ninety percent of all Americans see abortion at some stage as destruction of the human being. Most Americans women believe that life begins at conception.

I found it interesting today that the distinguished Senator from Connecticut feels that one of the major justifiable reasons for destroying human life is that present science technology might show that the fetus is handicapped. I hate to think what this world would be like without some of the greatest people that have lived who have, unfortunately, had handicaps.

Some argue that perhaps not many people really support this type of an amendment, but I suspect, when you look at this chart which says that a majority of American women say life begins at conception. 58 percent feel life begins at conception, 16 percent at quickening, 11 percent at viability, 10 percent at birth, and 5 percent do not know.

Some have argued, as I mentioned earlier, that legalization of abortion is necessary to prevent women from falling victim to crude back-alley abortions. The specter of American women suffering under the hand of back-alley abortionists, of course, is very frightening. But, in fact, legalization has had little to do with the reductions in abortion mortality. They are basically leveling off, and this next chart shows that. The reductions in abortion mortality occurred for the most part

before 1973. The reason they occurred is a result of medical advances that have protected women.

I might add that the major factors causing a drop in the mother's abortion mortality have been medical advances, sulfa drugs, penicillin, and the widespread use of the safer suction curette instead of the sharp curett.

Nonetheless women still die due to abortions.

I heard at one time early in my tenure in the Senate, that as many as 10,000 women a year died in back alleys before 1973 made the right to abortion on demand law.

This is simply not true as shown by this chart. Any loss of life, whether the mother's or the unborn child, is unacceptable to me.

Sadly there are still deaths occurring as a result of abortion, even though the policy of legalization is 10 years old.

The inappropriateness of this court-created legal edict as a governing tenet of our Nation is particularly apparent in the over-whelming rejection of abortion on moral grounds. This conclusion has nothing to do with political persuasion. The Connecticut Mutual Life report on American values in 1981, just 2 years ago, shows that a majority of all political persuasions believe that abortion is morally wrong—62 percent of the independents, 64 percent of the Republicans, and 68 percent of the Democrats.

Moreover, this moral judgment is not an idle conviction. The majority is clearly willing to stand behind their beliefs when a loved one faces the questions of abortion, and I think the next chart will show that. A majority of Americans I think stand up for their belief.

As next chart shows, a majority of Americans would not advise abortion for their 15-year-old daughter.

The fact that most Americans would not advise abortion, but seek some alternative, such as adoption, for their own 15-year-old daughter is particularly ironic. Just last week the Supreme Court ruled that a statute requiring 15-year-olds to consult with their parents prior to having an abortion was unconstitutional. Although, in many States, a minor must have parental consent to get her ears pierced, the Court said that a court may substitute for the parent in granting permission for an abortion.

Finally, the strong personal values of Americans do translate into support for a constitutional amendment to protect the unborn child. If those same people had been offered a moderate constitutional amendment that allowed them to participate in the formation of abortion policy in their States, their support may have been even higher.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HATCH. Mr. President, I ask unanimous consent that I be given 6 more minutes.

Mr. PACKWOOD. Mr. President, I am not going to object, but may I make an announcement about the time?

Mr. HATCH. Yes.

Mr. PACKWOOD. Mr. President, I do not intend to object to the request of the Senator from Utah, but the majority leader has indicated that he wants us to finish all our comments by 4 o'clock this afternoon. Both the Senator from Utah and I want about 20 minutes apiece to close. So I can say to his supporters and mine that if they wish to speak—realizing that there will be a recess from 12 noon until 2 p.m.—they should get to the floor as soon as possible.

Mr. HATCH. Mr. President, I ask unanimous consent that the period between 3:15 and 4 o'clock be divided equally between the distinguished Senator from Oregon and me.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. HATCH. I thank the Senator from Oregon for his patience. We have taken most of the time, and there are other Senators who want to address this issue today. We certainly want to make sure that speakers on the side of the Senator from Oregon have a right to speak on this matter.

At this point, I should like to address myself to the legal basis for governmental authority under Senate Joint Resolution 3. My intent is to demonstrate how the simple and direct formulation of Senate Joint Resolution 3 will operate to reverse Roe and restore to the legislatures of the various States the authority to set policy with respect to abortion, a function centralized in Federal courts for the past decade.

The 10 words of this proposed amendment, if ratified, would remove any constitutional basis for finding any kind of right, absolute or qualified, to procure an abortion. Abortion, governed by State statute or not at all until 1973, would no longer be a matter of constitutional prerogative. Accordingly, States would again possess plenary authority to regulate, or refrain from regulating, abortion policy.

In the absence of a national constitutional edict, the authority of Federal institutions to regulate abortion would be vitiated. Federal institutions could be said to possess a residual authority with respect to abortion to the extent that some tangential aspect of abortion policy may fall within the parameters of an independent source of Federal authority. For example, Congress would still be able to regulate interstate commerce to the degree of prohibiting interstate transport of abortifiacient drugs and devices. In fact, this was vitually the only Federal regulation tangentially related to abortion in the United States Code prior to 1973. (14 U.S.C. 1461, 1462.) In a more correct sense, however, this was not regulation of abortion at all, but regulation of matters clearly permitted to Congress by the Constitution. It can, therefore, be correctly maintained that Federal authorities would have no power to regulate abortion per se under Senate Joint Resolution 3, such regulation would be solely within the purview of State authorities.

Defining the nature of State authority with respect to abortion under Senate Joint Resolution 3 was a primary focus of the hearings held on the resolution. Prof. Lynn Wardle of Brigham Young University described the constitutional imbalance created by Roe and effect of the correction found in Senate Joint Resolution 3:

> As a direct result of the Supreme Court's decision in *Roe* v. *Wade*, two profound changes have occurred in the delicate balance of powers of government. First, there has been a significant shift of power and responsibility from the states to the federal government, which has substantially increased Congressional involvement in and responsibility for abortion policy. Second, there has been a significant shift of policy-making power from the legislative branch generally to the judicial branch * * *
>
> (S.J. Res. 3) would restore to the states their general police power to restrict and prohibit abortion. The states could enact legislation to the same extent that they could prior to *Roe* * * * It would not compel or prohibit the adoption by any state legislature or by Congress of any legislation restricting abortion * * * It would not give Congress any power directly to restrict or prohibit abortion * * * It would restore the Constitutional balance of power between the states and the federal government and between the legislative and judicial branches of government. In sum, it would restore the status quo ante *Roe* insofar as the power and responsibility to resolve abortion issues is concerned. (Senate Hearings, Feb. 28, 1983, Statement of Professor Lynn Wardle.)

This legal analysis by Professor Wardle was echoed and approved by other noted scholars in the Judiciary Committee hearings, including Prof. Victor G. Rosenblum of Northwestern University. (Senate hearings, March 7, 1983, statement of Prof. Victor Rosenblum.)

The conclusion reached by several witnesses in our hearings that Senate Joint Resolution 3 would restore to the States their exclusive authority to regulate abortion is supported by sound constitutional reasoning. In the first place, if abortion is no longer elevated to the status of a fundamental liberty deserving of special constitutional protection, then regulation of abortion would be subject to the same treatment accorded other doctrines of domestic relations. Even the Supreme Court concedes that the abortion issue

is essentially a question of domestic relations law, which has been elevated to the status of a fundamental liberty by the Roe decision. The Akron decision characterized the abortion right as a question of "personal choice in matters of marriage and family life." I mention this point because if the abortion issue were stripped of any protections afforded fundamental constitutional liberties, it would remain a "matter of marriage and family life." The locus of authority to regulate domestic relations has never been in dispute. As early as 1889, the Supreme Court had clarified that:

The whole subject of the domestic relations of husband and wife, parent and child, belongs to the laws of that State, and not to the laws of the United States. *In Re Burris*, 136, U.S. 586, 593 (1889).

Time after time, the Supreme Court has reiterated this elemental principle of constitutional interpretation. (For instance the Court repeated this language word for word in *Ohio ex rel Popvici* v. *Agler*, 280 U.S. 379, 383 (1930); *Williams* v. *North Carolina*, 325 U.S. 226, 233 (1944); *Ridgway* v. *Ridgway*, 454 U.S. 46, 73 (1981) (Stevens, J. dissenting).) Most important among the reaffirmations of this principle, however, is the recent case wherein Justice Blackmun, the author of the Roe decision, quoted the above language from the Burris opinion verbatim. *Hisquierdo* v. *Hisquierdo*, 439 U.S. 572, 581 (1979). As long as abortion has enjoyed the special constitutional status conferred by the Court in the Roe decision, abortion has not been treated as other "relations of husband and wife, parent and child" with respect to the allocation of constitutional power and authority. Federal institutions, primarily the courts, have assumed primary authority and responsibility relative to abortion. With Roe and its progeny reversed, however, abortion policy would once again "belong to the laws of the States and not to the laws of the United States." (Supra note 285 and accompanying text.)

An alternative line of constitutional reasoning reaches the same result with respect to the extent of State authority in the absence of Roe. State power to set criminal standards is clearly plenary. Justice Frankfurter stated the law on this subject:

In our Federal system the administration of criminal justice is predominantly committed to the care of the States. The power to define crimes belongs to Congress only as an appropriate means of carrying into execution its limited grant of legislative powers. U.S. Const. Art. I, 8 cl. 18. Broadly speaking, crimes in the United States are what the laws of the individual States make them, subject to the limitations of Art. I, 10, cl. 1, in the original Constitution, prohibiting bills of attainder and ex post facto laws, and of the Thirteenth and Fourteenth Amendments. *Rochin* v. *Calif.*, 342 U.S. 165, 168 (1952).

With Roe overturned, abortion would not be subjected to the protections of the 14th amendment or any other provision of the Constitution. Accordingly, an abortion misdemeanor would again be "what the laws of the individual States make them." Professor Lynn Wardle states this same principle very succinctly:

There is no general Federal law of crimes. That is, if Congress were to pass a law generally outlawing abortion in this country, such a law might be found to be unconstitutional, even without reference to *Roe* and its progeny. (Wardle, L., A Lawyer Looks at Abortion 187.)

Just as abortion was governed by mild State criminal sanctions against the abortionist in the years prior to Roe, the traditional and constitutional allocation of police powers would prefer States, to the exclusion of Federal authorities, as the power focus of abortion regulation after ratification of Senate Joint Resolution 3.

In a broader context, the discussion of the extent of State authority over abortion in the event Senate Joint Resolution 3 becomes part of the Constitution is a discussion of the limitations written into that great document. The very first section of the very first article of the Constitution states that the legislative powers of Congress are limited to those "herein granted." Nowhere in the specific grants of legislative authority found in section 8 of article I is Congress granted any power to govern criminal justice, domestic relations, or any other general category into which abortion might fall. James Madison explained the framers' reasons for denying such power to Congress:

The powers delegated by the proposed Constitution to the federal government are few and defined. Those which are to remain in the state government are numerous and indefinite. The former will be exercised principally on external objects, such as war, peace, negotiation, and foreign commerce; with which last the power of taxation will, for the most part, be connected. The powers reserved to the several States will extend to all the objects which, in the ordinary course of affairs, concern the *lives, liberties, and properties* of the people, and the internal order, improvement, and prosperity of the state. (The Federalist Papers, No. 45.)

Roe upset this balance. With Roe nullified, this balance will once again operate in the manner defined by the framers of the Constitution.

Senate Joint Resolution 3's legislative history also enlightens this subject. As introduced in this Congress, Senate Joint Resolution 3 was identical to Senate Joint Resolution 110 from the 97th Congress. In addition to overturning Roe, Senate Joint Resolution 3 provided the Federal Government and the States concurrent authority to restrict or prohibit abortion. On March 24, after considering many of the points mentioned herein, the Constitution Subcommittee unanimously accepted Senator THOMAS EAGLETON's advice to strike the language granting the Federal Government concurrent authority to restrict abortion. As specifically indicated by the subcommittee's action the Federal Government will possess no concurrent authority to restrict or prohibit abortion. Senate Joint Resolution 3, as amended, reverses Roe and thus insures that the Constitution's limitations properly operate to reserve to the States any authority to regulate abortion. Under this amendment the States would have plenary authority to legislate with respect to abortion. In their best judgment, the states might choose to have no policy respecting abortion or might choose to impose some restrictions. The subcommittee undertook to amend Senate Joint Resolution 3 to establish that it meant to remove Federal institutions from the policymaking process with respect to abortion and reinstate the State authorities as the focus of decisionmaking for this sensitive issue.

It is the intent of the authors, supporters, and Senators who brought this to the floor to recognize the state of the law relative to abortion prior to 1973 and to restore that balance. We understand this to aptly describe the expansiveness of State authority prior to 1973 and the constitutional inability of the Federal Government to regulate abortion. We feel that States would have full authority to restrict, prohibit, act or refrain from acting with respect to abortion. If Federal officials have some limited residual authority to the extent that abortion touches tangentially upon some other Federal powers, this limited residuum is nothing that does not exist in every other field of law. It does not include the power to do what is committed to the States, namely regulate abortion per se.

Mr. President, although I have attempted to clarify this point on several previous occasions, let me comment one more time on the issue of whether or not the proposed amendment, Senate Joint Resolution 3, is a States rights amendment.

Senate Joint Resolution 3 is indisputably a States rights amendment. It is a States rights amendment every bit as much as any other amendment that has ever been offered on the subject of abortion. It is a States rights amendment in the area of abortion every bit as much as any other area of the law is governed by the concept of States rights. It is a States rights amendment in the proper constitutional sense of the term.

Opponents of the amendment—who of course would not be any more supportive if the northern lights shone down from the sky with the message that this was a States rights amendment—argue that it is not a States rights amendment because there is re-

sidual power to legislate in the Federal Government under this amendment. There is, we are warned, residual power in the Federal Government to legislate through its commerce authority, its spending authority, and its taxing authority. With all due respect, Mr. President, this argument is utter nonsense.

The Federal Government has such residual authority over any area of the law, with or without this or any other constitutional amendment. My friends on the other side, in short, are concerned about Federal power generally, not about Federal power in the context of Senate Joint Resolution 3. I welcome most of them to the fold of those concerned about such power. I am pleased to see so many of my friends on the other side of this issue express, for the first time, their concern with the existence of excessive Federal power within our constitutional structure.

My question to the distinguished Senator from Oregon yesterday remains unanswered. I should like to direct it to my distinguished colleague today: would he be kind enough to share with me an area of the law that he does believe to be governed by the true concept of States rights? If this amendment is not satisfactory, in his view, to achieving this, what other area of the law would he have it emulate? Where does his conception of States rights exist in the law?

Mr. President, the opponents of legislation such as the measure which this body is currently debating frequently argue that it is futile to attempt to restrict abortion by law.

They argue that the legalization of abortion did not greatly increase the number of abortions performed in the United States, but merely resulted in a shift from dangerous, illegal, unreported abortions, to safe, legal, reported abortions.

They also argue that passing laws to render abortion again illegal in most circumstances would not greatly reduce the number of abortions, but would only drive the practice underground, or would merely shift the abortions from States with restrictive laws, to those without restrictive laws.

I would like to briefly address these arguments, both of which I believe to be largely erroneous.

Until the late 1960's, abortion was illegal in every State except under extreme circumstances—generally only being permitted to save the life of the mother. Wildly conflicting guesses were made as to the number of illegal abortions performed annually. In 1967 the First International Conference on Abortion, held in Washington, concluded that "no way has yet been found of obtaining reliable statistics" on this question.

Nevertheless, the unfounded figure of 1 million illegal abortions a year became popular among abortion advocates, and it is still heard today, even at times in congressional debates. In the light of data accumulated since the Supreme Court legalized abortion, the 1 million a year figure seems grossly exaggerated.

There are two major compilers of data on the incidence of legal abortion. They are the Federal Center for Disease Control in Atlanta, and the Alan Guttmacher Institute, a private entity connected to the Planned Parenthood Federation of America. The CDC relies mainly upon reports from State health departments, while the Guttmacher Institute conducts an annual survey of known abortion providers. The Guttmacher Institute annually reports higher figures than the CDC, because the Guttmacher Institute survey uncovers many legal abortions which are not reported to the CDC. The CDC acknowledges, in its own reports, that the Guttmacher figures are more complete.

According to both Guttmacher and CDC, the number of legal abortions performed in the United States began a steep climb after the 1973 Supreme Court decision which legalized abortion on demand nationwide. The following numbers of legal abortions were reported to the Guttmacher Institute for each year, beginning in 1973:

1973	744,600
1974	898,600
1975	1,034,200
1976	1,179,300
1977	1,316,700
1978	1,409,600
1979	1,497,700
1980	1,553,900

Let me underscore that last figure, Mr. President; 1.55 million reported legal abortions in 1980—a shocking and terrible toll. Incidentally, the CDC reports indicate that over one-third of the annual total is now accounted for by repeat abortions—a percentage which increases each year. Recently a professor of medicine at the University of California estimated that by the end of 1983, 50 to 60 percent of all abortions will be repeats.

Yet the question remains, to what extent does this figure represent a genuine increase, rather than just a gradual shift from illegal to legal abortions?

When the Constitution Subcommittee examined this matter, it heard testimony from Dr. Thomas W. Hilgers, professor of obstetrics and gynecology at Creighton University School of Medicine and a well-known authority on human reproduction. Professor Hilgers is coauthor of a landmark 1981 study which sheds some light on the question of how many illegal abortions were performed prior to the Supreme Court decision.

Dr. Hilgers estimates that the total number of abortions performed in the United States—legal and illegal—approximately tripled between 1969 and 1972, due mostly to the legalization of abortion in a number of large States, including New York and California. This sharp upward trend was given another boost when Roe against Wade legalized abortion in every State in January, 1973. I will discuss the post-1973 figures in a moment.

Dr. Hilgers' methodology was too involved to describe in detail here. But in brief, it began with the number of maternal deaths resulting from illegal abortion for each year, which is data available from the National Center for Health Statistics (NCHS). Dr. Hilgers compared this figure to the annual death rate per 1,000 cases of pregnancy from natural causes (also available from NCHS). He then took as a premise that illegal abortion during those years was at least five times as hazardous to the mother as natural pregnancy. From this data, Professor Hilgers extrapolated that the number of illegal abortions annually, prior to the Supreme Court decision, never exceeded 210,000 per year. Professor Hilgers readily conceded that there are certain deficiencies in data, but argued that if anything, he overcompensated for these in his study.

Dr. Hilgers concluded:

> With legalized abortion, there has been an exponential increase in the total number of abortions each year in the United States, in the range of 6- to 11-fold from the prelegalization era. This increase is directly attributable to the legalization of abortion. (New Perspectives on Human Abortion, University Publications of America, 1981, p. 178).[1]

The legalization of abortion has permitted the active promotion of abortion through propaganda directed at adolescents, through manipulative "counseling" services, through Yellow Pages ads and billboards, and so forth. Legalization has diminished the social stigma associated with abortion. It has often been observed that in a secular society such as our own, the law is a very important teacher with respect to great issues of social justice—which is one reason that the civil rights legislation of the 1960's was so important.

Now, does anyone wish to argue seriously that legalization of abortion, and the nationwide network of assembly line abortion clinics which legalization has allowed to grow up—has not resulted in a marked increase of the number of abortions performed?

The organizations which are most zealous in the promotion of abortion refute such a notion in their own studies. The Alan Guttmacher Institute publishes annual reports in which it argues that hundreds of thousands of women need abortions each year but do not get them simply because there

[1] The Hilgers study appears in the subcommittee's hearing record, immediately following his testimony.

are no clinics in the counties in which they reside. In the AGI's Family Planning Perspectives (September/October 1978), AGI research director Jacqueline Darrouch Forrest wrote:

For some, the barriers imposed by travel are so great that the woman cannot obtain an abortion at all. It has been shown that the farther a woman must travel to obtain an abortion, the less likely she is to get one.

This point was developed at length in a study published in the January/February 1981 issue of Family Planning Perspectives, written by AGI senior research associate Stanley Henshaw and three other researchers. This study concluded:

There were 1.4 million legal abortions in 1978 and a projected 1.5 million in 1979. The number of abortions increased by seven percent between 1977 and 1978 and by nine percent between 1978 and 1979. Nevertheless, an estimated 736,000 women in 1978 and 641,000 in 1979 were unable to obtain the abortion services they wanted and needed, and went on to have unintended births. Thirty-four percent of women estimated to be in need of abortion services where unable to obtain them in 1978, and 29 percent could not get them in 1979.

Part of the reason so many women have been unable to obtain abortion services is the continued inaccessibility of abortion facilities: Eight out of 10 U.S. counties have no facility in which legal abortions are performed, and only five percent of abortions are performed in nonmetropolitan areas, where 26 percent of women in need live. In addition, federal funds to subsidize abortions for indigent women have virtually been withdrawn as a result of the Hyde Amendment; most states have followed suit, refusing state Mediciad funds for abortions.

Other studies substantiate the contention that when abortion becomes less easily accessible—geographically or economically—the number of abortions (legal and illegal) drops markedly.

For example, the Texas State Department of Health conducted a study to measure the effects of the Hyde amendment, restricting medicaid funding of abortion. The study, published in the CDC's Morbidity and Mortality Weekly Report (June 6, 1980), concluded:

The present study in Texas found more than one-third of the legal abortions expected among Medicaid-eligible women were not obtained in the postfunding restriction period. . . .

In Texas, pregnant, low-income women who do not have federal or state funds for abortions do not appear to be resorting to illegal abortions to terminate unwanted pregnancies. These findings are consistent with those from a national monitoring system, which also could not document that the restriction of public funds for abortion caused a large percentage of Medicaid-eligible women to choose self-induced or non-physician-induced abortions.

This decrease in expected legal abortions, the absence of an increase in illegal abortion, and the rising fertility rate among Medicaid-eligible women in Texas all imply that a substantial portion of women who would have obtained a publicly-funded abortion before the restriction are now more likely to continue their pregnancies to term.

Mr. President, I submit that if the Alan Guttmacher Institute is correct, and 641,000 abortions were prevented in 1 year merely by lack of geographical or financial accessibility, then it stands to reason that State laws which directly restrict abortion will save the lives of a great many children. If thousands of women are dissuaded from having an abortion merely because there is no convenient abortion clinic in their county, then many, many more will be dissuaded from having an abortion when there is no abortion clinic open anywhere in the State.

If the proposed amendment which we are discussing is passed and ratified, many States will promptly shutdown the abortion industries in their States. The clinics will close. The ads in the Yellow Pages will disappear. Accessibility to abortion will be drastically diminished and the total number of abortions will be greatly reduced—although to be sure, there will be some increase in illegal abortions. No law against acts of violence is completely effective, whether we are speaking of rape, or child abuse, or abortion (and abortion is, in point of fact, the ultimate child abuse).

The greatest effect of restricting abortion will be an increase in the number of unborn children who are allowed to live. If abortion is illegal, then there may be renewed emphasis on the adoption option—which will be welcomed by the hundreds of thousands of couples who now wait for years—and in some cases forever—for infants to adopt.

Now, the Alan Guttmacher Institute regards abortion as a medical service, and it laments that so-called unmet need which 641,000 women had in 1979. Perhaps some of my colleagues share this view. But I am speaking at the moment to those of my colleagues who honestly regard abortion as a great evil, but who have wondered whether making abortion illegal would actually have much effect on the number of abortions performed. I believe that the best evidence suggests that the effect of legal restrictions, even if only in some States, would be the preservation of hundreds of thousands of innocent human lives each year.

HISTORY OF AMERICAN ABORTION LAW

Mr. President, yesterday Senator PACKWOOD and I engaged in an extended colloquy about the history of American abortion law. As I noted, the Supreme Court relied on some historical myths in reaching its conclusion that abortion should be permitted, practically without restriction, throughout all 9 months of pregnancy.

The historical myth of which I speak holds that Roe against Wade restored a right to abortion that was recognized at common law prior to the enactment of stringent antiabortion statutes by the States in the mid-19th century. The proponents of this theory contend that the common law right was reversed by these State laws primarily because it was believed that abortions, as practiced that, were dangerous to maternal health. By 1973, the theory maintains, abortions in the first trimester of pregnancy were safer than carrying the child to birth. The principal reason for the antiabortion laws ante-Roe, therefore, no longer existed. Hence, they argue, Roe against Wade.[3] Roe, in fact, accepted this theory.

Mr. President, the myth that the 100 years of restricted abortion in this country was a historical anomaly that resulted only because abortions once were unsafe is false. The common law right to an abortion early in pregnancy was based on the scientifically ignorant premise that the unborn child is not alive until her mother perceives her movement in the womb. Thus, abortions before this point were legal because the child was not thought to be yet alive. Once mid-19th century physicians learned that that was untrue, however, they sought to proscribe abortions before, as well as after, the quickening of the unborn child. Very restrictive abortion laws in each of the 50 States granted a significant degree of protection to the unborn child before Roe against Wade[4] stripped that protection away.

The quickening doctrine that I have described was grounded in the ancient scientific understanding of Aristotle, who identified life with the animation of the formed fetus.[5] Thus, the English common law created penalties for the performance of an abortion after quickening. This principle, which is known first to have been stated by the eminent British legal commentator Lord Coke, was recognized by Blackstone in 1769 in his noted "Commentaries on the Laws of England." "Life * * * begins in contemplation of the law," said Blackstone, "as soon as an infant is able to stir in the mother's womb."[6]

As Northwestern University professor of law, Victor G. Rosenblum noted during his testimony before my subcommittee, we know now that the unborn child actually moves long before her mother can feel that movement. Quickening, then, is really quite irrelevant to the humanity of the unborn child because it depends not on the objective degree of development, but rather on the subjective perception of the mother. As Professor Rosenblum observed:

Our ancestors * * * had to judge by the best information available at the time, and so they protected unborn life under the criminal law from quickening onward—

Footnotes at end of article.

when with their best, but comparatively primitive, scientific understanding they believed individual human life actually began.[7]

As of 1800 in the United States, no legal jurisdiction had adopted a criminal abortion statute. The common law quickening doctrine, which criminalized only postquickening abortions, remained in force through 1840. In the meantime, the abortion industry flourished. Both surgical and drug-induced methods of prequickening abortion were in use.[8]

According to abortion historian James C. Mohr, who also testified before my subcommittee, there was a great surge in the incidence of abortion between 1840 and 1870. During that period, reports Professor Mohr, abortion became employed increasingly as a method of birth control by white, married, Protestant women of comfortable economic means. With that rise in the demand for abortion, especially by economically privileged women, the business of abortion became more lucrative. Some physicians adopted the abortion trade as a specialty.[9]

But this significant upsurge in the practice of abortion produced a powerful reaction. Professor Mohr's book "Abortion in America" [10] describes and documents a physician's crusade against abortion that reached a peak between 1857 and 1860. Its principal goals, Mohr contends, were to turn the tide of public opinion firmly against abortion and to promote the passage of strong antiabortion legislation. Professor Mohr posts three theoretical motivations behind the doctors' crusade. First, these physicians believed abortion to be morally wrong because they valued the life of the unborn child. Second, such doctors were alarmed that respectable Americans—largely economically privileged Protestant women—seemed to comprise a large segment of those having abortions. Finally, says Mohr, doctors were alarmed at the new rise of feminism, which posed a threat to the traditional ordering of sex roles.[11]

Mohr's unmistakable tendency—in his book as well as in his testimony before my subcommittee—was to emphasize the latter two motivations, as well as a concern for maternal health, at the expense of the belief that abortion is wrong because it kills unborn children. This emphasis on factors other than the all-important concern for the sanctity of life is endemic not only to Mohr, but to other abortion history revisionists, such as Cyril Means,[12] as well.

The truth of the matter—as both Professor Rosenblum and Prof. William Marshner of Christendom College [13] demonstrated in their testimony before my subcommittee—is that the energizing force behind the physicians' campaign against abortion in the 19th century was the belief that the unborn child is a human being from the point of conception who deserves the protection of the law. This campaign, then, resulted from the realization that the old quickening doctrine was scientifically wrong.

Only in the period of 1825 to 1850 did biological research progress to the point of understanding the actual mechanism of human ontogeny. The 19th century witnessed a gradual, but profound, evolution of scientific knowledge about the beginning of human life. Although the existence of sperm was known by 1677, the ovum was not indentified until 1827. It was not until 1839 that the cell was recognized to be the basic structural unit of organisms. The sperm and egg were discovered to be cells in the two decades that followed.[14] As Professor Rosenblum noted:

> These developments were brought to the attention of * * * State legislatures * * * by those professionals most familiar with their unfolding import—physicians.[15]

It was these new research findings that convinced the doctors that biologically human life begins at conception—when the chromosomes of the sperm and egg fuse to form a new human life—and not at quickening.

Based on this reasoning, the American Medical Association, which was founded in 1847, actively opposed abortion.[16] According to Professor Mohr, much of the impetus behind the AMA's stance came from the doctors' belief that the quickening doctrine had been discredited. By 1857, it became almost universally accepted in the medical community that quickening is a scientifically and biologically insignificant point in pregnancy. A New York State Medical Society resolution that was passed that year stated that:

> From the moment of conception, there is a living creature in process of development to fully maturity . . . and . . . any . . . interruption to this living process always results in the destruction of life.[17]

An 1872 quotation from a Dr. Hodge, who was one of the leaders of the antiabortion campaign, confirms the causal effect of the new scientific information:

> If * * * the profession in former times, from the imperfect state of their physiological knowledge, had, in any degree, undervalued the importance of foetal life, they have fully redeemed their error and they now call upon the legislatures of our land * * * to stay the progress of this destructive evil of criminal abortion.[18]

Professor Mohr's "Abortion in America" identifies the period of 1860 to 1880 as the one in which the physicians' antiabortion campaign produced the most significant flood of antiabortion legislation in the Nation's history. In that era, reports Mohr, 40 antiabortion laws of various kinds were adopted by States and territories. Of these, 13 proscribed abortion for the first time, while 21 revised old antiabortion laws by making them apply before, as well as after, quickening.[19] New laws generally prohibited abortions strictly in all cases except those threatening the life of the mother.

Though he resists the conclusion to which the evidence that is documented in his book points, Professor Mohr's scholarship establishes that the physicians' crusade against abortion of the 19th century in general, and the obsolescence of the quickening doctrine in particular, were the key factors in persuading the States to pass tough antiabortion legislation. Mohr does concede, however, that medical doctors' opposition to the quickening doctrine was based on their belief in the inherent difficulties of determining any point at which a steadily developing embryo somehow becomes more alive than it had been the moment before.[20]

Mohr's study of the physicians' antiabortion movement of the 19th century effectively discredits the earlier theory, propounded by Cyril Means, and accepted by the Supreme Court when it legalized abortion, that the antiabortion laws that were passed in the 19th century were designed to protect maternal health principally rather than to protect the unborn. His work confirms the historical conclusion of Professor Sauer, who, like Mohr, is not identified with the prolife cause, that:

> One can infer from an analysis of nineteenth century abortion laws that the safety of the foetus was a major concern of many State legislatures. A law which has maternal health as its sole or main consideration is not likely to be worded in such a way that the human status of the foetus is recognized, since that recognition would also require that the foetus be given human rights protected by law. In a law where the concern is with the woman's health, a woman is likely to be labeled as pregnant rather than as being with child or some other phrase which gives a human status to the foetus. Although a number of the initial State laws contained a distinction based on quickening which gave lower value to early foetal life, the large majority of State laws never made this distinction, and most of these laws referred to a woman as being with child or some similar phrase which attributed a human status to the foetus. Furthermore, many of the States which initially had this distinction written into their law later dropped it and also referred to a woman at any stage of her pregnancy as being with child.

It is clear from Mohr's book that the campaign the doctors orchestrated persuaded State legislatures that first, the unborn child is a human being at all points in gestation, that second, therefore all abortions kill human life, and that third, therefore the quickening doctrine needed to be abolished in favor of a comprehensive abortion ban. The life-protective motive of the State legislatures is unmistakably clear.

As Professor Marshner argued before my subcommittee, revisionist histories of antiabortion legislation largely ignore the life-protective motive and concentrate on a variety of other, less important, factors. All forms of this revisionism challenge the standard history, observes Marshner:

(1) by replacing the protection of unborn life with other, more transient motives for the rise of American abortion statutes, and (2) by positing a primordial, common law liberty of abortion, which the Supreme Court could plausibly reinvigorate, when the transient motives lost their point.

In conclusion, Mr. President, it is Roe against Wade that is the historical anomaly. Our national history was one of progression toward greater respect and protection for unborn human life until Roe against Wade wrought a radical reversal of that history. Where once the lives of nearly all unborn children were protected by laws in all 50 States, now, under the Court's ruling, no unborn child can be afforded the most basic right to life in any State. No revisionist historian can change those facts.

DATES AMENDMENTS WERE INTRODUCED

The 11th amendment was introduced in 1794 and ratified by 1795.

The 12th amendment was introduced in 1797 and ratified in 1804.

The 13th amendment was introduced 1818 which failed to receive the consideration of the House of Representatives. In 1839 three amendments were introduced on the abolition of slavery. In 1863 and again in 1864 amendments were proposed 1864 it was rejected by the House but reconsidered in 1865 and passed. It was finally ratified in 1865.

The 14th amendment was introduced in 1866 and ratified in 1868.

The 15th amendment was introduced in 1868 and ratified in 1870.

The 16th amendment was introduced in 1896 and ratified in 1913.

The 17th amendment was introduced 1826 then in 1894 passed in House, lost in Senate subcommittee in 1898 passed in House and lost in Senate subcommittee in 1900 passed in House and came to a vote on the Senate floor 1911 and failed. In 1912 it finally passed and was ratified in 1913.

The 18th amendment 1866–1919.

The 19th amendment original tacked on to the 13th amendment in 1866 but was voted down. In 1914 is succeeded to both houses for a vote but failed in the Senate. In 1918 it came up for a vote again and failed in the Senate. It was resubmitted in 1919 and voted down again. It was reintroduced in 1919 and barely passed. It was ratified in 1920.

The 20th amendment introduced in 1840. Then 1866 another amendment was introduced in 1923 but was blocked by the House. This happened again in 1924 and 1926. In 1928 it passed the Senate but did not pass the House. In 1929 it passed the Senate and House but Amendment expired when they could not agree on compromise. 1932 it passed the Senate for the sixth time and finally passed the House. It was ratified in 1933.

The 21st amendment.

The 22nd amendment it began in 1787. Proposed in 1823 then 1824 passed by Senate, no action by House. 1826 passed by Senate, no action by House. 1913 passed by Senate no action by House. 1928 passed by House. 1947 passed by House and Senate. Ratified 1951.

The 24th amendment was introduced in 1947 and ratified in 1964.

Mr. ABDNOR. Mr. President, the Senate is at a crossroads. We have an opportunity to say affirmatively that human life has value. It is imperative we take advantage of this opportunity today.

On June 16, 1983, a person, upon surveying newspaper headlines in South Dakota, could only shake their head in disbelief.

A front page story featured Interior Secretary Watt decrying the slaughter of 23 bald eagles and announcing the climax of a 2-year "sting" operation aimed at curbing illegal trafficking in endangered species. The picture cutline stated: "Anger, indignation swells at sight of 23 birds killed for profit."

On the same front page was another story reporting the latest decisions by the U.S. Supreme Court related to abortion. The decisions removed State and local requirements which a majority of the Court determined impeded the rights regarding abortion set down in the infamous 1973 Roe against Wade decision.

Where endangered species are concerned we are outraged at the slaughter.

Where human beings are concerned, it appears to be quite another matter.

It is a tragic commentary on our modern times that respect for life has become so skewed.

Abortion, rather than being seen as the destruction of human life, has been given the respectability of a constitutional right. Cloaked in phrases designed to obscure the reality of the act, life becomes a "fetus" or "tissue"; killing of this life is reduced to a mere "procedure."

While some still cringe at the recollection of Auschwitz or Buchenwald, there is little repugnance at the human slaughter which accompanies abortion on demand which has become part and parcel of acceptable conduct today.

Where is our outrage at the human life killed for profit—for convenience—for economic concerns—for "choice"—for whatever reason can be conjured up to justify this travesty.

Mr. President, we must begin to reorder our priorities where respect for human life is concerned. We must restore dignity and respect for life at all stages—beginning with the unborn.

It is clearly evident a constitutional amendment must be enacted to address the findings of Roe against Wade.

Senate Joint Resolution 3, in my judgment, is inadequate. I would much prefer to be voting upon language such as is found in Senate Joint Resolution 4, but this is not the opportunity afforded us today.

Nonetheless, it is imperative a stand must be taken if respect for life is to be restored, and the Senate must take this stand.

In voting for Senate Joint Resolution 3, we are taking a stand not only in behalf of the unborn, but in behalf of all life.

Mr. PACKWOOD. Mr. President, without the time being charged to either side, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MATTINGLY). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I ask unanimous consent for a call of the quorum with the time chargeable to each side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, earlier unanimous consent was granted, I believe, to extend the time for debate on the abortion resolution to 4 p.m. Through a misunderstanding, Mr.

President, that was not cleared on both sides. I was not on the floor and was not aware of it.

Mr. President, I ask unanimous consent that that order be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the Chair.

Mr. HATCH. Mr. President, I ask unanimous consent that the distinguished Senator from Alabama be given 20 minutes at this time.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The Senator from Alabama.

Mr. BAKER. Mr. President, will the Senator yield to me for a moment?

Mr. DENTON. Yes.

Mr. BAKER. Mr. President, let me made sure we understand what is happening here. On the allocation of time the time will expire at 3:49 p.m., and Senators speaking on whatever basis, except by unanimous consent, which will be objected to, will not change that time.

May I inquire most respectfully then who is yielding time to the Senator from Alabama?

The PRESIDING OFFICER. The Senator just obtained 20 minutes by unanimous consent.

Mr. BAKER. In addition? Mr. President, may I ask the managers, please, if they will yield time to the Senator from Alabama because I really do not wish to change that time and had I been on the floor when that request was made I would have objected to it.

Mr. HATCH. Parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. HATCH. It is our understanding as managers of this bill that my time has expired. Senator PACKWOOD, the distinguished Senator from Oregon, has time remaining. Both of us have agreed to try to accommodate any colleagues on either side on this issue who come to the floor. Yet we both understand this debate will end at 3:49 p.m. Therefore, is it correct for me when I ask unanimous consent for time to also state that that time should be taken out of whatever time is available up to 3:49 p.m.? Would that be more correct?

The PRESIDING OFFICER. The Senator from Oregon would have to consent to yield the time.

Mr. HATCH. I guess first I should ask the distinguished Senator from Oregon to allot time as his time expires.

Mr. PACKWOOD. As I understand, there is no time but my time.

The PRESIDING OFFICER. There is no time but the time of the Senator from Oregon.

Mr. PACKWOOD. What I will try to do, and I wish to say this again to the Senator from Utah, I expect a number of supporters on our side to come and speak and, because the side of the Senator from Utah has had substantially more time, I would give them preference. I am still hoping he and I will have 15 or 20 minutes apiece to summarize.

Now, working backward from 3:49—and this is now my time now—it is clear to me that those on both of our sides who would want to speak are not going to get to speak. I will be as generous as I can with the time, but I may not be able to grant all of the requests that the Senator asks for.

Mr. HATCH. That is all I could ask for. I thank my distinguished colleague. We both understand that this debate will end promptly at 3:49.

Mr. BAKER. I thank the Senators for that. Let me make an inquiry of the Chair. This morning when we opened I inquired of the Chair, and there was a different Parliamentarian here at the time, how much time remained. At that time, I believe I stated that it would all expire at 3:49. That is what I was depending on. Perhaps that was an error, but that was the representation I made at the time.

Could I inquire of the Chair at this time when the time for debate will expire, assuming there are no extensions of that time?

The PRESIDING OFFICER. There are exactly 2 hours and 13 minutes remaining.

Mr. BAKER. And there are no extensions? That is the way we started out this morning, is that right?

The PRESIDING OFFICER. There were 2 hours and 49 minutes remaining.

Mr. BAKER. There are 2 hours and 13 minutes remaining at this time and they all belong to Senator PACKWOOD?

The PRESIDING OFFICER. That is correct.

Mr. BAKER. The Senator from Utah, I am sure, will implore the Senator from Oregon to try to accommodate other speakers. I add my supplication to that. I really urge we not change that time.

Mr. PACKWOOD. I want to make sure where we are. We are recessing from 12 to 2 p.m., is that correct?

Mr. BAKER. That is correct.

Mr. PACKWOOD. How much time is remaining?

The PRESIDING OFFICER. Two hours and 12 minutes.

Mr. PACKWOOD. So that puts us done at about 3:30 p.m., is that correct? An hour and a half after 2 o'clock and 30 minutes now. I just want to know where we end up.

The PRESIDING OFFICER. The Chair calculates we have 30 minutes remaining and it puts us to 2:45 p.m.

Mr. PACKWOOD. Not if there are 2 hours and 12 minutes remaining. We are coming back at 2 p.m. with whatever time is remaining.

The PRESIDING OFFICER. Approximately 3:45 p.m.

Mr. PACKWOOD. Approximately 3:45.

I think I will grant the time in about 10 minutes blocks in case any of my speakers come in. So I yield 10 minutes to the Senator from Alabama.

Mr. HATCH. Mr. President, I ask my colleagues who speak on their time to use their 10 minutes and if they need more, we will ask the distinguished Senator from Oregon to grant it. If he does not, they can put the rest of their statements in by unanimous consent.

Mr. DENTON. Mr. President, it is my understanding that my staff has been in touch to arrange a time at which I might speak. I am advised that a time was arranged yesterday and that it was changed until 2:30 today. It has further been changed to 11:30 this morning. I do not want any of the people whom I represent to think that there has been any unwillingness or lack of eagerness on my part to address the subject by whatever result obtained from the discussion that just occurred.

Mr. BAKER. Mr. President, let me make sure that the Senator from Alabama understands and everyone else understands. All I am trying to do is to preserve absolutely and literally the agreement that was hard won and arrived at after difficult negotiations for 10 hours equally divided for debate on this very sensitive issue. I believe we have accomplished that. The Senator from Alabama clearly wishes to speak, should speak, and is dedicated to this issue and has now been given time in order to do so.

But let me say that no change at all has been made. This was exactly the way it was done yesterday.

Mr. DENTON. Mr. President, I am not questioning the majority leader's fairness or propriety in this. I am just making a statement for the RECORD that I was ready to talk about this beginning yesterday, and I hope that the 10 minutes will be extended 10 more if Senator PACKWOOD's next speaker does not come in.

I will begin again.

The PRESIDING OFFICER. The Senator may proceed.

Mr. DENTON. Mr. President, I do not take the pains or the time to speak today under the conventional wisdom that no one will change their views on this issue. That conventional wisdom has been echoed at our luncheons and caucuses and I disagree with it. I believe that views can change as the result of reasoned debate. I know mine have in the past. Indeed, I realize that some, and perhaps many, opinions have been shaped less on the substance of the issue than on such subjective matters as the personal abuse that at least one Senator from Oregon has had inflicted upon him by those who oppose abortion. Such acts have only blinded many to the merits of the

case against the destruction of innocent life.

I and others who oppose abortion on demand do not have a monopoly on compassion. Many of those who oppose this amendment, including Senator PACKWOOD, have a deep, and I believe sincere, concern for women and girls who find themselves facing a difficult decision. This does not in any way mean that I agree that abortion is the answer but I deeply respect Senator PACKWOOD and others who are struggling to preserve what they view as the solution to these problems.

Moreover, if one views the constitutional process as a mechanism that preserves the fundamental rights of both the majority and minority, I think we can appreciate the importance of the role that Senator PACKWOOD and others are playing. Amending the Constitution should not be easy. It should flow out of a societal consensus that the status quo is unacceptable and that change must be made.

In that spirit, Mr. President, I rise in strong support of Senator HATCH's amendment, Senate Joint Resolution 3. The real issue before us is not when life begins, nor is it abortion as an issue in isolation from other concerns. What we are discussing today is the confrontation between an ethic that respects the sanctity of all innocent life, and one that imposes variable values upon human existence depending on its usefulness to others, its alleged meaningfulness, or its quality.

I suggest to my colleagues that the proabortion position in general, and the line of judicial decisions beginning with Roe against Wade in particular, are based upon a quality of life ethic that denies the dignity and rights of handicapped children and others after birth just as surely as it denies the dignity and rights of all human life before birth.

I wish to be absolutely clear on that point. I am not saying only that abortion diminishes our respect for life and begins a slippery slope toward infanticide. I am saying that the precise philosophical and legal arguments used for the last 10 years to defend abortion are, by their very logic, already applicable to infanticide. The only thing that has thus far prevented those arguments from dominating our legal system is the remnant of the sanctity of life principle that we have retained from before the chain of decisions beginning with Roe against Wade. I do not know how much longer that remnant can withstand the corrosive effect of the abortion rulings from the Supreme Court and other courts. We must take action to reverse those decisions before they can do further damage.

Some of my colleagues may think that I am saying something controversial by positing a direct link between abortion and infanticide. They are gravely mistaken. I would like to present three statements to which most major thinkers on both sides of the abortion issue can subscribe. I repeat: these three statements have been made repeatedly by ethicists who support abortion on demand as well as those who oppose it.

The first statement is this: The abortion debate has nothing to do with the biological question of when a new living organism of the human species comes into existence. As a biological matter, each genetically complete human individual comes into existence at conception. All subsequent stages of development are just stepping-stones in the life cycle of the same human being: from embryo, to fetus, to infant, to child, to adolescent, to adult.

The second statement flows naturally from the first: What the abortion debate is really about is whether defenseless living members of the human species have lives worthy of respect, or whether we can dismiss some lives as being less worthy than others. In other words, all living members of the human race deserve the philosophical and legal title of "person," or are some human beings unworthy of that status because of their age, their location, their dependency on others, their inability to perform certain mental or physical tasks, and so on?

The third statement follows naturally from the first two. It is this: If one accepts the quality of life position, in which all human life is not of equal value, there is no intellectually defensible reason why one must cease to make the distinction at the moment of birth. Abortion and infanticide, therefore, rise or fall together.

I suspect that some will claim that my statements, especially the third one, are special pleading for the prolife cause. I assure you that the point is acknowledged by the proabortion side in the scholarly debate. Let me give a few examples to illustrate the point.

All three statements are found in a proabortion editorial published in the journal California Medicine in 1970 under the heading "A New Ethic for Medicine and Society." In quick succession, the editorial said: First, it is absurd to deny the scientific fact, which everyone really knows, that human life begins at conception and is continuous, whether intra- or extrauterine, until death. Second, that the real debate is between the old sanctity of life ethic and the new quality of life ethic, with both being applicable before and after birth. Third, that since the old ethic has not yet been fully displaced, it has been necessary to separate the idea of abortion from killing, even though it is irrational to do so.

Many other examples appear in the hearing record and subcommittee report on Senator HELMS Human Life Bill last year. For example, geneticist Leon Rosenberg testified against the bill, saying that there is no way of telling objectively what is worthy of being called human life in the philosophical sense of the word: "Some say that life begins at conception," said Dr. Rosenberg, "but others say that life begins when brain function appears, or when the heart beats, or when a recognizable human form exists in miniature, or when the fetus can survive outside the uterus, or when brain development is completed at two years of age."

Acceptance of those statements except the last one, of course, would mean that at least some of the abortions legalized by the Supreme Court in 1973 are genuine homicides in the fullest sense of the word. Acceptance of the last one would mean that the killing of any child under two—and of some mentally retarded adults—would not really be homicide. Interestingly, Dr. Rosenberg dropped the last statement from his testimony when he delivered it orally. I imagine one of his politically astute proabortion friends told him at the last minute not to give the game away.

One could go on with examples for hours. Joseph Fletcher of the University of Virginia, for example, has published certain "indicators of humanhood" based primarily on mental abilities: An IQ of 40 for example, would make someone "questionably human," whereas anyone "below the 20-mark" is "not a person."

Michael Tooley, of Stanford University, admits that quickening, viability, and birth are all completely unconvincing as "cut-off" points for permitting abortion. He, therefore, concluded as early as 1972 that "infanticide during a time interval shortly after birth must be morally acceptable."

Nobel Prize Winner James Watson suggests that birth certificates should only be issued 3 days after birth so parents can decide whether they want their child to live.

H. Tristram Englehardt of Georgetown University argues, "Not only is the fetus not in the strict sense a person, neither is a child until a certain level of consciousness is attained. The infant is still more an 'it' than a 'he' or a 'she.'" Englehardt's 1975 essay carries the chilling title, "Ethical Issue in Aiding the Death of Small Children."

The link between abortion and infanticide is not abstract. It is not only a characteristic of ethical theory. With every advance in prenatal medicine, with every new technique for treating the unborn child as a patient like any other, it becomes more and more obvious to the layman that birth is simply a change of location, not a sudden change from "blob of tissue" to "human infant." It has little to do

with age. We have, thriving in our hospital nurseries, premature infants, who are much younger than some of the children being destroyed by abortion and discarded like garbage in those same hospitals.

Doctors know that better than anyone else, and they draw the obvious conclusion: What matters is not so much your stage of development as your perfection or, more generally, your "wantedness." In a 1975 opinion poll, 75 percent of the leading pediatricians and professors of pediatrics surveyed said that some abortions are better described as "infanticide." About 15 percent said abortion is always the same as infanticide. Answers to other questions in the survey suggested that most of the respondents were in favor of infanticide in some situations.

Yet some of my colleagues will still claim that the moment of birth is the magic point at which a fetus with no standing under the law, becomes a full-fledged legal person with all the rights of a citizen of the United States. Indeed, they will claim, that is exactly what the Supreme Court affirmed in 1973. The Court gave a woman a right to control the fetus as part of her own body before viability, but reaffirmed the child's personhood at the moment at which it can leave the womb and survive on its own.

That is absolutely wrong. It is grossly, absurdly wrong. I do not doubt that, if one were building an abstract legal system from scratch, it would be possible to define birth, or viability, as the point when valueless life suddenly becomes a person with rights. To say, however, that the Supreme Court's abortion rulings did that is to display an abysmal ignorance of those rulings. To the contrary, the Court has already explicitly rejected all the best arguments one might use to keep its rationale for termination of life from extending beyond birth. The rational has been expanded and clarified over time to the point that now, in 1983, all the legal mechanisms are in place to make a dead letter of all the constitutional rights of handicapped infants.

I will outline briefly the stages of that development. First, the 1973 abortion rulings themselves contained three things that prepared the way for legalized infanticide: First, the Court rejected the proabortion plaintiff's argument that abortion should be allowed because a woman has a constitutional right to do what she wants with her own body. The Court knew that this was an absurd principle, and that it would, for example, make State vaccination programs unconstitutional. So instead the Court posited a "right of privacy" which, it claimed, gave constitutional protection to decisions about the begetting, bearing, and raising of children. Here the Court cited several cases involving the rights of parents over their children after birth.

Second, the Court decided that, even after viability, the unborn child was only a "potential life," not a legal person, and therefore could be destroyed if a live birth might have an adverse effect on the woman's social or emotional "well-being." That, in and of itself, can be described as an authorization for infanticide, for abortion is medically defined as the expulsion of the fetus from the womb before viability. Moreover, the Court used "viability" as the "capability of meaningful life outside the mother's womb." Since "meaningful" remained an undefined and subjective term, one was left to wonder whether a fetus, a baby, might clearly be alive outside the womb and still not be "viable."

Third, the Court denied 14th amendment "personhood" even to "viable" unborn children, because statutory and common law had never treated them as having all the rights and responsibilities of "persons," and because most uses of the term "person" in the Constitution—for example, in clauses on who is eligible to vote or to be a Member of Congress—were not applicable to the unborn. As some legal scholars have noted, newborn children might also fail those two tests. Most uses of "person" in the Constitution apply only to adults.

Two days after the Court's rulings in Roe and Doe, the New York Times printed a letter, from Prof. Paul Ramsey of Princeton University, which was surely prophetic. Professor Ramsey said in part:

> Justice Blackmun described the grounds for compelling state interest in the unborn as their "capability of meaningful life outside the mother's womb." Meaningful? Thus the Court opened the door to weighing human lives according to comparative worthiness, or something called "meaningfulness."
>
> Ineluctably we pass from abortion to infanticide, whether the Justices know it or not. Ineluctably, because many of the reasons alleged to justify permissive abortion have equal force in justifying the killing of neonates in hospital nurseries.

I am sure that Professor Ramsey was saddened but not surprised to find himself testifying before my Subcommittee on Family and Human Services only a few weeks ago in a confrontation with medical groups that now openly oppose legal interventions to prevent infanticide in hospital nurseries.

In the second stage of the legal evolution, the courts overturned manslaughter convictions against various physicians who had neglected, or acted to kill, children born alive during late-term abortions. In reversing criminal charges against Dr. Kenneth Edelin in 1976, in a case involving the death of a child born alive during an abortion at the margin of viability, the supreme judicial court of Massachusetts suggested that the physician must not be held to the same standard of care during an abortion as if a live birth had been intended. Requiring adherence to ordinary standards of medical practice for premature newborns might infringe on the "constitutional freedoms" that protect the "right" of abortion. Dr. William Waddill was acquitted of similar charges in 1978, although an eyewitness claimed to have seen him actually strangling a child who unexpectedly left the womb alive and gasping for breath.

In these and other cases, as one commentator put it, the fact of a live birth became "somewhat like a State border, which an officer of one jurisdiction may disregard if he is following a fugitive in hot pursuit."

The third stage took place with the Supreme Court's 1979 ruling in Colautti against Franklin. The Court invalidated as unconstitutional a State law requiring medical treatment for infants born alive and possibly viable during abortions. The decision was made in large part because a vindication of the right of those children to reasonable care after they leave the womb would have what the Court called a chilling effect on the right to perform late-term abortions. With that decision, the U.S. Constitution was allowed to justify the neglect of even healthy newborns whose parents did not want them to survive.

The fourth stage came with the widespread practice of prenatal diagnosis followed by selective abortion of the handicapped child. State courts began to allow suits for "wrongful birth" and "wrongful life," so that a physician could be sued for failing to perform prenatal tests and to facilitate abortion. One State appeals court suggested that a handicapped child should be able to sue her own parents for not having destroyed her before birth. Some courts thus used the abortion rulings to create a new financial pressure toward infanticide.

Imagine the following scenario: A physician delivers a premature infant girl by cesarean section, and finds to his surprise that she has a severe mental or physical disability. He suddenly realizes that, since he did not expect this, he never advised the mother to get an amniocentesis to insure that the child was not "defective," so the child or her parents could sue him for the lifetime costs of raising, treating, and educating her. The parents now realize not only that they must assume the burdens of raising the child, but that they could be sued by the child for inflicting upon her what some commentators have called "the injury of wrongful existence." The obstetrician, however, realizes that the Supreme Court's abortion rulings have provided not only the mo-

tivation but also the means for eliminating the problem.

What is to prevent physicians and parents from neglecting the infant until she dies and then claiming that she was not "viable" in the first place, especially since the Supreme Court has ruled that the determination of "viability" must be left to the judgment of the individual physician? What is to keep the physician and the parents from saying that the handicapped girl, even though born at full term, is not "viable" because she is not capable of truly "meaningful" life?

Since a late-term abortion by hysterotomy uses exactly the same techniques as does cesarean section, except that the patient is not supposed to survive, what is to prevent the physician from changing one line on the medical record and retroactively labeling the entire procedure as an abortion? That would prevent all prying questions about the child's death, and would place the physician and the parents under the protective umbrella of a fundamental constitutional right.

Ten years ago, abortion advocates claimed that abortion was, tragically, necessary as a backup for "contraceptive failure." Have we already arrived at the point where infanticide is a tragically necessary "back-up" to unsuccessful abortions? Please note that "wrongful life" suits are not based only on the acceptability of abortion. They assume that a handicapped child's life after birth is a "wrong," justifying financial penalties, and abortion is proposed as a means of preventing this wrong before it happens. But if a child manages to sneak past that net, why not "cure" the wrong that was not prevented?

Why not, indeed? Last year, the Indiana State Supreme Court asked itself that question and, imbued with the slogans and the spirit of Roe against Wade, it could not think of an answer. So a child had to die. This is stage 5: Quite judicial approval of infanticide. The baby boy now known as Infant Doe was born with Down's syndrome and with a digestive blockage that called for routine surgery. The child's obstetrician and parents decided against lifesaving surgery. The child was then refused all intravenous food and water, wheeled to a dark and empty room in an adult ward, and left to die of dehydration. That took 6 days. Witnesses say the baby cried a great deal the first 3 days, whether from fear or loneliness, or hunger, or all of them, but was much quieter after that when hunger and dehydration made him too weak to cry.

Massive efforts to save the child's life, by the hospital, potential adoptive parents, State prosecutors, and legal defense groups, were to no avail. Infant Doe died after the Indiana Supreme Court affirmed his parents' right to insure his early death. The court has sealed the records in the case, but all reports indicate that the well-worn rationale of the abortion rulings was the decisive factor in the court's decision. The parents' attorney defended their "freedom of choice" and accused the State prosecutor of intervening in "medical judgments" which should be reached only between the parents and their physician.

The decision to end the child's life was an ideological, not a medical, decision, but then so are most decisions to abort, even in the late weeks of pregnancy. The real motivation was that the child's life would have been a burden on the parents and not sufficiently "meaningful." If he had been allowed to live, claimed the attorney for the parents on a TV talk show, "there would have been a horrific trauma—trauma to the child who would never have enjoyed a quality of life of any sort, trauma to the family, trauma to society." Let us note that the abysmal "quality of life" that effectively invalidated the equal protection clause of our Constitution in this case was that of a child who might have been simply a slow learner in school, or even of average intelligence. It is impossible at birth to predict the severity of a particular case of Down's Syndrome.

Mr. President, the Reagan administration responded to the "Infant Doe" case by reminding hospitals that under the Rehabilitation Act of 1973, handicapped people have the right to equitable treatment. That effort simply to reaffirm that 10-year-old civil rights law has been blocked in the courts. Although Judge Gesell of the U.S. district court based his April 14 ruling on procedural grounds, he also left no doubt about where he thinks the law should come down on the substantive issue. Gesell has provided us with stage 6: Explicit, written judicial arguments in favor of extending the "quality of life" ethic to deny equal protection to handicapped citizens. Gesell himself, of course, does not call the victims "handicapped citizens," he calls them "seriously defective."

Judge Gesell proposes a two-tiered system to determine a child's right to lifesaving treatment. Such treatment should clearly be ordered when it will cure all handicaps, allowing the child to "attain complete health and develop normally." He doubts, however, that a child should be saved when its "quality of life" and "chances for an independent existence" will still be "seriously impaired" by a handicap. Gesell finds fault with routine surgery allowing a retarded child to eat, because it "cannot alter the mental retardation caused by Down's." In other words, handicapped citizens have a clear right to medical treatment only if it will remove their handicap.

Gesell goes beyond denying that handicapped newborns should get the same standard of care as other newborns. He denies that any standard of care at all exists for handicapped newborns. He expresses doubt that Congress really intended to protect newborn infants when it enacted the Rehabilitation Act, as though it doubted that newborns are legal persons subject to civil rights protections.

Despite all that, the most provocative sentence in the ruling is the remark that regulations protecting handicapped newborns "may in some cases infringe upon the interests outlined in cases such as * * * Roe against Wade."

In light of that ruling, Columnist George Will's reaction last April to the "Infant Doe" case seems fully justified. In a tone of controlled anger, he wrote:

> In 1973 the Supreme Court created a virtually unrestrictable right to kill fetuses. Critics of the ruling were alarmed because the court failed to dispatch the burden of saying why the fetus, which unquestionably is alive, is not protectable life. Critics were alarmed also because the court, having incoherently emphasized "viability," offered no intelligible, let alone serious, reason why birth should be the point at which discretionary killing stops. Critics feared what the Indiana homicide demonstrates: the killing will not stop.
>
> The values and passions, as well as the logic of some portions of the "abortion rights" movement, have always pointed beyond abortion, toward something like the Indiana outcome, which affirms a broader right to kill.

When Roe against Wade was handed down in 1973, it apparently emboldened pediatricians who had been quietly neglecting handicapped infants to go public in the medical journals, and even to recommend their approach to other physicians. Two of the trailblazers, Drs. Duff and Campbell of Yale-New Haven Hospital, reported that 43 percent of the deaths in their nursery were related to withholding of treatment; those included situations identical with that of "Infant Doe" in Indiana. Duff and Campbell closed their article by saying, "If working out these dilemmas in ways such as those we suggest is in violation of the law, we believe the law should be changed." Ten years later, thanks to Roe against Wade's rationale and Judge Gesell, I fear they are about to get their wish.

Mr. President, I want to be honest and frank. My colleagues know that I am against legalized abortion at any stage, and that I consider it an unjustified attack on an innocent child. Some of my colleagues disagree strongly with my position on the matter. With respect to the legislation before us, however, which simply removes from our books the 1973 abortion rulings, I think the alliances should line up a little differently.

There are some in our country who are simply unreachable on the matter,

because they do not have much of a problem with either abortion or infanticide. Such people consider the starving of a handicapped infant as just another defense of civil liberties and of the right of parental privacy. I do not have much to say to those people. Those in this body who share their view must surely vote against the amendment, because they must defend the series of Supreme Court decisions that provide the only clear legal precedent for a constitutional right to infanticide. I want them to know, however, that the quality of life ethic to which they subscribe is, to my mind, no ethic at all. It is a flimflam. It is a batch of sophisticated mumbo jumbo designed to rationalize the oppression of the weak by the strong.

I think that most people who support the Supreme Court's decisions, in this Chamber and around the country, do so because, they do not fully realize their conceptual and legal implications. To my colleagues I want to say, please reflect very deeply and very carefully before you vote to uphold the Court's abortion rulings. Pray and agonize over it a little. Because if you think that those rulings pose no danger to those already born, if you think that a little thing like legal personhood is going to protect the rest of us from the acid that is now eating its way through the legal wall that protects us, I think that all evidence is against you.

As I said earlier, it may be possible in the abstract to arbitrarily define birth as a boundary between life that can be killed, through abortion, and personhood that justifies protection of the law, but it does not make any logical or moral sense. It is definitely not what the Supreme Court's rulings have done. All unwittingly, I think we risk affirming a legal trend whose destructive power we have only begun to witness, judicial support and justification for the attitude that being unwanted, whatever one's age, is a capital offense. That trend contradicts everything else we defend in terms of the civil rights of handicapped people and other defenseless minorities who, at one time or another have not been wanted by those in power.

I urge my colleagues to vote with me on the legislation before us to prevent more damage. I realize that many of us may continue to disagree on the extent to which our Government should take affirmative steps to protect the unborn, but perhaps we can agree that the right to kill is not a healthy thing to have elevated to the status of fundamental constitutional principle.

I commend my colleagues who agree with me on the abortion issue for their commitment to the defenseless, who cannot say "thank you" themselves. I urge them to support Senator HATCH's amendment with every bit of enthusiasm they might like to reserve for a stronger measure. Many would prefer to be voting on an amendment that would clearly affirm that every human being, regardless of age or condition, has the status of a person before the law. I beg my colleagues to consider how little good that principle can do as long as the right to kill the unwanted is allowed to take precedence.

The courts can decide that handicapped infants are persons. They can also decide that the measures taken to snuff out their lives are not acts of killing but simply medical judgments. The courts can decide that, because infants are persons, they have a fundamental right to die or a right to be free of the injury of wrongful existence. None of us wants to wait around to find out what imaginative and creative lines of reasoning will be used next to broaden the scope of the killing.

I urge my colleagues to help me put out some of the raging fire now, and not argue about the imperfections of the hose we are using. We will surely fight another day over other aspects of the right to life, but I fear that the fight will be over if the court rulings are allowed to work their way more deeply into our legal system.

Mr. President, I shall use the remainder of my 5 minutes to suggest to my esteemed colleagues that that group of men who were our Founding Fathers were praised by the British who wrote the Encyclopedia Britannica as perhaps the most fortuitous group to ever form a government—although the British, in that same publication, made light of our military effort in the Revolution, they praised those men. I believe we are abandoning their principles to the point that we are eroding the basis for our own rise to prosperity and threatening our survival. Those men said that all men are created equal, that they are endowed by their Creator—not by some psychologist, some sociologist, some medical doctor or pediatrician with a theory—by their Creator and, as most of the people in the Western World, I believe in that Creator. And that Creator gave them certain inalienable rights—inalienable rights—that among these are life, liberty, and the pursuit of happiness.

Are we regarding life as inalienable? Or are we making it an alienable right which judges, doctors, and pragmatist quibblers can dispense with, dispose of, as they see fit? If so, we are emulating the Chinese in deciding that girl babies are undesirable; if they are not wanted, we will destroy them.

We are emulating the chicken breeders down in Alabama who determine that if the sex of a chicken is male, it must be destroyed because we do not economically need that many male chickens.

We are treating life with a sort of "modern" alienability which is not in concert with the great thought regarding dignity of life, liberty, and the pursuit of happiness which were the foundations of this society.

Western law is derived from the Jewish, Christian, and Islamic belief in the God of Abraham. The right to life is an inalienable right endowed by that Creator. If we are so rude and arrogant as to denigrate that great principle, we are tampering with the natural law and the fundamental premise of our American democracy.

As chairman of the Subcommittee on Family and Human Services, I have to deal with the Down's Syndrome and infanticide. I do not claim to know all the answers to every question on infanticide. Because of the depth of immersion I have had in that issue, I am very aware of the rationale among German psychiatrists and doctors which convinced Germany that it had a right to destroy the Jews in the Holocaust. We are headed down a similar path. We are discarding that philosophy which brought us to a pinnacle of greatness from which we are now descending.

The history of our Nation is made up in part by efforts to extend to groups of individuals—freed slaves, American Indians, immigrants from around the world, and women of all races—the benefits of the inalienable rights of life and liberty. Only the unborn, the little children who are victims of infanticide, and the elderly who are "euthanased" out of existence, present an anomaly in the parade of the elevation of human dignity, and, indeed, the pursuit of happiness based on the principle that all men are endowed with some spark of the Divine.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. DENTON. I thank the Chair. I thank Senator PACKWOOD for the time.

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

Mr. HATCH. If the Senator will withhold, I thank the Senator from Alabama for his speech and the great contributions he makes and has made in the past on behalf of the unborn. I just wish to express the great appreciation I have for him on the floor.

I thank the Chair.

The PRESIDING OFFICER. The clerk will call the roll:

The bill clerk proceeded to call the roll.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. PACKWOOD. I yield such time as the Senator wants.

Mr. CRANSTON. Mr. President, the issue of abortion is one of the most difficult matters that comes before this body. There are very strong views on both sides, arising from deeply felt personal convictions, religious beliefs, and moral perspectives.

My own view is that abortion is a tragic result for everyone concerned. I believe that the real solution lies in the development of public policies to provide realistic alternatives that would help reduce the number of abortions. Throughout my career in the Senate, I have actively worked to develop such alternatives, particularly through support of programs to make safe and reliable family planning services available to those who seek services in order to avoid unintended pregnancies, to provide necessary medical services to those women who seek to carry a pregnancy to term, and to facilitate the availability of adoption for women who choose that option.

However, the real issue before us is not what the personal views of any Member of this body are with respect to abortion, but rather whether government—at any level—should be allowed to intervene in and limit the choices of individual women in this most personal, private, and difficult area. The Supreme Court held 10 years ago, and reaffirmed 2 weeks ago, that if the right to privacy means anything, it means the right to be free from unwarranted governmental intrusion in this area. Under the Constitution, at present, the question of abortion is a private one with the decision as to propriety and necessity left to the individuals and physicians concerned. That is how it should remain.

That is the view held by the vast majority of Americans. National public opinion polls repeatedly show that an overwhelming majority feel that decisions about abortion are best left to those involved, guided by their own personal beliefs and convictions, free from governmental interference.

Mr. President, the proponents of this amendment seek to impose the views of one side of the abortion issue upon those who hold different, but equally firm convictions. That goal is in fundamental conflict with the basic concept of individual freedom which Americans have always held dear.

It is also clear, Mr. President, that the proponents of this amendment will not achieve their goal, even if this amendment were added to the Constitution.

Passage and ratification of Senate Joint Resolution 3 will not resolve the abortion debate—it will only prolong it.

It will not halt abortions, but merely change the conditions under which they are performed and the price to be paid, both in human and economic terms.

The abortion fights which have repeatedly paralyzed Congress would become regular events in State legislatures and the rights of individuals would be subjected to continuous shifting majorities in State legislative bodies, with one side prevailing one year, and the other the next.

In those States where abortions became illegal, we would see a return to the days when unskilled abortionists preyed upon desperate women. The abortion mortality rate, which has almost disappeared would again rise. Legal and safe abortions, however, would remain an option for those women able to travel to other States or countries. The less affluent would be denied those choices.

Mr. President, once before in the history of this Nation, we adopted an amendment which attempted to impose the moral convictions of one segment of our society upon the rest. The 18th amendment was a miserable failure. It bred disrespect for the law among our people, made criminals out of otherwise law-abiding citizens, and created an industry of illegal profiteers and corruption. Adoption of this amendment would invite the same dire consequences.

Finally, Mr. President, there are substantial reasons to oppose this particular amendment irrespective of the abortion issue. Senate Joint Resolution 3 would establish a dangerous precedent for resolution of disputes over what are unquestionably fundamental and deeply controversial matters.

Unlike the various other proposed constitutional amendments related to abortion, Senate Joint Resolution 3 would not, by itself, outlaw abortion. Rather, lacking the consensus or public support necessary to achieve an outright ban, the proponents of this amendment seek to reduce a constitutionally protected right to one that could be limited or denied by a simple majority vote of a State legislature or the Congress. Citizens would be forced to negotiate on a State-by-State basis to assert what had been a fundamental right. What other fundamental rights might be subjected next to this approach? Should freedom of speech or assembly or minority rights be subjected to State-by-State determination?

Our Constitution stands as a safeguard against governmental intrusion into individual freedoms wherever one resides in the Nation. This amendment would alter that relationship and establish a precedent that could later be applied to other basic rights—an intolerable result, I believe.

Mr. President, Senate Joint Resolution 3 is a bad amendment and it represents bad public policy. I urge its defeat.

The PRESIDING OFFICER. Who yields time?

Mr. CRANSTON. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DECONCINI. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 2 P.M.

The PRESIDING OFFICER. Under the previous order, the Senate will now stand in recess until 2 p.m. today.

Thereupon, at 12:05 p.m., the Senate recessed until 2 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. LUGAR).

CONSTITUTIONAL AMENDMENT ON ABORTION

The Senate continued with the consideration of Senate Joint Resolution 3.

The PRESIDING OFFICER. All time is now controlled by the Senator from Oregon (Mr. PACKWOOD); 1 hour and 43 minutes remain.

Who yields time?

Mr. PACKWOOD. Mr. President, it is my intention, in a moment, to yield to the Senator from Massachusetts, but I first yield to the Senator from Minnesota.

Mr. DURENBERGER. I thank the Senator from Oregon.

Mr. President, the issue before us today has become one of the most difficult questions facing Congress and our society. While the disagreement over the resolution of this issue runs deep, it is clear that few people are satisfied with the present state of uncertainty.

Despite repeated congressional attempts, State and local laws and judicial rulings, our society has failed to reach a consensus on the question of abortion. In fact, contradictory policies seem to be the rule rather than the exception.

A court in one State convicted a man of murder for shooting and killing a fetus in a woman who survived the wound. A court in another State declared that a fetus has the right to inherit property. State legislatures and city councils have passed laws to restrict abortions and guarantee rights to the unborn.

While some of these laws have been struck down by the Supreme Court and some of the judicial rulings may be overturned, they stand out as just a few of the many examples of contradictions in our society's policies on abortion. If anyone is arguing to maintain the status quo in order to clarify the question, then that person has

been too far removed from the reality of how confused are our society's policies on abortion.

We are in desperate need of a societal consensus on abortion. I believe the Hatch-Eagleton amendment is the best vehicle to achieve that consensus, and I strongly urge my colleagues to support its passage.

I hope my words today and the arguments of the others who will speak in favor of this proposed constitutional amendment will not fall on deaf ears. Yet, I suspect that we could debate this issue for 10 hours or 10 weeks without changing a single vote in the U.S. Senate. I know that my colleagues on both sides of the question have not arrived at their positions without a lot of study, discussion, consideration and soul searching. I also know that their positions will not easily be changed.

Regardless of the fate of this amendment, I hope that my words today will at least cause opponents to reflect on their positions.

Mr. President, I believe that America is society at its best. I am only surprised when America fails to achieve the best. Sadly, that is the case with the untold number of unwanted children who are conceived every year.

Everything that caused me to get involved in public service years ago and caused me to become a candidate for the U.S. Senate in 1978 causes me to plea with this Congress to recognize our obligation to those children.

Abortion is not the answer. Some have argued that this human life federalism amendment sets a dangerous precedent: For the first time in our country's history, say opponents, an amendment to the Constitution would restrict a person's rights, namely a woman's right to privacy.

The basis of this amendment, however, is the rights of a severely disadvantaged group; the unborn. This amendment deals with one essential question: Does the unborn have the right to life? In my mind, the answer must be "Yes."

So, the crux of this debate is not whether we are taking away rights. Our society always has had to choose between competing rights. Throughout the years, interpretations of the very first amendment to the Constitution have recognized the need to balance rights. Americans are guaranteed the right to freedom of speech, until that speech is used to slander another person or incite lawless action. At that point, the right to freedom of speech is restricted because our society considers other rights to be more important.

Our society has even placed limits on the right to privacy, especially when the health and safety of an individual, a group of individuals or society as a whole are endangered. For example, Congress and Federal, State, and local agencies not only deem administrative inspections of private property to determine if health and safety standards are being met appropriate, but in many cases necessary.

The Hatch-Eagleton Human Life Federalism amendment clearly does not establish precedent, it follows a well-established and necessary pattern of balancing rights in a diverse society. This balancing of competing rights is vital if we are to remain a free society based on equality. Rights must not be accorded only to those who are articulate enough or wealthy enough to be heard by the policymakers of our country.

The only question that counts in this matter is whether or not the unborn should be guaranteed the right to life. Everything else, frankly, is a smokescreen. The scientific community cannot provide a certain answer any more than public opinion polls can. Both are divided on the issue.

In the end, it comes down to the obligations we, as elected representatives of this society, incurred when we were sworn into office. The most important of those obligations is to defend the rights of the helpless. And there is no person in our society today who is more helpless than the unborn.

If a court considers an unborn child a person who can be murdered, then certainly we must consider unborn children persons who have a right to a quality life.

Regardless of the fate of this amendment, I fervently hope all of us—proponents and opponents of this amendment—will commit to improving the quality of life for all children. Those of us who support the Hatch-Eagleton amendment must do more than say no to abortion. We must provide alternatives.

A study by the Alan Guttmacher Institute estimated that in 1981, 814,000 unintended pregnancies, including 423,000 among teenagers, were averted as a result of family planning services. More than half of these pregnancies would have ended in abortion.

Yet, title X of the Public Health Service Act is under attack by many. Rather than weakening this program, we should be doing everything in our power to strengthen it and expand its services.

In the same vein, this Congress has an obligation to assure appropriate funding for child welfare services, foster care and adoption services. Our children must not be on the front line in the battle to control the Federal budget. The same fervor we bring to protecting the unborn's right to life must be brought to funding programs that will provide the necessary health care for mother and child during pregnancy and the opportunity for a quality of life after birth.

Mr. President, let me conclude by saying that perhaps the greatest instrument in the Constitution of the United States is the system of checks and balances. It has served our Nation well, especially in protecting the rights of individuals.

The Supreme Court, as part of that system of checks and balances, has often broken new and important ground at times when Congress or the executive branch were unable or unwilling to lead.

Yet the Supreme Court is composed of people like us, like the public we serve. For all their years of study, for all their dedication to the issues and to the principles of our Nation, the Justices throughout the years of our Republic have occasionally erred. In 1857, 126 years ago, the Supreme Court majority erred in the infamous Dred Scott case when it declared blacks to be noncitizens. Congress responded, rightfully, by correcting that error and submitting the 14th amendment to the States for ratification.

In 1973 and again in 1983, I believe the majority of the Supreme Court has erred in declaring the unborn to be nonpersons. It is our duty today, as it was our predecessors' duty a century ago, to use the system of checks and balances to correct the Supreme Court's wrong and submit the Hatch-Eagleton Human Life Federalism amendment to the States for ratification.

Mr. PACKWOOD. Mr. President, I yield to the Senator from Massachusetts.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, will the Senator from Massachusetts yield to me so that I can put further requests with respect to committee meetings?

Mr. KENNEDY. I yield.

AUTHORITY FOR COMMITTEES TO MEET

SELECT COMMITTEE ON INDIAN AFFAIRS

Mr. BAKER. Mr. President, I ask unanimous consent that the Select Committee on Indian Affairs be authorized to meet during the session of the Senate on Tuesday, June 28, at 2:30 p.m., to hold a markup on the following bills:

S. 1168, trust lands for Kaw Tribe of Oklahoma.

S. 856, Indian housing bill.
S. 1224, judgment funds for Creek Nation.
S. 1249, Indian member of the Advisory Commission of Intergovernmental relations.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Environment and Public Works be authorized to meet during the session of the Senate on Tuesday, June 28, to hold a markup of the Clean Water Act Amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON SOIL AND WATER CONSERVATION

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on Soil and Water Conservation, of the Committee on Agriculture, Nutrition, and Forestry, be authorized to meet during the session of the Senate on Tuesday, June 28, to hold an oversight hearing on soil and water conservation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, did I correctly understand from the Senator from Massachusetts that he anticipated that there would be a request in respect to the Armed Services Committee?

Mr. KENNEDY. Yes.

Mr. BAKER. Mr. President, I mistakenly thought that was one of the three, and it is not. I do not put that request at this time. I note that the Senator has indicated that he would object if such request were put.

Mr. KENNEDY. The Senator is correct.

The meeting was scheduled for 2 o'clock, and I had anticipated that there would be such a request today. So I would make that objection, should such a request be made.

Mr. BAKER. I thank the Senator.

CONSTITUTIONAL AMENDMENT ON ABORTION

The Senate continued with the consideration of Senate Joint Resolution 3.

Mr. PACKWOOD. Mr. President, in yielding to the Senator from Massachusetts, I call attention to the fact that six Senators want to speak between now and 3 p.m. Senator BAUCUS will speak next. I would appreciate it if the Senator from Massachusetts would keep that in mind.

Mr. KENNEDY. Mr. President, I oppose the Hatch constitutional amendment on abortion. As we debate this issue again in the Senate, I am struck by an unusual irony. In recent years, a number of our colleagues—on the Senate floor, in committee meetings, and in the media—have regularly denounced excessive intrusion by Government into the lives of citizens. These colleagues have urged us to get Government off people's backs; they have extolled the virtues of less Government and greater individual liberty.

But as the years have passed, we have come to understand the true import of these slogans. To the reactionaries, less Government means more liberty for polluters to poison the air and water and despoil the wilderness. Getting Government off people's backs means tax cuts that primarily benefit the wealthiest individuals and corporations. Greater freedom means opposition to a constitutional guarantee of equal rights for women. To the reactionaries, less Government means fewer programs to help the most vulnerable in society—the elderly, the poor, the sick, the disabled, the unemployed, and the female heads of households who comprise an ever larger segment of our Nation's needy.

To paraphrase a famous aphorism, the proponents of this narrow view of liberty believe that the rich as well as the poor should be free to sleep under bridges, to beg in the streets, and to stand in unemployment lines.

These advocates of reaction disdain one of the greatest and most progressive principles ever established, not only in American history but in the long history of human freedom—the individual's right to privacy. As Justice Louis Brandeis wrote a half century ago:

> The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness . . . they sought to protect Americans in their beliefs, their thoughts, their emotions and their sensations.
>
> They conferred, as against the government, the right to be let alone, the most comprehensive of rights and the right most valued by civilized men. To protect that right, every unjustifiable intrusion by the government upon the privacy of the individual, whatever the means employed, must be deemed a violation of this [Constitution].

The self-proclaimed opponents of less Government interference now stand before the Senate with a proposal that would increase the involvement of Government in the most private of all decisions. They talk of taking Government off people's backs—and then fight to put Government into people's bedrooms.

Where our Constitution affirms diversity of thought and freedom of belief, they seek conformity to a single vision of America. They are now demanding a Government-imposed regime of intolerance toward those whose religious creed may differ from theirs, and whose gender happens not to be male.

I know there are many sincere people of deep conviction who seek to outlaw abortion—but given my conception of America as a pluralistic society, I cannot in good conscience join them.

The issue before us touches some of the most deeply personal questions in individual life. I do not believe that any woman makes the decision lightly whether to have an abortion. This is an issue, perhaps above all others, on which decent people hold deep and widely differing beliefs and values. Men and women, lay persons and clerics, have conscientiously reached their own decisions as to when, if ever, abortion is permissible.

The question we face today is whether the U.S. Constitution should be amended to decide this intensely private decision for all Americans. I am convinced that the issue of abortion cannot appropriately or effectively be resolved by legislative action or by amendment of the Constitution. It is, and it must remain, a matter of individual conscience.

Therefore, I do not believe that Senate Joint Resolution 3, or any constitutional amendment or any statute, can settle the abortion controversy. In fact, instead of resolving the issue on the merits, Senate Joint Resolution 3 will only make the present situation worse, by authorizing Congress and the States to legislate future answers by statute. The result could well be endless controversy about this profoundly divisive issue—with 50 different solutions, 1 for every State, and perhaps with each solution changing repeatedly in response to the changing power of different pressure groups.

Finally, it is disturbing that so many proponents of this amendment have voted consistently against the help and support that can mean fewer abortions. They have cut funds for maternal and child health programs that prevent fetal disease and help a mother carry a child to term. They have cut immunization programs that protect against crippling birth defects. They have opposed education and job training programs that give the poor and disadvantaged an alternative to despair and dependency. They have sought to abolish programs that offer family planning services for those who wish them. In the name of less Government, they turn their back on proven alternatives to abortion, and then seek to resolve the problem by the most intrusive kind of Government of all.

I am proud to have stood for Government when it has brought better health care to parents and children, better education, better jobs, and a better future. I have sought less Government and more free enterprise when that means greater efficiency and the end of outworn programs. And I am proud to have stood for less Government when it means the defense of our priceless freedoms—of thought and religion, of speech and press, and

assembly. Congress will never resolve the issue of abortion by Government fiat. But by defeating this amendment, Congress can begin to move beyond this issue and work to enhance American life in ways that are effectively and properly within the competence and scope of Government.

Mr. PACKWOOD. Mr. President, I thank my distinguished colleague from Massachusetts for support of this issue.

I now yield to the Senator from Montana.

The PRESIDING OFFICER. The Senator from Montana is recognized.

Mr. BAUCUS. Mr. President, I first wish to commend the Senator from Oregon for his efforts on this issue. I also wish to thank Senator HATCH from Utah and Senator EAGLETON from Missouri for the way in which they are presenting this matter to the Senate.

Mr. President, as we all know, other Senators in previous sessions of Congress have recommended that we address this issue differently. They urged Congress to end run the constitutional amendment process. In so doing they urged us to pass statutes that would restrict the jurisdiction of the U.S. Supreme Court not only on this issue but also on a number of other significant matters.

At that time I strongly opposed those court-stripping proposals. I thought they were wrong then; I think they are wrong now. In my view, they are clearly unconstitutional.

Mr. President, courtstripping is not the issue before us today. Fortunately, Senator HATCH and Senator EAGLETON are not trying to end run the process. Instead, they are, to their credit, addressing this issue frontally, in a straightforward manner, and I commend them for so doing.

Mr. President, in these busy and difficult times, it is important that we not lose sight of the paramount status of our Constitution. The U.S. Constitution is the single most important document in this country. It embodies the supreme law of the land. It establishes and circumscribes the powers of the Government. It defines and protects the fundamental rights and liberties of American citizens. Each principle articulated in the Constitution has a profound effect on our Government, our society, and our individual lives.

Changing the Constitution is therefore a task that should be undertaken only with reluctance and only with a complete understanding of the consequences of such action. The potential impact of new constitutional principles should be clear. And they must be consistent with the basic notions of societal justice and individual freedom upon which this Nation was founded.

In my judgment, Senate Joint Resolution 3 does not meet either of these criteria.

The lack of clarity in Senate Joint Resolution 3 is alarming. The language of the proposal does not resolve significant policy questions that should be addressed. For instance, what effect does the absence of the right to abortion have on other fundamental rights that are not mentioned, like the right to due process, the right to equal protection of the laws, and the right to privacy? Are these rights left intact or are they too meant to be circumscribed? Under the proposed amendment, are the States given free rein to outlaw abortions altogether? May different States have different standards regulating the availability of abortions? And what can and should be the role of the Federal Government in dealing with the issue?

None of these questions is addressed or answered by the Hatch/Eagleton proposal. It offers no clear and overriding principle of constitutional proportions to give guidance to today's lawmakers or to future generations. In my view, our Constitution should not become a repository for vague and imprecise statements of nonrights, such as those set forth in Senate Joint Resolution 3.

While I am deeply troubled by the lack of clarity, I am even more troubled by the inconsistency of this amendment with the fundamental principles and purpose of our Constitution. The Constitution was written and ratified largely to prevent Government from unnecessarily interfering with personal freedoms. Amendments to the Constitution have historically been designed to give greater protection to these freedoms and clear articulation to individual rights.

Senate Joint Resolution 3 would accomplish just the opposite. Instead of enhancing or protecting basic liberties, it eradicates a right that has previously been recognized. Instead of keeping the Government at arm's length from our private lives, it invites governmental intrusion into the most personal of private decisions.

We, in Congress, have a solemn responsibility to protect and preserve the Constitution, the constitutional tradition, and constitutional rights of all Americans. In my view, the adoption of the Hatch/Eagleton amendment is incompatible with this responsibility.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATCH. Mr. President, will the distinguished Senator from Oregon yield to me?

Mr. PACKWOOD. I Yield.

The PRESIDING OFFICER. Time is yielded by the Senator from Oregon to the Senator from Utah.

Mr. HATCH. Mr. President, the moral contradictions of legalized abortion become greater, not less, with each passing year. In our Nation well over 100,000 abortions a year are performed after the first trimester. Yet in modern neonatal units, younger and younger children are surviving.

I ask unanimous consent to have printed in the RECORD two recent press accounts of babies born, respectively, 16 and 18 weeks prematurely, who survived.

There being no objection, the press accounts were ordered to be printed in the RECORD, as follows:

[The Houston Post, June 9, 1983]

SMALLEST HUMAN ALIVE BREATHING ON HER OWN

VICTORIA.—A four-month premature infant—considered the smallest human being alive in the world—rested peacefully in a hospital incubator Wednesday breathing on her own, a doctor said.

"She is the youngest human alive in the world," said Dr. Wadieh El-Mahmoudi, the pediatrician for 14-ounce Melissa Maurer, born 4 months prematurely on June 1.

"They say in the Guinness Book (of World Records) that in England they had one baby born at 10 ounces, 14 years ago. Now, she (Melissa) is the youngest and the smallest human being alive in the whole world," he said.

The mother, Sandy Maurer, is optimistic her daughter will survive.

"I think she's going to make it. She's my miracle baby," Maurer said.

The tiny blond infant has breathed on her own since her birth. Nurses in the neonatal intensive care unit at the Citizens Memorial Hospital in Victoria, 50 miles south of Houston, said they keep a "watchful eye on her all the time."

Nurses have propped pillows around her to minimize any movements to prevent her from burning calories that could cause her to lose precious weight.

"The only thing near her is a bear that makes fetal noises like the womb," said one nurse.

"So far there are no complications that usually happen with prematurity," the doctor said.

Although El-Mahmoudi agrees the child is a miracle, he gives her only a 20 percent chance of surviving.

"As every day passes, I'm more hopeful. We go hour by hour. The more time passes, the better her chances are of survival," he said.

"So far she appears completely normal, just premature," the doctor said.

Maurer told doctors she was unaware she was pregnant until "several days prior to delivery," El-Mahmoudi said.

"She had two tests that were negative, and the third test was positive. When she knew she was pregnant . . . a couple of days later, she went into labor," the doctor said.

The tiny infant weighed one pound, two ounces at birth, but quickly dropped down to 12 ounces because she could not be fed.

Doctors inserted a tube through her navel to feed her a mixture of proteins, dextrose, and vitamins to keep her alive.

[From the Washington Post, Mar. 31, 1983]

INFANT BORN 18 WEEKS PREMATURELY AT 17 OUNCES SURVIVES AFTER 7 WEEKS

(By Jay Mathews)

LOS ANGELES, March 30.—A 1 pound, 1 ounce infant born 18 weeks prematurely has survived for almost two months in San Diego. She may be the smallest baby known to have survived such a premature birth.

The doctor caring for Ernestine Hudgins, who now weighs 1 pound, 14 ounces, said she has a 95 percent chance of survival.

"She is very special," said Dr. Morton L. Cohen, medical director of the neonatal unit at San Diego's Children's Hospital. "Her lungs should not have been developed at all, and her brain should not have been developed to the point where it could tell her to breathe."

The unprecedented survival of the child, born to San Diego housekeepers Gloria Patterson, 27, and Ernest Hudgins, 24, is expected to fuel controversy between pro-abortion and anti-abortion groups.

Ernestine was born after only 22 weeks of gestation. This is six weeks earlier than the 28-week point of "viability" suggested by the U.S. Supreme Court as the stage when the government might begin to regulate abortions.

"Viability is only dependent on the extent of the sophistication of the medical equipment available to keep these kids alive, and this goes to prove it," said Dan Donehey, spokesman for the National Right to Life Committee.

According to a spokesman for the American College of Obstetricians and Gynecologists, "There is no unambiguous documentation that an infant born weighing less than 601 grams at a gestational age of 24 weeks or less has ever survived." Ernestine, however, weighed 484 grams at birth, and both her mother and Cohen said today they were certain of the gestational age of 22 weeks.

Cohen cautioned against using Ernestine's case to justify massive efforts to save other children born prematurely. A baby born 17 weeks prematurely and also weighing pound, 1 ounce survived in San Diego in 1978, Cohen said, but remains severely retarded.

Cohen said Ernestine at birth in most ways fit the profile of an infant her age, showing, for instance, no calcification in her bones since that process begins at about 25 weeks.

However, her lungs were unusually well developed. He said she has developed chronic lung damage characteristic of premature babies, but the damage is considered minor. She is being kept on a respirator and is being fed high-calorie formula through a tube in her stomach.

Cohen said she would remain in intensive care for at least two more months, but so far gave every sign of developing into a normal child.

Patterson, Ernestine's mother, said in an interview that she was in pain the day before her baby's Feb. 8 birth and went to Sharp Hospital. The doctor there told her to expect a miscarriage, but she insisted on staying at the hospital. The child was born at 8:30 the next night.

The baby was transferred to Children's Hospital the next day, and doctors told her the chances of survival were not good.

"But she's still here," Patterson said, "and I am real happy."

BABY, DELIVERED AFTER MOTHER WAS LEGALLY DEAD, IS HEALTHY

SAN FRANCISCO, March 30.—A healthy 3-pound boy was born two months after his mother was legally dead, doctors at the University of California hospital said today.

The baby was nine weeks premature and suffered from a minor respiratory problem, but was otherwise healthy with "excellent" chances of survival, a doctor said.

After the cesarean delivery, the mother was removed from life-support systems and immediately stopped breathing.

A hospital spokesman said the mother was in her mid-20s and "very healthy" until a brain seizure Jan. 24. When her brain ceased to function, the woman was declared legally dead. Her husband and parents elected to keep her on life support until the baby's birth.

At the time of the mother's seizure, the fetus weighed 1 pound.

"The (Senate Judiciary) Committee observes that no significant legal barriers of any kind whatsoever exist today in the United States for a woman to obtain an abortion for any reason during any stage of her pregnancy."—Official report of the U.S. Senate Judiciary Committee on the Hatch Amendment, June, 1982.

EVERY CHILD A WANTED CHILD

Mr. HATCH. Mr. President, advocates of legal abortion often refer to unwanted children. The implication is that the value of a human being is somehow determined by others. I categorically repudiate this type of thinking for the following reasons.

Our psychological society has elevated the idea of wantedness to a primary condition for human happiness. As such, it has become a so-called social good that can justify almost anything. When applied to inanimate objects, those objects become prime candidates for the refuse pile. When applied to unborn children, they become candidates for abortion. At some point in human history, every brutalized minority has felt the sting of this word. Its full import was last witnessed in the slaughter of 6 million Jews. Those who bear its sign are marked for death.

Before blindly accepting this label, let us first consider some facts. To begin with, there is no correlation between an unwanted pregnancy and not loving the baby after birth. The reasons for this are simple and need no complicated academic explanation. A certain amount of anxiety and fear are common companions of pregnant women. Even under the best of circumstances, there is emotional upheaval and mixed feelings about a pregnancy. Feelings of depression during the early stages of pregnancy are not uncommon. What is uncommon, however, is to sail through a pregnancy with absolutely no feelings of inadequacy.

What should be carefully borne in mind is that how a woman may feel early in her pregnancy is not how she will usually feel late in her pregnancy. Consider the following information:

After studying a representative sample of 9,797 mothers who conceived in late 1973, the National Center for Health Statistics (HEW) found that one-fifth of the subsequent births were actually unwanted at the time of conception. Upon analyzing these unwanted pregnancies, the NCHA concluded that:

Many unplanned or undesired pregnancies result in children who are cherished. It is incorrect to conclude that "unwanted births" are the same as "unwanted children." [1]

A 1967 Danish study of 180 women whose applications for abortion were denied, concluded that most were satisfied with having the child. Several of those who did not had severe psychological problems.[2]

As long as 30 years ago, the divergence of attitudes during and after pregnancy were noted. M. Zemlick and R. Watson demonstrated a spontaneous change from prepartum to postpartum acceptance of their children by a group of mothers.[3]

The argument runs that wantedness somehow produces happier or more successful people. While no objective measure of happiness has yet been devised, one thing is certain: human achievement is unrelated to how wanted a person may have been. In one study financed by Planned Parenthood no direct evidence was found linking unwanted conceptions with undesirable effects on either parents or children.

This writer and others found it somewhat embarrassing to have to confess that there was little clear evidence that unwanted conceptions were in a worse light than other conceptions." [4]

Another researcher found no relationship between unplanned pregnancies and newborn deviant behavior.[5] In fact, no convincing body of scholarship has yet emerged which shows a direct causal relationship between happiness and achievement in later life. Success is not the exclusive offspring of happy children.

And really, what does wantedness mean? Unwanted by whom? Every infertile couple seeking adoption would dispute the idea that an unborn child could be unwanted. Thousands of such couples anxiously await an adoptable child and most are never satisfied. The demand for adoptable children far exceeds the supply, as all studies indicate. Emily Gardner of the Child Welfare League of America says:

In this country we have so many couples wanting to adopt infants or children as close to infants as possible that they wait as long as five or six years for a child.[6]

Footnotes at end of article.

I submit, Mr. President, that the question is not one of compelling a women to have a child who she does not want. A pregnant woman already has a child—the question is, Will she permit that child's life to be snuffed out, for any reason, or for no reason?

PERSONALLY OPPOSED

Mr. President, one of the most effective arguments that has been used against legislation to restrict abortion is the now familiar phrase: "I am personally opposed to abortion, but I do not believe Government should legislate in this area." In no other matter of national concern does the personally opposed answer seem such an obligatory part of a public officeholder's response. Why do we find so few elected officials who are willing to stand up and say:

I think abortion is very good, a necessary and proper adjunct to the good life in America and I will not rest until all have an equal opportunity to avail themselves of abortion services?

Perhaps abortion has so few avowed partisans and choice has so many because of what has been called the ambivalence of abortion. Few of us want to think too deeply about the impact of the abortion decision on our own families, on our own lives. We say we are personally opposed. Does that mean that we demand to be informed before our minor daughters can have abortions so that we can guide and support them and, perhaps, make our personal opposition meaningful? No. Being personally opposed cannot mean that. The Supreme Court does not allow for the personal opposition of parents to infringe upon the privacy rights of their daughters.

Regardless of the outcome of this debate, regardless of the decision of this body on the matter of this constitutional amendment, I believe that a great public good is being done here. We are clarifying the discussion. I believe that after this exploration of the whole subject of abortion, we will no longer hear the argument: "I am personally opposed, but I do not think the Government should legislate on abortion." I think this is because the vote on a constitutional amendment will divide this body. On one side will be those who sincerely believe that abortion is a positive good. They will in the future seek to defend abortion, to extend abortion, and to appropriate more taxpayer funds for the support of abortion. On the other side will be those of us who have come to see abortion as a great personal and political wrong. We will view it as a deep social conflict that cannot be resolved by an act of raw judicial power. If we are even to approach a desperately needed resolution of this problem, we will have to recognize that the public policy on abortion cannot be imposed by seven unelected judges on the American people. The elected representatives of the people must play a role in the achievement of a national consensus.

After this historic debate, those who have long said they are personally opposed to abortion will be asked not only how they have personally opposed it, but, much more importantly, why they are personally opposed to it. What is it about abortion that anyone could have any reservations about it at all? Can there be any other reason than the still quiet voice that tells us it is a human life that is being taken in every abortion? An irreplaceable, unreproducible human life? And once we give our attention to that small, almost embryonic conviction, how can we ever again trivialize the abortion issue by saying we are only personally opposed to a national policy that allows 1½ million human lives to be taken each year?

IMPOSING OUR BELIEFS

Mr. President, the question of whether some religious groups would use the processes of democracy to try to impose their own beliefs on others has been a lively one since the ratification of our Constitution. From the beginning, we decided that there would be no established religion. That decision was not half so difficult as the determination of what constituted the "free exercise of religion." Thomas Jefferson perhaps said it best when he argued in behalf of religious tolerance. "Whether my neighbor believes in one god or twenty, his belief takes no coin from my pocket." Quite true. And on this pragmatic basis we have tried to reach a pragmatic consensus on religious freedom.

But religious belief and religious practice are essentially different. We have tried to strike a balance with respect to religious practice that is based on religious belief. At times, the Government has compelled parents to send their children to school or to have them inoculated against disease despite the tenets of their faith. In other cases, this Government has come down on the side of pacifist sects by exempting their members from the full rigors of the military draft; similarly, the Government has supported the right of parents to choose a religious education for their children.

But suppose Mr. Jefferson's neighbor did believe in 20 gods, and suppose 1 of those 20 gods required the ritual sacrifice of the neighbor's first-born child? We would not expect even the tolerant "Sage of Monticello" to pretend that, since his own pocket was still full of coins, the religious practice of his neighbor was a matter of personal and public indifference to him. Here we, with Jefferson, would recognize a different issue.

Recently, an extravagant claim for unhampered religious practice was made in a Federal court by the Religious Coalition for Abortion Rights. This organization maintained that for the Federal Government to deny taxpayer funds for the performance of elective abortions constituted an abridgement of their religious freedom. (Check your pockets, Mr. Jefferson.)

Clearly, the religious practices of some can have a profound impact—financial and social—on the entire community. So it is that we must be very careful to avoid, wherever we can, imposing offensive practices on anyone. Just as clearly, however, we cannot avoid the responsibility to legislate merely because some of those affected argue that we are trying to impose our religious beliefs on them. The fact that many of us attend churches and synagogues where it is taught that murder and theft are wrong in no way makes constitutionally suspect the statutes we pass forbidding murder and theft as a matter of public policy.

Another questionable argument for not legislating about abortion is the one we often hear about consensus. Since there is no consensus about when human life begins, it is claimed, Government should not attempt to legislate protection of the unborn child. That was the position of the Supreme Court in the case of Roe against Wade. But that argument falls of its own weight. The question has never been when human life begins. There is no question. As the proabortion journal, California Medicine said in a now famous editorial of 1970:

[It is a] scientific fact which everyone really knows . . . that human life begins at conception and continues, whether intra- or extra-uterine until death.

The question is what value do we place on unborn human life.

"No consensus, no policy"—certainly we would not accept this argument in other areas of our concern. What is a Senate debate other than an attempt to come to a consensus? And while it may be easier to let unelected Federal judges decide all consequential questions of public policy, they certainly have not succeeded in building a national consensus on this issue.

The very fact that we are now debating a constitutional amendment on abortion indicates that the American people have not ratified the Supreme Court's 1973 decision.

ABORTION AND FAMILY LAW

Mr. President, Roe against Wade and its progeny have had a drastic and pernicious effect on family relationships in America, particularly parent-child relationships. Of these progeny, one of the most extreme was Planned Parenthood of Central Missouri against Danforth, handed down in 1976.

At issue was a law requiring for abortion, in most cases, the written consent of a woman's spouse or the written consent of one parent of any unmarried woman under the age of 18.

The Supreme Court struck down both these provisions for the astonishing reason that since the State had no power, under Roe against Wade, to regulate first-trimester abortions, the State could not "delegate" such power to husbands or parents.

I find outrageous the notion that family members have no rights with respect to one another except those rights granted to them by the State. Such an idea turns upside down our Nation's traditional view of the family as the fundamental building block of American society, and of Government as the servant rather than the master of its citizens.

As Justice White protested in his dissent to Danforth:

> The state is not . . . delegating to the husband the power to vindicate the State's interest in the future life of the fetus. It is instead recognizing that the husband has an interest of his own in the life of the fetus which should not be extinguished by the unilateral decision of the wife.

Professor Vincent Rue of UCLA, in his testimony before the Constitution Subcommittee on November 4, 1981, noted some devastating emotional effects that abortion can have on a man who has protective feelings toward both the woman and the child which he has conceived with her. Dr. Rue referred to a study by A. Shostak which noted that:

> A sizable minority of males find their abortion experience more frustrating, trying, and emotionally costly than public and academic neglect of this subject would suggest. Shostak also noted that three out of four male partner respondents stated they had a difficult time with the abortion experience, that most relationships did not survive the abortion stresses, and that a sizable minority reported persistent day and night dreams about the child-that-never-was, and considerable guilt, remorse, and sadness.

Professor Rue adds that these finding are corroborated by research by Jaffe, Luker, Luscutoff, and Elms, and Zorabedian. Case histories are also noted in books such as Linda Bird Francke's "The Ambivalence of Abortion" and Magda Denes' "In Necessity and Sorrow."

The emotional pain of abortion can be even more pronounced in the case of sensitive adolescent girls. In Danforth, the Court recognized the State's "somewhat broader authority to regulate the activities of children than of adults."

Nevertheless, weighing the State's interests in the safeguarding of the family unit and of parental authority against the right of privacy of the "competent minor mature enough to have become pregnant," the Court found that it could not conclude that:

> Providing a parent with absolute power to override a determination, made by the physician and his minor patient, to terminate the patient's pregnancy will serve to strengthen the family unit.

Mr. President, I sincerely doubt that by giving their teenage daughter the right to abort her child against the will of her parents, the Court has strengthened the family unit.

Three years after ruling in Danforth that States may not require parental consent for abortions on unmarried minors, the Supreme Court again addressed the issue in Bellotti against Baird. In this case, the Court upheld the State's right to require parental consent—but only if a mechanism is established whereby a judge may authorize an abortion for a minor without any parental involvement whatever. I would like to quote from that decision:

> We conclude, therefore, that under state regulation such as that undertaken by Massachusetts, every minor must have the opportunity—if she so desires—to go directly to a court without first consulting or notifying her parents. If she satisfies the court that she is mature and well-informed enough to make intelligently the abortion decision on her own, the court must authorize her to act without parental consultation or consent. If she fails to satisfy the court that she is competent to make this decision independently, she must be permitted to show that an abortion nevertheless would be in her best interest. If the court is persuaded that it is, the court must authorize the abortion. . . . If, all things considered, the court determines that an abortion is in the minor's best interests, she is entitled to court authorization without any parental involvement.

Earlier this month, the Court declared unconstitutional an Akron, Ohio, ordinance which contained the presumption that girls under age 15 are not mature and thus must obtain parental or judicial consent for abortion.

Thus, parents, who are ordinarily asked to sign their consent for a daughter's school field trips, for surgical care, perhaps even to have her ears pierced, may not even be notified as an abortionist tampers with her delicate reproductive organs. Although these same parents must sign for minors who drive, minors who purchase firearms, minors who marry, although they must accept responsibility for this minor's financial obligations, and despite the fact that common law has long recognized the parents' right as well as responsibility to nurture and to guide and to educate, at the very hour when she may need their love more than ever they are ostracized by the edicts of the Court.

I would like to remind my colleagues that I am speaking here of young teenage girls—some as young as 11 or 12 years old. Can we honestly believe that a judge who has never seen the young girl before, and will never see her again; who knows nothing about her other than what she volunteers in support of her request for an abortion, often after having been coached by an abortion counselor who has a financial ideological stake in her decision to abort; can we honestly say that this judge will make a decision which is better for this young girl than her parents, who have known and cared for her all her life and who will continue to do so for the rest of their lives? Perhaps the proabortion social planners feel that these decisions are best made by supposedly impartial judges and counselors. But I happen to feel, and I truly believe that the vast majority of American parents would agree with me, that parents are the best source of protection and guidance a young girl has when facing what is perhaps the greatest trauma and most difficult decision of her life. How many times did we, or our children, strenuously resist a parental decision, only to come back months or even years later to thank them for protecting us from making enormous mistakes?

What could be more ridiculous than to say to parents, who conceived, bore (in the case of her mother), nurtured, educated, guided, loved this child for all of her life, that suddenly their right to protect her from a decision which could literally result in her death, and will almost certainly affect her in her psychological being and her future relationships, that this right dissolves in the fact of the private right to kill another human being?

Justice Stevens, himself a member of the proabortion majority in Roe against Wade, commented, in his dissent to Danforth:

> Even doctors are not omniscient; specialists in performing abortions may incorrectly conclude that the immediate advantages of the procedure outweigh the disadvantages which a parent could evaluate in better perspective.

Just 2 years ago, Mr. President, the Supreme Court addressed the issue of whether a State could even require that parents simply be notified if their underage daughter intended to have an abortion. In the case of H.L. against Matheson, the Court upheld the Utah law which required that an abortionist "notify, if possible" the minor girl's parents or guardian before performing the abortion. The Court cautioned, however, that its consideration was limited to the effect of the law upon the circumstances presented in the particular case before it: An un-

emancipated minor who was living with and financially dependent upon her parents and had not made a claim or showing as to her maturity or relations with her parents. The Court has not ruled upon the constitutionality of a notification requirement when applied to minors in other circumstances. And the Court reaffirmed in Matheson that "a State may not constitutionally legislate a blanket, unreviewable power of parents to veto their daughter's abortion."

Mr. President, all of these decisions spring from one common root: The absolute right to abortion created by the Supreme Court in Roe against Wade. It seems strange to me that this sweeping right went unnoticed for almost two centuries. But time and time again, in subsequent decisions the Court has stressed that Roe's right of a women (or girl) to abort her unborn child is so fundamental that it overrides what have been among the most sacred rights in our society: The rights of husbands to make decisions about their children in conjunction with their wives, the rights of parents to guide and care for their children, the rights of children to be protected by their parents.

The amendment before us today would erase that Court-created right to abortion, and with it would vanish the distortions of family law which have multipled in its wake.

Mr. President, we have not discussed adequately during this debate the health risks of abortion to women. I have found a very concise and useful compilation of those risks in an affidavit submitted to the Federal District Court for Northern Illinois in a case involving a State abortion-regulation law.

I ask unanimous consent that the affidavit of Dr. Richard G. Moutvic be printed in the RECORD.

There being no objection, the affidavit was ordered to be printed in the RECORD, as follows:

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT OF RICHARD G. MOUTVIC, M.D., PROFESSOR, LOYOLA UNIVERSITY, STRITCH SCHOOL OF MEDICINE

I, Richard G. Moutvic, M.D., do hereby state under oath and upon personal and professional knowledge as follows:

1. I am a Board certified specialist in Obstetrics and Gynecology. My practice is in the State of Illinois. I was twice Chairman of the Department of Obstetrics and Gynecology at St. James Hospital, Chicago Heights, Ill. (1966-67, 1976-78). I am currently Vice-President and President-Elect of the medical staff at St. James. A copy of my curriculum vitae is included with this affidavit and made a part hereof.

2. I have reviewed S.B. 47, the Illinois Abortion Law of 1975, enacted as amended, on October 30, 1979 (S.H.A. Ill. ch. 38 §§ 81-21 to 81-35), and declare that if called to testify in this action, I will state as follows:

3. It is my professional medical opinion that the abortion procedure, as properly performed by licensed medical practitioners employing methodology approved by prevailing medical authority and in general use in the State of Illinois, presents a greater than *de minimis*, indeed rather significant, risk to the pregnant woman's future procreative capacity. The abortion techniques in use in Illinois consist of the following:

a. Curettage.

(1) Suction aspiration—the cervix is dilated, an aspirator introduced into the uterus, and a powerful suction produced. The suction pulls the conceptus from the uterine wall.

(2) Dilation and curetage (D&C)—the cervix is dilated and a curette (looped steel knife) is entered into the uterus. The practitioner then scrapes the conceptus from the uterine wall.

(3) Dilatation and evacuation (D&E)— the cervix is dilated and the uterine contents removed either with curette, suction, or ovum forceps, or some combination of these. D&E is distinguished from other curettage techniques because it is employed at a later stage of pregnancy (after the first trimester) and because hardening of fetal bones and increased fetal size require progressive dismemberment of the fetus in order to facilitate the extraction of fetal parts (Reference 14).

b. Instillation.

(1) Saline amino-infusion—a hypodermic needle is entered into the amniotic sac via the woman's abdomen. Fluid in the amniotic sac is removed and replaced with a hypertonic (highly concentrated) saline solution, which induces the death and expulsion of the fetus (Reference 20).

(2) Prostaglandin instillation—the chemical substance prostaglandin is introduced, usually into the amniotic sac, in order to promote labor and delivery.

c. Hysterotomy—intra-abdominal surgery is employed to open the uterus and remove the developing child, as in a Caesarian section.

d. Hysterectomy—pregnancy termination may also be effected by removal of the uterus. Since this operation sterilizes the woman, I need not further discuss the possible impact of this operation on the woman's reproductive capacity.

4. Each and all of these procedures involves a significant risk to the woman's procreative potential. The threat posed by induced abortion takes two main forms:

a. The procedure may injure the woman in such a manner as to impair her ability to successfully beget and bear children, either by causing:

(1) Subsequent sterility or sexual dysfunction;

(2) Subsequent incapacity to maintain a proper pregnancy, as evidenced by an increased incidence of ectopic (tubal) pregnancy, and of miscarriage/spontaneous abortion;

(3) Subsequent incapacity to deliver a healtny baby at term, as evidenced by increases in:

(a) Stillbirth/perinatal mortality,

(b) Prematurity,

(c) Iso-immunization, and

(d) Delivery complications.

b. The procedure may cause the subsequent death of the woman.

5. The most common threat induced abortion poses to a woman's reproductive capacity arises from complication which affects the incidence and outcome of future pregnancies. Some American studies claim that induced abortion does not contribute to subsequent reproductive difficulties (References 1, 2). But foreign studies which are based upon longer and more extensive experience, and which employ a vastly superior reporting system, establish conclusively the fact that abortion by dilatation and evacuation of the uterus, by whatever method, is conducive of a large variety of procreational impairments (References 3-8). More recent American studies are beginning to reflect this conclusion (References 9-13), and the advocacy of second trimester dilatation and evacuation (References 14, 15) with its "more frequent and more severe" complications (Reference 27), should hasten this trend and worsen the risks for American women.

a. Studies indicate that induced abortion increases the incidence of secondary sterility (sterility subsequent to previous pregnancy) (References 3, 5). It is a statistical fact that some women only become pregnant once. The pregnancy a woman aborts may be her last. Sterility would also result when complications necessitated hysterectomy (removal of the uterus). More frequently reproduction would be impaired and possibly prevented because of blockage in the Fallopian tubes (Reference 16). The damage could also result from either scar tissue, uterine adhesion, or infection following induced abortion. One study concluded that 46% of all cases of secondary infertility may be attributed to prior induced abortions (Reference 5).

Procreative impairment need not result in total sterility (Reference 16). More common conditions, such as partial tubal blockage, will reduce a woman's procreative capacity. A similar effect arises from disorders of the menstrual cycle, which have been associated with induced abortion (Reference 3).

b. Impairment of sexual functioning may also result from induced abortion (Reference 3), brought about by chronic or latent inflammatory condition of the genital organs or by functional sexual disorders or related psychiatric sequelae.

c. Induced abortion has been associated with an increased incidence of ectopic pregnancy (References 4, 7) and placenta previa (implantation over or near the cervix) (References 7, 16). Damage done by prior abortion increases the likelihood that the conceptus will not implant properly (i.e., on the uterine wall) (Reference 3). One study concluded that 45% of all ectopic pregnancies may be the consequence of prior induced abortion (Reference 4).

d. Spontaneous abortion occurs more frequently in women who have had one or more previous abortions (References 6, 7, 9, 16, 17). This is largely due to cervical incompetence (References 7, 16) brought about by the artificial cervical dilatation, laceration, or infection (References 13, 17), but may also result from damage to the uterine wall impairing implantation or placentation (Reference 9) and causing placenta abruptio (premature separation of placenta from uterus) (References 7, 16).

e. An increased incidence of stillbirth occurs among women with past abortion (References 3, 6). This may represent a malfunctioning of the placenta secondary to damage or scarring of the uterine wall.

f. Other studies show an increased probability of premature birth subsequent to induced abortion (References 7, 17, 18). Prematurity threatens the life and health of the infant. Indeed, induced abortion has been associated with a subsequently increased likelihood of neonatal mortality (References 7, 16-18). Those infants which survive a premature birth faced increased

risks of physical or mental handicap (Reference 3).

g. Induced abortion also tends to increase the chance of iso-immunization (Rh or ABO) (References 7, 16, 19). Antibodies in the maternal bloodstream can cross the placenta and attack fetal red blood cells. Before this danger can be realized, however, the woman must develop the appropriate antibodies. Since any obstetric event entails a high risk of the sensitization which will produce these antibodies, the woman has the greatest chance of avoiding iso-immunization with her first pregnancy. Termination of this first pregnancy, be it through birth, miscarriage, or induced abortion, will multiply the risk to future offspring.

h. Finally, abortion increases the likelihood of difficulties in later deliveries. Extended duration of labor, an unusually adherent placenta, and extensive hemorrhaging all have been associated with past abortion (Reference 16). The abortion procedure damages tissues and muscles and thereby impairs the delivery process. These difficulties subject the child to increased risks of death or injury.

6. Induced abortion, like any surgical procedure, involves a definite risk to the life of the patient. This risk stems from a variety of factors:

a. Hemorrhage—The blood loss involved in surgery presents both a direct threat (death from blood loss) and an indirect threat (death from complications associated with transfusion, i.e., hepatitis, incorrect blood type, etc.) to the life of the surgical subject.

b. Infection—Surgery, by its very nature, exposes the subject's body to a substantially increased likelihood of infection. Since the resultant sepsis is often internal, it may not be discovered until serious complications have developed.

c. Embolus—Pulmonary thromboembolism (blood clots) accounted for 16.3% of the deaths following first trimester curettage procedures, according to the Centers for Disease Control (CDC). Predispositional factors included obesity, previous thrombophlebitis, use of oral contraceptives, and type A blood (Reference 10).

7. Aside from the standard surgical risks, the specific procedures involved with induced abortion present additional risks of maternal death.

a. The abortion practitioner performs essentially blind surgery (with the exception of the hysterotomy procedure). The woman aborted consequently faces heightened risks.

(1) The curettage methods (suction curettage, dilatation and curettage, dilatation and evacuation) used for first- and second-trimester abortions involve the trans-cervical and intra-uterine manipulation of various surgical instruments (suction canulae, sharp curettes, ovum forcepts, etc.). Since the practitioner cannot observe these manipulations, he must rely solely upon his sense of touch. Thus these procedures involve the ever-present risk of uterine perforation (Reference 13), a risk which persists despite the experience (References 8, 12) or care (Reference 16) of the operator. The rate of uterine perforation for suction curettage (the safest curettage procedure) may range as high as 21 per 100 percedures (Reference 10). Perforation, aside from being a dangerous complication in itself for both the woman and her future offspring (Reference 17), can be followed by damage to other organs. Watson, for example, has documented the urologic complications of induced abortion (Reference 20). Acute renal failure, massive sepsis, or shock, any of which may be fatal, can result from uterine perforation.

The curettage methods also involve heightened risks of hemorrhage and infection (Reference 13). The uterus is especially soft and blood-rich during pregnancy. These characteristics make it highly susceptible to bleeding when undergoing the physical trauma of curettage abortion. Moreover, cervical perforation during dilatation "continues to occur" (Reference 21) and may cause death through laceration of the uterine artery (Reference 22).

Normally sterile, the uterus must face a septic assault upon the introduction of foreign instruments during an abortion. Since the trauma weakens the normally powerful antiseptic capacities of the uterus, infection becomes an especially likely sequela. Furthermore, if the abortion is incomplete, residual feto-placental tissue provides a "fertile field for bacterial invasion" (Reference 12). One study found postabortal infection and incomplete abortion to bring about 61% of suction abortion-related hospitalizations (Reference 11).

All of these risks are multipled for second trimester curettage (D&E). "Complications from surgical evacuation techniques performed after 12 weeks' gestation are similar to those of curettage procedures performed at earlier gestational ages; however, the complications are more frequent and more severe" (Reference 27). The death-to-case rate for D&E increases with gestational age from 7.6 (13-15 wks.) to 43.1 (>21 wks.) deaths per 100,000 procedures (Reference 27).

(2) The instillation methods of abortion have been widely recognized as particularly dangerous (Reference 23). If the hypertonic solution used in saline abortions accidentally enters a maternal vein or artery, for example, death ensues almost immediately (Reference 3). More common serious complications include changes in maternal coagulation factors (leading to severe bleeding) (Reference 23), myometrial necrosis (requiring hysterectomy), and formation of a posterior uterovaginal or cervicovaginal fistula (an abnormal hole connecting organs) (Reference 26). The prostaglandin method, while less frequently directly lethal, has a higher rate of major complications than the saline method. The CDC reports a death-to-case rate almost ten times as high for prostaglandin abortions as for suction curettage abortions (Reference 15).

b. Hysterotomy abortion, used in second- and third-trimester abortions, is far and away the most dangerous method of abortion, since it constitutes major surgery. Mortality estimates range from 44.7 to 271 maternal deaths per 100,000 procedures (References 27, 28).

c. Instances have also been documented in which gravidae die from undiagnosed ectopic pregnancy following attempted induced abortion (Reference 24). The practitioner performs a curettage which, regardless of its technical perfection, fails to remove the pregnancy (which is not located in the uterus). The woman then goes home, thinking she has had an abortion, only to die days or weeks later from a tubal rupture or other complications of ectopic pregnancy.

d. Figures from CDC and the National Center for Health Statistics (Reference 25) indicate that the death per case rate for abortions performed at or after the 16th week of pregnancy surpasses the maternal mortality rate. A greater understanding of the danger of abortion arises from the recognition that a variety of factors bias this comparison in favor of the relative safety of abortion.

(1) The abortion mortality rate formulas uses as the denominator the total number of cases, whereas the maternal mortality rate (MMR) formula [Maternal Mortality Rate=Total Maternal Deaths/Total Live Births] uses live births, i.e. a fraction of the total number of non-aborted pregnancies. A more accurate comparison would replace "live births" with "live births plus stillbirths plus spontaneous abortion plus ectopic pregnancies." This substitution would significantly increase the denominator and thus produce a lower MMR.

(2) Likewise the numerator must be adjusted to exclude deaths resulting from induced abortion—otherwise a safety comparison between aborted and non-aborted pregnancies will always favor the former. This change would reduce the numerator and further decrease the MMR.

(3) Still other adjustments should be made to reduce the biases resulting from the fact that:

(a) Every legal abortion is performed while the woman is under a physician's care, whereas nonaborted women need not be under a physician's care in order to be included in the maternal mortality statistics. Indeed most women who die from pregnancy related complications are not under a doctor's care.

(b) A woman who undergoes an abortion has already safely passed through a number of weeks of pregnancy; but the MMR reflects the deaths occurring throughout the entire pregnancy (including those women who died before obtaining an abortion).

Both these factors tend to increase the MMR relative to the abortion mortality rate. A more accurate analysis of the data would reveal a greater danger in legal abortions than appears from the CDC report (Reference 25).

(4) The data used to calculate the abortion mortality rate, because of incompleteness, further underestimates the danger of abortion. Families or doctors, seeking to protect their reputations, may be unwilling to report an abortion death as such. Furthermore, deaths arising from abortion-related complications may be listed as due to these complications (be they fatal hepatitis or suicide-provoking psychosis), and not to abortion. Thus the extand abortion mortality figures do not present the whole picture (Reference 13) but rather lend to the abortion procedure an appearance of lesser danger. Although the statistics necessary to perfect the MMR are not available, known statistical estimates suffice to substantially reduce the reported MMR.

8. In light of all of the above, it becomes apparent that induced abortion at any stage of pregnancy poses a definite and substantial threat of impairment of the woman's procreative potential. Naturally, the degree of the threat will vary with the quality of the procedure, the state of pregnancy, and the particular features of the woman aborted. It is important to remember, however, that the very nature of the abortion procedure entails certain risks which are inescapable, given present technology (Reference 16). It is my firm medical conclusion that current, approved abortion procedures, properly performed, significantly threaten a woman's future ability to successfully bear children, a conclusion abundantly supported by the medical literature.

Mr. HATCH. Mr. President, Columnist George F. Will has admirably critiqued the Supreme Court's latest abortion decisions in a column which appeared in June 19 Washington Post.

I ask unanimous consent that this column be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington Post, June 19, 1983]

ABORTION: THE COURT'S INTELLECTUAL SCANDAL

(By George F. Will)

Last Tuesday, the day before the Supreme Court compounded the travesty it has made of abortion law, a California court convicted a former sheriff's deputy of murder in the shooting death, during an unauthorized drug raid, of a fetus in a woman who survived the wound. Because of the Supreme Court's 1973 abortion ruling, no state could forbid the woman to kill the child by abortion, even though it was in the third trimester. But how can anyone "murder" something the Supreme Court says is only "potentially" human and has the legal status of hamburger in the woman's stomach?

In last week's decisions, the court discovered that the Constitution forbids Akron's requirement that other than first-trimester abortions be performed in a hospital; forbids Akron's requirement that physicians perform abortions on unmarried women under 15 only with certain parental permission or court orders; forbids Akron's requirement that physicians tell women seeking abortions the developmental status of their fetuses, the date of viability, physical and emotional complications that can result from abortion, and alternatives to abortion; forbids Akron's requirement of a 24-hour interval between a request for and performance of an abortion; forbids Akron's requirement that abortionists dispose of aborted fetuses in a "humane and sanitary manner."

To see the intellectual scandal of the court's position in 1983, consider Wednesday's ruling that Missouri can require the presence of a second physician during an abortion performed after "viability."

With 1.6 million abortions annually, it regularly happens that an abortion procedure results in a live birth and the inconvenient life is "terminated" by suffocation or aggressive neglect. However, Missouri requires (when the requirement does not increase the woman's risk) a late abortion to be performed by the method most likely to preserve fetal life—that is, the method most likely to fail, least likely to kill the fetus, which is the aim. Now the court says Missouri can require the presence of a second physician because if the fetus survives the attempt to kill it, the state "may" protect "the lives of viable fetuses," meaning "a fetus born alive."

Well.

The "viable fetuses" who the second physicians serve are often called, quaintly, "children." A "fetus born alive" is, in the vernacular, a "baby."

Concerning abortion, the justices use words and categories the way babies use forks and spoons: with gusto, but sloppily. In 1973 the court made much—or thought it did—of "trimesters." But regarding pregnancy a trimester is a demarcation without moral or medical significance, and without much legal significance, in spite of the court's attempt to give it such. The court, which does not yet seem to know what it did in 1973, said then that no state can prevent even a third-trimester abortion that any physician says is necessary for a woman's health. And "distress" (which can be caused by denial of an abortion) can be a health hazard.

In 1973 the court thought it made much of "viability," the point at which a fetus can lead a "meaningful" life outside the womb. Actually, viability made no significant difference concerning permissible regulation of

abortion. The court gave no meaning to the word "meaningful." And the point at which a fetus could survive outside the womb was unclear then and has moved since, thereby demonstrating the folly of linking constitutional law to a dynamic science.

Two years ago a Georgia court in effect took custody of a fetus, holding that an unwilling woman must undergo a caesarean section for the fetus's safety. Evidently, the fetus had a right to protection.

In Baltimore, a pregnant drug abuser has been placed under court jurisdiction to protect the health of the fetus. She may not injure the fetus with drugs. Of course, she retains a right to kill it with an abortion.

In Maryland, a fetus has a right to inherit property if the fetus is conceived before the death of the person from whom the property will be inherited. Prenatal medicine can perform wonders for fetuses that can be aborted at any stage. Malpractice cases are establishing that a child born injured as a result of negligent prenatal medicine can claim violation of rights it had as a fetus.

Fetuses, it seems, have various rights—but no right to life.

Cut adrift by its 1973 decision from constitutional and bio-medical realism, the court manufactures ever finer distinctions from never relevant categories. The justices should pray—not in a public building, of course—for Sen. Orrin Hatch's amendment ("A right to abortion is not secured by this Constitution"). That would restore the status quo ante 1973, thereby restoring to the states responsibility for dealing with an issue that clearly is beyond the court's competence.

ABORTION AND CHILD ABUSE

Mr. HATCH. Mr. President, I would also like to address an argument which has been the basis of a great deal of misguided support of the Supreme Court rulings.

I refer to the problem of child abuse, and the claim that legalized abortion helps solve this problem by eliminating the unwanted child. The Court's opinion in Roe against Wade itself justified legalized abortion by appealing to "the distress, for all concerned associated with the unwanted child, and * * * the problem of bringing a child into a family already unable, psychologically and otherwise, to care for it" (410 U.S. 113 at 153). The implicit claim here is that the particular children who will be aborted under a permissive abortion policy because they are unwanted months before birth are the very children who would have been abused after birth because of the same unwantedness.

Now, one part of this claim is certainly true in a simple-minded sort of way—no child can be abused if he is no longer alive, and there would be no postnatal child abuse if every child were destroyed prenatally. It is equally true that there would be no abuse of the elderly if all adults were quietly done away with at the age of 60. But the rest of the Court's rationale is completely erroneous, as is obvious from the frightening rate at which cases of child abuse have increased since its ruling. National statistics estimated the number of cases as being in the area of 100,000 10 years ago, now the estimates range between 1 and 2 million annually. To find out why this policy has failed so completely, one need only listen to what our national experts on child abuse have to tell us.

One of the first experts to confront this rationale for the Court's legalization of abortion was a professor of clinical pediatrics who was then serving as chairman of the Mayor's Task Force on Child Abuse and Neglect of the city of New York. Dr. Vincent Fontana was hailed by the New York Times as a national authority in the problem of child abuse when he published his classic analysis of the problem, "Somewhere a Child is Crying," in 1973; yet his analysis suggested that abortion, legalized by the Supreme Court that very year, was no solution at all to the problem of child abuse. As Fontana pointed out:

> Many maltreated children are children who were very much wanted before birth. Perhaps they were wanted for the wrong reasons: to prove to the man or woman that he or she is normal and able to have a child; to give the mother something of her own to love and give her love in return; to cement a couple on the verge of separation; to present a picture of a conventional family unit because for one reason or other that is the expected or respectable thing to do. Immature people, lonely people, emotionally starved people, abused people, more often than not, sincerely want their children. It is only after the children arrive that the doubts set in and the problems surface. It is not just a question of saying ahead of time, well, this one isn't wanted; let's not have it. It's just not that easy. People's motivations are much too complex for the problem to be solved in this way; and their own assessments of themselves, their needs, their wants, and their capabilities are often sadly wrong. Who is to know and who is to tell them how wrong they are, and that they must not have their wanted children? We should also remember that a good many parents, in the act of abusing their children, are in the grip of an uncontrollable anger and a love-hate emotion that has nothing to do with wanting the children or not wanting to love them. Their reasons for striking out are as distant from the unwanted-child theory as it is possible to be.

Another professor of pediatrics and researcher in the area of child abuse, Dr. Edward Lenoski, has confirmed the validity of Dr. Fontana's remarks. In his 1975 study of child abuse, Dr. Lenoski found that 91 percent of the abused children had been wanted by their parents:

> Significantly high among these parents Lenoski observes: was the desire for the pregnancy. Mothers tended to wear maternity clothes an average of 2 months earlier than necessary. A higher percentage of the children were named after one of the parents. All of these seemingly capable parents escalated to violence because of certain similar characteristics that prevented them from effectively coping with their children.

One common characteristic noted by Lenoski was an intense, even neurotic, desire for a child which led to an excessive degree of expectation for his or her accomplishments; when those expectations were not fulfilled, violence sometimes arose out of the parent's frustration. Lenoski found the typical child abuser to be in the late twenties, married, and of better than average education. More recent studies have underlined the fact that the well-to-do are well-represented among child abusers. Poor people do not necessarily abuse their children more often; they are just more easily found out, because they do not have private physicians who might be willing to keep quiet about the matter.

If it is true that children wanted before birth are often abused after birth, it is no less true that a child unwanted at some stage of a pregnancy usually becomes wanted afterward. Virtually every pregnant woman has ambivalent feelings toward a pregnancy in its early stages, and psychologists consider this a perfectly normal phase in the process of adjusting to the responsibilities of a new child. When this process is cut short by an abortion during a moment of ambivalence, the results are always irreversible and often tragic. Having obtained an abortion easily in a society which encourages it as a solution to unwanted pregnancy, some women find themselves wanting their child very intensely after it is too late. One psychologist has observed that a third of the women entering into surrogate motherhood contracts—in which they offer to bear a child by artifical insemination and give it away to an infertile couple—are women who somehow want to make up for a previous abortion by giving a child to others.

Since the Supreme Court's opinion in Roe against Wade made special mention of the problems of adolescent unwed pregnancy, it is worth noting that abortion has failed in a particularly spectacular way in this area. Unwed teen pregnancies and births have both increased dramatically since Roe. One problem here is that our teenagers are presented under current social policy with two choices: Either the pregnancy is unwanted, and then abortion is the preferred solution; or it is wanted, and then the girl is expected to keep and raise the child herself.

One study has noted that while almost half of the unwed teenagers who became pregnant in 1978 had abortions, only 4 percent of those who carried to term offered the baby for adoption. Abortions among unwed teens are not eliminating the children who would have been raised by single parents in unstable circumstances; for the most part, they are eliminating the unwanted children who would have been given up for adoption to couples who want them.

Most ominous of all is the role which abortion on demand may play in directly contributing to child abuse.

Studies by at least one researcher, Dr. Philip Ney of the University of British Columbia, indicate that women who have had abortions are more likely to abuse subsequent children. Dr. Ney has suggested that abortion cuts short the fragile maternal-infant bonding process which begins long before birth, and that this makes it more difficult for that bond to form again in subsequent pregnancies. "Permissive abortion," says Dr. Ney, "diminishes the social taboo against aggressing the defenseless." He says that abortion has diminished the value of children in our society, by endorsing the principle that their value is dependent on their being wanted. And to the extent that abortion contributes to feelings of guilt and depression in women, it intensifies the low self-esteem which is a common factor in parents who abuse their children. Dr. Ney's concern over the psychological aftermath of abortion is well-grounded: Testifying before the Senate Subcommittee on the Constitution in 1981, Psychologist Vincent Rue presented the results of 34 different studies, showing that negative reactions following an abortion span anxiety and depression to psychosis and suicide. Difficulty in relating to existing and subsequent children, as well as in maintaining marital stability in general, was found in many of these women after an abortion.

Abortion's role in short-circuiting our acceptance of children is not confined to individual women, however. It is a problem of social magnitude.

Abortion advocates defend their position by declaring, we affirm the right to life when wanted. Others speak directly of a right to be wanted, and say this right of the unborn child would be violated if we allowed it to live. How do we keep this attitude from expanding to children already born?

There are really only two basic approaches our society can take with regard to unwanted children, because one can mean two different things when one says, every child is a wanted child. These are mutually exclusive. We might mean that every child is a unique and unrepeatable gift of inherent worth, and therefore that no child should ever be branded as unwanted and dismissed by society. If that child is not wanted by his or her parents, the rest of us should support those parents to make sure they have the emotional and financial resources that will encourage them not to see their child as an unwanted burden. If that fails, we should say, your child is a precious gift to the world. We want him, if you do not. We can give him to loving adoptive parents who have been waiting for him for years. Please do not rob the world of him. We can place our society as guarantor behind the statement that no child will be born truly unwanted.

Or, we can mean our slogan in the diametrically opposite sense. We can say, every child is a wanted child, and mean that every child whose parents do not want him at a given point in time must not be allowed to live and grow up. Is it not a grudging and unloving attitude toward children that is both reflected and strengthened here? Is it not likely that as this attitude sinks more deeply into our collective psyche, more and more frivolous reasons will be found for unwanting children after they are born? Having used abortion to plan and screen our children, so that only the wanted and the perfect see the light of day, how ready will we be to accept their imperfections later on, when we discover that they are, after all, only flawed human beings like ourselves?

By allowing abortion to be written into our Constitution as a fundamental right, we have helped to substitute a harsh and unloving legalism for the spontaneous love and acceptance of others which should be the central dynamic of the family and an overriding goal for civilized society. By erasing this tragic error, we can perhaps set out anew on the road toward a more enlightened and constructive attitude with regard to all our Nation's children.

ABORTION AND THE CONSCIENCE OF THE NATION

Mr. President, the President of the United States recently wrote a powerful and important essay entitled "Abortion and the Conscience of the Nation," which appeared in the Spring, 1983 issue of The Human Life Review. I hope that all of my colleagues will take the time to study this compelling essay.

I ask unanimous consent that it be printed into the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

ABORTION AND THE CONSCIENCE OF THE NATION

(President Ronald W. Reagan)[1]

The 10th anniversary of the Supreme Court decision in *Roe* v. *Wade* is a good time for us to pause and reflect. Our nationwide policy of abortion-on-demand through all nine months of pregnancy was neither voted for by our people nor enacted by our legislators—not a single State had such unrestricted abortion before the Supreme Court decreed it to be national policy in 1973. But the consequences of this judicial decision are now obvious: since 1973, more than 15 million unborn children have had their lives snuffed out by legalized abortions. That is over ten times the number lost in all our nation's wars.

Make no mistake, abortion-on-demand is not a right granted by the Constitution. No serious scholar, including one disposed to agree with the Court's result, has argued that the framers of the Constitution intended to create such a right. Shortly after the *Roe* v. *Wade* decision, Professor John Hart Ely, now Dean of Stanford Law School, wrote that the opinion "is not constitutional law and gives almost no sense of an obligation to try to be." Nowhere do the plain words of the Constitution even hint at a "right" so sweeping as to permit abortion up to the time the child is ready to be born. Yet that is what the Court ruled.

As an act of "raw judicial power" (to use Justice White's biting phrase), the decision by the seven-man majority in *Roe* v. *Wade* has so far been made to stick. But the Court's decision has by no means settled the debate. Instead, *Roe* v. *Wade* has become a continuing prod to the conscience of the nation.

Abortion concerns not just the unborn child, it concerns every one of us. The English poet, John Donne, wrote: ". . . any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee."

We cannot diminish the value of one category of human life—the unborn—without diminishing the value of all human life. We saw tragic proof of this truism last year when the Indiana courts allowed the starvation death of "Baby Doe" in Bloomington because the child had Down's Syndrome.

Many of our fellow citizens grieve over the loss of life that has followed *Roe* v. *Wade*. Margaret Heckler, soon after being nominated to head the largest department of our government, Health and Human Services, told an audience that she believed abortion to be the greatest moral crisis facing our country today. And the revered Mother Teresa, who works in the streets of Calcutta ministering to dying people in her world-famous mission of mercy, has said that "the greatest misery of our time is the generalized abortion of children."

Over the first two years of my Administration I have closely followed and assisted efforts in Congress to reverse the tide of abortion—efforts of Congressmen, Senators and citizens responding to an urgent moral crisis. Regrettably, I have also seen the massive efforts of those who, under the banner of "freedom of choice," have so far blocked every effort to reverse nationwide abortion-on-demand.

Despite the formidable obstacles before us, we must not lose heart. This is not the first time our country has been divided by a Supreme Court decision that denied the value of certain human lives. The *Dred Scott* decision of 1857 was not overturned in a day, or a year, or even a decade. At first, only a minority of Americans recognized and deplored the moral crisis brought about by denying the full humanity of our black brothers and sisters; but that minority persisted in their vision and finally prevailed. They did it by appealing to the hearts and minds of their countrymen, to the truth of human dignity under God. From their example, we know that respect for the sacred value of human life is too deeply engrained in the hearts of our people to remain forever suppressed. But the great majority of the American people have not yet made their voices heard, and we cannot expect them to—any more than the public voice arose against slavery—*until* the issue is clearly framed and presented.

What, then, is the real issue? I have often said that when we talk about abortion, we are talking about two lives—the life of the mother and the life of the unborn child. Why else do we call a pregnant woman a mother? I have also said that anyone who doesn't feel sure whether we are talking

[1] This article first appeared in the Spring 1983 issue of The Human Life Review.

about a second human life should clearly given life the benefit of the doubt. If you don't know whether a body is alive or dead, you would never bury it. I think this consideration itself should be enough for all of us to insist on protecting the unborn.

The case against abortion does not rest here, however, for medical practice confirms at every step the correctness of these moral sensibilities. Modern medicine treats the unborn child as a patient. Medical pioneers have made great breakthroughs in treating the unborn—for genetic problems, vitamin deficiencies, irregular heart rhythms, and other medical conditions. Who can forget George Will's moving account of the little boy who underwent brain surgery six times during the nine weeks before he was born? Who is the patient if not that tiny unborn human being who can feel pain when he or she is approached by doctors who come to kill rather than to cure?

The real question today is not when human life begins, but, What is the value of human life? The abortionist who reassembles the arms and legs of a tiny baby to make sure all its parts have been torn from its mother's body can hardly doubt whether it is a human being. The real question for him and for all of us is whether that tiny human life has a God-given right to be protected by the law—the same right we have.

What more dramatic confirmation could we have of the real issue than the Baby Doe case in Bloomington, Indiana? The death of that tiny infant tore at the hearts of all Americans because the child was undeniably a live human being—one lying helpless before the eyes of the doctors and the eyes of the nation. The real issue for the courts was not whether Baby Doe was a human being. The real issue was whether to protect the life of a human being who had Down's Syndrome, who would probably be mentally handicapped, but who needed a routine surgical procedure to unblock his esophagus and allow him to eat. A doctor testified to the presiding judge that, even with his physical problem corrected, Baby Doe would have a "non-existent" possibility for "a minimally adequate quality of life"—in other words, that retardation was the equivalent of a crime deserving the death penalty. The judge let Baby Doe starve and die, and the Indiana Supreme Court sanctioned his decision.

Federal law does not allow Federally-assisted hospitals to decide that Downs' Syndrome infants are not worth treating, much less to decide to starve them to death. Accordingly, I have directed the Departments of Justice and HHS to apply civil rights regulations to protect handicapped newborns. All hospitals receiving Federal funds must post notices which will clearly state that failure to feed handicapped babies is prohibited by Federal law. The basic issue is whether to value and protect the lives of the handicapped, whether to recognize the sanctity of human life. This is the same basic issue that underlies the question of abortion.

The 1981 Senate hearings on the beginning of human life brought out the basic issue more clearly than ever before. The many medical and scientific witnesses who testified disagreed on many things, but not on the scientific evidence that the unborn child is alive, is a distinct individual, or is a member of the human species. They did disagree over the value question, whether to give value to a human life at its early and most vulnerable stages of existence.

Regrettably, we live at a time when some persons do not value all human life. They want to pick and choose which individuals have value. Some have said that only those individuals with "consciousness of self" are human beings. One such writer has followed this deadly logic and concluded that "shocking as it may seem, a newly born infant is not a human being."

A Nobel Prize winning scientist has suggested that if a handicapped child "were not declared fully human until three days after birth, then all parents could be allowed the choice." In other words, "quality control" to see if newly born human beings are up to snuff.

Obviously, some influential people want to deny that every human life has intrinsic, sacred worth. They insist that a member of the human race must have certain qualities before they accord him or her status as a "human being."

Events have borne out the editorial in a California medical journal which explained three years before *Roe* v. *Wade* that the social acceptance of abortion is a "defiance of the long-held Western ethic of intrinsic and equal value for every human life regardless of its stage, condition, or status."

Every legislator, every doctor, and every citizen needs to recognize that the real issue is whether to affirm and protect the sanctity of all human life, or to embrace a social ethic where some human lives are valued and others are not. As a nation, we must choose between the sanctity of life ethic and the quality of life ethic.

I have no trouble identifying the answer our nation has always given to this basic question, and the answer that I hope and pray it will give in the future. America was founded by men and women who shared a vision of the value of each and every individual. They stated this vision clearly from the very start in the Declaration of Independence, using words that every schoolboy and schoolgirl can recite:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights that among these are life, liberty, and the pursuit of happiness."

We fought a terrible war to guarantee that one category of mankind—black people in America—could not be denied the inalienable rights with which their Creator endowed them. The greater champion of the sanctity of all human life in that day, Abraham Lincoln, gave us his assessment of the Declaration's purpose. Speaking of the framers of that noble document, he said:

"This was their majestic interpretation of the economy of the Universe. This was their lofty, and wise, and noble understanding of the justice of the Creator to His creatures. Yes, gentlemen, to all His creatures, to the whole great family of man. In their enlightened belief, nothing stamped with the divine image and likeness was sent into the world to be trodden on. . . . They grasped not only the whole race of man then living, but they reached forward and seized upon the farthest posterity. They erected a beacon to guide their children and their children's children, and the countless myriads who should inhabit the earth in other ages."

He warned also of the danger we would face if we closed our eyes to the value of life in any category of human beings.

"I should like to know if taking this old Declaration of Independence, which declares that all men are equal upon principle and making exceptions to it where will it stop. If one man says it does not mean a Negro, why not another say it does not mean some other man?"

When Congressman John A. Bingham of Ohio drafted the Fourteenth Amendment to guarantee the rights of life, liberty, and property to all human beings, he explained that *all* are "entitled to the protection of American law, because its divine spirit of equality declares that all men are created equal." He said the rights guaranteed by the amendment would therefore apply to "any human being." Justice William Brennan, writing in another case decided only the year before *Roe* v. *Wade*, referred to our society as one that "strongly affirms the sanctity of life."

Another William Brennan—not the Justice—has reminded us of the terrible consequences that can follow when a nation rejects the sanctity of life ethic:

"The cultural environment for a human holocaust is present whenever any society can be misled into defining individuals as less than human and therefore devoid of value and respect."

As a nation today, we have *not* rejected the sanctity of human life. The American people have not had an opportunity to express their view on the sanctity of human life in the unborn. I am convinced that Americans do not want to play God with the value of human life. It is not for us to decide who is worthy to live and who is not. Even the Supreme Court's opinion in *Roe v. Wade* did not explicitly reject the traditional American idea of intrinsic worth and value in all human life; it simply dodged this issue.

The Congress has before it several measures that would enable our people to reaffirm the sanctity of human life, even the smallest and the youngest and the most defenseless. The Human Life Bill expressly recognizes the unborn as human beings and accordingly protects them as persons under our Constitution. This bill, first introduced by Senator Jesse Helms, provided the vehicle for the Senate hearings in 1981 which contributed so much to our understanding of the real issue of abortion.

The Respect Human Life Act, just introduced in the 98th Congress, states in its first section that the policy of the United States is "to protect innocent life, both before and after birth." This bill, sponsored by Congressman Henry Hyde and Senator Roger Jepsen, prohibits the Federal government from performing abortions or assisting those who do so, except to save the life of the mother. It also addresses the pressing issue of infanticide which, as we have seen, flows inevitably from permissive abortion as another step in the denial of the inviolability of innocent human life.

I have endorsed each of these measures, as well as the more difficult route of constitutional amendment, and I will give these initiatives my full support. Each of them, in different ways, attempts to reverse the tragic policy of abortion-on-demand imposed by the Supreme Court ten years ago. Each of them is a decisive way to affirm the sanctity of human life.

We must all educate ourselves to the reality of the horrors taking place. Doctors today know that unborn children can feel a touch within the womb and that they respond to pain. But how many Americans are aware that abortion techniques are allowed today, in all 50 states, that burn the skin of a baby with a salt solution, in an agonizing death that can last for hours?

Another example: two years ago, the Philadelphia Inquirer ran a Sunday special supplement on "The Dreaded Complication." The "dreaded complication" referred

to in the article—the complication feared by doctors who perform abortions—is the survival of the child despite all the painful attacks during the abortion procedure. Some unborn children do survive the late-term abortions the Supreme Court has made legal. Is there any question that these victims of abortion deserve our attention and protection? Is there any question that those who don't survive were living human beings before they were killed?

Late-term abortions, especially when the baby survives, but is then killed by starvation, neglect, or suffocation, show once again the link between abortion and infanticide. The time to stop both is now. As my Administration acts to stop infanticide, we will be fully aware of the real issue that underlies the death of babies before and soon after birth.

Our society has, fortunately, become sensitive to the rights and special needs of the handicapped, but I am shocked that physical or mental handicaps of newborns are still used to justify their extinction. This Administration has a Surgeon General, Dr. C. Everett Koop, who has done perhaps more than any other American for handicapped children, by pioneering surgical techniques to help them, by speaking out on the value of their lives, and by working with them in the context of loving families. You will not find his former patients advocating the so-called quality of life ethic.

I know that when the true issue of infanticide is placed before the American people, with all the facts openly aired, we will have no trouble deciding that a mentally or physically handicapped baby has the same intrinsic worth and right to life as the rest of us. As the New Jersey Supreme Court said two decades ago, in a decision upholding the sanctity of human life, "a child need not be perfect to have a worthwhile life."

Whether we are talking about pain suffered by unborn children, or about late-term abortions, or about infanticide, we inevitably focus on the humanity of the unborn child. Each of these issues is a potential rallying point for the sanctity of life ethic. Once we as a nation rally around any one of these issues to affirm the sanctity of life, we will see the importance of affirming this principle across the board.

Malcolm Muggeridge, the English writer, goes right to the heart of the matter: "Either life is always and in all circumstances sacred, or intrinsically of no account; it is inconceivable that it should be in some cases the one, and in some the other." The sanctity of innocent human life is a principle that Congress should proclaim at every opportunity.

It is possible that the Supreme Court itself may overturn its abortion rulings. We need only recall that in *Brown v. Board of Education* the Court reversed its own earlier "separate-but-equal" decision. I believe if the Supreme Court took another look at *Roe v. Wade*, and considered the real issue between the sanctity of life ethic and the quality of life ethic, it would change its mind once again.

As we continue to work to overturn *Roe v. Wade*, we must also continue to lay the groundwork for a society in which abortion is not the accepted answer to unwanted pregnancy. Pro-life people have already taken heroic steps, often at great personal sacrifice, to provide for unwed mothers. I recently spoke about a young pregnant woman named Victoria, who said, "In this society we save whales, we save timber wolves and bald eagles and Coke bottles. Yet, everyone wanted me to throw away my baby." She has been helped by Sav-a-Life, a group in Dallas, which provides a way for unwed mothers to preserve the human life within them when they might otherwise be tempted to resort to abortion. I think also of House of His Creation in Coatesville, Pennsylvania, where a loving couple has taken in almost 200 young women in the past ten years. They have seen, as a fact of life, that the girls are *not* better off having abortions than saving their babies. I am also reminded of the remarkable Rossow family of Ellington, Connecticut, who have opened their hearts and their home to nine handicapped adopted and foster children.

The Adolescent Family Life Program, adopted by Congress at the request of Senator Jeremiah Denton, has opened new opportunities for unwed mothers to give their children life. We should not rest until our entire society echoes the tone of John Powell in the dedication of his book, *Abortion: The Silent Holocaust*, a dedication to every woman carrying an unwanted child: "Please believe that you are not alone. There are many of us that truly love you, who want to stand at your side, and help in any way we can." And we can echo the always-practical woman of faith, Mother Teresa, when she says, "If you don't want the little child, that unborn child, give him to me." We have so many families in America seeking to adopt children that the slogan "every child a wanted child" is now the emptiest of all reasons to tolerate abortion.

I have often said we need to join in prayer to bring protection to the unborn. Prayer and action are needed to uphold the sanctity of human life. I believe it will not be possible to accomplish our work, the work of saving lives, "without being a soul of prayer." The famous British Member of Parliament, William Wilberforce, prayed with his small group of influential friends, the "Clapham Sect," for *decades* to see an end to slavery in the British Empire. Wilberforce led that struggle in Parliament, unflaggingly, because he believed in the sanctity of human life. He saw the fulfillment of his impossible dream when Parliament outlawed slavery just before his death.

Let his faith and perseverance be our guide. We will never recognize the true value of our own lives until we affirm the value in the life of others, a value of which Malcolm Muggeridge says: ". . . however low it flickers or fiercely burns, it is still a Divine flame which no man dare presume to put out, be his motives ever so humane and enlightened."

Abraham Lincoln recognized that we could not survive as a free land when some men could decide that others were not fit to be free and should therefore be slaves. Likewise, we cannot survive as a free nation when some men decide that others are not fit to live and should be abandoned to abortion or infanticide. My Administration is dedicated to the preservation of America as a free land, and there is not cause more important for preserving that freedom than affirming the transcendent right to life of all human beings, the right without which no other rights have any meaning.

Mr. HATCH. Mr. President, I commend to my colleagues the following outstanding analysis by Prof. John T. Noonan, Jr., on the recent Supreme Court abortion ruling, that will be published in the summer 1983 edition of the "Human Life Review."

Mr. President, I ask unanimous consent that the above-mentioned article appear at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AKRON: A PRAGMATIC POLITICIAN'S PARODY OF SOLOMON

(By John T. Noonan, Jr.)

Pragmatists who believe that in any dispute you can split the difference have looked at the life and death issue of abortion and have come up with what they think is a workmanlike, democratic, sensitive compromise. The abortionists get the unrestricted right to legal abortion. The anti-abortionists get the right not to fund it. A fair division they suppose. Half a loaf they say. Half a baby they imply. They would have resolved the trinitarian conflict of the fourth century by believing in one and one-half persons. Here the pragmatists say, they can kill, you don't have to pay for it; or, they get the blood, you can keep the money. This nice division of nonnegotiable demands is the explanation of *Akron v. Akron Center for Reproductive Health*, the Supreme Court's latest decision in the matter of abortion.

I speak of a decision "in the matter of abortion" advisedly, for like the Court's other decisions in the area, this decision has a curiously abstract air as though it were not determining a contest between real persons but were the draft of a legislative program. An actual woman seeking an abortion is not before the Court; the actual abortion clinic with the Orwellian name which is the plaintiff—its business methods, its business motives—is never mentioned; the party most at interest, the unborn child, is unrepresented. Abstractly structuring the pragmatist compromise, the Court affects the lives of millions of human beings. It does so not as judges deciding a concrete controversy but as designers of a political solution—a "final settlement" as James Buchanan said of *Dred Scott*.[1]

Written by Lewis Powell on behalf of himself and five of his male colleagues, *Akron* shows that the old *Roe v. Wade* majority has not only learned nothing but has paid almost no attention to contemporary discoveries in medicine, currents in politics, or critiques of judicial imperialism. Locked into the medicine of a decade ago, uncomprehending of the present political climate, disdainful of conscientious remonstrance and academic criticism, the entrenched majority declares that a "fundamental right to abortion" is to be found in the Constitution.

Unworkmanlike, undemocratic, insensitive—these are the principal characteristics of the opinion. Let us look at *Akron* in terms of these characteristics.

UNWORKMANLIKE

Justice Powell begins by noting "legislative responses" and "arguments" that "we erred in interpreting the Constitution." He continues, "Nonetheless, the doctrine of *stare decisis*, while perhaps never entirely persuasive on a constitutional question, is a doctrine that demands respect in a society governed by the rule of law. We respect it today, and reaffirm *Roe v. Wade*."[2]

What does Justice Powell mean when he says that *stare decisis*—that is, the obligation to follow precedents—is "perhaps never entirely persuasive on a constitutional question"? Fifty years ago Justice Brandeis com-

Footnotes at end of article.

piles a list of over a dozen instances on which the Court had reversed itself on constitutional questions—where the principle of *stare decisis* had not been observed.[3] The Court since the 1930's has been more cavalier with precedent than the pre-New Deal Courts. Explicitly of *sub silentio* it has discarded many more constitutional decisions than its predecessors had done. Conservatively estimated, at least forty times the Court has corrected itself on the meaning of the Constitution.

"Perhaps never entirely persuasive"! An accurate historian would say, "Often unpersuasive." Surely Justice Powell knows this. And why does he qualify his already qualified acknowledgement with a "perhaps"? The same judicial stutter appeared in *Roe v. Wade* where Justice Blackmun suggested that "perhaps" the liberty he was inventing could be found in the Ninth Amendment.[4] "Perhaps" in these contexts is a telltale mark of a judicial conscience struggling against an implausible assertion. For Justice Powell, a learned and experienced member of the Court, to state flat out that precedent was "not entirely persuasive" was too much for him to do when a candid sense of his craft required him to acknowledge, "On constitutional issues, the question is never settled until it is settled right."

Having overplayed the place of precedent, Justice Powell makes a truly desperate maneuver—he links the observance of precedent to "the rule of law." If observing precedent were essential to the rule of law, the institution of which Justice Powell has been a prominent member would have to be pronounced subversive. It has smashed precedents right and left—one need only read its decisions on marriage, divorce, and the family to see how careless it has been in preserving them. *Akron* itself announces three new requirements of the Constitution different from those stated in earlier abortion cases. Justice Powell's linkage gives us no choice—we either do not have the rule of law or the Supreme Court has not been doing what it has been reported to be doing for the past four decades. Either alternative is unacceptable. Justice Powell fails to make a valid equation between preserving the rule of law and not overruling an outrageous decision.[5]

A footnote answering the dissent adds two special reasons for not abandoning *Roe.* (1) *Roe* was argued one year, put over, and reargued the next. Justice Powell does not note that the first year was a presidential election year and that, like *Dred Scott, Roe* by re-argument was moved to a year when the political consequences of a political decision would be less immediately damaging to the decision-makers. (2) *Roe* has been applied "repeatedly." Justice Powell does not observe that the reason it has had to be repeatedly applied is because of the general detestation in which elected legislatures have held it.[6]

Special irony attends the appeal to precedent in *Akron*—it overrules a case decided only two years ago. If the Court is going to flip and flop, one would think it could flip the same way two years running. Such, however, is not its course with abortion. In 1981 it decided *Gary-Northwest Indiana Women's Services, Inc. v. Orr.* There a three-judge District Court had held that Indiana could constitutionally require hospitalization for second-trimester abortions. The Supreme Court summarily affirmed. The District Court, after all, had merely applied *Roe v. Wade.*[7]

Two years later the *Akron* majority finds that *Roe* and *Gary* have been "misinterpreted." Accepted medical practice is now said not to require hospitalization during "the early weeks of the second trimester." The change in medical practice requires the Court to change the constitutional requirement. The underlying fact on which the medical practice depends is that the safety of second-trimester abortion "has increased dramatically." Such abortions now kill only 7 women per 100,000 abortions instead of 14 women. A change of survival rate of seven is greeted as a dramatic increase, an increase so dramatic that the Court's recent precedent must be formally overruled. To make matters even more embarrassing for Justice Powell the statistics he cites so triumphantly must have been available when the Court went the other way in 1981. Respect for the rule of law is indeed endangered when the Court in 1981 cannot find the statistics it dredges up in 1983 to reverse itself on a requirement of the Constitution.[8]

Precedent is usually thought of as not merely the bare holding of a case but the reasoning which underlies the holding. Six years ago Justice Powell wrote the opinion upholding the right of a state not to fund abortion. In the course of that opinion Justic Powell declared that the state had a "strong and legitimate interest"—"an interest honored over the centuries"—in "encouraging normal childbirth." The state also had, he wrote, "a strong interest in protecting the potential life of the fetus." [9]

In *Akron* Justice Powell finds it unconstitutional for the law to set up a twenty-four hour waiting period in which a woman seeking an abortion might have a chance to weigh the consequences of her choice. Twenty-four hours is not very long to be asked to wait. It is, no doubt, a small encouragement to a choice in favor of the child and choice in favor of birth. If the state has strong interests in these subjects, one would suppose a day was minimal acknowledgment. Not so Justice Powell. Tacitly repudiating his own reasoning, he describes the day wait as "arbitrary and inflexible" and, speaking as if he were the Constitution, condemns it.[10]

Six years ago, upholding the state's choice not to fund, Justice Powell wrote, "We should not forget that 'legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts'." Justice Powell's reminder was a quotation from Justice Holmes, stating what became the accepted wisdom of the law schools: judges have no business reading their private social views into the meaning of "liberty" in the Constitution. It is in repudiation of this accepted doctrine, far older and far more than fundamental than *Roe v. Wade,* that Justic Powell lets his predilections determine that that liberty prohibits the small restraints Akron attempted to put on abortion.[11]

Unworkmanlike failure to achieve consistency with recent decisions and his own opinions—the glaring deficiency is excellently illuminated in the skillful dissent of Sandra O'Connor, joined by Byron White and William Rehnquist. Justice O'Connor, begins by quoting Justice Powell's own standard in the funding case—a regulation is not unconstitutional unless it "unduly burdens the right to seek an abortion." She cannot see how such regulations as the day wait can be found undue burdens. She thinks it extraordinary that the Constitution requires the States constantly to readjust their health regulations to conform to medical practice. She wonders if the Court, to carry out this concept of the Constitution, will have to function as "the nation's *ex officio* medical board." She points out the Court's double standard—health includes emotion and psychology when abortion is to be justified; it means only physical safety when law regulating abortion is to be justified. She shows how Justice Powell's invalidation of Akron's parental consent requirement for the abortion of girls under 15(!) does not square with the Court's 1977 decision in *Bellotti v. Baird.* She indicates that Justice Powell's invalidation of Akron's informed consent requirement in effect holds three other cases expounding the Constitution were wrongly decided. She quotes back to Justice Powell his reminder from Holmes that legislatures too, are guardians of liberty, and, what Justice Powell himself had once believed that, "in a democracy," the appropriate forum for the resolution of such "extremely sensitive issues" is the legislature. She demonstrates that the whole shaky trimester division of *Roe v. Wade* has collapsed in the face of medical improvements. She makes mincemeat of the opinion of Justice Powell.[12]

With the shoddiness of the majority opinion made apparent by the dissent, Justice Powell cannot resist adding a footnote bent on refuting Justice O'Connor. Her dissent, he writes, "rejects the basic premise of *Roe* and its progeny." Justice Powell has some difficulty pointing to where this basic rejection occurs. The nub of his accusation appears to be that Sandra O'Connor defends the waiting period out of a belief that the abortion decision "has grave consequences for the fetus." Quoting her observation, Justice Powell remarks, "This analysis is wholly incompatible with the existence of the fundamental right recognized in *Roe v. Wade.*" [13]

A day to think over the grave consequences for the child is "wholly incompatible" with the abortion liberty. In this brusque denunciation of the dissent, Justice Powell reveals his mind openly. He wants nothing to inhibit the choice of abortion. Every restriction is an "interference." He is impatient with the lines carefully drawn by the Akron ordinance. The raw abortion right he and his colleagues invented is not to be curbed at all.

The *Akron* legislators, respectful of the rule of law, had worked within the space apparently left open by *Roe v. Wade.* The three-judge District Court, mindful of the precedents set by higher authority, had followed *Gary-Northwest Women* and upheld hospitalization. The O'Connor dissent, relying on Justice Powell's own recent reasoning, finds the Akron regulations valid. Justice Powell has patience for none of this close reading of *Roe,* this conscientious application of precedent, this craftsmanlike invocation of his own ideas. Inhibition of the abortion choice in the smallest degree becomes denial of the fundamental right. The unworkmanlike character of his opinion follows on the zeal of the judge to sweep the board.

UNDEMOCRATIC

Akron compels the state to accept the standard prevailing in the medical profession. Indeed it compels the state to do somersaults to keep up—the American College of Obstetricians and Gynecologists changed its standards on hospitalization *after* the Akron trial; the Court holds that the new standards determine the constitutionality of the Akron rule. In the past, the states have set the standards for medical practice, incorporating professional standards where the state has found them appropriate. *Akron* subordinates the decision of the lawmaker

to the judgment of the interested professional.[14]

We are using "the model" of "a conscientious physician," writes Justice Powell (for him as for Blackmun, doctors are always conscientious and always "physicians"). Why is the government compelled to accept this fantasy as the basis for its regulations? Any aware citizen knows that a large number of abortions are performed in mills. The modern abortionist is not the family doctor by his patient's bedside. The well-known expose of modern abortionists in Chicago by the *Sun-Times* put before everyone the kind of doctor—careless of his patients, callous to their sufferings, greedy for his money—that the Akron regulations were aimed at. Ignoring the real world and insisting on the dream doctor of the judges, the Court tramples on the experience reflected in the democratic legislative process.[15]

The Court makes a great deal of this exemplary fellow, the conscientious doctor. Nothing is to be interposed between him and his adult patient. *Roe* itself, Justice Powell admits, had pointed to "the central role of the physician" in "consulting" with the patient about an abortion. He himself writes, "It remains primarily the responsibility of the *physician* to ensure that appropriate information is conveyed to his patient" (emphasis supplied). But where the Akron ordinance requires that the physician give consulting advice about the operation to his patient, he strikes a different note. The critical factor for Justice Powell becomes that the patient obtain "the necessary information and counseling from a qualified person, not the identity of the person from whom she obtains it." It becomes unconstitutional to insist that the physician give counsel. Wonderfully overlooking the kind of halfbaked social workers or past victims of abortion likely to be willing to take such lowpaid work, the Court grandly and vaguely holds that "qualified" persons can be required to do the counselling. The Court fails to make clear why the judges have the expertise to say that a class of qualified non-doctors exist to inform potential abortion patients what awaits them and their child.[16]

Putting the professional abortionist above the lawmaking processes of democracy, using an unrealistic model of the ideal abortionist, inconsistently setting the doctor aside when he became an inconvenience, the Court does not even pay lip service to judicial self-restraint. Not once does Justice Powell ask how he has the knowledge or experience to decide the care necessary for a woman's health or the encouragement she needs to protect her baby's life or the information she should have to make an intelligent decision. The fiction is maintained that Justice Powell is merely "interpreting" the Constitution.[17]

In the year 1983, on the brink of *1984*, this kind of fiction is peculiarly unpersuasive and peculiarly unappealing. Anyone who can read knows that the Constitution does not say one word about abortion. There is no liberty of abortion in the Constitution. To say there is such a liberty one has to believe that the judges are free to make up the meanings they like and engraft them in the manner of constitutional amendments to the original text.

No one doubts, of course, that genuine interpretation can expand general concepts to cover new discoveries, for example, to bring television within the Freedom of Speech. No one doubts that experience incorporated in American laws and reflected in American beliefs and tradition can provide a gloss on ambiguous provisions. The pre-1972 cases which Justice Powell, following *Roe*, invokes for "freedom of personal choice in matters of marriage and family life" reflect the sacredness of marriage and the authority of parents, values older than the Constitution and deeply engrained in American experience. When an action has been criminal in every state, when American traditions of the family and American beliefs in the sanctity of life have run exactly counter to the action, when the action is no new discovery but an ancient and barbarous way of killing the helpless—to say that this action is protected by the Constitution's pledge of liberty is to add a new clause to the Constitution, to amend our basic law by the undemocratic method of judicial command.

Roe v. Wade, of course, wrote the new amendment. *Akron* merely reaffirms it. But after ten years of relentless criticism of the constitutional fallacies in *Roe v. Wade*, did the Court not have an obligation to explain itself, defend itself, state what the basis of its extraordinary assumption of power was? For a decade, critics of all persuasion on abortion had been unable to discover a rational basis for *Roe*. Did not even minimal respect for the rule of law and the decent opinion of mankind call for the Court to assert a basis other than arbitrary power? The judges must be powerfully insulated if all they know of are "legislative responses" and "arguments" suggesting they erred. The nakedness of their assertion of power in *Roe* has been exposed to the view of everyone. They now have nothing better to offer than *Roe*. Nothing better than *Roe*? Then they have nothing at all. They exercise the power of their office without reason and with profound injury to the rule of law.

Akron strikes one new blow against democratic government. It muzzles the legislative organs of the people. *Roe* declared that the state could not choose what the Court was pleased to call a "Theory of life" in protecting the unborn child by the criminal law. *Akron* declares that the state cannot even choose to have the truth spoken that the child is a child, is human, and is alive. To prescribe that the physician speak these words is, according to Justice Powell's opinion, "inconsistent" with *Roe v. Wade's* teaching that a state "may not adopt one theory of when life begins to justify its regulation of abortion." Or, as Justice Powell puts it in his own words, a state may not have "regulations designed to influence the women's informed choice between abortion or childbirth." [18]

By the same token, it would appear impermissible for the State to educate its children in modern biology, for modern biology teaches that the distinctive human karyotype is present at conception and that the newly-conceived being is alive. If the transmission of this information impedes a decision in favor of abortion—as it surely does—it must be an interference with the Court-proclaimed fundamental right. Such information certainly influences the informed choice of all who reject abortion. It would be instructive if the American Civil Liberties Union would seek an injunction prohibiting the use in the public schools of textbooks containing this harmful information. The Court might gag on Powell's principles logically applied. Its present holding that the Constitution acts as a censor and prevents a regulation requiring disclosure of the facts is only a little less extreme.

INSENSITIVE

The first kind of sensitivity all of us have is sensitivity to pain—to our own pain first and then, as we become civilized, to the pain of others. Insensitive persons are insensitive to the pain of others, do not want to know about it, care to do nothing about it. The majority of the Court in *Akron* reveal a startling insensitivity to others' pain.

A substantial body of physiological evidence indicates that the unborn child reacts to pain—moves to avoid discomfort, distinguishes bitter sensations from sweet. The Akron regulation required that a woman be informed of the child's "tactile sensitivity, including pain." The District Court said that there was "much evidence" that the sensitivity to pain was "impossible to determine." [19]

Instead of consulting the relevant medical literature, instead of using such a well-known handbook for pregnant mothers as William Liley's *Modern Motherhood*, the Court treats the District Court's conclusion as final. The Court, which felt free to rely for other medical data on such partisan productions as the National Abortion Federation Standards does not discuss the findings of standard physiological investigations of uterine life. The person who deliberately denies himself knowledge that others are in pain which he could alleviate is fairly described as lacking in elementary sensitivity. What shall one say of a Court that denies the states the opportunity to inform their citizens of pain they may not want to inflict upon their own children? [20]

On a different level, the Court shows itself insensitive to the politics of the country even as it engages in open politics—for a decision lacking in constitutional bases, undefended by reasoning, can only be called political. The Court has not noticed how much most of the country deplores an anti-family stance. The majority of the Court has not read the opinion polls that show the great majority of the country do not want the radical abortion right conferred upon them—do not want it for themselves, do not want it as an amendment to the Constitution. The Court majority has not observed that a majority of both Houses of Congress and the Chief Executive do not believe in the abortion amendment the Court has constructed.[21]

In deciding *Akron*, it may be said the Court is playing politics in a minor league. It is knocking down a city ordinance alone. Yet the Court did have the benefit of a brief from the Solicitor General of the United States solidly on the side of the city. The Court, even within its insulated walls, was surely aware that the President of the United States had declared that "we cannot survive as a free nation when some men decide that others are not fit to live and should be abandoned to abortion or infanticide." The Court had been unresponsive to the several States of the United States which have tried to find ways of shielding their unborn children only to have their laws struck down by the Court or its surrogates. The Court is now unmoved by the Executive Branch.[22]

Unfeeling about pain, deaf to the voices of the people's representatives, the Court is curiously uninterested in medical advances on behalf of the unborn. Viability now comes earlier than the seventh month which *Roe* said was usual. Justice O'Connor told the majority that an infant could be viable at 22 weeks, and stated bluntly, "The *Roe* frame-

work, then, is clearly on a collision course with itself." [23]

As viability moves backward, *Roe* should permit the States to protect the life of the unborn at earlier and earlier stages. If the *Roe* rationale is accepted, if precedent is respected when it works against abortion, the *Akron* regulations are constitutionally salvageable just because they do safeguard the state's interest in viable life. Justice Powell, with Justice O'Connor's facts in front of him, did not care to take note of them or say a word as to how the new information on viability shattered *Roe*'s restriction of any protection of the child to the last two months.

There is only one explanation for this kind of blindness when the information is spread out before one—the parti pris of ideology. How awkward it finds that new medical data tells against abortion, how embarrassing to say the states must study medical literature and to discover that, if they do, they will regulate abortion earlier. If one is convinced that one has invented a fundamental right, it is certainly easier not to believe that the fundamental right will be eroded by medical technology. It may even be necessary not to acknowledge the facts that would support such a belief.

Ideology, too, accounts for the grim determination not to admit in any way that abortion involves the killing of a human being. "Terminate her pregnancy" is Justice Powell's opening locution. "Unborn child" in the Akron ordinance is at times translated "fetus." He religiously applies the rubric "potential" to life in the womb. (If a moving, kicking, urinating baby is only potential life, it would be instructive to know what actual life is). He once, as we have seen, falls back on the *Roe* language which reduces the real child still further to a kind of ghostly existence as a "theory of life." At no point is he sensitive to the maternal language that speaks of the child as a baby.[24]

Ideology blocks out the accents of our mother tongue. It leads to one final enormity. The Akron ordinance required abortionists to dispose of "the remains of the unborn child" in "a humane and sanitary manner." In *Franklin* v. *Fitzpatrick* the Court in 1976 had upheld such a standard. Unfortunately for the respect due the role of law, the majority were prepared to strike down all the works of the Akron City Council. They overruled *Franklin* and threw out this provision with the others. Their ingenious reason was that the statute might be construed to "mandate some sort of 'decent burial' of an embryo at the earliest stages of formation." [25]

As the use of the phrase "decent burial" in quotation marks suggest, it is repugnant to the judges to consider that humane human beings might want to bury decently even a very young child destroyed by abortion. As the Court is here quoting the Sixth Circuit, it is inferable that Justice Powell has no appetite for considering the grisly reality of what should be done with the dead. If decent burial is too good for the early embryo, Justice Powell seems to reason, then the whole statute is void for vagueness. The conscientious doctor cannot tell what he is supposed to do.

In a case decided the same day, *Simopoulos*, and abortion was described in which an aborted child of five and one-half months was deposited in the wastebasket of a motel. Even the majority might concede that that was not humane and sanitary disposal. Normally courts construing a statute are satisfied if they can say specifically what the statute prohibits. What criminal statues are without grey areas of uncertainty? It required no speculation for the Court to say that wastebaskets and garbage dumps could not be availed of by abortionists obeying this ordinance. The judges themselves add the gloss "decent burial" in order to impute vagueness.[26]

The real offense of the ordinance on humane disposition was that, however weakly, it suggested that the slaughtered being was not vegetable or animal to the run through the disposal; not a theory of life to be written off in a sentence; not mere potential, which had no actual beating heart and functioning brain; but flesh like ourselves. Asking for a humane manner of disposal, the ordinance was sensitive to the fact that abortion was a way of visiting death on a human being. The Court is not.

Solomon's famous decision was designed to discern who really loved the child. He did not suppose the child would be actually divided. Possessed of less than Solomonic wisdom, the Court seems to suppose that its unworkmanlike, undemocratic, insenstive solution will actually be carried out; that the country will accept the division.[27] The Court could not be more mistaken. Prayer and love, work and education, action by the Congress, leadership by the President, constitutional response by the people will right the wrong now written into law.[28]

[25] *Ibid.* at 32, citing 651 F.2d at 1211 (6th Cir. 1981). Technically the Court "distinguished" *Franklin v. Fitzpatrick* 428 U.S. 401 (1976) affirming 401 F. Supp. 554 (E.D. Pa. 1975) because *Franklin* did not involve a criminal statute. Realistically and practically, the *Franklin* precedent was discarded, as Justice O'Connor makes plain in her dissent, p. 24.

[26] *Simopoulos v. Virginia*, June 15, 1983, Slip Opinion, p. 2 (opinion by Powell, J.).

[27] In footnote 33 of *Akron*, Justice Powell offers the compromise explicitly: "A State is not always foreclosed from asserting an interest in whether pregnancies end in abortion. In *Maher v. Roe* 432 U.S. 464 (1977) and *Harris v. McRae* 448 U.S. 297 (1980) we upheld governmental spending statutes that reimbursed indigent women for childbirth but not abortion."

[28] Compare President Reagan, "Abortion and the Conscience of the Nation" at 15: "Prayer and action are needed to uphold the sanctity of human life."

Mr. HATCH. Mr. President, I thank the Chair and thank my colleague from Oregon.

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT

Mr. BAKER. Mr. President, will the Senator yield to me to propound a unanimous-consent request?

Mr. PACKWOOD. I would be glad to yield.

Mr. BAKER. It will come as no surprise to the Members of the Senate that for some hours, indeed for a day, we have been trying to arrive at a series of unanimous-consent agreements that will provide for final disposition of the tax cap as well as the abortion amendment, which has already been dealt with. I believe now we have an agreement that has survived both caucuses, it appears to be acceptable to both sides. I would like to state the request now for the benefit of the minority leader who is here and on the floor, and the managers of this resolution, and all Senators.

Mr. President, I ask unanimous consent that after the time for debate on Senate Joint Resolution 3, the abortion amendment, has expired, which parenthetically will be at 3:43 this afternoon, that the Senate then tem-

porarily lay aside Senate Joint Resolution 3 and proceed to the consideration of the so-called tax cap bill from the House of Representatives; that debate continue on the tax cap bill from that moment until 5 p.m. today, and the time to be equally divided between the majority and minority leaders or their designees; that at the hour of 5 p.m. the Senate resume consideration of Senate Joint Resolution 3 and, at that time, under the order previously entered, a vote occur on that resolution.

After the conclusion of that vote, Mr. President, I ask unanimous consent that the Senate resume consideration of the tax cap bill, with debate thereon.

Mr. President, I will also say parenthetically I am prepared to ask the Senate to stay as long as necessary this evening to accommodate the wishes of Senators with respect to debate.

ORDER FOR RECESS UNTIL 8:45 A.M. TOMORROW

Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 8:45 a.m. on tomorrow.

ORDER REDUCING LEADERSHIP TIME TO 5 MINUTES AND PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. President, I ask unanimous consent, with the concurrence of the minority leader, that on tomorrow the time allocated to the two leaders under the standing order be reduced to 5 minutes each, and that after the time for the recognition of the two leaders has expired that any time remaining before the hour of 9 a.m. be devoted to the transaction of routine morning business in which Senators may speak for 1 minute each.

ORDER FOR RESUMING CONSIDERATION OF TAX CAP BILL AND VOTE THEREON ON TOMORROW

At the hour of 9 a.m. in the morning, the Senate will resume consideration of the tax cap bill, and that the time between 9 and 10 a.m. be divided equally between the majority and minority leaders or their designees; that at the hour of 10 a.m. the vote occur on or in relation to the tax cap bill.

Mr. President, I further ask unanimous consent that no amendment be in order to the tax cap bill today or tomorrow.

Mr. BYRD. Mr. President, reserving the right to object, and I will not object, will the majority leader add two elements to this request? One, that the time on debate following the vote on the now-pending matter be also equally divided and under the control of the two leaders or their designees; and, second, that no call for the regular order will bring the tax cap bill down.

Mr. BAKER. Yes, Mr. President, I started to do that on equal division of time after 5:15 approximately, and I could not quite figure out how to do that since we do not have a particular time we are going to go out, but let me put this request.

Mr. BYRD. What about not later than 3 hours?

Mr. BAKER. Mr. President, I ask unanimous consent further that when the Senate resumes consideration of the tax cap bill after the Senate Joint Resolution 3 vote, that a period of not more than 3 hours of debate be equally divided and under the control of the majority and minority leaders or their designees.

I further ask unanimous consent, Mr. President, that the call for the regular order will not bring back a bill temporarily laid aside in order to accommodate provisions of this order, and that the provisions of paragraph 4 of rule XII be waived.

The PRESIDING OFFICER. Is there objection? The Chairs hears none, and it is so ordered.

Mr. BYRD. Mr. President, I thank the majority leader.

Mr. BAKER. I thank the minority leader.

Let me say I had hoped at this time to have an argument to take up and dispose of the agricultural appropriations bill after we finish the tax cap bill tomorrow. We are still working on that, and I remain hopeful we can do that. It is entirely possible that we can finish that appropriations bill tomorrow, and I would urge Senators who are involved in that to think kindly of that proposition.

Mr. President, if we finish these matters and if we can dispose of any conference reports on appropriations bills that are brought to us from the House of Representatives it would be my intention under the resolution previously passed by the Senate, and assuming it is passed by the House of Representatives, to adjourn on Wednesday until July 11.

I thank the Senator for yielding to me for this purpose.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I yield 10 minutes to the Senator from Kansas.

The PRESIDING OFFICER. The Senator from Kansas is recognized.

Mrs. KASSEBAUM. I thank the Senator from Oregon.

I was presiding yesterday when the Senator from Missouri (Mr. EAGLETON) gave, I thought, a very thoughtful analysis of the constitutional history of this very troubling issue. I am not a lawyer so I am not able to speak to the legal aspects of this issue, but I am addressing my colleagues today as a colleague and as a mother.

The national debate over abortion began long before I entered the Senate in 1979. Knowing this to be an issue about which feelings on both sides run deep and believing it important that my position not be misunderstood, I stated my views on this issue at the outset of my campaign for the Senate. As I said then and have repeated many times since, I believe that abortion is seldom, if ever, the right moral choice, but it should nevertheless be a choice.

I understand and respect the opinions of those who disagree with me. Nonetheless, I remain firm in my conviction that this issue is not one which is appropriately addressed in any legislative forum. The tragedy of abortion in one which should be dealt with in the home and church, not in Congress.

In my view, one of the primary responsibilities of parenthood is instilling in one's children a sense of moral values. This is not the responsibility of Government—an institution which is clearly unsuited for such a function. Success or failure rests with the family, which is the single most important influence on the formation of the principles followed by an individual throughout his or her lifetime. If the family fails, it is folly to suggest that governmental fiat will make a measurable difference.

An ordered society rests upon the concept of individual responsibility. As the Government itself assumes greater responsibility, its citizens are moved further from acknowledging responisiblity for their own actions. I am one who believes that Government has already gone too far in intervening in areas better left to personal decisionmaking.

This type of Government interference will serve only to further restrict personal choice and to invite the flouting of our laws. There are many times during which we as individuals must acknowledge responsibility for our actions—be they right or wrong. There are times when we need to think through the choices ourselves and arrive at independent decisions based not on outside mandates, but upon the values we hold from our own upbringing and our sense of moral rightness. Making a decision about abortion ranks in these categories.

Many suggest that those who support choice are somehow endorsing abortion as a preferred option. This is ridiculous. Abortion is a tragedy which no one is actively promoting. There is no constitutional decision that makes abortion mandatory. I urge my colleagues to join me in opposing the amendment before us.

Mr. PACKWOOD. Mr. President, I thank my colleague from Kansas. I know how long she has considered this subject and agonized over the conclusion she has come to. I thank the Senator very, very much for that statement.

Mr. RIEGLE. Will the Senator yield to me at this point?

Mr. PACKWOOD. Yes, I can yield 3 or 4 minutes. We have four speakers to work in between now and 3 o'clock.

Mr. RIEGLE. I will just take 1 minute.

Mr. PACKWOOD. I yield to the Senator from Michigan.

Mr. RIEGLE. I thank the Senator.

I was greatly moved by the comments of the Senator from Kansas, who I think has spoken with great eloquence and meaning on this subject. I share very much the views she has expressed and I think her remarks are as important as any we have heard on this subject.

I just wanted to make that observation. I thank the Senator.

Mr. HATCH. Will the Senator yield?

Mr. PACKWOOD. I yield to the Senator from Utah.

Mr. HATCH. Mr. President, during the debate several questions have been raised about the operation of Senate Joint Resolution 3 and the wisdom to amend the Constitution to nullify the right to an abortion. I would like at this time to dispel those questions.

I will state the objections to this proposal as questions and give my numbered responses.

What is the holding of Roe against Wade? Does it only restrict first trimester abortions?

First. In the case of Roe against Wade, the Supreme Court identified for the first time a right to abortion within the terms of the 14th amendment to the Constitution. This right was defined with sufficient breadth to result in the overturning of the laws on abortion in each of the 50 States of the Union. In place of these State restrictions, the Court supplied standards for abortion regulation that divided the pregnancy into trimesters.

In the first trimester of pregnancy, the right to abortion is plenary. As the Court stated,

> For the stage prior to approximately the end of the first trimester of pregnancy, the abortion decision and its effectuation must be left to the medical judgment of the pregnant woman's attending physician.

In the second trimester, a State's authority to regulate abortion is limited to insuring the safety of abortion procedures. Again, in the words of the Court,

> For the stage subsequent to approximately the end of the first trimester, the State in promoting its interest in the health of the mother, may, if it chooses, regulate the abortion procedure in ways that are reasonably related to maternal health.

In the final trimester, the State at length acquires an interest in protecting unborn life. That protective capacity, however, is subject to significant exception. The Court states that a State "may, if it chooses, regulate, and even proscribe, abortion, except where it is necessary, in appropriate medical judgment, for the preservation of the life or health of the mother." This "health of the mother" exception has effectively consumed the rule because maternal health interests were defined by Roe's companion case, Doe against Bolton, to include "all factors—physical, emotional, psychological, and the woman's age—relevant to the well-being of the patient." In the words of Prof. John Noonan, the absolute entitlement to an abortion is curbed in the third trimester only by the "necessity of a physician's finding that she needed an abortion." It would be a rare physician who would be incapable of defending an abortion on grounds that in his best medical judgment the "well-being" of his patient demanded it.

Does this amendment put the Government back in the bedroom?

First. In the first place, this amendment is carefully crafted to prevent any adverse effect on the right of privacy. The Supreme Court in 1965 enunciated a constitutional right to privacy that protects the "sacred precincts of the marital bedchamber" with regard to family life and contraception. Griswold against Conn., 381 U.S. 479 (1965). This amendment only repeals the "right to abortion" created by Roe in 1973. The privacy interests of the bedchamber remain untouched by this amendment.

Second. What we are discussing today is not what kind of government we will have in the bedchamber, but what kind of government we will have in the abortion clinic. It would be absurd to deny that government, indeed big government, is already there. We have 13-year-old girls going into these clinics with a permission slip from the local judge, saying that—even though they would need parental consent to have their ears pierced—they do not have to tell their parents that they are about to destroy their grandchild. In some States, we have State vehicles driving up to the clinic door to drop off wards of the State for their government-approved abortions. We have Federal courts telling public hospitals that it is unconstitutional for them to act in accordance with the hippocratic oath, because they have an affirmative duty to open their facilities to elective abortions. We have a right whose champions contend may not be exercised without public funding. In short, the most fundamental law of our land has been placed at the service of the abortion industry, and I, for one, consider that a flagrant misuse of our Constitution. On top of all this, abortion totally denies the rights of the unborn. How can a right be private that harms another?

Third. Any Senator who wants to remove big government from the abortion issue has an opportunity to do just that by voting for this amendment. Senate Joint Resolution 3, will not prohibit abortion—it states no single substantive policy on this matter—but it will remove the most powerful and least accountable branch of our Government from what can only be called an extremely active role in using the Constitution to promote abortion.

Would this allow States to adopt differing policies?

Yes. Since the Supreme Court's interpretation of the Constitution would no longer mandate a single national policy, States would be free to deal with abortion policy as they see fit. Abortion would be among the many subjects not specifically delegated to the Federal Government by the Constitution and thus left to the States and the people themselves. Abortion would be restored to its proper place with other subjects regulated by the powers reserved to the States. General police powers, domestic relations laws, insurance laws, corporation and business association laws, property laws, trust and estates laws, and any other potential topic of legal concern outside of the specific Federal powers enumerated by article I, section 8, are all within the purview of primary State authority, as indeed abortion policy was until 1973. All of these policies may and do vary from State to State.

These variances are often beneficial because it allows the States to experiment with different approaches to a legal problem. Thus, as the State legislatures deliberate, a consensus will form around the best solution to the problem. Indeed, this hypothesis was evidenced with abortion policy prior to the interruption by the Supreme Court. In the 5 years preceding Roe, 18 States had changed their abortion laws—all in the direction of more liberal allowance of abortion.

Respect for community consensus and the virtues of diversity have been a vital aspect of the vitality and strength of our Federal system.

After ratification, what other general constitutional rights will limit State enactments relative to abortion?

First. The Federal judiciary would continue to have responsibility for determining the meaning of the amendment. Other general provisions of the Constitution would continue to limit State enactments. For example, a State statute prohibiting only black women from having abortions would run afoul of the equal protection clause. A statute prohibiting only Catholics from having abortions would violate the first amendment. Under

the due process clause, a statute permitting abortions only at the discretion of a State agency that operates without standards in determining who gets an abortion would be invalid. In general all of the provisions of the Constitution would still be applicable to State enactments, just as they were prior to 1973. No general clause could operate, however, to elevate abortion to the elevated stature of a fundamental liberty. This would be creating a "right to abortion" such as was created by Roe and would be prohibited by this amendment.

What if a State constitution contains a right to abortion?

First. The specific language of this amendment is limited to "this Constitution," meaning the U.S. Constitution. It has no applicability to State constitutions. State statutes will still be subject to the provisions of their own constitutions, therefore any States whose constitutions contain a right to abortion would have to abide by that policy. This amendment respects the State's right to shape its own policy through constitutional or statutory processes.

How is this a "States rights" proposal if Congress will retain powers to prohibit abortion?

First. This amendment is a States rights amendment in the sense that any law under our Constitution is left to the reserved powers of the States. The objections about the extent of the residual Federal authority to regulate abortion are really not objections to this amendment at all, but objections to other constitutional clauses granting Congress broad authority. This amendment simply restores to the States and to the Federal Government the powers they possessed prior to 1973. If the Senate is displeased with the extent of the Federal commerce clause power or the powers of section 5 of the 14th amendment, it should consider constitutional amendments to deal with those perceived problems as I have proposed a constitutional amendment to deal with the Roe problem. This amendment confers no new power on the State or Federal Governments.

Second. In the Constitution Subcommittee and later in the Judiciary Committee, we struck language from Senate Joint Resolution 3 to clarify that the Federal Government has no special power with respect to abortion. The legislative history of this amendment is intended to direct all legislative concern with the abortion question to the States.

Third. From the standpoint of precedents, Congress did not regulate abortion in the nearly 200 years prior to Roe. In fact, the only statute that seems to have any intent with regard to abortion prior to 1973 would have prohibited interstate transport of abortifacients.

Does this amendment impose a particular morality on the country?

First, this amendment does not impose morals, it seeks to remove a Court ruling at one extreme poll of moral values and replace it with a position of neutrality. The Supreme Court, although at a loss to find any plausible reference to abortion in the Constitution, has ratified a very specific set of value judgments and required every State and local authority in the country to act as though it agreed with those judgments. Consider these moral positions: Since the Court decided that abortion is a specially protected medical practice, public health care facilities may no longer act as though the hippocratic oath—which dates back to 500 B.C. still has some meaning. Parents may not even consult with their pregnant minor daughter about abortion under recent Court rulings. This is not imposing morals, but reversing the gross imposition of morals.

Second, my amendment would reverse this very narrow and unrepresentative situation. It would reenfranchise all the people in our country, so that some kind of working consensus on the morality of permitting abortion in our society can be worked out. In and of itself, it states no dogma, takes no moral position, suggests no ethic. It simply says that our national morality does not warrant making abortion into a fundamental right. Testifying in favor of an amendment like this in 1981, Prof. Richard Stith of Valpariso University stated:

> Under this amendment, he said, (those who oppose abortion) may be in the minority, but they will not be excluded from debate by prior stipulated definitions of the beings whose interests are at issue. They may disagree with their fellow citizens, but they will not be alienated from the fundamental law of our land. And even in disagreement there is a bond to our neighbors in the hope of persuasion: Political dialogue and accommodation become once again worthwhile because local political decisions can and must be made. Free speech itself can again matter because it can be effective speech.

Third, every law ever enacted—at least, any law worth taking seriously—has a moral component. Every law says something about the values and ideals of the country that frames it, and in turn teaches the members of that society what it stands for. The question before us is whether our Constitution stands foursquare for abortion, or allows for a more pluralistic approach to this issue.

Would you be comfortable allowing the States to regulate other fundamental liberties, such as the freedom of speech?

This question presupposes that abortion is a fundamental right. This amendment is based on the principal that abortion should never have been elevated to the status of a fundamental liberty like freedom of speech. The framers of the Constitution and its amendments had no intention whatsoever to raise abortion to the status of free speech. In fact, several of the same State legislatures that ratified the 14th amendment enacted in the same session, strict prohibitions on abortion. It can hardly be maintained that the drafters of the 14th amendment intended abortion to become equal with free speech.

This amendment therefore reverses Roe and returns abortion to the place it occupied in American jurisprudence for nearly 200 years before Roe; namely, a matter within the discretion of the State legislatures subject to ordinary standards of constitutional review.

This amendment does not assert that States should be able to regulate free speech, but only that abortion is not deserving of treatment as a fundamental liberty. Free speech was approved by two-thirds of both Houses of Congress and three-quarters of the States. Can the same be said of the abortion right which was created by seven of nine judges?

Does this violate a woman's freedom of choice?

This amendment does nothing to declare policy on abortion. This amendment will derive any woman of any alternative. It does not say anything about abortion per se. It simply reverses one extreme resolution of a conflict between important societal values. I agree that freedom of choice is an important value. But in this instance, that value is in conflict with an even more important value, the fundamental right to life of defenseless human beings who are not yet born. Therefore, I must pose a further question: Freedom to choose what? Freedom to choose to kill an unborn infant in the third trimester simply because it is a girl instead of a boy, or simply because the mother decides it would be more convenient to wait another year or two? How about the freedom to choose to kill 1.6 million infants a year for such reasons? Moreover if choice is really the issue, then how can we justify the lack of concern over minors of perhaps 13 or 14 years being permitted to receive abortions without consulting with their parents? Every State recognizes that minors must be protected against the consequences of immature choices by requiring parental consent for marrying, attending adult movies, or in some cases, even getting her ears pierced. Yet abortions are allowed without concern for making the choice really free of immature factors. As I said, freedom of choice is an important value. But freedom to choose to kill unborn infants at almost any state of pregnancy is ignoring that another's choice may be at stake as well; namely, the unborn

child's. Where is the child's freedom of choice?

Would not this proposal affect Congress power to remove the jurisdiction of Federal courts—all jurisdiction from lower Federal courts, appellate jurisdiction from the Supreme Court—under article III and thus prevent courts from hearing abortion cases?

First, in the first place, this amendment does not affect the jurisdiction of the Federal courts at all. The power of the courts to hear and decide cases will not be altered in the slightest. The standards used to decide abortion cases in those courts will be altered. The abortion right will no longer be a fundamental liberty which the States can only limit by showing a compelling public interest. Instead a State may regulate abortion by showing a rational reason for doing so. As always, the determinations of rational basis will be made by courts. Since the States already have been granted at least two such rational bases—maternal safety and fetal life protection—State statutes are sure to be preserved.

Second, Congress article III power is not altered by this amendment. Congress could conceivably be debating an article III bill to alter Federal court jurisdiction today. That, however, would not change Roe which would remain binding on State courts even if lower Federal courts had no jurisdiction and the Supreme Court had no appellate jurisdiction over abortion.

If a Senator has objections to this Federal power, he should remember that this Federal power is not related at all to this amendment. It existed prior to 1973 and after 1973 when the Court created the abortion right.

Why could Congress not simply regulate abortion out of business under its taxing power?

For several reasons, such an attempt by Congress to regulate abortion under the guise of raising revenue is highly suspect and likely to be unconstitutional.

First, the Supreme Court has not been fooled by such subterfuges in the past. In 1922, the Court struck down a special tax on the profits of concerns employing child labor on the ground that the act was not a bona fide attempt to raise revenue but an attempt to control matters reserved to the States. *Bailey* v. *Drexel Furniture,* 259 U.S. 20 (1922). Moreover in 1935, the Court held invalid a statute attempting to tax liquor dealers in violation of State law because it was "an invasion of the police power inherent in the States." *U.S.* v. *Constantine,* 296 U.S. 287 (1935).

I recognize that the law in this area is not uniform. Sawed-off shotgun dealers, for instance, may be taxed at the prohibitory rates. *U.S.* v. *Sanchez,* 340 U.S. 42 (1950). Nonetheless, the taxing power is not without limits. If Congress attempts to expand its jurisdiction to cover a matter clearly reserved to the States, such as abortion will once again become after this Amendment, its attempt may well be struck down as unconstitutional.

Second, the argument that Congress could tax abortion out of existence admits too much. Under this rationale, Congress could also tax swimming pools or movie theaters or any other business for that matter. As John Marshall noted, "The power to tax involves the power to destroy." I hardly think that any Senator in this Chamber wants to start down the path of selectively destroying businesses with the power to tax. Once again, I come back to my statement that this amendment restores abortion to the plenary jurisdiction of the States to the extent that anything is within the plenary power of the States. We would all agree that regulating swimming pools or movie theaters—for safety—is within the States' exclusive control. Yet taken to its extreme, the power of taxation could totally override the States by taxing these interests out of existence. Abortion would be solely within the powers of the State in the same sense that anything under our Constitution is solely within State power.

Third, the taxing authority of article I is not an independent, freestanding power without bounds. The permissible scope of taxation is defined by the delimitation of the specific tasks delegated to Congress by article I, section 8. Thus, Congress may tax "to raise and support armies," "to establish a post office," "to constitute tribunals," or to accomplish any of the other specific congressional duties. Regulation of abortion or other criminal matters do not fall within those delegated powers and are, consequently, reserved to the States.

Fourth, one final limitation on this authority: While Congress has been allowed to use its power to tax to require gamblers and marijuana dealers to identify themselves by purchasing tax stamps, but this cannot operate in a fashion that permits violations of the privilege against self incrimination in the fifth amendment. *Marchetti* v. *U.S.,* 390 U.S. 39 (1968). Thus if abortion were illegal in a State, Congress could not fashion a tax that might cause someone performing abortions to incriminate himself by paying the tax. This could be an important limitation.

Could Congress use its authority to dispense money, the spending clause, to require publicly funded medical schools to ban abortion, to require publicly funded hospitals to ban abortions except for life of mother, to require any State receiving welfare funds to ban abortion?

First, this raises once again a fundamental constitutional interpretation controversy that traces its origins to the two primary expositors of the document, Madison and Hamilton. The Constitution says that the money Congress raises by taxation may be spent "to pay debts and provide for the common defense and general welfare of the United States." The phrase in question is "general welfare of the United States" Madison, in Federalist Papers No. 41, contended that this meant Congress was only empowered to spend to the extent necessary to carry out the other specific powers enumerated in serial fashion after the semicolon that follows the general welfare language. In addition to generally benefiting the United States, he maintained, any spending measure would have to be related to one of the specific delegations of power that followed. Thus, under Madison's reading, Congress could not cut off all funding for States that failed to ban abortion because none of the specific delegations of Federal authority is concerns abortion. My reading of the Constitution supports Madison's thesis that the spending authority must be subject to some restraints. This is the basic theme of the Constitution: to provide a limited Federal Government. Choosing Madison's option would preclude this problem from arising, if the courts wish to reach this result.

Hamilton's argument was that Congress power to spend for the general welfare was a power in addition to its other specific authorities. This, I must confess, is the interpretation that currently commands the majority in the Federal courts. Since *U.S.* v. *Butler,* 297 U.S. 1 (1936), Congress has enjoyed broad spending authority. Based on this current case law, I would expect that a congressional spending limitation intended to ban abortions could be upheld by the Supreme Court.

Second, because Congress has the power does not mean its exercise would be likely or prudent, however. After all, Congress has the power to declare a nuclear war, but such an exercise is unlikely. Nor is it likely that Congress would shut down necessary hospitals to prevent abortions, nor would it shut down medical schools or other vital services in the interest of banning abortions. This is particularly true because abortion will already be regulated by the States under this amendment. It makes no sense for Congress to risk shutting down lifesaving services to save lives, particularly when the States will enjoy the option to protect lives on their own without Federal help.

Third, in nearly 200 years prior to 1973, the Federal Government never found it necessary to take such a drastic action. The States sufficiently regulated abortion. It is unlikely that Congress should find it necessary to depart from this precedent. Since

11-059 O-87-20 (Pt. 13)

1976, Congress has probably exercised as much spending authority as it is likely to ever employ by its enactment of the Hyde amendment. The Hyde amendment specifically limits its prohibition on spending to a ban on any Federal spending under medicaid for the purposes of performing abortions other than those necessary to save the life of the mother.

Could Congress not, under the Commerce Clause, regulate abortions?

First. The commerce power is broad in that it allows Congress to regulate anything affecting interstate commerce as well as the commerce itself. *Gibbons* v. *Ogden,* 22 U.S. 1 (1824). Under this authority, Congress has made Federal crimes of acts which were traditionally governed by State criminal statutes. For example, the Dyer Act punishes interstate transport of stolen autos and the Lindbergh law punishes interstate transport of kidnapped persons, 18 U.S.C. 2312 and 1201. The commerce power, though very broad, is not without limits. For example, in *U.S.* v. *Five Gambling Devices,* 346 U.S. 441 (1953), the court did not enforce a criminal statute forbidding interstate shipment of gambling devices and requiring every dealer to register his place of business. The court said: "No precedent of this court sustains the power of Congress to enact legislation penalizing failure to report information concerning act not shown to be in, or mingled or found to affect commerce." 346 U.S. at 446. Thus, a Federal abortion statute under the commerce power would still be required to show a definite effect on interstate commerce, which in the case of a local medical operation may be difficult.

Second. Once again, I must stress that under its commerce power, Congress could hypothetically preempt almost all regulatory powers left to the States. Congress could find that babysitting affects interstate commerce and set national standards governing babysitting. In other words, any problem with Congress broad commerce power is not a problem with this constitutional amendment. This amendment simply allows the Constitution to operate as it did prior to 1973.

If some Senators are unsatisfied with the way the Constitution's commerce clause operates, they should propose a constitutional amendment to solve that problem; they should not attribute that problem to this narrow issue of the right to abortion.

Third. As I have repeatedly said, this amendment does nothing but restore the legal status quo ante Roe. Therefore, Congress will have no authority to enact prohibitions on abortion than it possessed in the entire life of the Republic up until 1973. In that time, Congress enacted virtually no laws governing abortion, with the exception of a law proscribing the interstate transport of abortifacients. 14 U.S.C. 1461, 1462. Thus, the precedent for Congress to abuse its authority and enact broad bans on abortion are scarce.

Because this amendment is silent on legislative authority, is it ambiguous on who may legislate and to what degree?

There is no ambiguity about who may legislate and to what degree with respect to abortion in this amendment. This amendment operates in conjunction with the rest of the Constitution. Therefore, the Federal Government may act within its jurisdiction, which means it may act very little because the Constitution gives Congress no specific legislative authority over abortion, and the States may act within their jurisdiction, which means they will have plenary authority reserved to them to set abortion policy. In fact, there is far more ambiguity about how Roe works than there is about how the Constitution works relative to abortion. Since Roe, there have been more than 100 Federal court cases, 15 of these decided by the Supreme Court, trying to ascertain the meaning of Roe. In nearly 200 years prior to Roe, there were fewer than five cases that reached the Supreme Court dealing with abortion. We have nearly 200 years of precedent governing how the amendment would work. Roe is far more ambiguous than is this amendment.

Is it not true that under this amendment a State may ban all abortions, including those necessary to save the life of the mother?

First. Technically yes, but to suggest that the States were ever in the past, or would ever in the future, be so callous is to overlook that the States too are fully capable of protecting the lives and liberties of their people. In fact, no State's body of law prior to 1973 failed to recognize a life of the mother exception. Most States protected that interest by statute; the rest protected the interest in their courts to such a degree that a statute was not necessary. Wardle, "A Lawyer Looks at Abortion," 39. The States clearly would recognize that right again.

The same might be said of rape and incest, namely that the States had provided some appropriate means of dealing with the problem in most cases.

Second. In a sense, this is more a rhetorical than a real problem. Under this amendment, the States would have plenary authority to regulate abortion as they now regulate marriage, divorce, or hospital cleanliness. Of course, a State could be so ignorant as to outlaw divorce or to permit a sewage treatment plant to be placed next to a hospital, but these are highly unlikely outcomes. It is similarly unlikely that a State is going to ignore the interest in life of the majority of its population capable of bearing children.

Third. As I have described, it is incomprehensible that a State would adopt, after 10 years under Roe, a policy that would be as callous as you suggest. But if, as you suggest, the majority of the people really do support the extreme policies of Roe, why do you fear to let the States legislate? Would not the majority rule in the States to bring about the policy you desire without continued Federal involvement?

Fourth. To posit that the States could adopt an abusive, callous, or unconsidered statute on abortion is to overlook that the States, too, operate on a system of checks and balances that will prevent abusive legislation. States, too, have vetoes, supermajority requirements, judicial review in State courts, and the like to prevent dislocations due to unwise policies.

Is the language "is not secured" ambiguous as the CRS memorandum mentioned by Senator PACKWOOD insinuates?

First. The memorandum prepared by Mr. Dale raised several questions without explaining his reasoning for even posing the questions. None of the witnesses from either poll of the abortion debate saw the supposed ambiguities that Mr. Dale purported to discover. I asked Prof. Lynn Wardle of the Brigham Young University to give his legal analysis of the paper prepared by Mr. Dale. He stated, "Conclusory assertions are always begrudged by legal analysis. And in this case, there is no support given for the conclusion that the language is ambiguous. If there is any ambiguity, it has not been revealed."

Second. Allow me to read from the Wardle memo a few thoughts dispelling the notion that there is some hidden ambiguity:

> Mr. Dale suggests that the phrase "is not secured" could conceivably be read to mean that abortion is prohibited or that abortion is protected subject to a minor countervailing consideration. These speculations are fun to engage in, and evidence a fruitful, creative mind. But legal analysis they are not. The author simply says that these interpretations "could conceivably" be made; he never says how the language could be given such translation or why such mental speculations should be given serious consideration.
>
> For instance, the author might have refered to a dictionary to show that the word "secure" has several meanings. Among the definitions given in Webster's Third New International Dictionary are guarantee, assure, to make safe, and to shield or make secure from * * * destruction or hostile interference. Or he might have referred to the Preamble to the Constitution where the same word is used in the phrase "to secure the blessings of liberty to ourselves and our posterity." But Mr. Dale does neither of these things. In fact, he gives no justifica-

tion or explanation whatever for his bare conclusory assertion that "is not secured" is ambiguous and could be given creative constructions like he suggests. Legal analysis is a discipline; lawyers and judges must reason every inch of the way from identifying an issue to reaching a conclusion. Mr. Dale's interesting speculation about how the bare words of S.J. Res. 3 might be construed lacks this discipline.

It is worth noting that Mr. Dale candidly admits that his speculations are necessarily tentative because he was working without the benefit of a fully developed legislative history. CRS at 3. Since the intent of the framers is crucial to the subsequent interpretation of constitutional amendments, Mr. Dale correctly noted that it was virtually impossible for him, writing a month before the Senate Judiciary Committee Report was published, to predict the proper construction of the language of S.J. Res. 3. The subsequent publication of Senate Report 98-149 supplies the crucial information Mr. Dale was lacking. It specifically states:

The phrase "not secured by this Constitution" is simply meant to clarify that the proposed amendment seeks to disestablish any theory of constitutional law upon which the existence of a right to abortion can be predicated. It is primarily designed to establish a new locus for decisionmaking authority, i.e., legislatures, not the courts.

S.J. Res. 3 merely affirms the power of legislatures to legislate with respect to abortion and denies the existence of any constitutional protection for "abortion."

Senate Report 98-149, at 57. Coming a month after Mr. Dale's memorandum and emphasizing so pointedly what the phrase "is not secured" was intended to connote, the Senate Report neatly clarifies the "ambiguity" which Mr. Dale saw earlier when he labored under the handicap of not having the legislative history.

Could this language result in the ban on contraceptives?

First. The 10 words of Senate Joint Resolution 3 will have absolutely no effect on the current protections afforded for contraception under our laws. This proposed amendment simply and directly reverses the abortion right created in Roe. It does not affect the privacy doctrines that have provided legal protections for contraception.

The 10 words of Senate Joint Resolution 3 were carefully chosen to avoid any impact on privacy doctrines other than abortion. This amendment simply removes abortion from the practices that can be protected by the privacy right. To be specific, this amendment reverses Roe against Wade, not *Griswold* v. *Connecticut*, 381 U.S. 479 (1965) (marital privacy prevents State anticontraception statute), nor *Eisenstadt* v. *Baird*, 405 U.S. 438 (1972) (statute forbidding dispensing of contraceptive to single persons invalid because State has no rational basis to distinguish between married and unmarried), nor *Carey* v. *Population Services*, 431 U.S. 678 (1977) (right to privacy strikes down statute requiring contraceptives to be distributed by licensed pharmacist and only to adults).

The undisturbed right of privacy will continue to protect contraception as it did prior to the reversal of Roe by this amendment.

Second. Once again, the committee report makes clear the intent of the authors and supporters of this amendment to avoid any impact at all upon formulations of the right to privacy other than abortion. See page 56 of the committee report.

Third. If some form of contraception is in fact an abortifacient, then this amendment still does not ban it. It merely means that that particular abortifacient is not protected by the fundamental liberty protections of the Constitution. Thus, the States would be free to legislate, or refrain from legislating, with respect to that abortifacient. Moreover, any State statute concerning such an abortifacient would not be immune from constitutional review. The State would still have to show some rational relation to a legitimate State interest before its law could be held valid. Fisenstadt has already said that such a rational basis does not exist to distinguish between marrieds and unmarrieds. Moreover, Griswold and Carey have discredited most any interests a State may posit as "legitimate" for purposes of contraception regulation. In short, even if a contraceptive acted as an abortifacient, States, if they venture to legislate at all, are unlikely to have success meeting the rational basis test. Therefore, we are quite safe in stating that all forms of contraception are beyond the purview of this amendment that reverses Roe.

Fourth. Even if all these hurdles are passed, abortifacient contraceptive bans are not likely to result in prosecution due to problems of proof. Most of these abortifacient contraceptives operate before a pregnancy can be proven. Therefore, there is no way to show that a pregnancy was in fact terminated by such a device.

Under this amendment, would a State be free to enact a statute that banned abortion even in cases of rape or incest?

First. The Hatch amendment does not prohibit abortions after rape or incest. Even prior to Roe when our consciousness of the problems associated with abortion was not as sophisticated as today, many States had statutes which allowed abortions in the case of rape or incest. The rest of the States, in effect, recognized such an exception because no one was ever prosecuted for performing an abortion under such circumstances. In the words of one legal commentator on the subject:

Although such abortions [for rape or incest] were not within the law as written [in some States], they were clearly within the law as applied. . . . As a practical matter, abortions performed by doctors in the three categories of hard cases were not considered to be criminal abortion by the 1960s.

Wardle, A Lawyer Looks at Abortion, 39.

In fact, despite diligent searches by my committee and witnesses before my committee, no one has ever been able to locate an instance where someone was actually prosecuted for performing an abortion to terminate a pregnancy caused by rape or incest.

In sum, I think we can be reasonably secure that the States will not act more unreasonably than they acted prior to 1973 when they did not prosecute for rape and incest abortions. In fact, I think we can trust them to be more responsible in protecting their own citizenry.

Second. In the 5 years prior to Roe, 19 States had changed their laws to permit abortions in instances where a mother's health might be endangered. If Roe had not interrupted the orderly development of the law, most if not all States would probably have such exceptions today.

Third. While a very emotional issue, this is hardly a major problem in terms of numbers of pregnancies caused by rape or incest. As I have mentioned, in those cases that might have occurred, we have no instance of prosecutions for an abortion.

Studies across the country attest to the fact that pregnancies from rape or incest are rare. In Chicago, a 1967 study found no pregnancies caused by rape over 9 years. In Buffalo, N.Y., a 1969 study found no pregnancies from confirmed rape in over 30 years. And a 1977 study in Philadelphia found no instance or pregnancy over a period of 19½ years (Judge Della Porta study).

Nonetheless States have not abused the trust placed in them on this issue.

Is this the first time in our history that the Constitution has been used to negate, rather than affirm, a right?

First. This really begs the question. This assumes that abortion is a fundamental right deserving the constitutional protection. This point totally ignores the other rights at stake in this matter, namely the fundamental right to life of the unborn child. The whole reason for this debate is that two important ideologies have collided. This collision was caused by the Supreme Court's adoption of one extreme poll of the debate without apparent constitutional justification. The whole purpose of this amendment is not to resolve the persistent issue of which of these interests are paramount, but rather to remove the legal basis for the Supreme Court's dubious holding and allow the States to resolve this controversy in the legislative forum.

Second. This statement is not factually correct. The 22d amendment, for instance, took away a person's right to be elected President more than twice.

Depending upon how the amendment is construed, every amendment

probably denied some kind of right and expressed a preference for another right.

Third. Like you, I am interested in maximizing individual rights. In this case, however, there is no consensus as to what those rights are. Even a decade under Roe, which adopted one answer to the question of rights, has not produced a consensus. This amendment facilitates the formation of such a consensus and the discovery of what the rights are to be protected in this case.

Is it appropriate to subject fundamental rights to democratic processes?

Fundamental rights of individuals should not be determined by referendum. The problem, of course, is that few can agree on what precisely are these individual rights that are involved with the abortion issue. Critics in the prochoice movement see these as being the right of the pregnant woman to determine how her body is used, while critics in the prolife movement see this as the even more fundamental right of the unborn to life itself.

In other words, there is just as much disagreement on the issue of what constitutional rights are involved here as there is on the issue of the morality of abortion itself. It thus begs the question to attack the immediate amendment as one "restricting rather than expanding" rights.

The purpose of the Hatch-Eagleton amendment then is not to resolve the persistent issue of which of these conflicting rights is paramount, but rather to establish a balancing process for determining how this conflict, will be resolved in the content of individual circumstances. In short, this balancing process will take place in the same forum in which it takes place in the context of most other controversial public policy issues within the legislative process.

Mr. President, we often hear the argument from so-called liberal quarters that those who oppose abortion are lacking in concern and compassion for genuine human needs. We prolifers are often pictured as morel blue-noses who will encourage the births of children but won't take care of them after they are born.

I must respond that we would like to take care of all helpless and vulnerable, the widow, the orphan, all those set upon by life's vicissitudes. But the simple fact of the matter is that we cannot when they are not allowed to live. Why hold out the prospect for food stamps and school lunches when you kill the potential recipients first?

Abortion is no answer to any of our social ills. It is a negative response to complex problems that demand more positive answers.

A major argument used against restrictions on abortion is the matter of protecting maternal life and health. For instance, the following arguments have often surfaced:

> I am unwilling to return the country to the barbarous conditions under which abortions were obtained when not permitted by law . . . by unqualified personnel, often in less than sanitary conditions.

Others relied before *Roe* on self-induced or even illegal abortions. I do not want to see a return to that tragedy that was caused by illigal abortrions. We have all heard too many horror stories about that, and we have seen the difficulties with it.

These comments were made by some of my colleagues in debate on the Senate floor. In addition to Senate debate, we all remember the prediction from the Center for Disease Control that implementation of the Hyde amendment would cause between 44 and 90 women to die within the year from botched abortions.

For my part, let me state unequivocally that I am motivated in my pursuit of a constitutional amendment by a deep concern for life—and that means the life of the mother as well as the life of the unborn. The picture often painted about the danger to pregnant women deserves to be clarified. The reality is, and both sides should admit it, that whether abortions are restricted or not, some women will be hurt and some will die during abortions. This is tragic, but it happens. The fundamental question to ask respecting maternal life and health is not whether some women will be hurt under various proposals, but whether women will be better off when States can regulate abortions or when abortion on demand exists. When posed in that light, the question changes. Under laws protective of the lives of the unborn and the mother, the protections for the life and health of women are greater.

Roe against Wade, by precluding regulation of abortion clinics to any reasonable degree and by drastically increasing the number of women obtaining abortions and by permitting extremely dangerous late-term abortions, has actually resulted in more women being hurt than prior to 1973. A 1978 Chicago Sun Times investigation uncovered a gruesome picture of legal abortion. The paper documented—

> * * * how women are deceived, maimed, crippled, and even killed by abortion profiteers.

It found an alarming number of women who, because of unsterile conditions and haphazard clinic care, suffered debilitating cramps, massive infections, and such severe internal damage that all their reproductive organs had to be removed. On November 19, 1978, their headline read "12 Dead After Abortions in State's Walk-In Clinics." And on January 5 of this year, the Miami Herald reported "Fourth Woman Dies After Abortion in Miami Clinic."

Now lets look at the actual data respecting maternal mortality and morbidity both before and after Roe against Wade. In 1942, 1,231 women died from abortion. In 1952, 320 women died from abortion, and by 1969, the number of deaths was down to 128. This dramatic decline occurred during a period when practically every State had a very restrictive abortion law. For this reason it is assumed that improvements in health care are chiefly responsible for the decline.

This decline in abortion-related maternal deaths continued after the Supreme Court decisions on abortion. But is was expected to continue, whether the Court acted or not, following a pattern that had been well established over the preceeding three decades.

According to a leading U.S. obstetrician writing in the February 1, 1978 issue of the American Journal of Obstetrics and Gynecology:

> There has been no major impact on the number of women dying in the United States since liberalized abortion was introduced.

In fact, he continues—

> * * * there has been less improvement in maternal mortality in the 1973-to-1975 period than in any other 2-year period since 1965. This suggests that approximately 1 million fetuses are being sacrificed each year with no evidence that it is contributing significantly to the reduction of maternal deaths in this country.

In 1977, when legal abortions reached 1,320,000, the decades downward trend in abortion maternal deaths reversed and continued upward through 1979—last year for which data is currently available.

Respecting maternal health, the total number of abortion complications treated in U.S. hospitals has increased since the legalization of abortion on demand. In 1969, the number of abortion-related complications being treated in U.S. hospitals stood at 9,000; by 1979 the number had more than tripled.

And not only did the projected Hyde amendment deaths not materialize, but in November 1980, the CDC reported that restricting public funds for legal abortion—

> (a) * * * has not increased the number of illegal abortions, (b) had no significant change in the number and proportion of publicly funded hosptializations for complications of illegal * * * abortions, and (c) resulted in * * * a marked decrease in publicly funded hospitalizations for complications of legal abortions.

Restricting abortions then, making them less accessible, is not detrimental to the lives and health of women, and is of course very beneficial of unborn children. I am prolife, prounborn, and prowomen.

At this point, I would also like to provide a poem on this subject for my colleagues:

As of today a million more are dead,
They weren't allowed to even lift their heads,
As silently the days go on and on,
No care that 15 million now are gone,
Since justice in the highest court we know
Repetitively rule—they have to go—
In subtle ways in brutal ways as well,
Without the slightest thought they work like Hell
For diminution of the human race,
For social inconvenience in this place,
Or Life Styles which are never like the past,
Or for their gender reasons—it's a blast,
Or for the other countless reasons now,
Innumerable frivolous we bow,
Before the godless shrines of argument—
We weep as almost helpless dissident.

Life, Liberty, pursuit of happiness,
The words of Jefferson are now impressed,
Upon the minds of all concerned for life,
Who hazard midst the everlasting strife
In this great land where feelings for our dogs,
Prohibits killing them like slaughtered hogs,
And yet the states are powerless today,
To grant the slightest help along the way—
To innocents, the unborn human lives,
Sucked out of mothers' wombs by sharpened knives,
And slopped in buckets like our garbage filth,
Forgotten as they're sluiced without a chill,
Which moral human beings used to feel,
But now we rationalize with no ill,
As though that tissue never lived at all,
I wonder how much more we have to fall—
Before the curtain slams into the stage
We call this life, now written on the page—
Kept by the angels watching daily deeds,
Of blood red hands from tissue that still bleeds.

The Dred Scott case denied the blacks their rights,
It took a decade to remove the slights,
Restoring Constitutional import—
To lesser privileged souls in the retort
I wonder thus how long we'll have to wait
To limit unborn killing and to state—
Protections to the tiny little souls,
Whose only offense is their silent roles—
Now played as though they never really die,
Or lived at all, they're wisps up in the sky.
Yet at three weeks, the blood cells are intact,
At four weeks muscles flex the heart beats fast,
The heart, at eight weeks is so audible,
At six weeks, we see formed—the skeletal
Upon which, if he lives, will bear him hence—
To 12 weeks where all organs now commence,
At 20 weeks, he kicks, he swims, he hears—
His mother's voice through all the many tears
Week 26 means he can now arrive
Outside the womb where he can then survive.

The right of choice, seductive in its sound,
A freedom now demanded does abound,
The termination of a life to me,
Relieves the one, the other is not free—
To live and die or daily contribute—
To all who live, to all who search for truth;
Snuffed out before the spark of life begins,
A future which could save the world from sins,
Or lovely music sweet he might compose,
Or scientific gifts he might have those,
To build a better world, a simpler hope—
That all may better magnify their scope
Of all the world everyone's request—
For peace and tranquil needs We could now rest,
And in the end be happier than now,
We lost it all when death destroyed the plow,
He might have held, to plant for you and me—
That we might live in health and harmony.

Mr. President, I might also add that my esteemed colleague, Senator KENNEDY, expressed his strong feelings on this subject. He has made earlier statements on the abortion issue, which I ask unanimous consent to be printed in the RECORD along with a news article on this subject so that they may be shared with our colleagues.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., August 3, 1971.

Mr. THOMAS E. DENNELLY,
Great Neck, N.Y.

DEAR MR. DENNELLY: I appreciate your letter containing your views on abortion. There are many moral and legal aspects arising from this complex issue which is gaining the acceptance of large numbers of women faced with unwanted pregnancies, while disturbing the consciences of a great many other Americans.

Opponents maintain that abortion is wrong from every theological, moral and medical aspect. Proponents are firmly convinced that the woman, alone, has the right to decide.

While the deep concern of a woman bearing an unwanted child merits consideration and sympathy, it is my personal feeling that the legalization of abortion on demand is not in accordance with the value which our civilization places on human life. Wanted or unwanted, I believe that human life, even at its earliest stages, has certain rights which must be recognized—the right to be born, the right to love, the right to grow old.

On the question of the individual's freedom of choice there are easily available birth control methods and information which women may employ to prevent or postpone pregnancy. But once life has begun, no matter at what stage of growth, it is my belief that termination should not be decided merely by desire.

I share the confidence of those who feel that America is willing to care for its unwanted as well as wanted children, protecting particularly those who cannot protect themselves. I also share the opinions of those who do not accept abortion as a response to our society's problems—an inadequate welfare system, unsatisfactory job training programs, and insufficient financial support for all its citizens.

When history looks back to this era it should recognize this generation as one which cared about human beings enough to halt the practice of war, to provide a decent living for every family, and to fulfill its responsibility to its children from the very moment of conception.

Sincerely,

EDWARD M. KENNEDY.

[From the Boston Globe, Sept. 27, 1982]

THE REASON FOR KENNEDY'S FLIP-FLOP ON THE ABORTION ISSUE

(By David Farrell)

The people of Massachusetts can always get a new senator, but I can't get a new set of convictions and values."—Sen. Edward M. Kennedy speaking on one of his new television commercials now being aired to bolster his re-election campaign against Republican Ray Shamie.

For nearly two decades, I have served in the Senate and heard my colleagues debate whether Congress can or should decide this intensely private decision for others. I have listened carefully and thought long. And I am convinced that the issue of abortion cannot appropriately or effectively be resolved by statute or by constitutional amendment. It is, and it must remain, a matter of individual conscience."—Sen. Kennedy addressing the Senate Sept. 15 just before it voted to shelve antiabortion legislation for the current session.

While the deep concern of a woman bearing an unwanted child merits consideration and sympathy, it is my personal feeling that the legalization of abortion on demand is not in accordance with the value which our civilization places on human life. Wanted or unwanted. I believe that human life, even at it earliest stages, has certain rights which must be recognized—the right to be born, the right to love, the right to grow old . . . Once life has begun, no matter at what stage of growth, it is my belief that termination should not be decided merely by desire . . . When history looks back to this era. It should recognize this generation as one which cared about human beings enough to halt the practice of war, to provide a decent living for every family and to fulfull its responsibility to its children from the very moment of conception."—Sen. Jesse Helms of North Carolina? Sen. Orrin Hatch of Utah?

Neither. It was Sen. Kennedy in an Aug. 3, 1971 letter to a constituent Kennedy says the subsequent change in his attitude toward the abortion controversy was made necessary by the Supreme Court's 1973 decision legalizing abortion on demand.

But if he had strong feelings and meant what he said in 1971, he would not be leading the opposition to a proposed constitutional amendment that would protect the unborn he said he thought so much of 11 years ago. His change indicates that his personal convictions are not nearly as deep as his new campaign advertising would have the voters believe.

Kennedy's flip-flop on abortion is strictly political and is explained by his desire to remain in the good graces of the ADA and various women's organizations which have been championing abortion as the No. 1 women's issue of this era.

The senator's long-range goal is the presidency. He assumes that his prospects of capturing the Democratic party's nomination—the essential first step in the elusive quest—will be enhanced if he uses his powerful leadership position on the Senate to block pro-life forces from changing the Constitution and negating the Roe-Wade abomination.

As the Globe's Thomas Oliphant pointed out last Friday, Kennedy's new television commercials constitute a trial run to meet the major hurdle facing him across the nation in 1984—the character issue. The TV ads are designed to elicit positive feelings about Kennedy as a person, a father and head of a family.

The sad aspect of Kennedy's effort to improve his image is its transparency. No lavish expenditure of funds is going to gloss over his switch on abortion or Chappaquiddick and its unanswered questions. Both will be waiting for Ted again a year from now

when the battle for the 1984 nomination gets going.

The Senator need refer only to the experience of Gov. Edward J. King who in recent multimillion-dollar advertising campaign failed to win him renomination. King's TV ads were well done and stressed the idea that the governor was a warm man with very close ties to family. But large numbers of voters obviously were not persuaded.

Kennedy, of course, will have no problem winning reelection this fall. The GOP's Shamie who has been doing everything he can to draw him into a debate has been unable to make a dent in Kennedy's powerful position with voters here.

Shamie also will make a mistake if he interprets the large number of voters who blanked Ted in the recent Democratic primary as a forerunner of good news in November. Despite Ted's liberal positions on many issues—a posture which places him at odds with sizable segments of the Massachusetts electorate—more Democrats are likely to support the senator in the voting booth.

But Iowa in 1984 presents a much tougher hurdle.

Mr. TSONGAS. Mr. President, I am here today to oppose passage of Senate Joint Resolution 3, an amendment to the Constitution of the United States to establish legislative authority in Congress and the States with respect to abortion. This amendment, proposed by Senators HATCH and EAGLETON, is but a mere 10 words:

A right to abortion is not secured by this constitution.

These 10 words, however, would seek to reshape our Constitution in a manner with implications far beyond the relatively narrow question of whether abortions should be sanctioned or denied. All other amendments to our Constitution declare affirmative principles of law. Senate Joint Resolution 3 negates the force of an existing right. It would be the first constitutional amendment to take express powers away from the judicial branch and confer them on the legislative branch. As such, the amendment is little more than a subtle, court-stripping mechanism similar to those proposed in previous debates on abortion, busing, and school prayer.

In that sense, this amendment would set up an unacceptable precedent for amending the Constitution by eliminating the established procedure—two-thirds of each House and three-fourths of the States—and placing power in the legislative branches of the 50 States. Think what that might mean in other areas. Under a simple majority rule such difficult issues as protection of individual liberties, protection of minorities, and the freedom of expression might all forfeit the traditional guardianship of the courts.

I, along with many of my colleagues who oppose Senate Joint Resolution 3, find this precedent unacceptable as a method for changing the Constitution, and one which could undermine other precious liberties. Today it is proposed that a woman's right to abortion be subjected to the struggles of the political and legislative arenas. Tomorrow, perhaps, we will be asked to allow the shifting and temporary majorities of popular opinion to determine which religions should enjoy the protection of the first amendment. These questions, I submit better belong to the calm and reflective judgment of the courts than to the sturm and drang of political organizing and intensive lobbying.

Mr. President, I am confident that the proponents of Senate Joint Resolution 3, know full well that a straightforward human life amendment would have an extremely difficult chance of passage either here or among the States under the normal ratification process, but that process would at the very least insure a clarity and a fair reading of public views. Elected Representatives here in the U.S. Congress and in the various legislatures would know what they were voting for or against. If successful, that customary procedure would result as well in the establishment of consistent and uniform enforcement procedures nationwide.

Senate Joint Resolution 3 does just the opposite. Passage of this amendment would result in endless litigation, with 50 different and widely varied sources of law for guidance and, at best, extremely limited Federal review for clarification. It virtually guarantees that the debate over abortion will become more rather than less intense in State legislatures, in the courts, and in Congress. It would seem that this scenario produces precisely the opposite effect from the one desired by proponents of the amendment, a clear and uniform prohibition of abortions on a nationwide scale.

In short, Mr. President, if the Supreme Court's reading that the U.S. Constitution prohibits restrictions on abortion is to be reversed, it would best be accomplished in a direct, unambiguous manner. We should vote up or down on whether to definitively prohibit abortion. I do not wish to fly under false colors here: I would vote against such a proposal.

But at least it would provide us with an unmistakable rule of law. At its best, Senate Joint Resolution 3 means continued confusion and ambiguity, widely varying and conflicting statutes and court interpretations, and an even more bitter and divisive abortion debate than we have now.

The adoption of Senate Joint Resolution 3 would result in greater pressure to expand the scope of Federal indirect controls. It certainly would invalidate the 1973 Roe against Wade decision, eliminating the part of the holding that denies personhood to the fetus, leaving that question open once more. Members of Congress could reintroduce bills like the human life statute with the understanding that they would not violate declared principles of law under the Constitution. Senate Joint Resolution 3 does not restore the status quo before Roe against Wade, as proponents have claimed. A woman could no longer claim her right to privacy as a rationale for abortion, nor could she depend on other claims to life and health, such as due process and equal protection, where these asserted rights are the basis for her attempt to obtain an abortion.

No law could prohibit a woman from traveling from one State, where abortion is illegal, to a State that permits abortion. The result would be that the rich would continue to have safe, legal abortions, an option not made available to poor women living in States that might ban abortion. No one seriously believes that enacting a constitutional amendment such as Senate Joint Resolution 3 would stop all the abortions in the United States, but would only make them more dangerous to obtain.

Much of what I have said, Mr. President, and much of the debate on Senate Joint Resolution 3, has necessarily involved abstract constitutional analysis and legalistic fine points. That is obviously to be expected in a debate over a proposal that makes a major alteration in the charter of the Nation.

But underlying all of this argument is a question of fundamental values. The essential reason this amendment should be rejected is that it fosters an intrusion by political brokers in areas of personal discretion. I continue to believe that decisions on abortion ought to be made by women themselves, based on convictions of conscience and religious judgment, assisted by the medical advice of their physicians, and not imposed by Government—at any level.

Mr. DOLE. Mr. President, I intend to vote in favor of the proposed constitutional amendment sponsored by the distinguished Senator from Utah. However, I wish to clarify for the record my reasons for doing so.

EVOLUTION OF THE ABORTION CONTROVERSY

In 1973, the Supreme Court handed down the Roe against Wade decision. This decision generally held that a State could no longer prohibit abortions during the first 6 months of pregnancy. Rather than having conclusively resolved the abortion question, the Roe decision sparked a national protest movement. And in each Congress since the Roe decision, proposed constitutional amendments have been introduced in both Houses seeking to overturn its effect.

THE PROPOSED AMENDMENT

Ten years later, the U.S. Senate is now, for the first time in history, debating a proposed constitutional amendment on the abortion question. The proposed amendment does not

seek to shape abortion policy, but rather simply states that "no right to abortion is secured by the constitution." The purpose of the amendment is to restore the status quo ante Roe, when the States possessed authority to legislate with respect to abortion.

CONCERNS ABOUT THE AMENDMENT

It has been said that the primary strength of the amendment is that by returning the abortion question to State legislative bodies, it does not have to address the delicate and controversial questions relating to whether, and under what circumstances, abortion should be legal. Rather, these decisions would be made by the representative branch in each of the States, who many feel could be expected to shape abortion policy in a manner more responsive to the views of the people.

But the primary strength of the amendment may also be its primary weakness. In light of the fundamental rights involved in the abortion issue, I question whether they should vary in accordance with the political whims of each of the 50 State legislatures. Moreover, I have serious reservations about the divisive influence which the amendment could have on the Nation.

Under the proposal, one State could decide to place no restrictions on abortion whatsoever; another could decide to prohibit all abortions. Every State legislature could be confronted with annual battles over abortion laws. Further, because the status of the law prior to Roe was unclear as to whether Congress had jurisdiction over the abortion question, the issue might be a recurring source of controversy in Congress as well.

CONCLUSION

Because of these concerns, I am unable to give my unequivocal support for this amendment. However, I will vote for it as a reaffirmation of my continuing opposition to Roe against Wade and its progeny. I commend the principal sponsors for their time and effort in bringing the amendment to the floor and making this historic debate possible. The high quality of debate that we have seen on Senate Joint Resolution 3 has greatly contributed to an understanding and awareness of the complexities involved in this difficult issue. Only by engaging in this kind of debate will we ever be able to seek out and find the right solution to the abortion question.

Mr. ROTH. Mr. President, the national debate on abortion continues to be one of the most emotional and controversial issues that we face today.

My position has always been that the Federal Government should not be involved in determining abortion policy.

Unfortunately, Senate Joint Resolution 3 does not completely remove Congress from determining abortion policy.

The passage of this constitutional amendment may, in the end, raise more questions than it resolves. Rather than eliminating the discussion of abortion at the Federal level, Senate Joint Resolution 3 may simply continue the disjointed debate on abortion that has been conducted over the past 10 years within the Halls of the Federal Congress.

For these reasons, I will vote against Senate Joint Resolution 3.

Mr. PACKWOOD. Mr. President, I yield 7 minutes to the Senator from Michigan (Mr. LEVIN).

The PRESIDING OFFICER. The Senator from Michigan.

Mr. LEVIN. Mr. President, while I shall vote against the Hatch-Eagleton compromise proposed constitutional amendment on abortion, Senate Joint Resolution 3, I happen to personally oppose abortions which are not the result of danger to the mother's health, rape, incest, or other unusual circumstances. Were I asked by a woman for advice regarding an abortion, I would advise her against it, absent such unusual circumstances. My views are the product of my personal beliefs and morals. They differ from the views of other persons, as is evident by the lack of consensus among religious groups and the medical profession on the underlying questions relative to abortion. In the absence of such a consensus, I believe that the woman's right to make a private decision concerning abortion should prevail as public policy, regardless of our personal views on the matter.

Mr. President, my objections to this amendment are based principally upon the views I have just outlined. There are, however, other reasons why I cannot support this amendment.

The proposed amendment will not put to rest the abortion controversy. On the contrary—assuming it does have the effect intended by the sponsors of the amendment—it would subject the American public to a battle over the abortion issue in each of the 50 States, since it would leave to the determination of State legislatures the question of whether abortion should be restricted or prohibited altogether.

Nor would it remove the issue from the Congress. Presumably, the proposed amendment would not affect other possible sources of Federal authority over the regulation of abortion, such as the commerce clause or the spending powers. Since the amendment is silent on the delegation of powers between the States and Congress, should it be approved, it is anybody's guess what the rule of Congress with respect to abortion will be.

Mr. President, whatever the resolution of our differences over the abortion question, the law should be uniform among the States. In Roe, the Supreme Court recognized two important societal interests involved in the abortion decision—the interest in "protecting the potentiality of human life" and the interest in "safeguarding health and maintaining medical standards." The Court's trimester approach to determining when States have authority to regulate abortions attempted to balance these sometimes competing interests.

While we might disagree with the way the Court has balanced those interests, I think we would all agree that each of the interests identified by the Court in Roe is important. Because the interests are so important, I believe Americans have a right to uniformity in the way the interests are weighed. Under the Hatch-Eagleton amendment, the States would be free to balance these interests as they see fit, depending upon the views of a majorty in each State legislature. This approach to the abortion issue would result in different rules in different States and would be particularly unfair to low-income women. We would be returned to a situation where women with money could travel to States where abortions are legal and therefore safer, while women who could not afford to travel might again resort to the "back-alley" abortion.

Our people are divided on the abortion issue. But I believe most feel that the same rule should be applicable as a practical matter to all our people wherever they live and whatever their financial circumstances.

I am wondering, Mr. President, if I might ask my friend, the Senator from Utah (Mr. HATCH), two or three questions relative to his resolution, the constitutional amendment he has offered? The first question is: Is there any implication in the sentence, "A right to abortion is not secured by this Constitution," that abortion is prohibited by the Constitution?

Mr. HATCH. No, Mr. President, the language of this constitutional amendment would neither encourage nor prohibit the issue of abortion within the Constitution. It is no secret that I personally would prefer a stronger amendment to the Constitution that would restrict abortion, but this particular amendment would allow the State legislatures to go any way they want to on the issue.

I might add, if I could, that the purpose of the amendment is to allow a consensus-building process within the elective branch of Government to resolve this very, very divisive issue.

Mr. LEVIN. Second, is it the intention of the proponents of this amendment that the Constitution remain neutral on the legality of abortion?

Mr. HATCH. Again, Mr. President, in my own personal viewpoint, I would not have the Constitution be neutral. I would prefer to see the Constitution establish the right to life of the

unborn, except in cases necessary to save the life of the mother. This particular amendment, however, removes the current Court-created right to abortion without replacing it with any value judgments. It leaves it up to the elected representatives of the State legislatures. Thus, this amendment is neutral.

Mr. LEVIN. Is it the intention, then, that as a result of the adoption of this amendment, if it were adopted, the Constitution would be neutral on the legality of abortion?

Mr. HATCH. Mr. President, this amendment, if adopted, would leave it up to the State legislatures to legislate on the issue.

Mr. LEVIN. I am trying not in any way to ignore what the Senator has said.

Mr. HATCH. I believe Senate Joint Resolution 3 is neutral.

Mr. LEVIN. This would leave the Constitution neutral if this amendment were adopted.

Mr. HATCH. What it would do is take away the right to abortion, thus restoring the neutrality of the Constitution which allowed States to govern abortion policy. It would do away with the present right decreed by the Supreme Court of the United States. It would then allow the States to set their own policies.

The Constitution then would not impose upon the States one way or the other what they must do. It would be their own elected State legislators who would resolve this issue as elected officials through the normal legislative processes.

Mr. LEVIN. Mr. President, let me slightly rephrase the question. Is it the intention of the proponents of the amendment that if this amendment were adopted, the Constitution would at that stage be neutral on the issue?

Mr. HATCH. Yes. It is the intention to do away with the right to abortion. This would restore the Constitution's neutrality. The right to abortion created by the Court disrupted this neutrality which this amendment will restore.

The PRESIDING OFFICER. The time yielded to the Senator from Michigan has expired.

Mr. PACKWOOD. I yield 2 more minutes.

If I might enter into this discussion, the Senator from Utah and I do not have the same view as to what his amendment seeks to do. It does not take us back to the situation prior to Roe against Wade with respect to the regulation of abortion because it inserts into the Constitution the words of the amendment, henceforth, any Federal or any State court decision has to take into account the fact that abortion is not a right guaranteed by the Constitution. That was not part of the Constitution as decided by Roe against Wade.

Mr. HATCH. I agree with what the Senator has said.

Mr. PACKWOOD. Second, Mr. President, I contend that this amendment is not neutral in any sense. I think it absolutely tilts against choice. It is neutral because it leaves to the State legislatures or the Federal Congress the right to legislate on abortion. I use the word, "legislature" in the exact sense: This is not a States rights amendment, it was not drafted as a States rights amendment and in deliberation it was not considered as a States rights amendment.

Mr. HATCH. Mr. President, let me add to what the Senator from Oregon said, I believe the people in this country do not want the widespread abortion on demand situation we have today in this world, especially in this country—as I have said, the most permissive in the world except for Communist China. That being the case, should this amendment pass, I believe there is no question that there would be restraints brought about on the widespread practice of abortion on demand by State legislatures. There is no further question that it is my intention as a sponsor of this amendment, and I believe Senator EAGLETON's intention, that we want restraints on the widespread practice of abortion. So, in that sense, it is not neutral.

It is neutral in the sense that we leave this issue up to the State legislature as the Constitution clearly intended before the ill-conceived 1973 decision.

It restores neutrality in the sense that we take away the right to abortion as a part of the Constitution, abortion as decreed by judges in the Supreme Court. Permit me to explain how this amendment will operate. The Roe decision made the right of abortion a legal entitlement deserving of the strict constitutional protections afforded fundamental liberties, like freedom of speech. This heightened standard of constitutional review means that a State must show a compelling justification for any statute limiting abortion. This "compelling public interest" test for validity of State statutes is very exacting. Even such seemingly inconsequential State regulations as the 24-hour waiting period before performance of abortion requiring a physician to warn a woman of the risks of abortion have failed to meet this demanding standard of review.

In those cases, as in Roe, the Court acknowledged that the State has a legitimate interest in protecting maternal safety and the life of the unborn. Nonetheless, these profound interests did not rise to the level of "compelling." Thus, the standard operated to strike down the will of the State legislature in those particular instances.

This amendment removes the abnormally elevated constitutional status afforded the right created by Roe against Wade. After ratification of this amendment, a State statute concerning abortion would be subject to ordinary standards of judicial review. The same standards used to assess the constitutional sufficiency of other domestic relations statutes or insurance statutes or business association statutes would apply to abortion laws. This standard requires a State to show a rational relationship between its law and a legitimately protectible State interest, the rational basis test.

Since the court has acknowledged at least two legitimate interests, maternal safety and the profound interest in unborn human life, any statute rationally related to these purposes would be upheld. Since this standard is easily satisfied by State enactments, the will of the people as reflected in State statutes would be respected by the courts. The Constitution would remain neutral and allow the States to create any policy in this area. I believe that answers the Senator's inquiry.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PACKWOOD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I yield 2 minutes to the Senator from New Jersey.

Mr. BRADLEY. Mr. President, I thank the Senator from Oregon for yielding. Mr. President, the legislation before us is very brief—only one sentence: "A right to an abortion is not secured by this Constitution." It is designed to overturn the Supreme Court's 1973 decision in Roe against Wade which held that State laws unreasonably restricting a woman's right to an abortion were unconstitutional. I oppose Senate Joint Resolution 3. It is likely to result in legislation in each State that would still be subject to constitutional challenge and it would force women to return to the days of unsafe and illegal abortions.

I have said many times that I feel uneasy, as a man, determining for women whether they will have the right to a legal abortion since it is a decision I will never be asked to make. It is one of the most deeply personal decisions an individual can make. It involves one's personal, religious, moral, ethical views, as well as an assessment of one's health and future life. I recognize that there are sincerely and deeply held views on both sides of the issue. And, it is for this reason that I believe the Supreme Court was correct when it held that the right to an abor-

tion was inextricably tied to the right to privacy.

But the Supreme Court also struck down many State abortion laws for reasons other than the fact that they violated the right to privacy. And it is important to recall those reasons in order to understand why Senate Joint Resolution 3 is not the right way to go.

Prior to Roe against Wade, many States prohibited abortion except where it was necessary to save the life of the mother. While there is no record of these laws being enforced against the women who had abortions, there was frequent prosecution of doctors who performed them. And the Supreme Court held that the standard—to save the life of the mother—was unconstitutionally vague. How close to death does a woman have to be before it is lawful to perform an abortion? Does it have to be certain death if an abortion is not performed? Or merely high risk? Such legislation put doctors at risk for criminal actions without a clear standard to guide them. Senate Joint Resolution 3 does nothing to resolve this problem. So if Roe against Wade were merely overturned and States adopted the old laws they had before 1973, those laws would still be subject to challenge on the grounds of unconstitutional vagueness. Those laws would also be subject to challenge on the basis of State constitutional protections which have upheld the right to abortion in many States. The one thing certain is that there would be considerable litigation.

What are the practical consequences of returning to the old standards of preserving the life of the mother or even the life and health of the mother? No one can contend that the old abortion laws prevented women from getting abortions. Women who could afford it went to private hospitals and received abortions under the guise of other medical procedures. Poor women went to back-alley apartments without adequate professional care and with no provision for emergency care. It is no accident that the maternal death rate has plummeted since Roe against Wade. So the question will be as it has always been; not whether women will have abortions, but where and under what conditions. As a matter of privacy, I cannot and do not wish to decide for any one whether an abortion is appropriate for that individual. As a matter of public policy, however, I want to insure that women who chose this option will have access to safe medical care. Senate Joint Resolution 3 goes precisely in the opposite direction.

Mr. President, when we are dealing with our criminal laws, I am concerned that we must have a set of clear and simple rules which are strictly enforced. It does us no good to have volumes of laws which are ignored. That breeds contempt for the law. I have heard no one argue that the women—or children—who have become pregnant—as victims of rape or incest—should be sent to jail for having an abortion. Nor can anyone contend that abortions will not occur as a result of making them illegal once again. To return to the pre-1973 laws will not eliminate abortions; it will only make them unsafe for those who are most in need of support and help. The only thing this constitutional amendment will accomplish is to shut the doors to the hospitals.

I see no reason to turn back the clock. This most personal decision is precisely where it should be—as a private matter between a woman and her doctor.

Mr. PACKWOOD. I thank my colleague from New Jersey, with whom I have shared so many battles in a variety of areas, and I look forward to sharing with him more on the same side.

Mr. President, Senator HATCH and I have worked out between ourselves the method in which we will close. He will close for about 15 or 20 minutes. I will have rebuttal, whereafter he will have 5 or 6 minutes for surrebuttal. I will yield at this time 20 minutes to the Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized.

Mr. HATCH. I thank my dear colleague from Oregon for his kindness.

Mr. President, in 1857 this Nation was rocked by an edict from the highest Court of the United States. In disbelief that these learned men would actually hold that some human beings deserve no protection from the same Nation that declared that "all men are created equal and endowed by their Creator with inalienable rights to life and liberty," the United States sank into the despair that produced the great War Between the States. In 1973 the Supreme Court once again declared that some human beings are not deserving of the full protections of this humane and generous Nation. In the decade since that infamous decision, this Nation has been locked in a great debate over civil rights, a great debate over human rights. That great debate reached the floor of this body yesterday in the form of the first constitutional amendment to reverse the Roe against Wade decision and restore to the people in the States the power to resolve this issue as they see fit.

This has been the debate over abortion that the American people did not have before the Supreme Court's decree. The momentous scope of this debate has been evident in the subjects of great constitutional and moral concern addressed by the John Calhouns, Henry Clays, and Daniel Websters of our era. I cannot express enough the great respect I have for the Senator from Missouri (Mr. EAGLETON). He deserves credit in history for his devotion to the rights of all men, particularly those yet to be born. A similar credit should be extended to Senator THURMOND and Senator DECONCINI. At the same time, I feel it appropriate to compliment the distinguished Senator from Oregon (Mr. PACKWOOD) for the fairness and fervor with which he has defended his views and dealt with me and others on the floor of this Chamber. I respect him. I know he is sincere, and I know he believes in what he is saying and what he is doing.

In a few minutes—frankly, at 5 o'clock—we are going to vote on this issue. I would remind this body that at that time the Senate, unlike any other entity created by our Constitution, can at times be called upon to exercise two of the basic functions of Government. The Senate is a legislative body, but in certain unique circumstances such as impeachments, it also becomes a judicial body. Although we are today acting as a legislative body under article V of the Constitution, I would like to invoke that comprehensive judgment demanded of judges. I urge my colleagues to consider themselves in the role of justices called upon to render judgment in a capital case. This vote will ask you not only to decide whether to reverse the modern Dred Scott decision, but also to pronounce a sentence of life or death for countless unborn children.

In respect to your judicial task of weighing the jurisprudential merits of Roe, I could cite the reasoning of John Hart Ely, Archibald Cox, Alexander Bickel, and many other talented constitutional scholars, who although they favor the outcome of Roe, confess that it is bad constitutional law or not constitutional law at all. These legal merits, however, are not the most compelling impeachment of Roe. The most compelling case against Roe, in my opinion, is the regime of callous disregard for the sanctity of human life it has produced.

Since Roe, 15 million unborn children have perished. I mentioned earlier that the Supreme Court's dreadful Dred Scott decision helped precipitate the bloody Civil War. Yet, the horrors of that war, combined with the dead from every other war, is less than one-tenth of the deaths in the war against the unborn. Ten times as many Americans have died from abortions as from all wars put together.

Moreover, the death rate is still climbing. Nearly 2 million abortions a year are performed in America. Nearly one in every three pregnancies ends in abortion.

Two cities in this country have more abortions than they have births, and this is one of those two cities. The other is the largest city in the country.

This great civil rights movement is motivated by a concern for all life.

The life of the mother, when jeopardized by a pregnancy, must be preserved, even at the terrible cost of the life of the infant. On occasion, those choices are necessary. When necessary, appropriate medical procedures must be available to protect the mother. Indeed, every single State, prior to 1973, protected the mother's life by law. But protecting the mother's life has little to do with today's regime of permissive abortion. Only 3 percent of all abortions performed can be justified by the need to protect the mother's life or health.

All other abortions are performed, more or less, for reasons of convenience.

A particularly tragic aspect of this disgrace is that many of those children killed by abortion are on the verge of viability when they could live outside the womb normally. These are children near their 20th week of growth.

At 20 weeks, their hearts have already been beating 12 weeks; they have been sucking their thumbs for 8 weeks; they are appropriate candidates for fetal surgery to preserve their lives from natural threats; finally, their fully formed nervous systems are capable of experiencing anguishing pain at the moment their lives are torn asunder. Nobody disagrees with that.

Throughout this debate we have heard much about the "freedom to choose." Freedom to choose is an important value. But in this instance it is in conflict with an even more important value, the fundamental right to life of a defenseless human being. Can freedom of choice justify killing an infant in the third trimester, fully capable of life, only because she is a girl instead of a boy or because of some convenience for the mother or because of some other factor related to the well-being of the mother. If freedom of choice is the only principle to govern this situation, who will step forward to defend the child's freedom to choose to live?

No doubt the medical facts about the development of the child—its ability to recognize its mother's voice in the womb, its ability to respond to music and touch—have been the primary reasons most Americans see abortion at some stage as destruction of a living being. On this point, there is a gender gap. More American women than men believe life begins at conception.

Since we have drawn special attention to the woman's point of view, we should examine one other argument of this debate, that women will be driven back into the alleys if States are allowed to regulate abortion. This argument suggests that legalized abortion deserves credit for saving women's lives. To the contrary, legalization should receive little, if any credit, for saving lives. Advances in medicine, principally penicillin and use of the safer suction curetter, deserve credit for maternal safety during abortions. I think the second chart at the rear of the Chamber shows that.

In terms of morals, Americans, by overwhelming majorities, feel abortion is wrong. This judgment is nearly uniform amongst people of all political backgrounds—62 percent of the Independents, 64 percent of the Republicans, and 68 percent of the Democrats, for two-thirds of the American people.

Moreover, this is not an idle judgment. If allowed, most Americans would stand behind their convictions and seek an alternative to abortion for their own 15-year-old daughter. We have heard people who have come to the floor today say, "I would never want this to happen in my family. I would never want this to happen in my life. I would not go through this myself." Nevertheless, the vast majority of people are very concerned about the widespread, indiscriminate abortion on demand that is going on in this country today.

Ironically, the Supreme Court stated a few weeks ago that 15-year-olds may get permission for an abortion without ever consulting their parents.

Finally, the strong personal values of Americans do translate into support for a constitutional amendment to discard Roe against Wade. If the Americans polled for this chart had known of Senate Joint Resolution 3, which would allow them to participate in forming a humane abortion policy, this number may have even been higher than the 50 percent who think there should be an amendment to the Constitution of the United States.

Mr. President, let me summarize the pending constitutional amendment one final time. The principle purpose of the human life federalism amendment is to deconstitutionalize the issue of abortion. Instead of issues relating to abortion being decided only by Federal courts—their exclusive forum for the past decade—the proposed amendment would restore authority over this issue to the elected representatives of the people. Once again, the matter of abortion would be subject to debate and discussion and deliberation among the elected legislators of each State.

I would respectfully ask my colleagues: What are the alternatives to this amendment? What are the ultimate alternatives to the resolution of the abortion issue proposed in Senate Joint Resolution 3? Will we tolerate forever the social divisions that have been created by the Court's decision in Roe against Wade? Will we tolerate forever a substantial share of the American people believing themselves to be totally without a voice on a controversy of this dimension? Will we tolerate forever a situation in which only Federal judges are allowed to influence public policy on abortion, while the people and their elected representatives are permanently rendered impotent? Will we tolerate forever a society in which the unborn child is to be accorded all the rights and protections of law of a tumor or a mass of diseased tissue?

Mr. President, I do not believe that we can tolerate any of this. Nor do I believe that the abortion controversy is likely to silently go away as would be desired by those who are pleased by the present state of affairs. These same individuals—inside and outside Congress—thought that the abortion issue would silently go away 10 years ago. They thought that the passions generated by the Roe against Wade decision would subside and ultimately disappear as abortion became a day-to-day reality. They thought that, as more women themselves experienced abortion, or as people came to know women who experienced abortion, that this issue would fade into the constitutional recesses of history.

Those who have taken this view have been wrong and they will continue to be wrong. Indeed, as more and more people come to know the horrors of abortion firsthand, as the platitudes of freedom of choice and reproductive rights run up against the realities of the destruction of the innocent life within the womb, the movement against abortion will grow in this country. As the myths of abortion come to be understood, as the American people come to know that maternal health and rape and incest are factors involved with an infinitesimal number of abortion and that social covenience and lifesytle and sex selection are the principle motivating factors, the prolife movement will grow in this country.

Whatever takes place later this afternoon—and I have no illusions—the effort to restore protection for the unborn will continue. I do not believe that this Nation will even become to oblivious and so numbed to the loss of life involved in our present constitutional policy of abortion on demand that this issue will simply disappear into the stealth of the night. If we do not succeed today, it is not because we do not speak to the values and sensibilities of the American people—I know that we do—rather, it is because we have not yet done the necessary work in explaining to them the realities of abortion.

Mr. President, despite my own deeply felt views on the matter of abortion, the proposed constitutional amendment represents the first serious effort since Roe against Wade to fashion a consensus approach to this difficult issue. It does not adopt the perspective of either extreme—abortion on demand or outlawing all abortion—and that is why those of the most extreme persuasion on both sides

will vote against this measure. But, the majority of my colleagues, as with a majority of the people in this country, I believe are looking for this kind of solution. They may wish to preserve the opportunity for abortion in the hardest and most difficult cases, but they do see the need for some restrictions upon access to abortions.

These may be restrictions upon late abortions. These may be requirements that doctors attempt to save the lives of aborted infants who remain alive. These may be requirements that minors discuss the abortion decision with their parents, or that wives discuss the abortion decision with their husbands. Whatever these restrictions be, I believe that the broad consensus of opinion in this country is that, at the very least, there are conflicting rights involved in the abortion procedure that deserve to be respected. That is not possible under the present court decision.

Once more, Mr. President, I ask what are the alternatives to Senate Joint Resolution 3. Are there any alternatives? If ours is to remain a decent and compassionate society, if ours is to remain a representative and democratic system of government, if ours is to remain a society in which the views of all citizens are respected and entitled to influence national public policy, I believe that there are no alternatives. With as much sincerity and as much passion as I can, I ask my colleagues—whatever their announced positions on this measure, to cast their vote in favor of Senate Joint Resolution 3 this afternoon. There are no enduring alternatives.

I thank my colleague from Oregon for this time.

The PRESIDING OFFICER (Mrs. KASSEBAUM). The Senator from Oregon is recognized.

Mr. PACKWOOD. Madam President, for the last 2 days Senator HATCH and I and many of our supporters have been debating this subject. I think 33 or 34 Senators have spoken on this subject which, as the President and others know, is a great number of Senators to speak on any particular topic. It is a topic that moves all of us in one fashion or another.

I thought to myself how, in my closing comments, there would be any way to influence one, two, or three Senators who may not have yet made up their minds on this subject. We cannot return to our home States without the question coming up. We are either lauded or criticized by different groups depending on our position on this subject. We are flooded with letters.

No Senator will be coming in to vote at 5 p.m. without having done a lot of thinking on this issue and, in most cases, without reasonably strong feelings on it.

I am not sure there is any point in returning to the substantive arguments that the Senator from Utah and I have made about the merits or the demerits of whether or not a woman should have a right to make a choice.

Nor am I convinced there is any point in reiterating the common law at the time this country was founded. There are a few people in this Chamber who have made reference to the morality of this country at the time of our founding and that the Roe against Wade decision has undone that morality.

But both the Senator from Utah and I agreed yesterday that at the time of the founding of this country at common law, by which we are governed today, at the time of the founding of this country, abortion, at least prior to quickening when a woman can feel the fetus move within her body—normally around 3½, 4, or 4½ months—was not a crime, and it was commonly practiced in Great Britain and the United States.

So when our founders drafted the Constitution, they saw no particular need to make any reference to abortion. It was common in our country. It was common to their knowledge. It was, if not morally approved, at least acquiesced in without overwhelming disfavor. So they saw no need to legislate on it one way or the other.

Brilliant as our founders were, they did not foresee a time when the country would try to prohibit abortion as at that time they saw no need to write into the Constitution a protection so that the woman could make the choice for herself.

But I do not think that argument will sway any votes.

Nor do I think that the argument that Roe against Wade does not allow abortion on demand will sway any votes. That is a comment that has been made over and over by the supporters of this amendment. They full well know that Roe against Wade does not allow abortion on demand through an entire 9 months of pregnancy. At best it allows it on demand, if you want to call it that, for the first 3 months of pregnancy, and then after that puts very significant limitations on it and in the last 3 months of pregnancy puts almost onerous limitation on it until the law is very strongly on the side of the fetus rather than on the side of the woman.

But again I do not think that will sway any votes.

Madam President, I am not sure that there is any merit in trying to argue the law and the constitutional decision of Roe against Wade because I think that will change no views.

It is not unusual—it is not frequent but it is not unusual—for the Supreme Court from time to time to either reverse itself, as it has in the case of Plessy against Ferguson, which had to do with separate but equal school facilities, or in the case of reapportionment where for years they said it was a political plan and the Court not intervene and in the midsixties reversed themselves and said the previous decisions were no longer valid.

And the Supreme Court has from time to time extended itself into State areas that it did not previously extend itself into. It certainly did it in the case of Gideon when it finally said to the States you can no longer under certain circumstances deny to an indigent defendant the right to counsel because it denies him the right of fair trial. They had not said that before, and they imposed upon the States an obligation, a Federal right, if you will. They certainly did it in Miranda where they finally said to the States that the self-incrimination clause will be extended to mean that the defendant must be advised of his or her rights against self-incrimination at the time of being picked up by a police officer or arraignment and if not so advised, statements made to the police officer or to the arraigning judge may be found to be inadmissible in evidence.

These were both new conditions imposed upon States, both, if you want to call it that, newfound Federal rights that had not previously existed.

I say to my fellow Senators that we are a common law country. That is the genesis of our law, and common law was judge-made law and for years Great Britain operated on that basis and in this country to this day we still operate under the common law and to the extent that legislatures or Congress have not acted in certain areas the courts are still free to make law, if you want to call it that. What the common law judges call it is finding law.

So court changes are not unique and they are well known to our history.

But I think the thing that has bothered those who dislike the Roe against Wade decision is not what they regard as inadequate legal reasoning or not what they regard as an effort by the court for the first time to take an action they had not taken in other fields. What bothers people about Roe against Wade is that many people do not like the decision they have reached and I can assure that Right to Life, Americans United for Life, the Life Amendment Political Action Committee, and all the others that operate under the umbrella of what I call right to life, would not be here complaining and crying about inadequate reasoning of the Court, if the Court had come to the conclusion they wanted it to come to.

But all of those arguments are not going to change any votes. The one argument that may have some effect on some of our fellow Senators is whether or not this is a return to the law prior to Roe against Wade or whether or

not this is a pure States right amendment.

Now clearly it is not a return to the law prior to Roe against Wade. At that time the Constitution was silent in terms of the use of the word abortion as it is silent on the use of the word privacy.

So if we add this amendment to the Constitution which will read: "The right to abortion is not secured by this Constitution." What we are saying is that we are not going back to Roe against Wade where the Constitution said nothing. We are going to go back to a situation where State court judges would no longer be able to look at the U.S. Constitution and reach a decision that they would now be precluded from reaching. So it is not a return to the status quo.

Is it a pure States-rights amendment? Madam President, and my fellow Senators, it clearly is not, and understandably not, because the Senator from Utah and the others were posed with the problem of how to straddle a dilemma. There is a split in the right to life ranks, and again I use that term generically, as there is in almost all coalitions as to what their position ought to be.

One part of the group feels that the right to choose or not to choose an abortion is such an abomination that it should be banned nationally altogether forever throughout the country and they want to preempt the Federal amendment that says: "No abortions in this country shall be legal, period," as we tried with prohibition to say: "Alcohol in this country is illegal, period."

There is another part of that coalition that says: "We have no chance of getting that amendment, let us try for a pure States rights amendment," because that might attract some votes who would be willing to give the decision to the States but not be willing to vote for a pure Federal amendment.

You can see the dilemma the two groups find themselves in. If you really honestly, conscientiously believe that abortion is murder then you cannot at the same time vote for an amendment that is a pure States-rights amendment that in essence says: "Well, OK, murder in New York is OK but not in Pennsylvania. Murder in Oregon is but not in Idaho."

So what they were faced with is trying to find an amendment that would appear to be a States right amendment but is not.

Now they could have found a pure States rights amendment, and this was fortunately called to my attention by one of the members of the Judiciary Committee, because in 1975 and 1976 the Judiciary Committee had hearings on this subject and they had four different constitutional amendments before them. Three of them read very similarly, they all have a preamble and then they conclude by saying: "Congress and the several States," and then they go on "shall have the power to prohibit abortion."

The last one reads, however, "the power to regulate the circumstances under which pregnancy may be terminated is reserved to the States."

Madam President, that is a States' rights amendment and that amendment could have been drafted by this committee and sent to this floor but they will lose five or six votes of pure Right-to-Lifers who will not vote for that kind of an amendment, and if they send us a pure straight out federalism ban abortion amendment then they lose five or six people who might vote for States rights, and they wondered "How can we straddle it," and they tried to make the argument on the floor that the Federal Government will have nothing but residual power, residual power if this amendment is passed.

Well, ladies and gentlemen, residual power is all of the other power that you do not give away. Residual does not mean less. Residual just means everything else, and unless you have given away to the States and only to the States the right to legislate abortion then you have reserved for yourself whatever powers remain.

Several analyses of this amendment have been done—two I am going to cite have been done by the Congressional Research Service which is a legislative arm of the Congress, nonpartisan, unbiased, it has no vested interest in Senate Joint Resolution 3 for or against. All of us use them frequently for opinions, for research. It is an arm of the Library of Congress, an extraordinary organization.

Charles Dale of the Congressional Research Service in his analysis of May 9, 1983, states as follows, after he goes through what Senate Joint Resolution 3 is and is not and he says it is not a pure States rights amendment and he cites the States rights amendment I read. He concludes by saying:

> Since the reported amendment would effectively extinguish the right to procreative choice in Roe, the argument favoring Congress' power to regulate or prohibit abortion under section 5 may be correspondingly strengthened.

Similar language in a memo of May 13 by Karen Lewis, also of the Congressional Research Service, in which she says:

> If you add a States rights amendment, it would effectively free abortions from Federal constitutional constraints by explicitly lodging exclusive legislative power over abortion in the States.

And then she cites the same amendment that I have read and goes on to say but Senate Joint Resolution 3 is not that kind of an amendment. She goes on to say:

> Since S.J. Res. 3 would eliminate the constitutional protection for the woman's right to terminate her pregnancy, Congress would arguably be free to pass "pro-life" legislation pursuant to Section 5 of the Fourteenth Amendment.

Now you can say those are objective, unbiased opinions from parties who have no interest in this, and that is true.

Let me read to you what the parties that do have an interest in this say. At the request of the Senate Constitution Subcommittee, four legal analyses were prepared by Americans United for Life, a group that is opposed to a woman's right to choice. One of those articles was by Prof. Lynn Wardle, in which he says, and I am quoting:

> Senate Joint Resolution 3 would restore congressional power to restrict and inhibit abortions mostly through indirect means as necessary and appropriate to perform its constitutional responsibilities to control interstate commerce, Federal lands, Federal taxation, spending et cetera.

Or the article by James Bopp, Jr., in Right-to-Life News, April 28, 1983, which more carefully lays out what Right-to-Life has planned than any other article that I have seen. And again I am quoting:

> The Hatch-Eagleton amendment reverses Roe v. Wade with the practical effect of restoring to Congress and the States the power to protect unborn life. There exists in the Constitution both direct and indirect powers which may be brought to bear on abortion. Any direct power that the Congress might have to regulate abortion, i.e., private killings, could be found in section 5 of the 14th amendment.

And listen to this:

> Once Roe v. Wade is removed the likelihood of a human life bill's constitutionality is more secure. Such a bill properly drafted could include the power to restrict or prohibit private abortions in addition to limiting State governments, in addition to limiting State involvement in abortion. Such a bill is a logical second step after the adoption of the Hatch-Eagleton amendment.

That is the part that Right-to-Life has tried to play down because they know if this full Senate thinks they are not getting rid of this subsection forever and sending it out to the States, they are not going to support this amendment and they are not because every Senator might as well be on notice because if this amendment passes we are going to be back here voting on statutory human life bills and funding of hospitals and a whole variety and panoply of other subjects relating to abortion that this amendment will allow us to vote on.

Make no mistake, all I ask my fellow Senators to grasp is that they are not shedding themselves of this subject, and giving it to the States, and solely to the States. All they are going to succeed in doing if this amendment is passed and adopted by the Congress, and ratified by the States is absolutely dividing this country for a generation

because the fight that we have had in the U.S. Congress is now going to be a fight in the U.S. Congress, and the State legislatures, and in every campaign, in every legislature, in every session for the next decade or the next generation, and in this Congress for the next generation we are going to fight, and refight, and refight those battles. That is not a plague that should be visited upon this Nation. It is bad enough that we have to discuss this topic, year after year, after year, but at least with the law the way it is those at the State legislative level can say "The Supreme Court has granted to every woman in this country the right to make a decision for herself whether or not she wants an abortion, and therefore we cannot legislate to prohibit it," and that saves at least every State legislator from this pernicious battle.

So, let me conclude once more by saying to my fellow Senators: If you want to continue to vote on human life bills and funding bills and abortion restriction bills, and prohibitions on medicine or instruments being shipped in interstate commerce that could be used for abortions, support this amendment because that is what you are going to get.

If, on the other hand, you either support a woman's right to choice or, at a minimum might—might—vote for a genuine States rights amendment, this is not it, and you should vote against the amendment as proposed by the Senator from Utah.

Mr. HATCH. Madam President, I once again have been interested in my colleague's eloquent remarks. My colleague mentioned a memo by a CRS attorney with regard to States rights. I asked a law professor to comment on this particular analysis, and I ask unanimous consent that his remarks, plus some additional remarks, be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MEMORANDUM REGARDING THE "LEGAL ANALYSIS OF SENATE JOINT RESOLUTION 3 . . ." PREPARED BY CHARLES V. DALE FOR THE CONGRESSIONAL RESEARCH SERVICE

(By Lynn D. Wardle)

The "Legal Analysis of S.J. Res. 3, Proposing An Amendment To The U.S. Constitution Relative To Abortion, As Reported By The Senate Judiciary Committee" is an interesting, if mistitled, document. It is interesting in part because of the creative and original constructions it suggests for some of the language contained in S.J. Res. 3. It is mistitled for the same reason, i.e., because in some critical passages of the memorandum creative writing was used in lieu of legal analysis.

The substitution of creativity for legal analysis is especially apparent in the first three pages of the memorandum. In those pages, the author focuses upon the phrase "is not secured." This section of the memorandum starts well enough with the author conceding the plain meaning of S.J. Res. 3:

The apparent objective and one possible effect of the amendment proposed by S.J. Res. 3 would be to essentially restore the status quo that prevailed prior to the Supreme Court's 1973 abortion decisions. That is, a woman would have no individual right, protected by the Due Process Clause or other federal constitutional guarantee, to choose to terminate her pregnancy free of the restraints imposed by state law. In addition, the courts would be precluded by the proposed amendment from predicating such a right at some future date upon any provision of the U.S. Constitution.

CRS at 1,2. But then the author proposes several "creative" alternative constructions which are possible "given the ambiguity of the amendment's language." But legal analysis does not "give" such fundamental matters as purported "ambiguity" without more than the bare assertion that ambiguity exsists. Conclusory assertions are always begrudged by legal analysis. And in this case, there is no support given for the conclusion that the language is ambiguous. If there is any ambiguity, it has not been revealed.

Mr. Dale suggests that the phrase "is not secured" could "conceivably" be read to mean that abortion is prohibited or that abortion is protected subject to a minor countervailing consideration. These speculations are fun to engage in, and evidence a fruitful, creative mind. But legal analysis they are not. The author simply says that these interpretations "could conceivably" be made; he never says how the language could be given such translation or why such mental speculations should be given serious consideration. For instance, the author might have referred to a dictionary to show that the word "secure" has several meanings. (Among the definitions given in Webster's Third New International Dictionary are "guarantee," "assure," to "make safe," and "to shield or make secure from . . . destruction or hostile interference.") Or he might have referred to the Preamble to the Constitution where the same word is used in the phrase "to secure the blessings of liberty to ourselves and our posterity." But Mr. Dale does neither of these things. In fact, he gives no justification or explanation whatever for his bare conclusory assertion that "is not secured" is ambiguous and could be given creative constructions like he suggests. Legal analysis is a discipline; lawyers and judges must reason every inch of the way from identifying an issue to reaching a conclusion. Mr. Dale's interesting speculation about how the bare words of S.J. Res. 3 might be construed lacks this discipline.

It is worth noting that Mr. Dale candidly admits that his speculations are "necessarily tentative" because he was working without the benefit of a fully developed legislative history. CRS at 3. Since the intent of the framers is crucial to the subsequent interpretation of constitutional amendments, Mr. Dale correctly noted that it was "virtually impossible" for him, writing a month before the Senate Judiciary Committee Report was published, to "predict" the proper construction of the language of S.J. Res. 3. The subsequent publication of Senate Report 98-149 supplies the crucial information Mr. Dale was lacking. It specifically states:

The phrase "not secured by this Constitution" is simply meant to clarify that the proposed amendment seeks to disestablish any theory of constitutional law upon which the existence of a right to abortion can be predicated. It is primarily designed to establish a new locus for decisionmaking authority, i.e., legislatures, not the courts. . . . S.J. Res. 3 merely affirms the power of legislatures to legislate with respect to "abortion" and denies the existence of any constitutional protection for "abortion." . . .

Senate Report 98-149, at 57. Coming a month after Mr. Dale's memorandum and emphasizing so pointedly what the phrase "is not secured" was intended to connote, the Senate Report neatly clarifies the "ambiguity" which Mr. Dale saw earlier when he labored under the handicap of not having the legislative history.

The remainder of Mr. Dale's memorandum assesses the possible effect of S.J. Res. 3 upon the balance of powers, i.e., the power of the states and of Congress to restrict abortion. On the whole, this section of the memorandum underscores the point that S.J. Res. 3 will restore the constitutional allocation of power to deal with abortion that existed prior to *Roe.* Thus, with respect to the power of the states Mr. Dale initially notes that "[b]ecause neither Congress nor the states would be granted express authority to legislatively enforce the reported amendment it may effect a less drastic shift in the balance of power between the federal government and the states than some alternative formulations." CRS at 3. After this begrudging admission, the author later concludes that "in terms of the relative balance of federal and state authority in the abortion area, the amendment may restore the *status quo ante* in *Roe.* . . ." *Id.* at 9. In fact, he never suggests that S.J. Res. 3 would not restore the pre-existing power of the states to restrict and prohibit abortion. He does suggest that S.J. Res. would not do any more than this, i.e., that it would not of its own force override state constitutional, state legislative, or state judicial interpretations (of local law) which afford some protection for the practice of abortion. It would only restore to the states the federal constitutional authority to restrict abortion. Whether any particular state exercised that power or not would not be controlled by the Amendment. The Senate Report is in complete agreement. Quoting one of the witnesses who testified, it notes: "S.J. Res. 3 would restore to the states their general police power to restrict and prohibit abortion. The states could enact legislation to the same extent that they could prior to *Roe.* . . . It would not compel or prohibit the adoption by any state legislature or by Congress of any legislation restricting abortion." Senate Report at 58.

Regarding the power of Congress to legislate regarding abortion, Mr. Dale's memorandum again confirms that even before the Senate Report was prepared it was obvious that S.J. Res. 3 would not add to or take away from any of the legislative powers vested in Congress by the Constitution. Mr. Dale points out that the full extent of those powers, as they relate to abortion, are not known. Of course, the full extent of all powers of Congress is not yet defined. (For example, the extent of Congress' power to create new legal rights under section five of the Fourteenth amendment is a matter of uncertainty today generally, and not just with respect to abortion. See *E.E.O.C.* v. *Wyoming,* 51 U.S.L.W. 4219 (Mar. 2, 1983).) What is important is that S.J. Res. does not curb, enhance, or modify in any way those constitutional powers which Congress has. Only the limiting doctrine of *Roe* is repealed. Again, this notion is in accord with the Senate Report. See Senate Report at 55-60. With respect to Mr. Dale's specula-

tion as to various provisions of the Constitution which might justify congressional legislation dealing with abortion, the only noteworthy point is that all of those provisions and all of those powers are pre-existing powers, i.e., they are traceable to provisions of the Constitution that will be unaffected by S.J. Res. 3. If Mr. Dale's notions abut congressional power under the Fourteenth Amendment or the interstate commerce clause have validity it is because they stand on their own as valid interpretations of those other provisions. S.J. Res. 3 does not affect them.

In the final analysis, Mr. Dale's memorandum provides a contrast which clarifies the meaning of S.J. Res. 3. It was published May 9, 1983. A month later Senate Report 98-149, the Report of the Committee on the Judiciary of the United States Senate was published. Mr. Dale hypothesized about what might have been meant. Mr. Dale suggested several different theories of interpretation. The Senate Report discloses precisely what the Committee intended. Inasmuch as Mr. Dale's suggested "possible" interpretations were published well before the Committee Report was completed and published, where his speculations differ from the Committee Report that provides a reasonably clear indication of what was not accepted or intended by the Committee, and, therefore, what construction will not be given S.J. Res. 3 by the courts.

Mr. HATCH. I might mention that, without question, this is a States rights amendment, but also we have talked about the residuum of rights that would be in the Federal Government, which is neither more nor less than there would be under the language that he has suggested. The Federal Government can always act in those areas where it is capable of acting so much for States rights. This amendment does that.

Madam President, the annual Gallup polls since 1975 have shown that never more than 25 percent of all Americans have felt that abortion would be legal in all circumstances, which is the case today. Similarly, never more than 22 percent have felt that abortion should be outlawed in all circumstances. A majority oppose the current policy of abortion on demand.

In 1979, Gallup found that a majority believes that some abortions should be permitted during the first trimester in cases of rape, incest, or endanger to the mother's life or health. Beyond the first trimester, a majority of Americans believe that only a legitimate threat to the mother's life should be considered as justification for an abortion.

Madam President, the Declaration of Independence talks about inalienable rights. Life is one of the first of those inalienable rights, and we are taking away 2 million lives a year in this country and, I might add, in the process we are demoralizing this country and hurting this country beyond repair.

We are the most permissive country in the world in killing the unborn, with the possible exception of Communist China. What an indictment. And yet we have arguments to keep this present monstrosity alive.

Madam President, this is a moral issue, literally an issue concerning life and death, life and death of a society as well as countless unborn children.

I might add, Madam President, that there are over 100 lower court decisions and 18 or 19 Supreme Court decisions and the courts have not resolved this issue at all. In the eyes of a majority of the people in this country, they are ill equipped to do so. This is a great moral issue. It is a great human rights issue. It is a great civil rights issue. It is a family issue. It is an ethical issue. It is a social and societal issue.

Even if, as is claimed, the human fetus is not a person in the whole sense of the law, John Hart Ely, the professor at Harvard who agrees with the courts on the decision, said that early the fetus is certainly not nothing. He went on to say that dogs are not persons in the whole sense, nor have they constitutional rights, but that does not mean the State cannot prohibit killing them. It does not mean the State cannot prohibit killing them in the exercise of the first amendment rights of the political process. Even dogs have protection in this society. They have more protection than these 2 million unborn children that are destroyed every year.

What seems to be the greatest anamoly of all is that those who think that this should continue, many of them, have such concern for animals and dogs and harp seals, and you could go on and on, and virtually no concern at all for unborn human life.

Well, I think it is time to express that concern. That is what this debate is all about. I hope that my colleagues will vote for this constitutional amendment as a statement that Roe against Wade is not only a bad decision, it is an unconstitutional decision and it is a demoralizing decision that has hurt this country and will continue to hurt this country until it is resolved.

I hope my colleagues will give every consideration to their vote today because this is not an insignificant vote.

Again, I wish to thank my colleagues for forbearing, the leadership for allowing this debate to take place, and my dear friend from Oregon with whom I differ greatly on this issue for being as courteous and as decent as he has been.

Mr. PACKWOOD. Madam President, let me also thank the Senator from Utah for the gentlemanly fashion in which he has conducted himself. I would like to think I have done the same. This is a difficult, emotional, and passionate issue on all sides. Yet, in almost a year it has taken the Senator from Utah to get his amendment to a vote—and, believe me, he had a difficult time getting it here for a vote—in almost a year that he and I have talked and negotiated, there has never been an acrimonious word or acrimonious thought. I am delighted to say that he is going to get his chance, without impediment and without amendment, for something that he has worked at as sincerely and as deeply and as fervently as I have seen anyone in Congress in my career work on any subject.

I wish to take this opportunity to thank just a few groups that have helped me tremendously in the preparation of materials and research. They include Planned Parenthood, the National Abortion Rights Action League, the Religious Coalition for Abortion Rights, the American Civil Liberties Union, the National Organization of Woman, the Alan Guttmacher Institute for some very excellent briefs; Nancy Buc and Janet Benshoof, who did yeoman's work on this; from the Judiciary Committee, Ben Scotch and Marge Baker; and from other staffs, Steve Moore, from Senator WEICKER's staff; Carolyn Kamlet, from Senator HART's staff; Susan Martinez, from Senator CRANSTON's staff; Mary Bea Troland, from Senator BAUCUS' staff; and Mike Epstein and Susan Manes, from Senator BYRD's staff.

Madam President, I wish to say to Senator HATCH how gracious his staff has been in working with us on this. We would not have had the time agreement without our staffs working together and we would not have had a chance to have what I think has been an extraordinary debate in the Senate that 33 people have participated in. I think we would not have been able to achieve it without our staffs working together.

The PRESIDING OFFICER. Is all time yielded back?

Mr. PACKWOOD. I yield back the remainder of my time.

TAX RATE EQUITY ACT OF 1983

The PRESIDING OFFICER. The time for debate having expired, under the previous order, the Senate will now proceed to the consideration of H.R. 1183, which the clerk will report.

The legislative clerk read as follows:

A bill (H.R. 1183) to amend the Internal Revenue Code of 1954 to limit to $700 the maximum reduction in individual income tax resulting from the third year of the rate cuts enacted by the Economic Recovery Tax Act of 1981.

The Senate proceeded to consider the bill.

The PRESIDING OFFICER. The time between now and 5 p.m. will be equally divided and controlled by the majority and minority leaders or their designees.

If neither side yields time, time will be charged equally.

Mr. EAGLETON. Madam President, I suggest the absence of a quorum with the time to be equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Madam President, I designate the distinguished chairman of the Finance Committee (Mr. DOLE) to manage the time on this side of the aisle with respect to the pending legislation.

Madam President, I ask unanimous consent that I may suggest the absence of a quorum, with the time to be charged equally against the two sides.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD. Madam President, in conformity with the terms of the agreement, I designate Mr. BRADLEY to control the time on this side of the aisle.

Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Madam President, I am going to speak briefly, and then I understand the distinguished designated manager on the other side, Senator BRADLEY, will speak. I believe Senator HATCH would also like to speak briefly on this matter. I assume there will then be other speakers.

As I understand, we are talking about equity here. We want to come out on the side of fairness, equity, all those good things that come to the fore when we want to appeal to the voters. In this cast we are doing it 2 days before this tax cut is supposed to take place. It is supposed to take place on July 1. There has already been, I do not know how many, but millions of dollars spent by the Government to notify people, to change withholding, tables and to do a lot of things.

I do not object to efforts to have fairness and equity. We are going to need a lot of that in the next few weeks in our committee. We have to raise $73 billion in revenue. So I hope we do not deposit all of our fairness and equity into this measure because this would only raise $6 billion in 1984 and maybe a total of $20 billion over a 3-year period.

But, again, it is taking money away from people who are paying their taxes. It is, in effect, increasing taxes for workers and others, whether they make $30,000 or $40,000 or $50,000.

It is still taking money away. This Senator just happens to believe that there is plenty of room in the Tax Code to tighten up loopholes without taking away any tax cuts from the American people. I remind my colleagues that the bill we are trying to dismantle now passed this body by a vote of 89 to 11 in 1981. We have had almost continuous assaults on the rate cuts—first on the second year, then on the third year. Finally, now, we have given up on all that and we are now down to just part of the third year, a proposal to just put a cap on it, a $720 cap.

Madam President, it just seems to me that there are a lot of things we could do. Certainly, if we are talking about fairness and equity and making certain that upper-income Americans pay their fair share of tax, there are a lot of different provisions of the Tax Code that ought to be tightened up. Maybe there are new ones that ought to be added. In my view, this is not one of those. This is simply a political effort to indicate that, somehow, President Reagan and those who supported his program—in fact, almost everybody who voted for the 1981 tax bill—somehow favored the rich.

Now, somehow recognizing that they voted to favor the rich, they want to vote against it. I do not know who the rich are. We shall probably hear about that today, too. Evidently, everybody who makes over $30,000, even though it may be a man and wife working, if it is somewhere over $30,000, they are rich.

Madam President, I hope this effort by TIP O'NEILL, which was successful in the House, where he has a 101-vote margin, where he lost 29 Democrats is not successful—but the majority leader did make a promise to the distinguished minority leader that he would bring this matter up. It is up now.

I do not quarrel with the Democrats for wanting to play politics. We are going to have to be exposed to that for several hours—I hope not too long, because there are other important things that need to be done. By tomorrow morning, everybody will have said all they want and we shall vote on it. In my view, the effort will be defeated.

Before I yield the floor let me say that Secretary Regan told us just last week in the Committee on Finance that many, many middle-income taxpayers would be affected by this proposal. I know we are going to hear that and we shall have some examples.

Madam President, as the Senate takes up H.R. 1183, the so-called Tax Rate Equity Act, I trust that on consideration, our Members will agree that this legislation is anything but the measure of equity that it purports to be.

Last week Congress finally adopted a budget resolution for fiscal year 1984. After 6 months of effort Members finally concluded that the only way to reduce the deficit was to order $73 billion in new revenues over the next 3 years, and to scale back the President's defense program. Now many of us have argued for some time that some defense adjustments were in order, and that some revenue changes might be necessary, in the context of an overall agreement that also included real, significant restraint on domestic spending. But this budget misses on two important points: It leaves domestic spending virtually untouched, even provided for new spending under a so-called contingency fund. What is more, it calls for a tax increase that is unlikely to materialize in any event. Members who have the will to vote for a budget sometimes lack the will to implement it, particularly if it requires politically painful decisions on the eve of an election year.

So as we consider the particular tax increase called for by H.R. 1183—for this is a tax increase, pure and simple, and nothing but—we ought to realize in the first instance that this measure lacks any kind of meaningful context. We do not really know where we are going on the budget, or whether we will restrain spending in any significant way. Yet, out of the blue, we are asked to raise tax rates on 8.1 million returns by withholding tax relief scheduled to go into effect this Friday. That is right—we are asked to reverse a policy adopted in 1981, just a few days before that policy takes effect.

Madam President, this is not just bad planning and bad policy; it is hypocrisy. This is not a sincere deficit reduction measure. It is an attack on the President and on our own endorsement of the President's programs. It has nothing to do with the budget. It has everything to do with elections.

But, proponents of the $700 cap proclaim, this bill raises $6 billion. That will help cut the deficit, and go halfway toward meeting the 1984 revenue target in the budget resolution. What is more, it taxes the wealthy rather than the average taxpayer. What could be more reasonable?

First of all, it is hard to claim that these revenues are earmarked for deficit reduction when the budget resolution we just adopted allows for $8.5 billion in new spending in fiscal year

1984 alone, under the contingency fund. If we really want any new revenues to cut the deficit, we should first stop talking about new spending. But it is also a mistake to call this a tax on rich people.

As the Secretary of the Treasury, Don Regan, told the Finance Committee last week—and as he and the President have said repeatedly—many, many middle-income taxpayers would be affected by this proposal. For example, the cap proposal would raise taxes beginning at income levels of around $29,800 for taxpayers who are single and do not itemize deductions. The comparable figure would be $39,200 for joint returns. These people are by no stretch of the imagination wealthy. The fact is that this cap proposal would have very little impact on taxpayers with incomes over $100,000, inasmuch as those taxpayers generally already pay tax at the maximum 50 percent rate and would not get a further benefit from the third year rate cut in any event.

OTHER CONCERNS

Madam President, there are many other reasons to be concerned about the impact of this proposal, both in terms of equity and in light of our economic goals. The cap would undermine the marriage penalty relief enacted in 1981, and nearly half the revenue raised would come from two-earner couples: A disincentive to additional work and savings if ever there was one. Around 2.4 million small businesses would experience a tax increase, at a time when we want to encourage risk taking and entrepreneurship—that is what creates jobs and greater wealth for everyone. In addition, the third-year cap creates odd anomalies and distortions in the income tax rate structure. The abrupt cut-off at $700 requires steep rate rises above that level, and these would be permanent changes. At $35,200 of income, rates would suddenly jump by 9 percentage points, from 28 to 37 percent. Some of us thought there was a consensus for keeping tax rates down to minimize economic disincentives—that is what the proponents of the so-called fair tax, and the flat tax movement in general, have been telling us. But such concerns apparently do not trouble the proponents of this legislation, which gives them an easy opportunity to take a shot at the President's program.

POLITICS

Madam President, it should be clear to everyone that this is a political amendment. If we want to raise taxes on the wealthy—and we all agree, at least in principle, that we want the wealthy to pay their fair share—then we have fair and sensible ways to do that. But it must be for the goal of deficit reduction, and it must be tied to real restraint on spending. Anything else is an illusion and a deception. We certainly can improve tax compliance and cut tax preferences to raise revenue. The Finance Committee has been exploring those options in an extensive way. We are looking at compliance, we are looking at tax shelter abuses, we are looking at tax breaks that help those in the know reduce their taxes while Joe Public has to pay higher tax rates. If you vote for this amendment, that is what you are voting for: Higher tax rates to help maintain special tax privileges. That is not fair, and it is not progress. It is yesterday's politics, and it will not deceive the American people for one minute. The people will get their full tax cut July 1, and they will keep it.

So let us have the debate, let us air all the issues, and get all the rhetoric out of our systems. But when the smoke clears, and we get down to the substance of our problems—the nitty-gritty, as it were—we will still confront the need to pare the deficit with spending restraint, and such revenue measures as we can agree to as we come out of recession. The people understand who is really for fairness and who is really for deficit reduction. The people understand that there is a right way and a wrong way to do things. The right way is to stand up and say, "We know that government programs are popular, and we know it is difficult to cut them. We know that special tax breaks have strong constituences, and we know that it is tough to modify them. But we also know that we have to do both those things, not just to reduce the deficit, but to make government more efficient and to make our economy function more effectively." The wrong way is to take a piecemeal approach and reverse the progress made in recent years in tax policy. We have many budget fights ahead of us: The lines are being drawn, and the voters will remember which side we were on. Unless we draw the line here, the prospects for real action on the deficit are dim indeed. But once this side issue is set aside, I hope that we can work together to tackle our real problems. That is what the public expects.

Madam President, I ask unanimous consent to have printed in the RECORD a letter from the Secretary of the Treasury dated June 27, 1983.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF THE TREASURY,
Washington, D.C., June 27, 1983.

Hon. HOWARD H. BAKER, Jr.,
U.S. Senate, Washington, D.C.

DEAR HOWARD: The Senate will consider this week H.R. 1183, which, under the guise of a $700 cap on future tax reductions, actually imposes a retroactive and permanent tax increase on millions of taxpayers. The Administration strongly opposes this bill and urges its defeat.

A $700 cap on the third year of the tax cut is an ill-conceived and unfair proposal which is both bad economics and bad tax policy. Raising taxes now would be particularly harmful to the economic recovery now taking place. And although proponents of the cap claim it would affect only the wealthy, it would in fact result in increased taxes for millions of middle-income families, working married couples, small businesses, and family farms.

A $700 cap, which would increase taxes for 8.1 million tax returns by an average of $654, would hit squarely at our great middle-income class. About half of the tax returns facing a tax increase under this proposal have income of less than $50,000 a year. Some single taxpayers who do not itemize would be affected, even though they earn no more than $30,000 of gross income. In addition, since the top tax rate has already been reduced to 50 percent, the cap would have little effect on taxable income brackets in excess of $109,400.

Compared to pre-ERTA law, marginal tax rates applying to taxable income below $35,200 and above $109,400 would be reduced by about 23 percent under the cap. But the marginal tax rates applying to taxable incomes between $35,200 and $109,400 would be reduced by only 14-15 percent. The result is a tax rate schedule that is particularly onerous for middle-income families. A $700 cap would create a rate schedule that reaches its steepest point—a 9 percentage point increase—at $35,000 of taxable income. At this level of income the marginal rate would jump from 28 percent to 37 percent. And while millions of taxpayers would be affected initially, more and more taxpayers would be subject to these same steep tax rates as the whole distribution of income gradually moves upward.

The $700 cap would also hit hard at two-earner married couples. Millions of taxpayers would be affected by the cap simply because both the husband and wife work. According to our data, 4 million of the 8.1 million tax returns facing a tax increase under this bill involve two-earner married couples. In addition, nearly half of the revenue raised by the proposal would come from two-earner married couples. As a result, this proposal would offset to a significant degree the marriage tax relief enacted in Congress in 1981.

Small businesses and family farms would also be affected by the $700 cap. Small businesses, which are a vital source of jobs and investment, are almost always taxed at individual tax rates. Nearly 2.5 million small businesses, including 350,000 family farms, would be subject to a tax increase under this bill.

Finally, some proponents of the cap claim it is needed to reduce budget deficits. But deficits are not caused because taxpayers do not pay enough taxes. Long-term deficits exist because government spending has grown a lot more rapidly than receipts over the past twenty years. And as many of your colleagues recognize, a tax increase without an accompanying cap on spending would only result in more government spending and bigger budget deficits.

Therefore, I urge the Senate to defeat this proposal.

With best wishes.

Sincerely,

DONALD R. REGAN

Mr. DOLE. I might say as recently as this morning, the Senate Finance Committee held hearings. We will hold hearings again tomorrow. We are going through the tax preferences, tax

expenditures, they add up to $296 billion. They should be reviewed. We have had some outstanding witnesses, including Alice Rivlin, Director of the Congressional Budget Office, go through a list of preferences they have been focusing on. I do not share all of her views, but she has a number of, I think, rather good suggestions.

It is my hope that the Committee on Finance, when we face up to the budget resolution, can come to grips and find some areas of agreement to comply with the budget resolution, or at least do the best we can.

I hope that we might be able to do it by looking at tax preferences and compliance and not go back to the third year of the tax cut or tax indexing which we just passed in 1981 and which many people believe was about the best thing we did in the 1981 Tax Act.

I suggest that we have the debate. Again, I do not quarrel with it. It is a political move and I say that in the positive sense, not in any negative sense. It is a political move. In my view, the Democrats feel that this action will demonstrate to someone, many people, millions of people, that they are fair and Republicans are unfair, that they want to tax the rich, however they may be defined and we want to tax another group, apparently. But in the final analysis, I am not certain next year who is going to remember who wanted to take whose tax cuts away. I am not going to remind people that Democrats only wanted to increase taxes for the rich. I assume we will want to point out that the Democrats wanted to take the tax cut away from everyone, or at least do violence to the tax cut. I think that would be a fair way to characterize the debate.

We do have to reduce the deficit. I hope there is some indication that should this measure fail, my colleagues on the other side will be willing to join us in raising revenue. This cap would provide $20 billion over a 3-year period. We need $73 billion to comply with the budget resolution. I do not think that is possible unless we have some spending reduction.

If that is the case, if this is going to be a commitment by, hopefully not a majority, but a near majority of Senators, 40-some Senators, indicating they are willing to raise the revenues at least $20 billion over a 3-year period—some indicated last week they are willing to raise $73 billion over a 3-year period—then there will be other votes on other occasions. If, in fact, we bring a revenue bill to the floor, we hope our colleagues who now seek to raise taxes on working people will be willing to help us in that effort.

It seems to this Senator that we may as well go about the business of debating this issue. There are no amendments in order. I had hoped to bring up tuition tax credits. It seemed to me if we are going to have this little loophole in this little time on the floor, we should be considering some constructive legislation. I had a substitute prepared, still have it with me, but I am instructed by the majority leader that under the unanimous-consent agreement, amendments are not in order. We will have to bring up tuition tax credits on another day. I am sure it is noncontroversial, will probably slip through here in 30 to 40 minutes.

I am pleased to yield the floor, Madam President.

(Mr. SPECTER asssumed the Chair.)

Mr. BRADLEY. Mr. President, I think at the beginning, we might address why we are bringing this particular matter up at this time. The reason is that when we sought to do it on the debt limit, we were asked to please refrain from doing it on the debt limit in exchange for a time certain to debate this issue. From the outset, we should be very clear about what this bill does.

There has been a lot of rhetoric, a lot of confusion, and a lot of misinformation about this legislation. So let us start with 10 facts. The first fact is that the bill will limit the amount of tax reduction available to some taxpayers under the third year of the Economic Recovery Tax Act.

The second fact—and Senators are going to hear a lot of numbers in the next couple of hours today and tomorrow and the numbers are going to have shifting bases, but this is the most important fact to remember throughout this whole debate; it was confirmed as late as the day before yesterday by the chairman of the Finance Committee on a morning television show—the second fact is that 90 percent of all taxpayers will receive the scheduled tax cut in full—90 percent of all taxpayers will receive the tax cut in full. So this broad middle class that the opposite side is defending is the top 10 percent of the American taxpayers. That is fact No. 2.

Fact No. 3. Even those taxpayers whose tax cut is reduced will still benefit. Married taxpayers will get a maximum of $720, single returns will get a maximum of $637.

Fact No. 4. The bill will raise $38.8 billion over the period fiscal year 1983 through 1988.

This means that the deficit will be reduced by about $39 billion, which in turn means that we will be able to reduce the amount we have to borrow to finance that deficit. So on top of the $39 billion in additional revenues is an interest savings of about $7.5 billion. Thus, over a period of 5 years we have a deficit reduction of close to $45 or $46 billion. That is fact No. 4.

Now, fact No. 5. Of this $38.8 billion, 89 percent comes from taxpayers earning over $50,000, who represent only 6 percent of all taxpayers.

Fact No. 6. The cap will not affect married taxpayers with adjusted gross income under $46,500 or single taxpayers with adjusted gross income under $35,700.

Fact No. 7. The cap will affect less than 5 percent of all taxpayers earning under $50,000. Only 11 percent of the $39 billion will come from the group with incomes below $50,000.

Moreover, the effect on taxpayers earning under $50,000 will be minimal. For example, taxpayers with incomes between $30,000 and $40,000 who are affected by the cap will lose no more than a couple of dollars a week from their tax cut. On the other hand, people earning between $100,000 and $200,000 will lose about $2,500 a year because of the cap. That difference, a couple of dollars a week versus $2,500 a year, is why the bulk of the revenue this cap raises comes from the wealthiest members of our society.

Finally, the cap's effect clearly is confined to taxpayers in the highest income groups. Middle- and low-income families will get their tax cut in full. Remember the fact that 90 percent of all taxpayers will get their full tax cut. Only 10 percent will be affected by the cap. This "broad middle class" that we are hearing defended on the floor today is not the middle class at all. On the contrary, it represents the top 10 percent of incomes in the country.

Mr. President, that is how the tax cap works. Now let us look at why it is needed. Congress and the administration, Democrats and Republicans, liberals and conservatives, all agree that the enormous deficits projected for fiscal year 1985 and beyond threaten a sustained economic recovery. Under these circumstances, it simply makes no sense to go deeper and deeper into debt to pay for a tax cut that we clearly cannot afford. We are borrowing from everybody and pushing up interest rates to finance a deficit so that the top 10 percent of our taxpayers can have their full July tax.

Mr. President, failure to confront this reality threatens the recovery and jeopardizes the tax base. Worse, I think it erodes public confidence in Government's ability to manage the economy and to restore fiscal integrity.

Given this reality, the cap is undoubtedly the fairest way to raise revenues right now. It is certainly fairer than the regressive energy taxes the administration proposed in their standby tax plan. It is certainly fairer than the proposed surcharge that affects all taxpayers including those in lower income groups who have already borne the brunt of the administration's economic program. It is even fairer than isolating one or two tax expenditures that will disproportionately burden the working men and women

of this country, like capping health insurance.

Mr. President, I know that the other side will say, "Well, those tax increases that the President proposed were contingent." Indeed, contingent on the deficit, which is now about 5 percent of GNP, dropping to about 2.5 percent of GNP. That means the deficit would have to fall to $100 billion. The President's own program projected that we would not achieve that goal. So to argue that even though we have proposed these tax increases we really do not think we are going to have to implement them in my view flies in the face of reality and of the evidence from virtually every source including the administration.

Some people are also going to argue that the cap will abort the recovery. That is just nonsense. The $6 billion in 1984 revenue increases is simply not big enough to stifle a genuine recovery. Even the President's chief economic adviser, Martin Feldstein, says the same thing. If the recovery is not genuine, if it is so fragile that giving away less to the top 10 percent of the population is going to catapult us into a deep, deep recession, then we have problems that far dwarf this debate.

Mr. President, many of the same people are going to say to you and to the Senate that notwithstanding the facts we have just covered, this tax cap is not fair. Why is it not fair? Because a few taxpayers making between $46,000 and $50,000 get slightly smaller tax cuts than they otherwise would.

What I want to know, Mr. President, is where were these people in 1981 when most of us on this side offered amendment after amendment to give more of the 3-year tax cut to people making less than $50,000? Where were they then? Voting "no" against giving a bigger tax cut to people with incomes under $50,000. Where were they in 1982 when we offered similar amendments to give greater tax relief to the middle class? Voting "No." And the reason they voted "no" is because they were squarely behind cutting taxes for the wealthy and letting the benefits trickle down through the country—trickle down supply side. That is the basis of the 3-year tax cut.

I think those arguments have been completely discredited by the recent recession. But notwithstanding that they have been discredited, trickle down supply-side rhetoric fuels the opposition that is at the bottom of this debate today. From the beginning, we questioned both trickle down and supply side. Many of us on this side did not believe it in 1981 when we voted against the Economic Recovery Tax Act. We are just as skeptical today.

I believe that all income groups should pay their fair share of the tax revenues needed to run this Government. That is what this tax cap is about—a fair share of tax revenues from the affluent and a fair shake for those who are truly in need.

Mr. President, I know that my distinguished colleagues from Arkansas and Florida would also like to speak at this point.

I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. BRADLEY. On the time of the Senator from New Jersey.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Mr. President, I understand that we are going to debate until 5 p.m., and then there will be a vote; and if anyone wants to debate after that, they can talk for as long as they wish, I suppose, and tomorrow morning between 9 and 10 there is to be 1 hour of debate, equally divided. Is that correct?

The PRESIDING OFFICER. As of this point, 3 hours are scheduled for debate, to follow the vote on the constitutional amendment.

Mr. DOLE. Mr. President, I do not know how many requests there will be on this side. We are on the high ground, so we do not need to talk about it. If you do not have anything to sell, you talk a lot, so I assume that most of the speakers will be on the other side.

The best thing I have heard today has been the calling of the names during the quorum call. That made more sense than most of what we have heard up to now.

I hope that some of those who are going to talk about this great effort for equity and fairness will recall how they voted last year on the 1982 tax reform bill, when we went after a lot of people in upper brackets. I do not recall getting a single vote on the other side until the conference report came back; and then, fortunately, there were 11 Democrats who voted for that bill.

In my view, that is where we should be looking now for equity and fairness, trying to broaden the base of the system, so that we can lower marginal rates.

A tax cut is a tax cut, and if you have to earn more money to pay more taxes and there is a tax cut, you should not be penalized because you are above a certain level. If you want to do that, we should look at tax shelters and other areas where taxpayers with a lot of money and income shelter a lot of it and pay very little tax or have a very low effective tax rate.

A tax cut should be designed so that whatever tax you have, if there is a tax cut, you get the same cut as everyone else. This is not a welfare program we are trying to design.

We are not trying to arbitrarily choose who is high and who is low income.

I am just advised that a lot of the housing projects for low- and moderate-income families are for those who earn $37,000 to $39,000. If that is low income, why is it high income when we are talking about it on the tax side?

So I would simply challenge my friends on the other side to join with us. In the next few weeks it is going to get fairly difficult to raise $73 billion, particularly unless some on the other side are willing to vote not just for budget numbers—that was the quarrel the Senator from Kansas had with the whole budget resolution. It did not mean anything. Anyone can vote for numbers.

But I can already hear it now, that we are for raising revenue but not this particular revenue.

The best way to raise revenue is go back and look at tax compliance which reminds me of the great rush to repeal withholding on interest and dividends, most of it coming from the other side. They were talking about people with a lot of interest and dividend income who are not paying any tax at all. But, now, we cannot collect taxes from those people. No, if we have to withhold on interest and dividends that would be unfair. Unfair to whom? Unfair to the rich; unfair to the working people?

So I just believe it is pretty hard to sell this rhetoric today, based on the fact that there is not any record of votes for tax fairness on the other side.

Every time we have had a tax bill out that calls for reform and tightening up loopholes no one wants to be heard. But there is something about the Reagan tax approach that distresses my colleagues on the democratic side. But we are in a recovery period, even though the Carter recession lasted longer than we had hoped. We are starting in the recovery, and the recovery is in full bloom. If we can figure out some bipartisan way, I might suggest to my colleagues, to put together a revenue and spending reduction package, we are going to have a long sustained recovery. But I would hope that those who are speaking would at least check their votes on previous tax efforts to broaden the base and to try to close some of those loopholes that affect the "rich" and we did a number of those as far as pensions and a number of areas where people had not paid much tax at all, and we are going to collect $100 billion in revenue because of what was done in Congress in 1982.

There were about 25 different items in that tax bill. In addition the compli-

ance provision added about 20 to 25 additional items.

So far we have lost only one. We have lost half of that. That is the withholding on interest and dividend provision which for some reason we will hear a lot of rhetoric about fairness but somehow that was unfair because there we were asking the people to pay taxes who were not paying any tax at all on interest and dividends. It is unfair to ask people to pay taxes they owe, but is not unfair to say we are going to increase your taxes because you are making $32,000 or $39,000 and therefore you are "rich" and you should have a tax increase. This is the folly of the cap.

Good politics—I think that is questionable. Good policy—obviously not, for all the reasons we have stated.

But that does not mean there cannot be an agreement here later on this year on both sides of the aisle to bring down the deficits, and I would just say to my colleagues, my Democratic friends, that we are prepared in the Finance Committee to try to put together a package. But there are not going to be any easy choices in that package. I guess the easiest way is just to take it away from the people. Do not worry about the loopholes. Do not close the loopholes. Do not collect taxes on interest and dividend income that is not being reported. But go after the people, the working people and others who might make $32,000 or $39,000, raise their taxes. Do not close the loopholes. Do not broaden the base of the tax system. And to me that in my view is not the best tax policy.

But again I do not quarrel with my friends who want to get all the mileage that they can out of this debate.

Therefore, I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. DOLE. Mr. President, I yield time to the Senator from Delaware.

The PRESIDING OFFICER. The Senator from Delaware is recognized.

Mr. ROTH. Mr. President, it will come as no surprise to anyone in this Chamber that I rise in very strong opposition to the tax cap proposal. I do so not out of any sort of pride of authorship—although I am proud to have my name attached to this very significant tax cut—but rather because it is a bad idea offered at the very worst possible time.

This tax cap amounts to nothing more than a legislative mugging of the middle class. Despite all the rhetoric about rich people, the fact of the matter is that this year's tax cut will bring needed relief to middle-income wage earners. The truly rich have already gotten their tax cut, thanks to the actions of this Congress 2 years ago when it lowered immediately the maximum tax rate from 70 to 50 percent—a proposal which not incidentally was offered by my Democratic friends. Now that the wealthy have gotten their breaks, we now are asked to stick it to working Americans.

Make no mistake—by capping the tax cut you will raise taxes for millions of middle-income taxpayers, two-earner married couples, small businesses, and family farms.

Let us look at the facts for a moment.

The $700 cap would increase taxes for 8.1 million tax returns by an average of $654 per return per year.

Nearly half of the tax returns affected by the cap are filed by taxpayers earning less than $50,000 a year.

Nearly half of the revenue raised would come from two-earner married couples; 2.4 million small businesses, including 350,000 family farms, would have their taxes raised. Let me remind the Senate that 86 percent of all small businesses pay only the individual income tax.

So, if you love raising taxes on married individuals, farmers, and small businessmen, then this bill is for you.

Mr. President, I might also say that in all my years in the Senate I do not think I can ever remember a proposal so surrounded by misstatements and half-truths.

It has been advertised as a "rich-man's tax," that unless you are a cousin of J. R. Ewing, you will not have anything to worry about with this tax cap.

That, in a word, is baloney. I do not think married couples with a taxable income of $37,200 are rich. Yet to hear some of my friends talk who support this idiotic tax cap plan, you would think that those people are living in the lap of luxury. Nothing could be further from the truth. Yet those are the people who are going to be hit, and hit hard, by this tax increase. For those in the $35,200 to $45,800 family income range, nearly 40 percent of their third year tax cut will be taken away by this legislation. However, if you make more than $109,400 the tax cap will have little if any effect. That is not taxing the rich—that is taxing the middle class of this country.

Let me remind my colleagues why we passed this 3-year tax cut in the first place.

You might recall that the purpose of this reform was to restore badly needed incentives to our economic system—to remove some of the penalties inherent in our tax system. As the current recovery gains strength, it is essential that the Tax Code not throw any artificial barriers in the way of investment, work effort, and all forms of productive activity. We need to maintain the natural incentives that the 3-year tax cut provided—and we especially need to maintain them for the most productive sector of our economy. We need to make sure that married couples with joint incomes of $37,000 have plenty of incentive to try to get $47,000. If the tax cap passes, much of that incentive will be removed and that would be terribly, terribly unfortunate. Because, Mr. President, it is when couples that make $37,000 try to make $47,000; and individuals that make $32,000 try to make $42,000 or $43,000 or even heaven forbid, $50,000, that this country prospers and thrives. It is then that jobs are created and technology advances. We must not artificially remove the incentives to growth.

Mr. President, we are now seeing an economic recovery taking place that has astounded most observers. The tax cuts are a major reason for that recovery. For that reason, and for the reasons of equity that I have outlined, I urge the defeat of this unfair and highly damaging legislation.

I yield back the floor.

Mr. BUMPERS addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. BRADLEY. I yield to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from Arkansas is recognized.

Mr. BUMPERS. Mr. President, I want to address a point that was made by the Senator from Kansas about whether or not this bill was political. The Senator from Kansas said he did not care whether it was political or not and I believe him. If it is political to notice that a family of four with a $100,000 income is getting almost 15 times as much tax relief, if this bill is defeated, as a family with an income of $20,000 a year, then I stand guilty of playing politics.

If it is political to believe that a $220 billion deficit this year, that a doubling of the national debt in 5 to 6 years is likely to sink this country's economic ship, and that we ought to do something about it, I stand accused and I plead guilty of playing politics.

If it is political to believe that the people in this country who make $20,000 a year are having a tougher time making ends meet than people making $100,000 a year, if that is political and I am charged with being political, I plead guilty.

If you believe, as I do, that the families in this country who make over $50,000 a year are not part of the middle class, if it is political to believe that, I am guilty, because I happen to come from a State where the median family income is about $17,000 a year. That means half the people in my State make less than $17,000 a year, and half the people make more than that; 1.9 percent of the households in my State make over $50,000 a year, so I invite the President to come to Arkansas and tell the people that those making over $50,000 a year are the great middle class.

Mr. President, in 1981, when we went through this orgy of tax cuts, I

said on the Senate floor, along with 10 other Senators, that if you think you can cut taxes by $750 billion and spend $1.6 trillion on defense at the same time and balance the budget, you are asking me to repudiate everything my second-grade arithmetic teacher taught me, so I voted against it. If you want to read a brilliant speech made on the Senate floor that day, write my office, because I said that tax cut would produce the most staggering deficits this country has ever known.

I said it would be impossible to get our interest rates down to a level where ordinary people, some of those lower middle income people, could own a home. You remember the promises? In our political system people are supposed to be accountable. The Senators in this body have to go home every 6 years and defend themselves and give an accounting of their stewardship, and that is the way it ought to be. It has worked well for us, and I can tell you if this proposal is as politically motivated as the President says it is, I will take my risk; I will take my chances. As a matter of fact, if I were running in 1984, every time I got on the stump and no one raised the question about the fairness of taxes, I would pay somebody to bring it up, because I feel so strongly about it.

The President said we should cut all the taxes, giving 38 percent of the cut to the wealthiest 4 percent of the people in the country, in order to create a big savings pool so that business can borrow money and invest. That was supposed to provide a booming economy which would pay for the tax cuts and balance the budget all at the same time.

Has that been the case? Should the President be called to account for his promises? What has resulted? The stock market fell badly, unemployment went up, and we went into the biggest depression we have had since the Great Depression of the 1930's.

The supply-siders gathered around the Georgetown cocktail circuit and said: "Well, we forgot to go back to the gold standard, that is what is wrong with this."

Somebody else spoke up and said: "No, that is not the problem. We did not cut taxes enough."

At about that time Paul Volcker literally choked off the money supply, guaranteeing the depression which was already underway. Then a third supply-sider spoke up and said: "No, it is not the gold standard and it is not that we did not cut taxes enough; it is that crazy chairman down at the Federal Reserve Board with his tight money policy."

Is it not interesting that 1 year later the distinguished Senator from Kansas and the Senator from Tennessee (Mr. BAKER) agreed that we had to increase revenues or else the deficits would be absolutely out of control.

I applauded them then and I applaud them now. Who was it who said if we did this, then there would not be any chance of supply-side economics working? None other than the President of the United States. He said the same thing about the Dole-Baker bill in 1982 that he is saying now about this tax cap.

What happened after the Dole-Baker tax bill passed in 1982? Why, the stock market took off, people began to think maybe Congress is going to do something about the deficits, and now we have a little embryonic recovery going. Unemployment is still unacceptably high, real interest rates are higher than ever, and if you saw the Post this morning, you saw Treasury bills have gone up 1½ percent from about 8.1 to 9.5 in the last 2 months. If you have been studying the newspapers, you have also read that the U.S. Treasury had to borrow $19 billion in May, the most money ever borrowed in 1 month, the biggest deficit ever run in 1 month. Also, for the first time in history, I believe, we ran a deficit in April, and that is the month of the year when everyone pays taxes.

The President now says we have a recovery beginning and if we impose a tax cap, we will abort the recovery. Do you know how much revenue is involved in this? Six billion dollars. Do you know what the gross national product is supposed to be this year? Almost $3.5 trillion. My point is simple: If a $6 billion cap is going to abort the recovery, we do not have a true recovery. Have you heard the President or anybody else mention the OPEC price cut? The Senator from New Jersey (Mr. BRADLEY) follows this subject very closely. When the OPEC cartel reduced the price of oil by $6 a barrel, it reduced gasoline prices enough to give the consumers of this country almost as much benefit as the third year of the tax cut.

One effect of the depression was that people quit using gasoline because they did not have a job to drive to. Finally, the OPEC cartel fell into a state of disarray and prices tumbled $6 or $7 a barrel.

Even after the President got a gas tax of 5 cents per gallon passed—which just devastates the people of my State—there was still almost a windfall of $20 billion that went into the pockets of the consumers in this country. And now the President says, "If you put the cap on, it will be $6 billion the people do not have to spend and that will destroy the recovery." I do not believe it. I think if the recovery is not stronger than that, then the sooner we find out about it, the better off we will be.

Mr. President, there are two things that I want to reiterate. and that is, first, that $6 billion more in revenue is not going to stop a recovery. No man believes that. Second, nobody believes that people who make over $50,000 are the great middle class. Those are the two arguments the President is making, and they are not good enough reasons to vote against this proposal. Maybe there are some other reasons, but do not vote against this bill for those two reasons.

Did you know that the tax cut in 1981 was so bad that the Congressional Budget Office reported that people of this country who make less than $10,000 a year have actually had a tax increase? Considering bracket creep and the increase in social security taxes, people who make $10,000 a year have had a 24-percent increase in their taxes. Was that fair?

There are a lot of people here today who say that nobody makes $10,000 a year. That is true. A lot of people in my State do not make that much. A lot of people in my State, probably about 30 percent, make $10,000 or less. The 1981 tax cut has put a 24-percent-tax increase on them already, and that does not count what they have lost in the spending cuts in the programs of which they are the principal beneficiaries.

The people making $100,000 a year have had a 14-percent-tax cut. The people making $200,000 a year have had a 17-percent-tax cut, worth $26,000. Is that fairness?

The President has a third argument. He says, "The rich have already gotten theirs." That first year when the top bracket was cut from 70 to 50 percent, he says that took care of the rich people then and they have already gotten theirs.

I agree that they have gotten the lion's share of tax relief. Can you think of a better argument not to give them any more? I do not want to punish the rich. I have been trying to join them all my life. But I do not believe in giving more money to the wealthy and more power to the powerful, and that is what we have seen unabashedly for the past 2½ years.

I have said before, "We don't want to punish the rich or the powerful, but we don't want those at the top of the ladder stepping on the hands of those who are reaching for the first rung, either."

The PRESIDING OFFICER. All of the time of the Senator from Arkansas has expired. Under the order, the remaining time until 5 o'clock is under the control of the Senator from Kansas (Mr. DOLE).

Mr. DOLE. Mr. President, does the Senator need another minute?

Mr. BUMPERS. I am willing to wait until after the vote and take it up again.

Mr. DOLE. Well, I think what may happen here, I may take 10 minutes and I understand Senator HELMS would like to have 5 minutes on abor-

tion, which sort of fits into this debate. [Laughter.]

Mr. BRADLEY. On which side? [Laughter.]

Mr. BUMPERS subsequently said: Mr. President, another argument, indeed another deception, that the President has engaged in on this issue, he has consistently told the American people that we should not raise taxes.

Surely the President knows that this bill has nothing to do with raising taxes. On the contrary, everybody in the country is going to get a tax break. Ninety percent of the people in the country are going to get exactly the tax cut the President wants them to have. Everyone will get a $720 tax cut. So we are not raising anybody's taxes, we are cutting the taxes of every single taxpayer in the United States.

Mr. President, never in our history has the U.S. Government gone out into the credit markets and borrowed money, borrowed money to pay for a tax cut of such staggering proportions. If this bill is not adopted, the Treasury Department will have to borrow $2.5 billion on July 1 to finance the third year of the tax cut. If the bill is adopted at least it will only have to borrow $2 billion a month instead of $2.5 billion, and though that amount seems small by comparision, every little bit counts.

Mr. President, the point has been made repeatedly during this debate about the inequity of this tax cut. The fact is that the people in the lower income categories literally have had no tax cut; their taxes have been raised. They have been ravished by this administration, and the issue in summary is one of fairness.

How can the President in good conscience say that this proposal harms the middle class when we know it does not? How can the President urge us to give working people a tax cut and then propose a tax on health benefits. Here is the chart that shows his health benefits tax which is about as regressive as any tax that can be conjured up. It will be taking away from them any benefit from the third year of the tax cut and more.

If his health benefits tax becomes law, even people making $30,000 a year are going to pay $213. A tax for 1984 on health care benefits will wipe out the tax benefit that everybody in this country gets that makes less than $30,000 a year. The same song. second verse. Put the tax on the little people. There is the chart. It speaks for itself.

Consider the proposed contingent energy tax which would equal 12 cents a gallon of gasoline which he has proposed for 1984. Since an average driver uses about 1,000 gallons a year, a 12-cent-per-gallon tax would be another $120 tax. People making $100,000 a year could not care less about the $120.

But even that 12-cent-a-gallon gas tax takes up most of the $164 that the President proposes in the third year for people making $20,000.

How long, America, can we go on betraying our national character with any such proposal as that? Maybe we do not have any national character left. Maybe those Judeo-Christian principles that I learned about at the feet of my parents, to be concerned about my fellow man are being forgotten. Maybe we have become so cynical in this country they do not really matter any more. One would almost have to conclude that, based upon what has happened in the past 2½ years and what continues to happen unabated.

Mr. President, the first 3 or 4 months of this year I toyed with the idea of running for President myself. A sagacious man told me, "Maybe you shouldn't run, but I will tell you one thing: There is no divine decree or duty that you be President, but there is a divine decree that you be right."

Henry Clay one time said, "I'd rather be right than President." I never really believed that, incidentally.

However, if the Senators want to do what is right, they will ignore all of the things the President of the United States has said about this proposal. They are erroneous, unfair, deceptive, and distorted. If you want to do what is right, you will vote for this bill.

Mr. DOLE. That is a judgment we will have to make later.

I want to confess to the Senator from Arkansas that it has taken a little longer to get out of the Carter depression than the President planned, but we are doing our best. I will put the Senator from Arkansas down as noncommittal on the President's policy, or at least undecided.

I say this in all sincerity. I appreciate the Senator's commendation of our efforts last year for tax reform, but I would have appreciated his vote more. The point is, Are we really going after the wealthy and the powerful and all these people who are described as rich? I do not know who is rich. It makes a great stump speech, but we have to deal with facts. Who is rich? I do not know who is rich. A lot of people are wealthy, some rich, so I think we have to be specific. I assume most everyone else thinks somebody else is rich and they are not, and I do not want to quarrel with that.

It just seems to me that this is a political exercise. I do not fault that. After all, the Democrats have one view and the President has another view. I have not always agreed with the President. So I do not think we should apologize for trying to get a little political mileage out of increasing taxes.

But I really believe that the answer ought to come in real tax reform. We can quarrel all day about who is going to be hurt and who is not going to be hurt.

I just suggest that last year we repealed the favorable treatment of modified coinsurance that allowed large companies to escape billions in taxes. We restricted the use of foreign tax credits by multinational oil companies. We restricted the use of an accounting method that allowed large defense contractors to escape the corporate income tax almost entirely. We put limits on the amount of money the wealthy can put away tax free in pension plans and lend back to themselves. We tightened up the individual minimum tax to make certain the wealthy pay their fair share.

We scaled back a variety of corporate tax preferences, including intangible drilling costs of large oil companies by 15 percent. We put the brakes on safe-harbor leasing, where we have these giant corporations buying and selling unused tax credits. I just suggest we also put limits on the tax benefits arising from corporate mergers and acquisitions.

That is only 8 of the things we did; there were 25. One we did suggest was that people who were not paying their taxes ought to have the tax withheld on interest and dividend income. But, again, that was repealed, or at least we have lost half of that. I will not argue that, because the Senate has spoken on that.

But the point the Senator from Kansas makes is, with all these crocodile tears about all this for the rich, it just seems to me we are going to have another opportunity, maybe not by July 22—it seems rather impossible to report out a tax bill with $73 billion between now and 1986 by July 22—to revisit this question.

But, in my view, there are still a number of areas we ought to tap, called tax preferences and compliance, to make certain that those who shelter their income or somehow benefit from the Tax Code where there should not be a benefit, and in a lot of cases there should be a benefit, that is what we ought to really go after in a bipartisan way—someone who escapes taxes altogether or some who may pay very little, and I am talking about individuals, corporations, individual partnerships, whatever it may be.

It just seems to this Senator that we have a lot of things we are going to have to hammer out. I agree with the Senator from Arkansas that deficits are intolerable. I never did understand supply-side economics fully. I have said so so many times. I never understood the Laffer curve. I never really wanted to understand the Laffer curve.

In any event, we do have a problem. The problem is we have big deficits up there. Everyone has different ways to correct this.

Mind you, we have to reduce spending. There are many areas we have to reduce spending, such as starting with agriculture.

That is very important in Kansas, but it has gotten out of hand. We have one program, the PIK program, that pays you to take land out of production, and you have another program asking farmers to produce more. You have conflict there.

You tell the farmer one time to take the land out of production and, on the other hand, you tell him to produce more, to put more fertilizer on the land and to have more production.

There are a number of areas that we ought to address.

It just seems to the Senator from Kansas that my colleague on the House side, the chairman of the Ways and Means Committee, was not too anxious to bring this bill to the House floor, but the Speaker wanted it there. The Speaker had the votes and the Speaker prevailed. Obviously, it was apparently by some polling device, or whatever, but it indicated that this was good politics. If you say you are going to tax the rich, a lot of people do not know who the rich are, but they think that must be the guy across the street. "If they are going to tax that guy, I will vote for whoever says that."

We have a lot of candidates here running for office, a lot of Presidential candidates that come in and out of the Chamber, who visit here from time to time. They will all vote to tax the rich. That is popular, to tax the rich, unless we define who the rich are.

We have to deal with realities, as I indicated before. I would hope that when the vote comes at 10 o'clock tomorrow, we will indicate we are going to keep the third year of the tax cut and then, hopefully together, we are going to hammer out some revenue along with some spending restraints to bring down those deficits and sustain the recovery.

Finally, let me add that despite all the comments, the interest rates were 20 percent, or over 20 percent in 1980, and they have been cut in half. The inflation rate has been cut by more than half. The growth of Federal spending has been reduced sharply since President Reagan took office.

So, we can stand up and denounce the President. I know we are getting close to 1984. There is every indication that he is going to be a candidate in 1984. So that is understood.

We do have to bring down the deficit. If the economic program works, it will be good news for the President. If it does not work, it will not be so good.

So, Mr. President, I am prepared to yield the remainder of my time to the distinguished Senator from North Carolina.

CONSTITUTIONAL AMENDMENT ON ABORTION

The Senate continued with the consideration of the joint resolution (S.J. Res. 3).

The PRESIDING OFFICER. The Senator from North Carolina.

Mr. HELMS. I thank the Senator from Kansas.

Mr. President, I ask unanimous consent that the vote on Senate Joint Resolution 3 appear immediately following the conclusion of the debate on that issue.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. HELMS. Mr. President, I ask that the statement I am about to make appear just before the vote.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HART. Mr. President, Senate Joint Resolution 3 fails the fundamental test of a constitutional amendment: It will leave unsolved the problems it purports to address. It does not promote a sense of resolution as should an amendment to the Constitution. But more than that, Senate Joint Resolution 3 undercuts a secure and vital constitutional right, women's freedom of choice.

However artful its designers might obscure the intent of this amendment behind philosophies of States rights or federalism—all of us should be able to agree that Senate Joint Resolution 3 aims to eliminate the right to abortion. This right was first recognized by the Supreme Court 10 years ago in the Roe against Wade decision; that historic decision was amplified and reconfirmed a few weeks ago with the Akron decision.

The sponsors of this amendment would like to sweep the Constitution clean of any argument supporting a right to abortion. But the right to abortion is central to the realization of due process for 51 percent of our population. Rhonda Copelon of the Center for Constitutional Rights has well articulated the reasons behind the right to abortion:

> No decision of the Supreme Court has meant more to the lives, the health, the well-being, the freedom and the dignity of women than the decision in (Roe). While this decision alone can hardly remedy the historic inequality of women, recognition of the right to make childbearing decisions is fundamental to the attainment of equality and the realization of women's full capacities as human beings.

This amendment aims to eliminate that constitutional right.

Mr. President, it would be bad enough if Senate Joint Resolution 3 were limited in its distinction to ending a constitutional right, but to limit a constitutional right without, in any appreciable degree, resolving the debate over this issue is even worse. Passage of Senate Joint Resolution 3 will not end the abortion debate. But it will bring great harm to our system of federalism and to historic principles of constitutional rights.

This amendment would increase litigation, confusion, and complexity at all levels of government. The sponsors are aiming for a States rights solution—giving each State the right to pass its own abortion laws. But nothing in this proposed amendment would prevent resolution in this area by both the State and Federal Governments. States would be permitted to regulate abortion as with any other area, only to the extent their statutes do not conflict with Federal law. Such complications, particularly if State and Federal law differ, portend a future of massive litigation if this amendment becomes part of our Constitution.

It does not take a great deal of imagination to guess the many areas of future conflict—conflicts which will require further adjudication by the courts if this amendment passes the Congress and the majority of the State legislatures. What if the Federal Government passes a restrictive abortion statute and a State passes a liberal abortion statute? What if someone argues for a right to abortion on grounds other than the due process clause the Court used in Roe. If this amendment passes the Congress, the debate will become more intense throughout our Federal system. Those looking for a resolution of the abortion debate should not be fooled by this amendment.

Worst of all, passage of this amendment will promote the concept of "50 different U.S. constitutions." If, as the sponsors of this amendment wish, passage leaves the States free to pass restrictive abortion statutes, we will have created a situation in which the fundamental concerns of privacy, due process, and autonomy for women mean one thing in Colorado, and another thing in Utah, something else in another State. If we are dealing with constitutional rights, as I believe we are, they must be applied equally throughout our Nation. If not, the unity of our National Constitution is broken. To think otherwise is to misread the notion of federalism. If abortion is wrong in all circumstances, it should be allowed nowhere. If abortion is right, it should be permitted in all the States. That is the traditional application of a constitutional right.

Passage of this amendment will encourage a balkanized bill of rights in which each State possesses its own attitudes on which rights are constitutional. The danger in this approach was best raised by Abraham Lincoln over 120 years ago when he said that "our Nation cannot endure half slave and half free." Similarly, we cannot have two different nations with re-

spect to the fundamental right to abortion.

Mr. President, this amendment should be opposed by all Americans who support civil rights and traditional processes for changing the Constitution.

If this amendment becomes part of our Constitution, the message will be clear to future generations: If you do not like a constitutional right change it by legislative majorities. The sponsors of this amendment are suggesting that if you do not like a constitutional right, simply amend the Constitution to eliminate the powers of the court by saying that something is no longer a right. Today it is abortion. Tomorrow it might be free speech or assembly. Such court-stripping is offensive to our constitutional traditions.

I opposed such court stripping efforts last year and I will continue to fight them this Congress. The legislative, whether in Washington or the State capitals, should not have the power to nullify a right by saying that it is no longer a right. That is not the way our system is supposed to work.

Mr. President, I urge my colleagues to vote against this amendment. In opposing Senate Joint Resolution 3, we are not simply voting on the issue of abortion—we are also voting on the type of Constitution we want to live under. This amendment will not promote the constitutional change compatible with our fundamental freedoms. In closing, I wish to quote from Rhonda Copelon, who succinctly and clearly provides moral ammunition to all those who hope that with this vote, the Senate will put the abortion debate behind it and start protecting—rather than denying—the basic rights of the American people:

> Never before has this nation—despite great outcry against certain decisions of the Supreme Court—passed a Constitutional amendment that took away a fundamental Constitutional right. Once before, with the 18th amendment, we approved an amendment that invaded the private sphere. Prohibition was a disaster: it bred violence, death, and disrespect for law; it created huge profits that built a criminal trade; it made criminals of decent people; and it caused the watering down of other Constitutional safeguards. To amend the Constitution to augment rather than limit the power of government over the personal aspects of people's lives invites these dire consequences. And to do so in an area which is not simply a lifestyle, but affects the right which is a cornerstone of liberty and equality for women, can only produce massive resistence and unforgivable carnage.

Mr. BOSCHWITZ. Mr. President, I rise as a supporter and cosponsor of Senate Joint Resolution 3, the Hatch amendment, that states "the right to an abortion is not secured by this Constitution."

Some years ago, prior to being elected to public office, I scheduled a series of meetings with fellow Minnesotans on both sides of the issue who I felt would help me review the complexities and controversies surrounding the abortion issue. I met with medical doctors, biologists, theologians, feminists, geneticists, and others. I came away from those meetings with a much better understanding and I also came away from those meetings with the firm conviction that human life begins at conception.

Therefore, the basis of my support for this amendment and my opposition to abortion is that life begins at conception. And just as we would not terminate the life of an elderly person whose life's work may be done, we must protect human life at every stage of development.

Previously I referred to the many meetings I had to help me in reviewing this issue. I spoke on several occasions with Dr. Hymie Gordon, chairman and professor of medical genetics and physician at the famed Mayo Clinic in my home State. Dr. Gordon, in testimony before a subcommittee of the Senate Judiciary Committee stated:

> I think we can now also say that the question of the beginning of life—when life begins—is no longer a question of theological or philosophical dispute. It is an established scientific fact. Theologians and philosophers may go on to debate the meaning of life or the purpose of life, but it is an established fact that all life, including human life, begins at the moment of conception.

Dr. Gordon further stated:

> I have never ever seen in my own scientific reading, long before I became concerned with issues of life of this nature, that anyone has ever argued that life did not begin at the moment of conception and that it was a human conception if it resulted from the fertilization of the human egg by a human sperm. As far as I know, these have never been argued against.

Once I came to the conclusion that life begins at conception, the issue of abortion was no longer as complex or as controversial. Because, if at conception there is life, then an abortion ends a life. Our society forbids one human from ending another's life and I support that vow.

I will vote for the amendment sponsored by Senator HATCH. It is not a perfect solution to this problem, but we must start somewhere to guarantee the protection of human life.

Mr. SPECTER. Mr. President, after much deliberation, I am voting against Senate Joint Resolution 3 because of my deep-seated view that it is unwise to amend the Constitution in response to specific Supreme Court decisions.

I have long held that view. When I was the district attorney of Philadelphia, I was outraged by U.S. Supreme Court decisions on confessions and other subjects which made law enforcement very difficult; nevertheless, I opposed amending the Constitution as a means to overturn those decisions. If we amend the Constitution in response to specific Supreme Court decisions, we initiate a process which would call into question decisions affecting very basic rights such as freedom of speech, religion, and press.

In addition, I find particularly troublesome the fact that the effect of Senate Joint Resolution 3 would be to create the setting for 50 separate State laws on abortion. I believe that a State-to-State divergence on such an issue of fundamental national importance is unacceptable. Any law on such a fundamental issue should be uniform throughout the land.

Mr. HEINZ. Mr. President, I address the Senate as one personally opposed to abortion, convinced that its use as a commonplace method of birth control is contrary to values of human life and dignity held in common by myself and many Americans. It is for this reason that I have consistently voted to restrict Federal funding of abortion to only those cases involving the life of the mother, rape or incest, or instances of severe physical health damage to the mother. I also count myself among those troubled by the Roe and Doe decisions, and the most recent Supreme Court decisions which have invalidated many duly enacted State laws aimed, in some cases, at improving even in a minimal way information available to pregnant women seeking an abortion.

But, I am also troubled by the amendment before us, which, according to its sponsors, would return the issue of abortion to each of the 50 States to decide for themselves and would restore abortion to the legal status existing prior to 1973 and the Roe decision.

Subsequent to the Roe decision, I said in a 1976 interview with the Pennsylvania Catholic Conference concerning my views as a candidate for the U.S. Senate, to quote from their transcript, "I don't think something having the moral or civil rights implications that abortion has should be left to the discretion of the States."

The proponents of Senate Joint Resolution 3 have argued forcefully that this is exactly what they seek to achieve by this amendment. Inasmuch as my view remains unchanged today, I am obliged to oppose the resolution on the grounds that having 50 different State laws, irrespective of one's moral view of abortion, cannot be justifiable public policy.

Although I would vote against the proposed amendment to the Constitution solely on the basis of its failure to insure and confer nationwide equal protection under the law on an issue of profound national significance, I am also concerned about the amendment because of significant disagreement about the actual effect and consequences of it following ratification. Fully one-half of the Senate Judiciary Committee voted against favorably reporting Senate Joint Resolution 3. All

nine of these Senators concluded that—

> The resolution leaves unresolved the problems it purports to address and cannot possibly culminate in the sense of resolution that (constitutional) amendments ought to promote in our diverse society.

Also cited was the testimony of Prof. Laurence H. Tribe, a constitutional scholar, who testified that—

> The amendment poses as many questions as it answers, falls considerably short of its apparent purpose, and would contribute to further litigation.

Mr. President, I am not a lawyer, let alone a constitutional scholar, and I will not claim to be the final legal authority on how the words of the Hatch-Eagleton amendment would be translated by the courts in the course of history. However, I do believe that the Congress should have a reasonable certainty about the expected outcome of a new law proposed for enactment. It does seem to me that the wording of the amendment—"A right to an abortion is not secured by this Constitution"—has generated significant disagreement among respected legal authorities on both sides of the abortion issue, and, therefore, I cannot conclude that the proponents of the amendment have met what I believe to be both a reasonable and necessary test of clarity of effect of the amendment. This, too, weighs against its enactment.

I have stated before that I do not agree with the extreme position taken by the Supreme Court on the issue of abortion. Absent a change of constitutional interpretation by the Court which seems unlikely with the recent Akron decision, the only method of achieving any change from Roe is by changing the Constitution through the prescribed process of a constitutional amendment. I am willing to support appropriate change. But, that should not be misunderstood as a willingess to support any constitutional amendment, and, for the reasons I have indicated, Senate Joint Resolution 3 is not an amendment I can support.

Mr. HOLLINGS. Mr. President, I rise today in opposition to Senate Joint Resolution 3. My colleagues who also oppose Senate Joint Resolution 3 have amply described and documented the various infirmities of this amendment. There is no need for me to further reiterate the specific problems it poses.

The issue of abortion is one that always has and always will invoke a high emotional reaction among proponents and opponents alike. It is an issue which involves one of the most fundamental rights enjoyed by U.S. citizens. That fundamental right, of course, is a constitutional right to privacy.

Ten years ago, the U.S. Supreme Court, in Roe against Wade, held that the right to privacy founded in the 14th amendment's concept of personal liberty protected a woman's decision whether or not to terminate her pregnancy. However, the Supreme Court did not fail to recognize the competing interests at stake when it handed down this decision. Rather, it tried to strike a reasonable balance between the individual woman's right to privacy and the society's interest in the preservation of life.

Simply stated, the Court in Roe against Wade held that the individual has the right to choose during the first trimester of pregnancy. After the first trimester, a State may regulate the abortion procedure in ways that are reasonably related to maternal health. Once fetal viability has been reached, a State may regulate and even forbid abortion except when the life of the mother is endangered. I firmly believe that this decision strikes the proper balance between the competing interests.

This delicate balancing of interests is the best solution available when one considers the divergent opinions of leading experts in the medical, legal, philosophical, and theological fields on the issue of abortion. The differences are most pronounced theologically. The record will show that in medieval times St. Thomas Aquinas and St. Augustine, two of history's leading theologians, separately considered the issue of the beginning of life. Their inquiries narrowed the issue to the question, "When did the soul join the body to become a human?" St. Augustine took the very reasoned position that this occurred when there was the first breath of life—at the time of birth. St. Thomas Aquinas analyzed the development from embryo or fetus, from stages of the seed, the plant, the animal, the human, and concluded that the soul joined the body 3 months before birth. If even these two great theologians could not decide this issue, surely the politicians in Congress should refrain from any attempts to do so. Senate Joint Resolution 3 is such an attempt and I must oppose it.

Mr. President, I stand today in support of the individual's constitutional right to choose whether or not to have an abortion. As the Supreme Court has recently reaffirmed its protection of this right in the Akron case, so do I reaffirm my commitment to oppose any congressional attempts to curtail that right. There is nothing more precious than an individual's right to privacy and a woman's right to make decisions affecting her body and welfare must not be jeopardized by the resolution before us or by any similar future legislation.

Mr. MATTINGLY. Mr. President, I regret that the issue of abortion must come before this Congress. However, as many difficult decisions must be made here, so, also, must this one be made. The difficulty is that in making this decision we must make a judgment regarding two fundamental rights—the right of privacy of the individual and the sanctity of life. It is not a question of politics and it is not a question of government.

The prochoice forces in this debate argue that it is not appropriate for the Federal Government to intercede in the abortion question. Yet, it was the Roe against Wade decision that made abortion a national issue. I support Senate Joint Resolution 3 because it would return us to the pre-Roe status when States, not the Federal Government, would be able to legislate with respect to abortion.

I have studied this issue and corresponded with, met, and talked to many people about it. People from all walks of life find it an emotional subject and one which is discussed with fervor. Honestly speaking, there have been many occasions when I wished the issue would just go away, but it will not.

The vote which each of us will cast today is one on which we all have thought long and hard. For me, my decision to vote yes is based on two conclusions. First, the Constitution of the United States does not secure the right to abortion and, therefore, the Federal Government should not shape abortion policy. Second, the mother's right to privacy must not override the right to the protection of the life of the fetus. Both the mother and the unborn child are human beings who should be afforded every protection of the laws of this land.

In closing, I should like to quote one of our Founding Fathers, Thomas Jefferson. This quotation was taken from an address he made to the Republican citizens of Washington County, Md., in March 1809. Mr. Jefferson said, "The care of human life and happiness, and not their destruction, is the first and only legitimate object of good government." I trust that we will all vote accordingly.

Mr. BUMPERS. Mr. President, a decade has elapsed since the Supreme Court decided Roe against Wade. The fact that abortion continues to be the focus of an emotional national debate, however, reflects the continuing and unresolved moral and ethical issues that are involved. Many Americans continue to hold fast to the concept that a "person" in the constitutional sense should include a fetus from the moment of conception. Others hold fast to the notion that the question of abortion raises overriding concerns of personal privacy protected by the concept of "liberty" guaranteed by the 14th amendment to the U.S. Constitution.

Emotional and strident arguments are made on both sides of the issue. I

appreciate the sincerity with which many of my colleagues are approaching these difficult questions. I appreciate the sincerity of the motives of many of those who vigorously support Senate Joint Resolution 3. I recognize that their support for this constitutional amendment flows from deeply held moral convictions about a very controversial matter.

First of all, let me say that I agree that the appropriate manner by which to overturn the Supreme Court's opinion on the constitutional issue is by constitutional amendment. The constitutional amendment process set out in article 5 of the Constitution is indeed a "leadenfooted" process, and it was intended to be so. After all, the sovereign people of the United States have chosen to amend this almost sacred document only 26 times since the Constitution was ratified in 1789. Aside from the merits of the underlying issue—be it abortion or whatever—the appropriate way to overturn an interpretation of the Constitution by the highest Court in the land is by constitutional amendment. This method is infinitely preferable to passing a mere statute which purports to strip the courts of jurisdiction over the question of abortion, a method the Senate soundly rejected last year. I do not think that the Constitution can be properly amended by the backdoor "court-stripping" method, and I am pleased that the Senate is debating a straightforward proposal to amend the Constitution. I frankly do not believe that there is a consensus in this country for overturning the Roe decision, but should we decide to do so, we should carry out our intent in a way that will not violate the integrity of the Supreme Court and the power of the Court spelled out in Marbury against Madison to determine ultimately what the Constitution means.

Nevertheless, I cannot in good conscience vote for this measure. First, if made part of the Constitution, this measure undoubtedly would result in a quiltwork of State laws. One State might ban abortion completely, another State only in certain circumstances, and still another State might allow abortions in all circumstances. The right to an abortion would depend upon whether one lived in Texas, Idaho, Michigan, or Florida. in my judgment, the result would be that pregnant women who were desperate for abortions would flock to those States with the most liberal abortion laws. Pregnant women who happened to be poor might well resort to illegal or unsafe means for abortion out of sheer desperation. In this sense, we would probably end up with a situation similar to that which existed before Roe against Wade. The availability of safe abortions would be determined by one's State of residence and economic status. According to estimates from the Centers for Disease Control, in 1972, before Roe, nearly 200,000 women living in States where abortions were illegal crossed State lines to obtain legal abortions. The same thing would happen if this constitutional amendment is adopted. Again according to the Center for Disease Control, there were an estimated 130,000 illegal abortions in 1972 and 39 deaths as a result of "homemade" abortions, and in my judgment there is every reason to believe that indigent women in restrictive States would again resort to unsafe homemade abortions if this amendment is adopted.

Second, I am also deeply concerned that the amendment is too broad. In providing that no right to an abortion would be protected by the U.S. Constitution, the amendment would allow any State to prohibit abortion absolutely, even in cases of rape, incest, or where the mother's life would be endangered by childbirth. Under this amendment there would be nothing to prohibit a State from denying a woman the right to an abortion absolutely. Many of the questions related to abortion are extremely difficult for most of us, but I am absolutely and firmly convinced that a woman should not be forced by a State to give birth after a conception forced by rape or incest or in circumstances in which the mother's life would be endangered by birth. To me, it is no answer to argue that most States probably would allow abortions in these circumstances. After all, we are debating a constitutional amendment which would change the fundamental law of the land, and we should not, in the hope that States will uniformly act rationally, place a provision in the Constitution that gives them the freedom to act irrationally.

There are deeply held views by responsible men and women on both sides of the abortion issue, but I am simply not persuaded that a consensus exists for completely erasing any constitutional protection for the right to an abortion.

Mr. LUGAR. Mr. President, today I offer my strong support of Senate Joint Resolution 3, the Hatch-Eagleton amendment, declaring that a right to abortion is not secured by the U.S. Constitution. Recent decisions by the U.S. Supreme Court reaffirm the need to address the issue of abortion through a constitutional amendment, and I compliment the Senators from Utah and Missouri for pursuing that approach.

I share the belief of many of my colleagues that the Roe against Wade decision was an ill-founded one which went far beyond appropriate judicial discretion. The result of that decision has been a tragic "abortion on demand" policy which has cost millions of lives during the past 10 years.

Today, as in the coming years, my vote will reflect my belief that the unborn fetus is a living human being who deserves full protection of the right to life.

Mr. MITCHELL. Mr. President, abortion is a serious issue which deserves our most serious concern. During the past 3 months, I have met with numerous individuals and groups, in Maine and in Washington, to listen to and consider their views on the issue before us. I have read many statements, articles, and pamphlets, as well as a number of books on the subject. I have listened to and studied the debate yesterday and today in this Chamber. After much deliberation, and with deep concern, I have concluded that I must vote against Senate Joint Resolution 3, the Eagleton-Hatch amendment, the so-called human life federalism amendment.

I have a deep personal and religious conviction against abortion. As a Catholic I am keenly aware of the importance my church attaches to the issue. But I am also aware that as a public official, my obligation is to all of the people, and especially, the Constitution.

It is to that fundamental, national document to which I first turn. There are extremely complex questions of constitutional law presented by an effort to amend the Constitution, which is intended to embody our Nation's most fundamental and lasting values. It expresses basic principles, with respect to the structure and procedures of Government and the rights of individuals, on which we as a country have reached a national consensus. As such, the Constitution speaks as a voice of unity for our people.

Social, economic, and political issues which we debate always arise in our public forums. But we generally do not, and should not, look to amend our Constitution in an attempt to force an artificial consensus on the controversial issues at hand. While the original text of our Constitution was written almost 200 years ago, it has been amended very sparingly, only 26 times.

This fact helps to explain why our Constitution, unlike that of many other nations, has been so durable over time. I am personally inclined, for that reason, to be very conservative about amending a Constitution which continues to prove its basic soundness nearly two centuries after its adoption.

Within our society, abortion remains a highly emotional issue on which there is widespread disagreement as to both its moral and medical aspects. Millions of Americans strongly believe that abortion is equivalent to murder and should be outlawed by the Government. Millions of Americans believe just as strongly that abortion is not an issue in which Government should be involved, that it is a pro-

foundly personal matter, to be decided only by a woman in consultation with her family and her doctor.

This is not an issue on which there is anything even remotely resembling a national consensus.

Moreover, the amendment does not even purport to impose a single, uniform national standard.

The intent of the amendment is clear: To overturn the 1973 Supreme Court decision in Roe against Wade, thus restoring the situation which existed prior to that decision. States would then be free to deal with abortion policy as they see fit and abortion laws would vary from State to State. People can and do differ over the wisdom and morality of the current legal formula by which the rights of women and the rights of the unborn are considered. But if our Constitution does indeed express basic principles on the rights of individuals, then the rights at stake in this issue should not be left to the differing views of 50 State legislatures.

If abortion is to be restricted, then it should be so in every State in this Union. If the right to choose abortion is a matter between a woman and her doctor, then it should be so in every State in this Union. So I oppose this amendment because it attempts to force an artificial consensus into the Constitution while at the same time it fails to insure that the effects of the amendment reach across this country and touch all citizens equally.

I also oppose this amendment because I fear it will not accomplish what its supporters hope for, a significant reduction in the number of abortions performed annually in this country.

This Nation tried once before to amend the Constitution on a social issue on which there was no broad consensus. I refer, of course, to the ill-fated 18th amendment enacting prohibition. Prohibition was a bitterly divisive issue. Nevertheless, strong social pressures led Congress to adopt the 18th amendment forbidding the manufacture and sale of all intoxicating beverages. Because that amendment did not express the kind of broad, enduring principle that belongs in the Constitution, it was neither respected nor enforced. Drinking not only increased, but became more fashionable during the next decade. Organized crime prospered by making liquor available to the public, and disrespect for the law increased dramatically. In the end, Congress proposed what is now the 21st amendment to repeal the 18th.

The unfortunate experience with the 18th amendment should teach us all a lesson: We must carefully consider the implications of amending the Constitution—especially when dealing with an issue which is deeply emotional and on which no national consensus exists. This was essentially the problem with the 18th amendment—no one stopped to consider its implications. Instead, our Nation was forced to live and learn them. I fear this will also be the case if we move now to amend the Constitution to overturn the Roe against Wade decision.

There are now about 1½ million abortions a year in this country.

But 10 years ago, when abortion was illegal in almost every State, estimates of abortions performed ranged from a quarter million to as high as a million a year. The law was not enforced. It simply drove the practice underground, where women performed abortions on themselves or had them performed by unqualified persons in unsafe places. As a result, many women died.

Passing this constitutional amendment will not by itself end abortion.

Our lawbooks are filled with laws that were passed by legislators who did not think through the implications of their actions. It is not enough just to pass a law. We must consider what will happen after it is passed.

The supporters of this amendment openly intend that it will be followed by legislation at the National and State levels prohibiting abortions. What will happen then?

If we do not enforce those laws, we will simply push the practice back underground and we will create disrespect for the law. That always happens when you pass a law that is not enforced.

The result will be a pervasive disrespect for the law in general and for the Constitution specifically. This can only cause great harm to our society, especially with our younger citizens, who already see widespread disobedience of the laws involving drug use. I see no sense in seeking a constitutional amendment if a major byproduct of its enactment will be adverse to the law of our land.

At the same time, I believe enforcement of laws prohibiting abortion poses an insolvable social problem. It just could not be done. To be enforceable, a criminal law must reflect a consensus of society. There is no such consensus about abortion. Indeed, if the resulting State laws were rigorously enforced, the possibility exists that a large number of women would be prosecuted for criminal activity. Yet those so prosecuted would be considered by many as morally correct and fully responsible members of the community. Indeed, if history is any guide, the most likely offenders of State abortion laws would be terrified teenagers ignorant of birth control techniques, or women with families who cannot afford either another child or the cost of travel to another State with less restrictive abortion statutes.

The impact on our criminal justice system would be severe. We would have to build new courthouses, hire more prosecutors and appoint more judges, all to try to accommodate the avalanche of "criminals" created by antiabortion laws, most of whom would not be viewed by a large segment of society as being criminal. Indeed, the underlying dilemma is that what we would define as criminal is conduct which many of our citizens view as acceptable private behavior.

Of course, even then, abortions will continue to be performed, though under much less safe and sanitary medical conditions. In short, I think it is likely that any attempt to enforce any subsequent antiabortion laws passed by the States would contribute to social unrest and turmoil. I might add that enforcing the various States' antiabortion statutes will also increase the control of government over the affairs of the American people. In a time when we hear so often the need to "get government off our backs," the Eagleton-Hatch abortion amendment would have just the opposite effect. It would promote further interference by the Government in our private lives. It is ironic that many of those who so fervently condemn the Government's intrusion into our lives now seek to force the full weight of the Government's criminal power into an area of conduct which is so personal and private.

I am personally opposed to abortion. I am also deeply troubled by the complex ethical questions involved. I would very much prefer that no abortion ever be necessary. If I were a physician I could not, in conscience, perform an abortion. Ultimately, I hope abortion becomes an obsolete issue as better contraceptive methods are developed and made more readily available to an increasingly well-informed adult population.

I also know many abortions are performed because of the most compelling personal urgency and I am hesitant to impose upon others my personal religious convictions even though I am convinced that those convictions, have a sound base as a matter of private ethical judgment.

I know many people in good faith disagree with my conclusion. I respect that. But I must act in what my conscience and my judgment tell me are the best interests of the people of Maine and the Nation.

It is ironic that a legislative body that is 98 percent male should be making a decision of such fundamental importance to women. It is, ultimately, women who will bear the burden of our decision, whatever it is.

In a very real sense it is their bodies, their rights, their liberties at stake here.

But no matter the irony, the choice is upon us. By out votes we must decide. Let us hope that our decision is

informed with guidance from the Supreme Being who has created and cares for us all, men, women and children alike.

Mr. HELMS. Mr. President, I have listened to the debate on this amendment very carefully. What I have been hearing is a great deal about abortion and the right to life, but very little about the far-reaching implications of this specific constitutional amendment, Senate Joint Resolution 3. What I have been hearing instead, from both sides in this debate, is that this is a referendum on the right-to-life issue.

Mr. President, I cannot view the proposition before us as a referendum on the right to life. The constitutional issues involved are too complicated to reduce it to a simplistic yes or no. I am convinced that any group that attempts to use the outcome of this amendment as a litmus test on the issue of prohibiting abortions will be doing a disservice to the prolife movement. The fact is that this amendment, by the admission of all on both sides, does not prohibit abortions, nor does it return the legal situation to the status that existed before Roe against Wade.

As I said yesterday,

> The unfortunate fact is S.J. Res. 3 does not advance the principle that human life is inviolable. Instead, it surrenders forever this principle in exchange for the illusory hope that some lives may be saved.

Mr. President, let me reiterate the central point which I sought to make in my statement yesterday, and it is in the RECORD of yesterday.

> The basic problem with S.J. Res. 3 is that, instead of recognizing the unborn child's inalienable right to life, it merely rebuts the concept of a right to abortion. After ratification, the Federal and State Governments apparently may or may not, as they choose, secure the right to life for unborn children. In this regard, S.J. Res. 3 would institutionalize in the text of the Constitution, the idea that abortion is a matter of choice for the governing authorities. Moreover, it would thereby undercut the correct understanding that the Fifth and Fourteenth Amendments protect all human "persons" including the unborn. In short, S.J. Res. 3 runs contrary to the remaining moral principle of the prolife movement that no government ever has the authority to sanction the destruction of unborn human life.

Mr. President, that is the nub of it. Senate Joint Resolution 3 would allow government to have the authority to authorize the destruction of unborn human life. I listened in amazement yesterday as the distinguished Senator from Oregon framed the argument correctly. Obviously Senator PACKWOOD and I disagree on the abortion question; more fundamentally, we are diametrically opposed to each other's positions on it. Yet, I commend him for making my point for me when he said:

> There are those, therefore, who say let us take the best we can get. Let us have a genuine States rights amendment and attempt to turn the law back to what it was prior to Roe against Wade, although I will emphasize the amendment before us does not do exactly that. The problem with that amendment, however, is if you are a genuine right-to-lifer, if you really believe deep in your heart that abortion is murder, then in good conscience you cannot support a States rights amendment. If you really deep down are convinced that abortion is the unjustified taking of innocent human life, then you cannot bring yourself to say, "But I will vote for an amendment that says it is OK in New York but not in Pennsylvania; it is OK in Oregon but not in Idaho; it is OK in California but not in New Mexico." If you truly believe that abortion is murder and wrong, it is hypocritical to support that kind of an amendment.

Mr. President, this was the statement of Senator PACKWOOD. On this point, and this point only, I agree with him. No one has been able to demonstrate to me that abortion is not the taking of an innocent human life. Yet the distinguished Senator from Utah (Mr. HATCH) acknowledges that his amendment would allow some States to permit abortion and others to restrict it. Mr. PACKWOOD is exactly right when he points out the contradiction that Mr. HATCH's proposed amendment involves.

Indeed, Mr. President, with all due respect for the motives of the distinguished Senator from Utah, he has led us to a Hobson's choice. I am convinced that a tactical error has been made in bringing up a constitutional amendment without having the necessary votes or being in striking distance. I have not opposed his efforts, but I cannot support them.

Therefore, I am in a dilemma. If I vote "yes" on Senate Joint Resolution 3, then I am in the position of supporting a proposal that, if ratified, would allow the States to sign the death warrants of the unborn. If I vote "no" on Senate Joint Resolution 3, then the news media of this country will attempt to make it appear that I have sided with the anti-life movement in the United States.

It is my intention, therefore, to vote "present" on Senate Joint Resolution 3. Let my vote "present" show that I respectfully disagree with both sides in this debate.

Finally, Mr. President, the prolife movement should look where the votes are. We should look first to the passage of a statutory remedy, such as S. 26, or any other suitable statutory remedy. I believe that we can get a majority vote in this Senate for abortion reform. Second, we should look to the Supreme Court for the votes. The three dissenting votes, led by Justice O'Conner, form the cornerstone of abortion reform. I note also, Mr. President, that five of the six justices favoring the taking of innocent human life are all over 74 years of age. The prolife movement should look to the votes on the Supreme Court and support as President in 1984 whichever candidate is pledged to support the sanctity of unborn human life.

(The following occurred later:)

The PRESIDING OFFICER. Who yields time?

Mr. HATCH. Will the Senator yield me 15 or 20 seconds for a unanimous-consent request?

Mr. BYRD. I yield to the Senator from Utah.

Mr. HATCH. I thank the distinguished minority leader.

Mr. President, today the Senate of the United States will conclude—I ask unanimous consent that the balance of my remarks be printed in the RECORD immediately before the vote on abortion.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATCH. I thank the Chair, and I thank my colleague from West Virginia.

Mr. President, today the Senate of the United States will conclude this small part of a debate that has already been raging amongst the people of the United States for more than a decade. The question before this body and the entire United States is whether to retain the Supreme Court's current reading of the Constitution that requires a right to abortion on demand.

Senate Joint Resolution 3, which states in its entirety that "A right to abortion is not secured by this Constitution," has already been the subject of extensive examination and consideration over two Congresses in the Senate Judiciary Committee. In the 97th Congress, the Constitution Subcommittee held 9 days of hearings on proposed amendments to the Constitution relating to abortion. The product of these comprehensive deliberations was Senate Joint Resolution 110 which overturned the Supreme Court's Roe against Wade decision and granted both the Federal Government and the States concurrent authority to restrict abortion, provided, however, that a State law more restrictive of abortion would govern over a conflicting law of Congress. This amendment became the first constitutional amendment relating to abortion ever approved by a congressional committee when the Senate Judiciary Committee reported it favorably by a vote of 10 to 7.

In the 98th Congress, the Constitution Subcommittee held two more hearings to examine the legal ramifications of proposed constitutional amendments relative to abortion. Senate Joint Resolution 3, the primary focus of these additional hearings, was identical to Senate Joint Resolution 110 of the 97th Congress.

On March 24, 1983, the Subcommittee on the Constitution voted to report

out Senate Joint Resolution 3 after having adopted an amendment offered by myself which changed the amendment to its current succinct form. This change was the recommendation of Senator THOMAS EAGLETON in his persuasive testimony on February 28. Senator EAGLETON had suggested striking the second sentence of Senate Joint Resolution 3, as introduced, which included language giving the Federal Government a role in legislating and setting policy with respect to abortion. Senator EAGLETON noted that limiting the amendment to its first 10 words would "wipe out the legal status afforded to the 'abortion right' by Roe against Wade and return us to the status quo ante" when abortion was a matter for the people in each of the States to decide through their elected representatives. By adopting Senator EAGLETON's suggestion, the subcommittee established its intent to remove Federal institutions from the policymaking process with respect to abortion and reinstate State authorities as the decisionmakers for this sensitive issue.

In April of this year, Senate Joint Resolution 3 became the second constitutional amendment on abortion to emerge from a congressional committee when the Judiciary Committee gave its consent for this debate to take place. Thus, this debate begins; in a larger sense, this is not the beginning of this historic debate, but merely the climax of a constitutional, philosophical, legal, moral, and social debate that has raged with such fervor amongst the people of the United States that we in the Senate can no longer allow the questions to go unaddressed in this hallowed forum.

Although in the past, this body has discussed cures for some of the problems created by the abortion ruling of the Supreme Court, such as Federal funding for abortions, this is the first time the Senate has addressed itself to a cure for the central cause of the controversy.

THE GENESIS OF THE CONSTITUTIONAL DISPUTE

As I have mentioned, the genesis of this constitutional dispute was a conversial and ill-conceived decision of the Supreme Court. Senate Joint Resolution 3 is carefully crafted to nullify that decision and restore the balance upset by that holding. In the decade since Roe, Federal courts have faced a flood of abortion litigation, Congress has spent countless hours trying to correct tangential problems relating to abortion, and the number of unborn aborted annually has increased to over 1.5 million—the total number of abortions since Roe is approaching 15 million. These violent disruptions of our social fabric were accomplished by an equally wrenching disruption of our constitutional fabric. In short, Roe did not carry out the intent of the Constitution, but upset the Constitution's intended balance.

Although, in the words of Prof. John Hart Ely, the Constitution "simply says nothing, clear or fuzzy about abortion," the Supreme Court created a constitutional right to abortion. This upset the preexisting constitutional balance that for nearly 200 years had allowed State legislative processes to carry out the will of the people with respect to this sensitive social policy. Thus the new right created by Roe overturned the Texas abortion statute and related laws in every one of the 50 States. Not only did this decision upset the federalistic balance between State and National institutions, it also disturbed the constitutional separation of powers between legislative and judical functions.

Professor Wardle made this point very eloquently:

> By giving the right to choose abortion the status of a fundamental right, the Supreme Court substantially restricted the authority of the legislative branch to legislate concerning the subject and substantially increased the responsibility of the judiciary for defining and monitoring regulation of the fundamental right. (Statement of February 28, 1983).

In essence, Roe made abortion a constitutional doctrine. Despite my great reluctance to amend the Constitution, this Roe decision upset the constitutional balance. Thus, it is incumbent upon this Senate, in my view, to take the appropriate constitutional steps to restore that balance.

The most simple, direct, and effective way to accomplish that objective without disturbing other established constitutional doctrines is to completely nullify the Roe ruling. If Roe were fully deprived of legal significance, the constitutional balance that existed prior to 1973 would be restored. The people in the States would be reenfranchised to shape abortion policy through their legislators. Policymaking that for a decade has been centralized in the nonrepresentative judicial branch would be subject again to democratic processes. Only by restoring this constitutional balance and permitting the people to participate directly in this policymaking process will the Nation ever achieve a consensus on this divisive question.

ROE V. WADE

Since this amendment's avowed intention is to reverse Roe, I would like to review the basic propositions of that ruling.

On January 22, 1973, the U.S. Supreme Court handed down a decision that has since generated social divisions in this Nation virtually without precedent. In the case of *Roe* v. *Wade,* (410 U.S. 113 (1973)) a majority of seven on the Court identified for the first time a right to abortion within the terms of the 14th amendment to the Constitution. The nature of this right, outlined in great detail in Justice Blackmun's opinion, was such as to result in the overturning of the laws on abortion in each of the 50 States of the Union.

Prior to the Roe decision, 31 States of the Union had enacted statutes that totally protected unborn human life from the time of conception. Of the remaining 19 States that permitted abortion under limited circumstances, abortion was legal only, as a general rule, where necessary to protect the life of the mother, in cases of rape or incest, or in cases where there was a likelihood that a child would be born with a substantial mental or physical deformity. In only four States did anything approximating abortion-on-demand exist and in each of these States there were temporal limits to such a right. The most liberal of these provisions was probably that existing in the State of New York, in which abortions without restrictions were permitted until the sixth month of pregnancy.

As a result of Roe however, a new regime was created in this country on the abortion issue—a regime more permissive with respect to abortion than had existed in any one of the 50 States prior to January 22, 1973. As a result of the Roe decision, a right to abortion was effectively established for the entire term of a pregnancy for virtually any reason, whether for sake of personal finances, social convenience, or individual lifestyle.

Despite misconceptions on this issue, there is relatively little informed disagreement that Roe has established a national policy on abortion without legal restrictions of any significant kind. During the first trimester or pregnancy, the plenary right to abortion is made express by the terms of Roe. As the Court stated:

> For the stage prior to approximately the end of the first trimester of pregnancy, the abortion decision and its effectuation must be left to the medical judgment of the pregnant woman's attending physician, 410 U.S. at 164.

During the second trimester, a public interest in abortion arises an interest in protecting and preserving the health of the mother. This interest may be expressed through governmental requirements that such abortions be performed within hospitals, clinics, or other licensed facilities. As the Supreme Court again stated:

> For the stage subsequent to approximately the end of the first trimester, the State in promoting its interest in the health of the mother, may, if it chooses, regulate the abortion procedure in ways that are reasonably related to maternal health. 410 U.S. at 164.

During the second trimester, however, there remains an absence of legislative authority to do anything more than insure the safety of the procedures of abortion. There are no protec-

tions whatsoever for the unborn child during this stage of pregnancy.

During the final trimester of pregnancy—or approximately at that point at which the fetus reaches "viability"—a compelling interest finally arises in protecting unborn life. As the Court stated.

> For the stage subsequent to viability in the State, in promoting its interest in the potentiality of human life, may, if it chooses, regulate, and even proscribe, abortion except where it is necessary, in appropriate medical judgment, for the preservation of the life or health of the mother. 410 U.S. 164-65.

The exception to this authority in the State to limit abortion following "viability—in cases where the mother's "life or health" were involved—effectively consumed the rule, however. The critical element was the term "health of the mother."

According to the Court in the companion case of *Doe* v. *Bolton*, 410 U.S. 179 (1973) whether or not the "health of the mother" necessitated an abortion was a medical judgment to be made:

> In the light of all factors—physical, emotional, psychological, and the woman's age, relevant to the well-being of the patient. Id. at 192.

In other words, to quote Prof. John Noonan of the University of California Law School, the absolute and plenary right to abortion was curbed during the final trimester only by the "necessity of a physician's finding that she needed an abortion." J. Noonan, A Private Choice 12 (1979). It would be a rare physician who would be incapable of defending an abortion decision on the grounds that in his best medical judgment the "well-being" of the mother demanded it.

As Professor Noonan has summarized the nature of the restrictions placed upon the abortion right in Roe and Doe:

> For the 9 months of life within the womb, the child was at the [pregnant woman's] disposal—with two restrictions: She must find a licensed clinic after month three; and after her child was viable, she must find an abortionist who believed she needed an abortion. Id.

Thus, no significant legal barriers of any kind whatsoever exist today in the United States for a woman to obtain an abortion for any reason during any stage of her pregnancy.

It is this rule of abortion-on-demand imposed upon a citizenry whose values were sharply at variance that has created nearly a decade of intense divisions and passions on the issue of abortion. During this decade, the social views of a relatively small number of individuals have reigned as the law of the land immune from even the most modest efforts of reform. In judicial decisions subsequent to Roe, the Supreme Court has expanded upon its decision in Roe by striking down statutes to require the consent to an abortion by the father of the unborn, statutes to require parental consent to abortion performed upon minors, statutes to insure that pregnant women are fully apprised of alternatives to abortion, and statutes to protect live-born fetuses.

The proposed human life federalism amendment is addressed to the Roe decision as well as the progeny of Roe. The objective of the proposed amendment is relatively simple—it would reverse completely Roe against Wade, thus restoring the status quo that existed prior to the Roe decision when the States possessed authority to legislate with respect to abortion. Unlike many other proposed amendments on the subject of abortion, it would not obligate the States to legislate; it would simply restore to them the authority to do so. By "deconstitutionalizing" the issue of abortion, the proposed amendment would allow the States a wide variety of options with respect to this matter. In their best judgment, the States might choose to have no policy regarding abortion or might restrict and condition it in a variety of ways. For example:

First, they could place restrictions of some form upon late-term abortions;

Second, they could impose obligations upon physicians to save the lives of fetuses capable of surviving an abortion;

Third, they could place limitations upon genetic engineering and other experimental and medical research involving the use of human embryos and fetuses;

Fourth, they could require that women contemplating abortions be fully apprised of the risks of abortion and the alternatives to abortion;

Fifth, they could require some form of parental consent to abortions performed upon minors;

Sixth, they could require some form of spousal consent to abortions;

Seventh, they could establish some minimum waiting period before an abortion could take place or require some form of professional consultation prior to an abortion;

Eighth, they could establish rights of refusal to perform abortions by physicians or nurses, or in entire hospitals;

Ninth, they could limit the commerce in abortifacient devices;

Tenth, they could prohibit abortion generally subject to certain well-defined exceptions and safeguards; or

Eleventh, they could undertake any other form of restriction or regulation upon the abortion procedure.

In removing the abortion controversy from the Federal judicial branch, the people in the States would be reenfranchised to shape abortion policy through their elected representatives. By its very nature, the judiciary is the wrong forum within which to resolve the abortion issue. Because they cannot control the specific types of cases that come before them and because they are limited in their ability to fashion compromise solutions to difficult issues, the courts are an inappropriate place within which to debate abortion.

The all-or-nothing legalization of abortion-on-demand in Roe has done nothing but exacerbate the tensions already created by the abortion controversy. Unlike most legislative solutions, in which some element of deference is paid to all major political or social or occupational groupings, the abortion decision involved a small group of seven men who were totally able to disregard the passionately held views of a large segment of the American people. They did this not in response to the unequivocal demands of the operative document of our Nation, but through a decision whose jurisprudence and whose textual and historical foundations are at least as suspect as the policies that it fostered.

Perhaps the foremost objective of the proposed amendment is to facilitate the development of a social consensus on the difficult issue of abortion. The abortion issue, if it is to be elevated into an issue of constitutional proportions, should be elevated only through the normal consensus-building procedure of the article V amending process rather than through the process of judicial reinterpretation. Senate Joint Resolution 3 would reenfranchise all the people in fashioning a solution to the abortion controversy or, if not a solution, at least an equilibrium. This can only be done by placing this issue back within the representative branches of State governments where it should have remained all along. If the result is that difficult legislative compromises are reached through bitter sessions of negotiation and give-and-take—compromises that are not entirely satisfactory to those on either end of the spectrum on this issue—then the issue of abortion will have been dealt with in the same manner that most other difficult matters are dealt with in a democratic system of government.

If the social divisions that have beset this country since the Roe decision are to be overcome, they will have to be overcome through a process in which all shades of opinion are considered and weighed, not simply those of a small minority of the citizenry. There is no more appropriate forum in a free society for these kinds of controversies to be debated and resolved than in State representative, legislative forums. Although some may observe—correctly—that basic issues of individual rights are not subject to referendum in a free society, this, of course, begs the basic question, which is precisely what those rights are and what their relative priorities are. It is

the resolution of these precise questions that is unlikely to occur in the absence of a constitutional amendment of the sort of the human life federalism amendment. I urge my colleagues to support Senate Joint Resolution 3.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the joint resolution.

The resolution was ordered to be engrossed for a third reading and was read the third time.

Mr. BYRD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BYRD. Is it not part of the order that, once this vote is completed, the Senate will go back to the tax cut cap and there will be up to not more than 3 hours for debate thereon today?

The PRESIDING OFFICER. The Senator is correct.

Mr. BAKER. Will the minority leader yield to me?

Mr. BYRD. Yes, Mr. President, I yield.

Mr. BAKER. While we are on that subject, Mr. President, I wonder if the two managers can give me some idea of how much of the 3 hours they plan to use this evening. I am sure many Members would like to plan the remainder of their day. If we use it all, it will be sometime past 8, around 8:30. I suspect, canvassing this side, that there probably is not a shrill demand for that much time this evening, but we are going to stay here as long as we need to stay.

Mr. BRADLEY. Mr. President, I say to the majority leader that we are allotted 1½ hours. I do not know if we will use it all. My speculation is that we might. We will not know until the next half hour.

Mr. BAKER. Mr. President, I estimate, then, that we shall be here until at least 7, perhaps a little later.

The PRESIDING OFFICER. The question is on agreeing to the joint resolution.

Mr. BOSCHWITZ. I ask for the yeas and nays, Mr. President.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. On this vote, the yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. HELMS (when his name was called). Present.

The result was announced—yeas 49, nays, 50—as follows:

[Rollcall Vote No. 173 Leg.]

YEAS—49

Abdnor	Boschwitz	Danforth
Andrews	Chiles	DeConcini
Armstrong	Cochran	Denton
Baker	D'Amato	Dole
Domenici	Huddleston	Nunn
Durenberger	Humphrey	Pressler
Eagleton	Jepsen	Proxmire
East	Johnston	Quayle
Exon	Kasten	Randolph
Ford	Laxalt	Stennis
Garn	Long	Symms
Grassley	Lugar	Thurmond
Hatch	Mattingly	Trible
Hatfield	McClure	Warner
Hawkins	Melcher	Zorinsky
Hecht	Murkowski	
Heflin	Nickles	

NAYS—50

Baucus	Hart	Percy
Bentsen	Heinz	Pryor
Biden	Hollings	Riegle
Bingaman	Inouye	Roth
Boren	Jackson	Rudman
Bradley	Kassebaum	Sarbanes
Bumpers	Kennedy	Sasser
Burdick	Lautenberg	Simpson
Byrd	Leahy	Specter
Chafee	Levin	Stafford
Cohen	Mathias	Stevens
Cranston	Matsunaga	Tower
Dixon	Metzenbaum	Tsongas
Dodd	Mitchell	Wallop
Glenn	Moynihan	Weicker
Goldwater	Packwood	Wilson
Gorton	Pell	

ANSWERED "PRESENT"—1

Helms

The PRESIDING OFFICER (Mr. PRESSLER). On this vote, the yeas are 49, the nays are 50, and 1 Senator voted "present." Two-thirds of the Senators present and voting not having voted in the affirmative, the joint resolution fails of passage.

PERSPECTIVE

Mr. HATCH. Mr. President, while I would have preferred it if the present amendment would have received several more votes, let me take strong issue with those in the so-called prochoice movement who have been so quick to read the obituary of the antiabortion movement.

Slightly less than 3 years ago the human life federalism amendment was conceived. Since then, the Senate Subcommittee on the Constitution has conducted 11 days of hearings on this amendment, the most thorough and balanced set of legislative hearings ever on the issue of abortion. In the process, we have established the most comprehensive record on the issue of abortion ever prepared by a committee of the Congress. We have heard from the Nation's leading constitutional scholars, medical and psychological doctors, theologians and religious leaders, philosophers and sociologists, and citizen's organizations—from all perspectives.

During the past 2 years, the human life federalism amendment has become the first constitutional amendment—indeed the first legislative measure of any kind—on the subject of abortion to be reported out of, first, a subcommittee of the Congress and, then, a full committee. The human life federalism amendment has become the first constitutional amendment on the subject of abortion ever to be subject to a favorable report by an official body of the U.S. Congress. The report of the Committee on the Judiciary, during both the 97th and 98th Congresses, is one of the most compelling documents on the subject of abortion and Roe against Wade ever prepared.

During the past 2 years, the human life federalism amendment has been the subject of unprecedented public debate and media commentary. Finally, this week it has become the first constitutional measure on abortion ever to be considered on the floor of either House of Congress in the history of the country. The debate did not involve public funding of abortion, or Federal employee abortions, or Peace Corps abortions, or courtstripping; rather, the debate involved abortion as a national public policy and Roe against Wade as an expression of that policy. We have had 2 full days of debate in the Congress, and we have had nearly two dozen U.S. Senators physically come to this floor to argue in support of a constitutional amendment to overturn Roe against Wade. Indeed, we have had a near majority of the entire U.S. Senate cast their votes in favor of a constitutional amendment to overturn this decision.

Finally, Mr. President, we have done all this with honor. We have conducted a high level of debate—as have opponents—and we have argued the issues as clearly and as rationally as we are able. We have gone through the entire legislative process in bringing the human life federalism amendment to this floor—not once but on two occasions. We have never attempted to shortcut the regular legislative process nor unfairly exploit the procedural and parliamentary rules of this body. We have fought to obtain a debate on the issue of abortion on this floor not a debate on procedural tactics or on the constitutionality of exotic legislative proposals. We have succeeded in this, in my opinion.

Mr. President, we have also cleared some of the smoke that has existed on this issue for many years. We have framed the issue of abortion as clearly and as directly as I believe that it can possibly be framed, and we have allowed each elected Representative in the Senate to choose their position. As a result, Members of this body will—as they ought to be—be fully accountable to their constituents on what has proven the most controversial and divisive issue of the past decade. There is, in my respectful opinion, no longer any credible argument that can be made by opponents of Senate Joint Resolution 3 that they are, in fact, seriously concerned about the legal structure of abortion on demand that has been erected in this country as a result of a single decision of the Supreme Court.

In conclusion, while some may be eager to write the obituary of this movement, I would suggest that this

week's debate is, on the contrary, evidence of unprecedented life. Despite the loud cries of a small number of unrepresentative groups that claim to be prolife, the prolife movement is more united in behalf of Senate Joint Resolution 3 than it has ever been on any measure to reverse Roe against Wade.

What we have achieved during the past 2 years is merely the start of renewed efforts by the prolife movement to deal with the tragedy of abortion in an effective and responsible manner. The death notices of the movement, to say the least, are premature. For opponents of today's constitutional amendment to argue that the support of a majority of United States Senators for overturning the Supreme Court's decision in Roe against Wade is the movement's death knell is wishful thinking of the most extreme kind. Rather, it is simply the first effort in what will be an ongoing effort to restore full protection to unborn life.

At this point I would like to thank those whose untiring efforts in this cause deserve special commendation. While any list like this risks missing some important people, I feel it represents the major contributors to this historic effort.

Mark Gallagher; Ernie Ohlhoff; Douglas Johnson; Sue Burke; Dr. Jack Willke; Prof. Lynn Wardle; Prof. Richard Stith; Prof. John Noonan; Dennis Horan; Prof. Victor Rosenblum; Pat Truman; Tom Marzen.

Dave Osteen; Darla St. Martin; Jan Carroll; David Mall; and Prof. Bill Marshner.

Senators: Eagleton; DeConcini; Thurmond; Grassley; Rep. Weber; and Rep. Ashbrook (memoriam).

Staff: Marcia Verville (Eagleton); Bob Feidler (DeConcini); Sherri Flans; Marci Anderson; Sharon Peck; Steve Markman; and Randall Rader.

SENATE SCHEDULE

Mr. BAKER. Mr. President, there is an order now that provides for a vote on the Tax Rate Equity Act tomorrow at 10 o'clock. The Senate will come in at 8:45 and resume consideration of that measure at 9.

The Senate is free to continue debate as long as necessary this evening, for not to exceed 3 hours, the time to be equally divided. No amendments are in order, by unanimous consent.

It is clear, then, Mr. President, that there can be no votes, unless they are procedural votes, for the remainder of this day. Therefore, I wish to announce that I do not anticipate any more record votes during this calendar day.

AUTHORITY FOR COMMITTEE ON ARMES SERVICES TO MEET TODAY

Mr. GOLDWATER. Mr. President, will the Senator give us an approximate time when we might adjourn or recess?

Mr. BAKER. Mr. President, I think there will not be any more votes today. There will be debate which will continue for not more than 3 hours, and the next vote will occur tomorrow at 10 a.m.

Mr. GOLDWATER. I am wondering if I might get unaniomus consent for the Armed Services Committee to meet at 7 p.m. tonight.

Mr. BAKER. Mr. President, I yield to the minority leader on that subject.

Mr. BYRD. I do not think we have any problem. I will have to check. We will be back to the majority leader shortly.

Mr. GOLDWATER. The reason I asked is if we do not and the Senate will be in recess by 6:30 p.m., we will be prevented from having a meeting this afternoon. We have to wrap it up. If we have to stay 3 hours, it sort of shoots the whole thing down.

So I wish to have permission to hold the hearing.

Mr. BAKER. Mr. President, let me confer with the minority leader to see if we cannot work that out.

Mr. GOLDWATER. I thank the majority leader.

Mr. BAKER. I thank the Senator.

Mr. President, I am advised by the minority leader that there is no objection to the request I am about to put. I will put it now for his consideration and that of all Members.

Mr. President, I ask unanimous consent that if the Senate is still in session at 7 p.m. today, notwithstanding, the Committee on Armed Services may be authorized to sit.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the Senator.

TAX RATE EQUITY ACT OF 1983

The PRESIDING OFFICER. The Senate will continue with the consideration of H.R. 1183, which will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 1183) to amend the Internal Revenue Code of 1954 to limit to $700 the maximum reduction in individual income tax resulting from the third year of the rate cuts enacted by the Economic Recovery Tax Act of 1981.

Mr. BYRD. Mr. President, may we have order in the Senate and in the galleries?

The PRESIDING OFFICER. There will be order in the galleries.

Mr. STEVENS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BRADLEY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BRADLEY. Mr. President, I yield to the Senator from Hawaii.

May we have order?

The PRESIDING OFFICER. The Senate will be in order.

The Senator from Hawaii.

Mr. BYRD. Mr. President, I beg the Senator's pardon for interrupting, but he is entitled to be heard.

The PRESIDING OFFICER. The Senator makes a good point. Those conversing will retire to the cloakroom. The Senate will be in order.

Mr. INOUYE. Mr. President, I rise to support passage of H.R. 1183, the Tax Rate Equity Act. This legislation marks the last in a series of efforts we have made to correct the mistakes of President Reagan's misguided tax policies.

What are these mistakes?

A short look back into the history of the Reagan administration's tax policy will reveal how the policy misfired.

The Senate first considered the notion of across-the-board tax cuts in October 1978. Although the proposal was soundly defeated, 36 to 60, the so-called Kemp-Roth proposal was slowly seeping into mainstream Republican politics.

The basic concept of the proposal was simple: The notion was that you could cut taxes across the board and pay for these massive tax cuts with a boom in economic growth. The idea sounded wonderful: It was the magic key to unlock the door to our future growth and prosperity.

These ideas continued to gain momentum. By July 1980, the Republican Party's platform committee had endorsed the Kemp-Roth proposal. In September, candidate Reagan endorsed the proposal and projected that, if elected, he would produce a budget surplus in 1983.

In March 1981, President Reagan introduced his tax cut plan and by August it had passed the Senate. During consideration of that measure, Members on this side of the aisle tried to tie the third year to the level of interest rates and deficits. We were defeated. Shortly thereafter the trouble began.

In October, 2 short months after the Economic Recovery Tax Act was passed into law, OMB Director David Stockman projected a budget deficit of $60 billion for the coming fiscal year.

By December, all the mirrors around Reaganomics began to break. OMB Director Stockman, in a publicized magazine article, admitted that the Reagan tax cuts are nothing more than trickle down economics. By January we began seeing press reports that the White House staff was lobbying the President to increase taxes. The President, however, was reluctant to tamper with his program.

In February 1982, the administration forecast a budget deficit of $91.5

billion for 1983. Keep in mind that we were supposed to have a surplus in 1983. By April, that deficit projection had ballooned to over $101 billion. By June, it had grown to $104 billion.

These alarming deficit increases led to the passage of the Tax Equity and Fiscal Responsibility Act in the summer of 1982. Although this act left the basic structure of the Reagan tax cuts in place, it raised revenues by about $99 billion over 3 years.

Despite these efforts the deficit continued to careen out of control. In December of last year another effort was made to modify the third year of the tax cut. The proposed reform would have partially delayed the tax cut for persons with incomes between $50,000 and $65,000 and would have fully delayed the tax cut for 3 years for persons earning over $65,000. The proposal was defeated 44 to 53.

Now we come to the last chapter of this battle to correct the mistakes of Reaganomics. Deficits continue to grow. Early this year the deficit was projected to be $201 billion in 1984 and to grow to $268 billion by 1988.

Clearly, Reaganomics has not worked. Now we are faced with trying to eliminate the distortions in our fiscal policy caused by the mistaken policies of the past. Clearly, these distortions cannot be corrected overnight. We cannot wish away $200 billion deficits.

What we need is not more pie-in-the-sky promises, but a reasonable and balanced fiscal policy that provides for a gradual and sustained reduction in the deficit.

This bill makes a first step in that direction. We raise $6 billion by limiting the tax cuts available to the wealthiest 10 percent of our taxpayers. This is a fair way to raise revenue; 89 percent of the revenue generated by this proposal comes from taxpayers earning over $50,000. Alternatives like the tax on oil that the administration has proposed will tax everyone, and it will raise revenue in a far more regressive fashion. Fully 75 percent of the revenue raised from an oil tax will come from people earning less than $40,000.

It is time we stop pretending that there are easy answers to the problems of budget policy and economic growth. We need a long-term strategy to insure prosperity through the balance of this decade and beyond. The first step in that strategy must be to correct the mistakes of Reaganomics.

This bill takes a first step on that journey. It is a modest step, but it is a journey that we must make.

Mr. HATCH. Mr. President, putting a $700 cap on the third year of the tax cut is an ill conceived and unfair proposal. It is bad economics and it is bad policy. This proposal, which comes to us from the liberal House Democrats under the totally inaccurate label of a means to make the wealthy pay their fair share and reduce deficits, must be defeated.

Do not be fooled by the terms "revenue enhancement" or "merely capping a tax cut." This proposal, pure and simple, increases the taxes which must be paid by those who would be hit with the tax cap. This proposal must be enacted, according to proponents, in order to reduce the horrendous Federal deficits. But raising taxes has, in the past, failed to reduce deficits. There is no reason to believe that raising taxes now will be any more successful than in the past at reducing deficits.

As a matter of fact, raising taxes will probably do now exactly what it has done in the past—that is, raising taxes will only result in more Government spending. Taxes are now about 19 percent of GNP, their historic level in the 1970's before their boost under the Carter administration. Thus, all the 1981 Reagan across-the-board tax rate reductions did was return the taxpayer's burden to its more traditional level and, thereby, unmask increases in Federal spending.

For it is overspending, not undertaxing, which causes our huge deficits. Government spending has grown a lot more rapidly over the last 20 years than have receipts. Government spending is running over 25 percent of GNP, whereas spending levels in the 1970's averaged less than 21 percent of GNP. So, President Reagan's tax-rate reductions lowered the tax burden to its historic level. The Congress should join the President in enacting spending cuts which would also reduce spending to its traditional level. Congress should join in reducing spending and not once again raise taxes. Cutting Federal spending will reduce deficits; raising taxes, no matter the proclamations of tax-cap proponents, will not. Certainly the recently passed congressional budget calling for greater increases in domestic spending, and under which we are enjoined to raise more revenues, confirms this conclusion.

This proposal is a well bad economics because raising taxes at this time would be particularly harmful to the economic recovery just now underway. Although many economic indicators predict a strong recovery, we still have a long way to go for a full recovery. Unemployment remains over 10 percent. Factories still operate at under 72 percent of capacity. The level of real output is still no higher than it was at the end of 1979. Raising taxes risks reducing consumer confidence. Instead, the full third year of the President's tax cut is a necessary impetus for consumers in order to invigorate and maintain our economic recovery.

In addition, the claim that this tax cap will affect only the wealthy, will make them pay their fair share of economic recovery, is patently erroneous. The tax cap will scarcely affect the wealthy. However, it will result in tax increases and unfairness for millions of middle-income taxpayers, two-earner married couples, and small businesses and family farms.

It is precisely the middle class, not the rich, whom the liberal Democrats will soak with this proposal: Nearly one-half of the returns which would be socked with this tax increase report incomes of less than $50,000. A full 46 percent of the returns reporting incomes between $30,000 and $50,000, and 43 percent of returns reporting between $50,000 and $100,000, would have to hand over more in hard-earned tax dollars as a result of a $700 cap. I find it hard to believe that a couple earning between $30,000 and $50,000 trying to buy a new home and facing college expenses would consider themselves "rich" and deserving thereby of a greater tax burden.

Likewise, the proposed cap would produce a taxrate schedule particularly onerous for this middle class. Under the 1981 tax law combined with the proposed cap, tax-rate reductions would remain about 25 percent for those earning below $35,000 and above $109,400. But capping the return for middle-income returns in between these incomes would mean squeezing their 1981 tax-rate reductions down to only about 14 to 15 percent. As a result of the increased marginal rates effected by the cap, not only would middle-income families have higher tax burdens, but also the rate of progression, or steepness, of their tax brackets would be exaggerated. These are precisely the same taxpayers who have already been hurt most by inflation-induced "bracket-creep." Why should they be hit once again?

Note as well that the proposed cap hits particularly hard at two-earner married couples, most of them in this middle-income range. It is estimated by the Treasury that almost one-half of the 8.1 million tax returns which the cap would affect are the returns of two-earner married couples. Likewise, the Treasury estimates that nearly one-half of the estimated $5.3 billion netted in 1984 would come from these couples. Let's face it, the proposed cap would offset a considerable portion of the marriage tax relief enacted by Congress in 1981 to help maintain incentives for two-earner families and eliminate the unfairness of the previous tax schedules which operated to penalize marriage.

Hit as well by the proposed cap would be small businesses and family farms—a group not of the wealthy, but of our good, solid middle class. It seems that those proposing the cap have forgotten that small businesses are almost always taxed at individual

income tax rates. In fact, 86 percent of all small businesses are partnerships, sole proprietorships, or small corporations which pay only the individual income tax. As a result, nearly 2.5 million small businesses, including 350,000 family farms, would have to cough up more taxes under the cap. Have those proposing the cap while decrying unemployment and calling for the Government to "do something" about unemployment thought about the perverse effect their own proposal would have for unemployment? Small businesses are traditionally a vital source of employment and investment. Increasing their taxes would siphon off the very money that they could use to hire and to invest. Our economic recovery needs them to hire and to invest.

Let us dispose of this measure quickly. It is only another attempt to raise taxes—and a not very well-concealed attempt at that. Furthermore, raising taxes is not the solution to reducing deficits. Only cutting Government spending will do that. As well, raising taxes now is a sure-fire measure to abort economic recovery. And, finally, this cap would not, as its proponents would have you believe, affect only the wealthy. It would attack the middle class, particularly two-earner families, and small businesses and family farms. How unfair and how foolish.

The tax cap proposal is bad economics and bad policy. It must be defeated.

CAPPING THIRD-YEAR TAX CUT

Mr. SASSER. Mr. President, the Tax Rate Equity Act we are considering today achieves two very important objectives. First, it helps reduce our staggering budget deficit. But perhaps more significantly, H.R. 1183 restores much of the equity and fairness to our tax system which has been lost during the past few years.

The tax package enacted in 1981 reduced revenues to the Treasury by $1.1 trillion from fiscal year 1982 through fiscal year 1988. Last summer's tax increase bill recouped some of this loss but left a staggering revenue loss of $881 billion for the 7-year period.

When the 1981 tax bill was enacted, the administration assured us that the revenue loss would be more than offset by increased business investments and increased savings. Yet the predicted economic boom never came to pass. Instead, we have been saddled with the worst recession in this country in 40 years. Deficit levels are astronomical.

In fact our problems with the Federal deficit may actually be getting worse. The Wall Street Journal reported last week that the Federal deficit totaled $29.29 billion for the month of May. The deficit level for May 1982, reached $18.9 billion. Administration officials indicated that this year's figure suggests a higher deficit level for the year than originally forecast. Indeed, administration officials now suggest that the fiscal 1983 deficit could reach $215 billion.

H.R. 1183 raises a significant amount of revenue in the least painful way available. It would raise $6.2 billion in fiscal year 1984. It would raise $38.8 billion through fiscal year 1988. H.R. 1183 produces prompt action to stop the budget hemorrhage caused by this administration's budget policies.

It is clear that a $700 cap on the third-year tax cut is the fairest means of reducing the deficit. The cap on the tax cut restores some of the equity taken out of the tax system by this administration and spreads out the burden of economic sacrifice across all segments of society. For too long this administration has asked for sacrifices to help us through our economic crisis, but only from low- and middle-income families.

The administration contends that a $700 cap would drown the middle class. This is curious when we consider what has happened to America's middle-income earners under the Reagan tax and budget packages thus far. The Reagan tax cuts, when offset by tax increases from social security taxes and inflation, have resulted in a 22-percent increase in the tax burden of those persons earning below $10,000. Persons in the $10,000 to $15,000 income group will see a 7-percent increase in taxes. And those earning from $20,000 to $30,000 will shoulder a two-tenths of 1-percent increase. Yet, if you manage to make over $200,000 and you will receive a 15-percent decrease in your tax liability.

Further evidence of the administration's bias toward the well-to-do is found in studies done by the Congressional Budget Office on the administration tax and budget changes for fiscal years 1982 through 1985. These changes will take more than $20 billion from households with incomes below $10,000, yet increase after-tax income of households earning more than $80,000 by $64 billion. An even more glaring figure is the fact that fully 35 percent of the benefits generated by the 1981 tax cut go to the wealthiest 5 percent of American taxpayers.

Is this concern for the middle-income earners of America? I think not, Mr. President. I think it is a continuation of the inequitable trickle-down approach which has guided this administration. The administration has supported increases in gasoline taxes which are clearly regressive, having a greater impact on the spending power of low-income groups. It has supported increases in telephone excise taxes which have a detrimental impact on our Nation's small businesses. It has asked sacrifices of those who wish to apply for student loans. It has asked sacrifices from our military personnel. I feel that it is time we ask our Nation's most prosperous citizens to sacrifice a portion of their tax cut and to bear a fair measure of the burden of cuts needed to sustain economic recovery.

I think we should stress, Mr. President, that nobody is giving up their tax cut. Our proposal retains the tax cut. We are only advocating reducing the size of the tax cut. As the Joint Tax Committee's figures point out, this proposal would reduce the size of the tax cut only for an estimated 8.1 million individual taxpayers in 1984. This is roughly 10 percent of all U.S. taxpayers. Thus, a full 90 percent of our taxpayers would continue to receive the full amount of the tax cuts enacted in 1981.

The administration has argued that many persons other than high-income earners would be affected by this measure. The figures dispute this claim. Only 9 percent of those earning between $30,000 and $40,000 would be affected by a $700 cap. Yet fully 93 percent of those earning between $75,000 and $100,000 would see a reduction in the amount of their tax cut.

The fairness of this approach can also be seen by looking at where the revenue raised by the cap would come from; 89 percent of the revenues raised by this bill would come from taxpayers earning over $50,000; 60 percent of this sum comes from those earning over $75,000.

Now, these may be middle-income earners in the circles the administration travels in, but a person with an income level above $50,000 is still considered an upper income earner by Tennessee standards. Our median family income in 1979 stood at $16,245 and only 4 percent of Tennessee families were earning more than $50,000 in that year.

H.R. 1183 also allows the Federal Government to raise revenues without stalling our economic recovery. The tax cap still results in a tax cut of $24 billion in fiscal year 1984. This $24 billion will go far in providing the increased purchasing power needed to continue our budding economic recovery. As my colleagues know, low- and middle-income earners tend to consume a greater portion of their incomes than high-income earners and these groups account for most of the increase in demand spawned by tax cuts.

Nor would a cap adversely affect the backbone of our economy, the small business community. Sole proprietorships, the epitome of the American entrepreneur, accounted for 76 percent of the total business establishments in America in 1979. Partnerships made up 8 percent of the total while corporations represented 16 percent of the overall figure.

Using the $50,000 cutoff point for being affected by the tax cap, we see that most small businesses are not hurt by this measure; 82 percent of the sole proprietorships have income levels below $50,000, while only 28 percent of all corporations earned less than $50,000 according to Department of Commerce figures.

In sum, Mr. President, H.R. 1183 sustains our economic recovery while taking positive steps to reduce the Federal deficit. It also restores considerable equity to our income tax system. I urge a strong vote for this measure.

Mr. KENNEDY. Mr. President, the outcome of tomorrow's important vote will be determined on the basis of our answers to two fundamental questions:

First, are we prepared to insist that our Nation's tax system meet a simple standard of fairness and equity?

Second, are we prepared to firmly resist the prospect of endless massive deficits; and insist that, even though the President has turned his back on the massive deficits we face, the U.S. Senate will take a crucial first step toward fiscal discipline and responsibility?

The facts are indisputable and have been well documented by many of our colleagues. The President claimed that massive tax cuts skewed toward the very wealthy would yield a surge of investment and a balanced budget. The only part of the President's claim that has been borne out is the skew toward the wealthy.

A family earning $100,000 has already had their taxes reduced by over $3,400 a year. A family earning only $20,000 a year—one fifth as much—has seen their tax bill reduced by only $300—one-tenth the reduction received by the $100,000 household. And to make matters even worse, inflation and the social security tax increases have already wiped out that modest $300 reduction. Proceeding with the third year will make a bad situation worse. The $100,000 households' new tax reduction will be more than 14 times the size of the $20,000 households' cut.

For the first time in the history of the Republic an administration has made the widening of income gaps its explicit policy.

On equity grounds alone this body ought to stand with our colleagues in the House and reaffirm our commitment to a tax system that fairly distributes the burdens.

But there is another issue as well. After 2½ years of economic mismanagement, our country is confronted with an unprecedented problem—massive deficits with no end in sight; deficits that show no sign of coming down even as the ecomomy recovers; deficits that threaten to choke off even the tepid recovery we are now experiencing; deficits that threaten to cause turmoil in credit markets and to push interest rates even higher.

Economists as diverse as Council of Economics Advisers Chairman Martin Feldstein and his predecessor, Walter Heller, warn that the continuation of these deficits is the most important threat to our efforts to restore prosperity and sustained growth.

Yet the President urges that nothing be done. I reject that advice.

By voting to cap the third year—an action that will insure that 90 percent of all taxpayers receive their full reduction—we can take a crucial step toward fiscal responsibility without raising anyone's taxes. By merely insisting that further reductions for the well-to-do be scaled back, we can reduce the projected deficit by almost $40 billion between now and 1988.

Make no mistake, if we do not take this action today, we will soon find ourselves back in this Chamber debating whose taxes to raise. Mr. President, today we have an opportunity to send a clear message that the U.S. Senate intends to combine fiscal discipline with fairness. I urge my colleagues to stand firm.

Mr. DECONCINI. Mr. President, I ask the floor manager to yield me 5 minutes.

Mr. JEPSEN. Mr. President, I ask the floor manager to yield me 5 minutes.

The PRESIDING OFFICER. Does the Senator yield time?

Mr. JEPSEN. I am trying to get a little time myself.

Mr. DECONCINI. Who has the floor.

The PRESIDING OFFICER. The control of the time is under the Senator from New Jersey and the Senator from Kansas.

Who yields time?

Mr. BRADLEY. Mr. President, I yield 5 minutes to the Senator from Texas.

Mr. BENTSEN. Mr. President, the administration's opposition to any proposal to cap the tax cut exemplifies the constant inconsistencies within this administration. President Reagan had endorsed a constitutional amendment to balance the budget, yet the budget deficits under his administration are the highest in our Nation's history. It is estimated that over a 5-year period our national debt will increase from just under $1 trillion to over $2 trillion.

In another inconsistency, the Reagan administration has said it is for increasing our commitment to better education. The facts, notwithstanding the President's statement to the contrary, are that this administration has actually reduced the level of funding for education.

Last week Secretary Regan testified before the Finance Committee that the administration was opposed to capping the third year of the tax cut. He said the cap proposal was "unfair," particularly as it impacts on the middle class and that this administration was opposed, for economic reasons, to any tax increase this year. The truth, Mr. President, is that this administration is not opposed to increasing taxes on the middle class. In fact, this administration has actually proposed increasing the taxes of the poor and middle class.

Let us look at the record; this bill will affect 3½ million Americans with incomes of less than $50,000. Of the $6 billion raised, 12 percent or $720 million is from this group. The day before Secretary Regan testified, HHS Assistant Secretary Dr. Rubin, presented to the Finance Committee testimony, including a chart, which set forth the tax impact of the administration's proposal to cap employer provided health benefits. The chart, which HHS said was prepared by the Department of the Treasury, shows the average tax increase, by income class, of the administration health cap proposal. The administration's proposal would not only increase taxes of individuals making between $30,000 and $50,000 it would raise the taxes of individuals making less than $10,000 by an average of $139. According to Dr. Rubin's testimony, the administration's tax increase would raise $27 billion over fiscal years 1984–88. It would affect between 35 and 45 million working men and women, increasing their taxes by an average of $228.

It offends me that the Reagan administration continues to seek caps on the health care tax benefits of the poor and middle class while opposing a cap on the tax cuts of $4,300 that go to people earning over $200,000 a year. Meanwhile the President keeps telling the American public that he is opposed to increasing taxes.

The truth is that the cap proposal before us today does not raise anyone's taxes. It does limit the July 1 tax cut for 4½ million upper income Americans who are the only people to receive a real tax cut in the last 2½ years. In the last year we have raised excise taxes and social security taxes. Because of the fixed rates applicable to excise taxes they are regressive in nature and have their most adverse impact on lower income individuals. The increases in the social security tax, which is wage based, also primarily affects low- and middle-income individuals because of the $35,700 income limit on which it is applied. This administration supported each of these tax increases and as I noted earlier, proposed yet another tax increase on workers this year. But tell this administration that you are considering a bill to limit, not take away, but limit the tax cut going to the wealthy and this President, before ever seeing the proposal, threatened to veto it. I believe it is time for this administration

to be more bipartisan in its approach to government and evenhanded in its policies.

The tax area is not the only one in which this administration has sought to shift or increase the burden on the poor and middle class. Examples are not hard to come by, particularly in the Finance Committee where we have jurisdiction over one-third of the $43 billion in cuts sought by the administration.

The administration wants to cut medicare by almost $11 billion in the period 1984-86, with 63 percent of the cuts to be imposed on sick beneficiaries. These cuts come on the heels of OBRA and TEFRA cuts in medicare totaling $13 billion.

The administration is trying to force older people to be more "prudent" purchasers of health care by increasing patient copayments and deductibles. Mr. President, the staff of the Finance Committee has produced data showing that the average medicare patient would already be $1,925 out of pocket during a year in which he or she would have to be hospitalized. I should think a tab of that size would be quite enough to encourage prudence.

Child neglect and child abuse are on the increase in 33 of the 50 States, but the administration proposes to freeze child welfare funding at the level of 2 years ago and seeks to eliminate staff training funds.

At a time when studies show 79 percent of divorced men fail to make their child support payments, the administration wants to eliminate Federal incentive support for States that aggressively collect delinquent child support. Apparently, they believe it makes more sense to add these children to the welfare rolls, that sounds like a false economy to me.

The administration want to cap the foster care program in a misguided effort to save $126 million. We should be asking who will bear the brunt of that savings—will it be the children forced to remain in an abusive setting?

The CBO has recently estimated that there are 10.7 million families who lack health insurance because of the high rates of unemployment that are projected to continue into next year. Yet the administration wants to freeze maternal and child health block grant funding at $373 million—an 18-percent reduction from 1981. We are talking about a program that served 12 million mothers and children in 1980—a classic block grant with States having absolute control over how they structure and spend the funds. The kind of program the administration is supposed to admire.

The budget resolution requires the Finance Committee to raise $12 billion in fiscal year 1984. I intend to work with the Committee to try and fulfill our obligation. An obligation that not only applies to tax increases but to spending cuts. But I intend to work as hard as I can to make sure that those spending cuts and tax increases are fair and evenhanded. The bill before us today requires that for each dollar of revenue raised we must cut spending by an equal amount. I think this is a fiscally responsible provision. While I have reservations about the way this cap proposal is designed I intend to vote for it because I believe it is one of the fairest ways to raise the revenue the Committee is instructed to raise. I urge my colleagues to do the same.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. JEPSEN. Mr. President, I rise in opposition to the proposed tax cap. This tax increase measure would hurt middle income Americans and undermine the current economic recovery.

It is just another manifestation of the old tax-and-spend political philosophy that got us into the current budget mess we are in now. It must be remembered that there is no way we can tax our way into prosperity.

This proposed tax cap is supposed to increase the fairness and equity of the Tax Code. In this respect the proposed cap is a sham. The tax cap hardly affects the very rich at all. Two-earner couples with taxable incomes of $35,200 would be hit with a 9-percentage point increase in their tax rates. As we all know, $35,200 earned jointly is not really that much money: this level of taxable income is typical of middle income taxpayers.

Moreover, about 3.9 million taxpayers with adjusted gross income under $50,000 would be hit with a tax increase. Altogether, about half the returns taxed more heavily under this proposal would report annual incomes under $50,000. The tax cap is just a large tax increase on the middle class.

The negative effects on wage and salary income are bad enough, but the tax increase on small businesses might be even worse.

Everyone in both Houses of Congress likes to point out, quite correctly, how important small businesses are to innovation and job creation. Here is an opportunity to practice what we preach.

Around 86 percent of American small businesses are taxed as individuals, as are most farmers. This tax cap proposal strikes very hard at small businesses. Its practical effect is to increase the tax burden of small firms and thus make their competition with big business more difficult.

At a time when small businesses are getting back on their feet all throughout this country, this tax proposal would pull the rug out from under them.

This measure is a discriminatory attack on small business and its innovation and job creation.

All the economic news signals that a robust recovery is now underway. Auto sales, housing starts, income, output, productivity, and employment are all up strongly.

In fact, for the first time in 17 years beginning in the month of February every economic indicator that measures the health of an economy was in place pointing to the right direction with positive action taking place.

Now is not the time to enact a counterproductive and unfair tax measure. We do not want to do anything that could choke off the hard won economic recovery.

It is really incredible we are considering this proposal now, even as things are finally getting better.

Supporters of this political "turkey" suggest that more revenues are needed to reduce the deficit. The same supporters have shown year in and year out now for over a quarter of a century that they spend every dime and one dime more than any revenue that is ever taken in in the Halls of Congress. But Congress has proven repeatedly that it will spend every dime of additional revenues raised, and then some. Witness the recent budget passed over in the House where they had some $30 billion in additional revenue and they increased by over $30 billion.

More revenues will only fuel more Federal spending, and might result in even larger deficits. Already plans are being made to spend additional money we do not have with the incorporation of the so-called reserve fund in the budget resolution.

In summary, Mr. President, this proposed tax cap would be unfair to millions of Americans, many millions of small businesses, and would also reduce incentives to work and to save and invest in all of the things the 3-year tax cut, as has been alluded to earlier by some of the folks who did vote for it originally, believed in, when they voted for it and supported it.

The proposed tax cap would endanger the recovery, it would jeopardize the trend of increased employment and, Mr. President, I oppose this measure and I urge my thinking colleagues to do likewise.

Mr. BRADLEY. Mr. President, I yield 3 minutes to the Senator from Arizona.

Mr. DECONCINI. I thank the Senator. Mr. President, I am alarmed to see that interest rates are creeping up, that last month's inflation rate was 6 percent on an annualized basis, and that this administration continues to insist on a deficit in excess of $184 billion dollars. But most of all, I am alarmed that this administration is not alarmed. The administration that talked about a balanced budget in 1984 and 1983 seems to have thrown that to the winds. I can recall statements I made on the floor of this Senate 3 and

4 years ago, appalled at deficits of $50 and $60 billion, and now this administration has come to the conclusion that $184 billion is acceptable. Mr. President, $184 billion is not only unacceptable, but it should be unthinkable.

I will not try to contend that the sole cause of this outrageous deficit is the 3-year across-the-board tax cut, but I do believe that it has had a substantial impact on raising the deficit, and now is the time to admit a mistake and back off. Frankly, if I had my way, I would prefer to see the third year eliminated altogether, or at least deferred until we can get some semblance of control over a Federal budget gone wild. But I recognize that this is not a popular notion, and does not stand a chance of success. So I will support the next best option, a cap on the third year of the tax cut.

The cap on the third year of the tax cut is not a tax increase, Mr. President, as the President has said or the Senator from Iowa just said. All taxpayers will still get a tax cut for the third year. In fact 90 percent of all taxpayers will receive the full 10 percent tax cut. Only 10 percent—the wealthiest 10 percent—will receive a reduced tax cut. Over the next 5 years, the cap on the tax cut will raise an estimated $38.8 billion. Of this additional revenue, 89 percent will be raised by taxpayers earning over $50,000 foregoing part of the 10-percent tax reduction. While the President would have us believe that taxpayers making $100,000 a year are middle-income, that simply is not the case. Less than seven-tenths of 1 percent of the American public earn in excess of $100,000. In fact, less than 4.5 percent earn in excess of $50,000. So let us be frank, these are not middle-income Americans; they are the taxpayers who have already benefited the most from the President's tax cuts and they are the ones most able to weather a lesser tax reduction.

However, we cannot stop with a cap on the third year of the tax cut, we must continue our effort to get this budget under control. The International Monetary Fund is one area where cuts can be made. The $8.4 billion cost to the United States of the administration's recommended increases in IMF and the general arrangements to borrow (GAB) raises serious questions of priority and equity. I find it hard to justify such enormous sums to help other countries, however difficult their particular problems, or to help big banks which have reaped enormous profits from their foreign lending operations.

Foreign aid and wasteful, duplicative domestic programs should also be targets of spending cuts. But clearly spending cuts alone cannot bring deficits down to an acceptable level. Therefore, I will support the cap of the third year of the tax cut, as one of the least painful ways to reduce the deficit. However, I caution my colleagues that we cannot take these revenue increases as a sign to spend these additional revenues before they are in hand. It is imperative that these revenue gains be applied directly to reducing the deficit.

I thank the Senator from New Jersey.

Mr. DOLE. Mr. President, I yield 5 minutes to the distinguished Senator from Washington (Mr. GORTON).

Mr. GORTON. Mr. President, I thank my distinguished friend, the Senator from Kansas.

I speak, perhaps, as the first Member on this side of the aisle who favored the budget resolution which was passed by the Congress last week and, at the same time, strongly opposes this so-called tax cut cap.

I do so because I feel it to be highly unfair, because I feel it to be unproductive of improvement in our economy, and because I believe there are far better ways to find revenues which I think are necessary for an appropriate balance between revenue increases and spending cuts.

I have listened in vain over the many weeks of debate over this tax cap in both the House and here in the Senate for the slightest discussion by its proponents over whether or not it will help this economy grow, whether or not it will help create employment or will simply frustrate it.

I have listened in vain for any discussion of the obvious impact of tax cuts during the course of the last 2 years which have been to increase receipts from those who were the greatest dollar beneficiaries of those tax cuts rather than decrease them. That increase has taken place, of course, because the reforms of the last 2 years, which include the anticipation of this tax cut, have made a number of unproductive tax shelters less appealing, and have even in the time of a recession tended to create more jobs, more employment, more activity, and thus more taxes under the present system.

Perhaps one of the proponents of this cap will discuss that subject at some time in the future. Certainly they have not done so so far in the course of this debate. Nevertheless, I am concerned most of all with their presentation that this cap is somehow being fair. So I am going to ask the distinguished senior Senator from Louisiana, who is the second most senior Member in this body, the very distinguished minority leader, who has been here for a number of terms, perhaps the senior Senator from California, all of those who have been on the other side of the aisle during the time of Democratic majorities, who have set tax policies for this country over the course of the last 30 years, when was the last time, for that matter when the first time was, when they were increasing taxes that they proposed a cap on that increase? I will ask any one of them to say whether or not when they proposed that taxes should go up either here on the floor of the U.S. Senate or in any public place whatsoever, they said "But nevertheless, even though there has got to be a 10-percent tax increase next year we do not think it will be fair to ask any citizen to pay more than $700 in addition to what he or she is paying at the present time?"

I will warrant, Mr. President, there has not been a single occasion on which any of the proponents here this afternoon of capping a tax cut has ever proposed to cap a tax increase. Certainly they did not do so during all of the inflation in the late 1970's when American after American were forced into higher tax brackets simply by operation of inflation. I do not remember their doing so when tax increases were proposed during the end of the Vietnam war.

Bluntly I say to those who promote this cap what was fair when taxes were going up is fair when taxes are going down, most profoundly fair. Unless they believe that no individual should ever have a tax increase of more than a modest $700 a year, it is very difficult for them to present the case for going down in taxes other than as a percentage of total tax liabilities.

In fact, the tax cut in this respect voted in 1981 was the fairest of all possible tax cuts, because it treated with a tax liability and by what share or proportion it should be reduced.

The Senator from Kansas, the distinguished chairman of the Finance Committee, has spoken eloquently on this floor, both in proposing changes in our Tax Code and in bringing them to the floor, about cutting back on tax loopholes, preferences, credits, exemptions and the like. And yet when he brought such a proposal to the floor last summer, he had very little support from the other side of the aisle. And I suspect that if he brings such a proposal to the floor this summer, he is likely to have very little support from the other side of the aisle. Even though most of these credits, exemptions, loopholes, and the like do apply only to upper income groups, they simply do not have the romance or the superficial attractiveness of a cap on a tax increase.

Mr. President, I believe that we have a tax system in the United States of America which is in trouble. It is in trouble because people perceive it to be unfair. It is in trouble because people perceive it to be unfair because those with equal incomes do not pay the same amount of tax due to loopholes and preferences and the like.

To the extent that we need additional revenues—and I believe that we do—I much prefer the route proposed by the Senator from Kansas, that we examine the Tax Code from beginning to end, make it more fair, make it more equitable, have lower rates but fewer preferences, rather than simply to put on a superficial cap on a cut, which has never been proposed by any of its proponents as a cap on increases in taxes from the beginning of the income tax until this day.

Mr. CRANSTON addressed the Chair.

The PRESIDING OFFICER. The Senator from California.

Mr. CRANSTON. Mr. President, President Reagan says everyone must sacrifice to reduce Government spending and reduce his record deficits. So as he cuts programs to help the elderly, he tells them they must share in the sacrifice in order to cut spending.

President Reagan says poor people must sacrifice, children must sacrifice, disabled people must sacrifice, veterans must sacrifice—all supposedly to bring about economic recovery.

But what happens when the Democrats say that it is time for the rich to sacrifice just a small portion of this year's tax? President Reagan cries, "foul." He believes the rich should not be asked to make the same sacrifice all the rest of America is making.

A $700 cap on the tax cut would save $6 to $7 billion—and still give low- and middle-income taxpayers the tax cut they deserve.

A cap would reduce the horrendous Reagan deficit that is keeping interest rates high and threatens to snuff out the recovery before it really begins.

The Democratic Party stands united on this issue.

The Kemp-Roth tax cut came to the floor in 1981 as part of an omnibus package. Besides Kemp-Roth, the package contained a number of good provisions—provisions designed to boost productivity and savings. And I played an important part in developing several of these productivity provisions and strongly supported them.

But every time the issue of Kemp-Roth itself came up for a vote, I voted against it. Every single time.

I and most Democrats voted no fewer than 11 times—8 times in 1981 and 3 more times in 1982—in favor of floor amendments to kill, defer, or limit Kemp-Roth.

We tried to limit it to a 1-year tax cut targeted to middle- and low-income families.

The Republicans said no.

We tried to make it a 3-year tax cut targeted to middle- and low-income families.

The Republicans said no.

We wanted to eliminate the third year of the cut.

The Republicans said no.

We wanted to make the third year of the cut contingent on reduced deficits.

The Republicans said no.

We wanted to make the third year of the cut contingent on a balanced budget.

The Republicans said no.

We tried to make the third year of the tax cut contingent on lowered interest rates.

The Republicans said no.

On each vote we were beaten down by a Republican majority determined to push through the Kemp-Roth cut—even though everybody knew it would throw us into deeper and deeper deficits and confront us with the threat of higher and higher interest rates.

Now, for the 12th time in 3 years we Democrats are trying to put some fairness and some sense into Ronald Reagan's unfair economic policies.

A cap on a tax cut for the wealthy is fair.

It makes sense.

Once again we Democrats will say "Yes" on fairness, "Yes" on cutting the deficit.

Are the Republicans—for the 12th time—again going to say No?

Speaker O'NEILL has asked why a family making $100,000 needs a tax break of $2,368 on July 1, and why a family making $200,000 needs a tax break of $4,436. And he has asked why these people cannot make it on the same $720 tax break that a family making $50,000 will receive.

I join Speaker O'NEILL in asking those questions and I also ask this: Why should every family earning more than $50,000 get a larger tax cut than every family earning less than $50,000?

For all these reasons—and more—I will cast my 12th consecutive vote against Kemp-Roth. I will vote to limit the tax break for the wealthy. I will vote for the pending proposal to put a $700 cap on Kemp-Roth.

Mr. BRADLEY. Mr. President, I yield 5 minutes to the Senator from Maine (Mr. MITCHELL).

The PRESIDING OFFICER. The Senator from Maine.

Mr. MITCHELL. Mr. President, the American people have come to expect misuse of the English language by persons involved in the political process. We here in the Senate have become almost immune to misuse of the English language. But I submit that we have here a case where the English language is being misused in a manner more egregious than ordinary even by the standards of this Chamber.

Last week, the Secretary of the Treasury came before the Senate Finance Committee and said that he opposed this tax cap because, in his words, "It hit squarely at the middle class in this country." That statement has been repeated over and over again and we can confidently expect that tonight the President will use the same language: "The tax cap hits squarely at the middle class in America."

First, let us make clear what we are talking about. The tax cap provides that everyone who is entitled to a tax cut will get a tax cut. It provides only that those in the very highest income brackets in our society will get a cut of no larger than $720 for a joint return and slightly less than that for an individual return. So no one's taxes are going up. Everyone's taxes are going down.

Now, as to the assertion that this affects the middle class, first, as the figures provided by the previous speakers and these charts in the rear of the Senate Chamber make clear, 90 percent of all taxpayers will be unaffected by the cap—90 percent. The only persons affected by the cap will be those at the top end of the income scale, those in the top 10 percent of incomes in our society.

Now, how can that be described as the middle class? How can those in the top 10 percent of income in our society be described as the middle class?

Webster's Dictionary, which I have before me, defines the middle class as: "A class occupying a position between the upper class and the lower class." And, as every American schoolboy can tell you, middle suggests between two extremes.

The fact of the matter is that this tax cap does not hit squarely at the middle class. It hits squarely, to the extent that it provides a lesser reduction in taxes, at those at the very top level in income in our society.

Ninety-five percent of all tax returns filed in this country report incomes of less than $50,000—95 percent. And while the Secretary of the Treasury and others here who oppose the tax cap argue that a person who makes $50,000 does not think of himself as rich, that may be true, but it is irrelevant to the issue before us because the fact of the matter is that if someone in this country has an income of $50,000 a year, they are in the top 5 percent in our society, 95 percent of all tax returns being for a lesser amount.

There may be valid reasons to oppose a tax cap, although I have not heard any here in the Chamber. Surely the argument that the cap hits squarely at the middle class is not an argument against the tax cap. It is completely false. It is preposterous, in fact, for anyone to stand with a straight face and suggest that a proposal that affects only the very highest income earners in our society is a proposal that strikes at the middle class.

The middle class in this country has been punished by the tax policies of this administration, which has proposed, supported and pursued policies related to the ability to pay, while at the same time increasing taxes that

are unrelated to the ability to pay, excise taxes, the gas tax, the social security payroll tax, and now, under the contingency a surtax, and an oil import fee that will raise the gasoline tax by an additioinal 12 cents a gallon.

The consequences of these policies has been less of a tax reduction and more of a tax distribution. In our society, the burden now falls primarily and in increasing degree upon those in the true middle class, those whose incomes range between $20,000 and $50,000 a year. It is that class of Americans who are suffering the most under the tax policies of this administration because overall their taxes are going up. The only group in our society whose taxes overall are going down are those at the very upper end of the income scale, that 5 percent of Americans whose incomes exceed $50,000 a year.

It is no secret that among that group of Americans this President's popularity is higher than any other President in modern times. And rightly so, because the policies he has pursued have benefited that class to the almost total exclusion of the other 95 percent in our society.

This tax cap is a modest effort to redress the inequity and unfairness of the tax policies that have been prusued by this administration.

I conclude as I began: It does not hit the middle class. It hits only those at the top end of the income scale, and by no reasonable use of the English language can the top 5 or 10 percent in our society in terms of income be described as the middle class. They are not. In terms of income, they are the higher income persons in our society. The true middle class, the great majority of Americans, will be unaffected by this reduction, except to the extent that they will benefit from the reduction in the deficit that will ensue from this cap.

I was interested to hear someone suggest that farmers will be adversely affected. How many farmers do we know who have incomes between $50,000 and $200,000? The farmers in my State do not make $50,000, $75,000, $100,000 a year.

And it is going to affect small businessmen, we are told. How many small businessmen are making $75,000 and $100,000 a year? The small businessmen in my State do not make that.

The tax policy of this administration has one category of beneficiaries, the upper income persons, the top 5 percent in our society. All this tax cap does is to try, in a very modest way, to redress that inequity, to redress that imbalance, and to restore some fairness to American society.

Thank you, Mr. President. I thank the Senator from New Jersey.

Mr. BRADLEY. Mr. President, I yield 5 minutes to the Senator from Montana.

The PRESIDING OFFICER. The Senator from Montana.

Mr. MELCHER. I thank my friend.

Mr. President, there is a $200 billion deficit for this year, and next year, even with the hard fought, scrapped over budget resolution of the Congress, there will likely be a $170 billion to a $180 billion deficit. Under either the congressional budget projections or the President's budget projections—and by the way, the President would have us spending more and have larger deficits—under either one, over the next 5 years there are huge deficits, far exceeding $100 billion a year.

When the public reacts to the debate over whether or not this scheduled tax cut is fair, they have a right to be confused.

First of all, there is the question of whether or not they are going to have much of a tax cut when the deficits are that large. And, if so, what does it mean to me?

That is the question the taxpayer is asking himself in trying to draw a conclusion out of all of the debate that has been going on over whether or not they are really going to get a tax cut, and whether or not Congress should modify it.

A comparison has been drawn between this coming tax cut and the withholding of taxes on savings accounts. We listened to the chairman of the Senate Finance Committee draw a parallel between the two.

He says you do not want to tax those who are supposed to be paying taxes on savings accounts, but now you are trying to take a tax cut away from middle-income people.

Let us set aside the objections to the withholding of taxes on savings, and those objections are based on whether or not the taxes are actually due, whether they have to pay them and then ask for a refund because there was not that much tax involved—and there were a lot of people involved in all this—whether or not it would really cost more to administer than the additional revenue that would be raised. That is the basis on which we ought to evaluate the withholding of taxes on savings accounts.

Setting all that aside, we can understand this particular tax cut due July 1. It is a 10 percent tax cut. That is easy to calculate. Anyone can clearly understand that and can calculate what it means to them based on their last year's earnings and they can project how much tax this year's earnings and they can project how much tax this year's earnings would require.

The bill before us is easy to understand, too. It just says that the tax cut you are going to get on July 1 will be no more tha $720. You can count on that, no more.

The confusion really arises over whether or not this tax cut, if it were capped at $720, really affects the middle-income family.

The President said the middle-class American workers or families would be hurt if there was only a $720 tax cut. Who is this middle-income group he is talking about? I ask, what are we to call the middle-income group? Using the table provided by the Joint Committee on Taxation, the $720 cap would begin to affect those families who are making $40,000 or more, somewhere bewteen $40,000 and $50,000 based on families of only two, a husband and a wife, who have that level of income and itemize their deductions.

Maybe we should not assume they itemize their deductions but I can assure you that the Joint Committee on Taxation finds that indeed families of two in that income bracket certainly do itemize, so that is where the impact would come.

If we are going to base this on what is fair for the middle-income families, I think middle America is going to be surprised that the middle-income families, according to the President, are somewhere above $40,000. Of course, if they had more deductions, it would be greater. But that is still pretty high on the tax schedule.

The comparison is drawn between these families and those that make more or those that make less. Whatever confusion there is on what is middle-income American and where this tax cut cap would apply, there is one thing that is absolutely certain: The President has done a very fine snow job in claiming this bill hurts middle-income people. I can tell you some large groups of middle-income Americans who are not in that income tax bracket—farmers and ranchers across this country. The statement has been made by several of my distinguished colleagues, of whom I have great fondness and with whom I have great friendship, that if we capped this at $720, it would have a drastic effect on farmers and ranchers of this country. In fact, our farmers and ranchers simply do not make that kind of money. There are only 4 to 5 percent of the total agricultural producers in this country that fall into that range of $50,000 income and above.

Another group, a large group is small business. How many small businessmen make more than $45,000 a year? So they fall into that group. And how about truckers and retirees.

In fact, everybody but the top 10 percent of the people with earned income in this country are below the $45,000 to $50,000 income area.

The scheduled tax cut can be quite big—$4,456. That is if you have an income of a quarter of a million dollars a year. I will acknowledge that there is a great difference between a cap of $720 and $4,456. That is the

group that the President is fighting for, is bleeding for, on this snow job, and those, my friends, are not middle-income Americans.

Who gets enough to be affected by the tax cut? Senators, I guess, can fit in there; at least Senators with outside income or Senators with a fair amount of honoraria. We got a pay increase last week; some might say we might as well have a tax cut this week of a meaningful nature.

There are others, of course, in that category—athletes, actors, network TV news commentators. This tax cut is overly fair to those with the high incomes.

Where does the real rub come? The rub comes in the $200 billion deficit and in years to come, $150 billion, $170 billion, $125 billion or perhaps even higher, of Federal deficits. To cover these deficits there are going to have to be tax increases. We know that. Where is it going to come from? Those are the taxes that are going to come from the middle-income and the lower-income people. They are going to come out of farmers, ranchers, out of small business, they are going to come out of retirees, truckers, and other people, the mass of the taxpayers below the $40,000 bracket. That is where the additional taxes are going to come from. That is exactly the rub. That is why we are taking this time on this floor to debate the tax cap now.

Those people who are going to get the benefit of what we are talking about tonight are the ultra-high income people of this country, that top 10 percent.

I shall not bleed for them. I shall not swallow the President's snow job. We are going to have to raise additional taxes after this is over, and it is going to come out of those people who are earning less than $40,000 a year and that, indeed, is the big rub. It is only fair that before asking the real middle class for more tax money, we first limit the tax cut that will go to the wealthy if we do not pass this bill.

Mr. President, I do not believe that any of us here in the Senate or throughout the country really want to accuse President Reagan of misleading the public; that is, of deliberately misleading the public. But it does give us alarm when we hear this consistent chorus coming from the President and from his administration that it is unwise at this point to change the law regarding this upcoming tax cut of July 1, because he gives as a basis of that that it would interfere with middle America and the tax cuts that they feel that they will be receiving.

While we would strive not to infer on the President improper motives, it is extremely difficult to understand the President's line of thinking and his rationale in describing middle-class America as people of incomes of $40,000, $45,000, or $50,000 a year.

It would not hurt us so much to see that distortion if it were not for the fact that we will have to be voting very soon in this Chamber on additional taxes to be imposed upon the taxpayers of this country. We know it from the budget resolution. We know it from the President's own recommendations. We know it has to be done. When those tax proposals come before this Chamber, we are going to find that they do indeed hurt the average taxpayer in this country.

And so what we are trying to do with this bill is to simply say to everybody: "Well, you are not going to get more than $720 tax cut out of this July 1 tax cut, because if you do, we have to imposed additional tax burdens on everyone and they will not come across as fair taxes and equitable taxes for the average taxpayer."

Mr. BRADLEY. Mr. President, I yield 10 minutes to the Senator from Florida.

Mr. CHILES. Mr. President, the subject before the Senate today is the same one that has been with us throughout the lifetime of this administration: taxes. But hovering over our vote today—and, more important than the specific issue of tax rates—is the far larger question of how long and how strong the economic recovery will be.

Nearly 2 years ago, Congress agreed to the President's idea of a 3-year, 25-percent cut in individual tax rates. The President told the Nation that cutting taxes to this extent would actually bring in more revenues. His idea was that people would have more income, and would put the extra money in the bank if only taxes were lower. Business would borrow this money, expand operations, and the expansion would produce more jobs. With more people working and paying taxes, the Treasury would end up with more revenue, not less.

It was a great idea, Mr. President. I went along with that idea, as the vast majority of people in this Chamber and in both Houses of Congress. The President's plan just did not quite work the way he said it would.

Now, we have an economic recovery under way and the White House says the plan has worked. Frankly, it is clear to me that we have an economic recovery in spite of what we have done, rather than because of what we have done.

The question is: How do we keep the economic recovery going? I think it is cyclical in nature, and we have to keep it from sputtering out.

By 1988, the President's tax cut will reduce revenues by a total of $860 billion. When you add in the $285 billion in additional defense spending the President requested, you end up with a gap of more than $1.1 trillion between what we take in and what we spend. This is new deficit. It is all borrowed money, extra debt piled on top of the debt we would have had with the economy operating at full capacity and near full employment. Even after the Congress cut domestic spending by $387 billion—the level proposed by the President—you still have extra deficits totaling over three quarters of a trillion dollars by 1988.

This extra deficit threatens economic recovery by virtually guaranteeing high interest rates. We see this happening already. Just when the economic recovery is getting up a head of steam—just when business is finally getting ready to borrow—high and climbing interest rates generated by growing Federal deficits will stop the recovery in its tracks.

The tax cap bill before the Senate today is not an attempt to raise taxes. It is, instead, a small step—consistent with the budget adopted last week—to contain Federal deficits. The budget we approved calls for $73 billion in additional revenues. Of that amount, $46 billion would come in 1986—the same amount in the same year—requested in January by the President.

The budget resolution Congress approved last week is the blueprint for lower deficits. Now we must actually begin the work. This tax cap legislation we consider today is a good place to start. If enacted, the $700 cap on the third year of the tax cut will produce $21 billion over the next 3 years, or well over a quarter of the extra revenues specified in the budget resolution. And the amount will be the result not of raising taxes as planned by the President but, rather, by limiting the extent to which taxes have already been reduced.

If the President's economic program has proven anything, it is that you cannot reduce Federal deficits by shutting off revenues. You cannot erase deficits solely by cutting spending. Congress has already gone a long way in the battle against deficits by cutting spending nearly $390 billion. Whoever would have thought the U.S. Congress would actually cut spending that much? We have actually done that.

The problem is that those cuts lost their effectiveness in the face of an administration policy that added more than $2 to the deficit in the form of red ink tax cuts for every $1 that we saved in our spending cuts.

So, if you wonder why deficits are so high, it is not because Congress boosted spending; it is because the President insisted on reducing taxes too far, too fast. As a result of the budget we passed last week, entitlement spending as a share of the gross national product will decline from 12.1 percent in 1983 to 10.4 percent in 1988. Total Federal spending as a share of GNP is going to decline from 25.1 percent in 1983 to 23 percent in 1986. Over the same period, taxes will rise to 20 per-

cent of GNP, actually a lower tax burden than the 20.6 percent endorsed by the President in his January budget. The spending contribution to reducing the structural deficit is 2.1 percent of GNP by 1986. That is almost twice the tax contribution of 1.2 percent.

Mr. President, I ask unanimous consent to print our explanatory table in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

MAJOR COMPONENTS OF THE BUDGET AS PERCENT OF GNP

	Fiscal year—				
	1983	1984	1985	1986	Change fiscal year 1983–86
National defense	6.7	6.8	6.9	7.0	+0.3
Nondefense:					
Entitlements	12.1	10.9	10.6	10.4	−1.7
Discretionary plus pay	4.6	4.4	4.2	4.0	−0.6
Net interest	2.8	2.7	2.7	2.5	−0.3
Total outlays	25.1	24.0	23.5	23.0	−2.1
Revenues	18.8	19.2	19.4	20.0	+1.2
Deficit	6.3	4.8	4.0	3.0	−3.3

Mr. CHILES. Mr. President, if we are going to cut deficits, if we are all going to profit from a sustained economic recovery, everyone will have to play a part. No one can be immune from the effort necessary to protect the recovery. That, for example, is why defense spending in the fiscal 1984 budget will rise a healthy 5 percent rather than the 10 percent asked by the President and deemed too high by the Congress. That is also why, in the interests of fairness, the tax cap we vote on today is a reasonable measure.

Ninety percent of all taxpayers will still receive their full, scheduled tax cut under the terms of this bill. Of the revenue the bill would raise, 89 percent would come from taxpayers earning over $50,000 annually. I believe this is a fair approach. If you want to see the fairness question in sharper focus, all you have to do is look at the shape of the President's tax cuts.

The tax changes thus far, matched with spending cuts, will actually mean $310 less in income to a worker whose annual income is less than $10,000. If the annual income is between $20,000 and $40,000, the tax cut will add just over $700 to that income. But if a person's annual income exceeds $80,000, that person has already received a $14,000 windfall from the tax cuts. Moreover it will cost everyone who makes less than $80,000 a year about $21 billion just to pay for the cuts given the wealthy.

For too long, the administration has been trying to persuade the public that Congress wants to raise taxes, and that raising those taxes is unfair. What is really unfair, Mr. President, is trying to persuade the taxpayer that a tax cut comes without cost. The truth is that the taxpayer has paid for those tax cuts—and then some—every time he or she has tried to buy something on credit. It has been like a revolving charge account. The taxpayer will pay. So the administration policy has not really been a taxectomy. It has only been a tax transplant, exchanging a drop in personal tax rates for an increase in interest rates.

The tax cap legislation we will vote on today is fair and an effective first step in redeeming the pledge we made in the budget resolution. We promised then to cut deficits. We can start today. What we can begin now and continue in the weeks ahead and will determine whether we can preserve the economic recovery. That is the key question. I hope the Senate will approve this tax cap bill in the interest of fairness, in the interest of deficit reduction, and in the interest of overall economic improvement.

Mr. BRADLEY. Mr. President, I yield 10 minutes to the Senator from Kentucky.

Mr. HUDDLESTON. I thank the distinguished chairman.

Mr. President, the Tax Rate Equity Act now before the Senate would limit the third year of the individual tax reductions enacted in 1981 under the Reagan economic program. This legislation is important for two reasons. First, it represents an important beginning to establishing a more balanced fiscal policy for the rest of this decade. Second, it saves needed revenues in a way that is fair to all Americans. Because this tax proposal has been drafted to be fair to all taxpayers, it represents a marked departure from the tax policy embodied in the Economic Recovery Tax Act, a policy that has been consistently tilted to provide the greatest benefits to our wealthiest citizens.

When President Reagan proposed in his campaign that the way to economic salvation in this country was to make drastic tax cuts, virtually everyone outside his own party was skeptical. How could you cut taxes, raise defense spending, and balance the budget all at once? The answer, we now painfully have learned, is that you cannot do all three. There is no magic to fiscal policy, despite the optimistic promises of President Reagan and his economic advisers.

We are now left with the specter of enormous budget deficits for the balance of this decade.

I think it is well to reflect that it took this Nation 205 years to accumulate $1 trillion in debt. Under the policies now promulgated by the White House and under the submissions to this Congress for the next 5 years, this country would match that trillion dollar indebtedness in just 5 years.

President Reagan promised that we could pay for his massive tax cuts with economic growth. That clearly has not happened. Two months ago the Congressional Budget Office estimated that these deficits will be over $200 billion in fiscal year 1984, over $210 billion in fiscal year 1985, and rising to over $267 billion in fiscal year 1988.

The failure of the administration's policies has left us with three fundamental problems in fiscal policy. First, how do we provide adequate domestic spending to assist the victims of the worst recession in 40 years and meet the needs of those needy citizens who must look to their Government for help? Second, how do we provide for a responsible and credible program to rebuild our defenses? Finally, how do we provide for a gradual, sustained reduction in budget deficits?

The budget resolution which has recently been adopted on a bipartisan basis gives us responsible answers to these questions. An important part of the solution to these problems must include additional revenues. That is not simply a Democratic Party position. That is the conclusion of extensive deliberations and negotiations between Democrats and Republicans in both Houses of Congress.

The budget resolution calls for an additional $12 billion in revenues for fiscal year 1984. This legislation, if it is enacted, will provide $6 billion, and it will generate this revenue in a fair and balanced way.

Critics of this proposal claim that the tax cap is unfair to the middle class. Yet, what are the alternatives, and how do these alternatives affect the middle class?

If we look at the Reagan administration's own proposal for an income surtax to raise revenue beginning in October 1985, we find that 62 percent of the revenue comes from people earning under $50,000. By contrast, the tax cap is much more progressive: 89 percent of the revenue it raises comes from those earning over $50,000 and only 11 percent of the revenue from this proposal comes from taxpayers earning less than $50,000.

The second major proposal the Reagan administration has made to raise revenue in order to reduce the deficit is a standby tax on oil. Seventy-five percent of that tax will be paid by people earning under $40,000. Clearly, this oil tax is much more regressive than the tax cap we are now considering.

In short, there are no good alternatives to the tax cap. To criticize the cap proposal as unfair to the middle class simply distorts the issue. The central fact is that the fairest solution is to impose the tax cap on the third year.

Critics of the tax cap proposal have focused on two sets of arguments. First, they argue that raising taxes at the early stages of a recovery will jeopardize the prospects for growth.

Second. they argue that the tax cap is not really fair at all because it places additional burdens on the middle class. Both arguments rest on faulty assumptions.

On the first issue it is simply wrong to suggest that the tax cap represents a tax increase. The fact of the matter is that a $700 tax cut is a $700 tax cut. The question is not whether to cut taxes, but rather how big should the third year tax cut be? If we do nothing, there will be a $30 billion tax cut on July 1. If we modify the tax cut by adopting a cap, we will still provide everyone with a tax cut, but the total magnitude of the tax cut will be smaller. Instead of a $30 billion tax reduction we will be providing a $24 billion tax reduction. To suggest that a difference of $6 billion in a $1.5 trillion economy will jeopardize recovery is simply specious.

We need a balanced fiscal policy to sustain growth through the rest of this decade. The budget resolution which we adopted last week provides the blueprint for that policy. The resolution calls for a gradual and sustained reduction in the deficits with a moderate package of spending restraint and revenue increases. The tax cap stands as a first step to fulfilling our institutional commitment to the budget plan we have adopted.

Critics of the tax cap do not stop with fiscal policy, however. They go on to criticize the tax cap as inequitable to the middle class. To make their case, opponents of the tax cap generate a smokescreen of confusing statistics and distorted images. All this rhetoric should not obscure three basic facts about the tax cap:

First, everyone still gets a tax cut under a tax cap. The only impact of the tax cap is to reduce the size of the tax cut to wealthier individuals.

Second, the tax cap will affect the wealthiest 10 percent of all taxpayers.

Third, while the tax cap will affect some taxpayers with incomes as low as $29,800, the impact is minimal. The tax cap is truly a progressive proposal; 89 percent of the revenue comes from people earning over $50,000. Meanwhile, the taxpayers earning between $30,000 and $40,000 will have their tax cut reduced by about $111 or about $2.13 a week. That is hardly an action that will drown the middle class.

The tax cap is a modest proposal. It will not bankrupt small business or family farmers. It will not impose special burdens on working couples. It will not destroy incentives to work and save.

All these arguments have been raised in a serious effort to discredit the proposal. They are based on confusing and distorted statistics, and they serve only to obscure the basic issue: In this time of record budget deficits, should Congress borrow even more money to provide the wealthiest 10 percent of our citizens with more than $700 in additional tax cuts?

We are facing an unprecedented budget crisis with our projected deficits. No one can forecast the consequences of this looming imbalance in our budget policy. Faced with this prospect, the only responsible and prudent course to follow is to take a series of difficult but modest actions over the next few years to regain control of the budget.

The tax cap represents the first step along that path.

Mr. EXON addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. BYRD. How much time does the Senator need? He may have as much time as he wants.

Mr. EXON. Mr. President, I have looked carefully at the tax cap bill and concluded that its passage would be in the best interest of Nebraskans and the Nation as a whole.

The key requirement in this deficit reducing, spending reduction measure is on line 1 of page 10:

> The changes in the individual income tax contained in this act will be accompanied by dollar-for-dollar reduction in outlays in fiscal year 1984 by an amount which is at least equal to the revenue projected to be collected by these changes in the individual income tax.

What this means is that there will be a dollar of spending cuts for each dollar of additional revenue which is raised by the tax cut cap in 1984. Any time the Senate can get a dollar in spending cuts for a dollar that will not have to be borrowed to finance a future tax cut, it should jump at the chance. In terms of total dollars, this would mean a deficit reduction in 1984 of $12 billion—$6 billion in spending reductions and $6 billion in less borrowing for financing a portion of the July 1 tax cut.

At a time when most thoughtful people are nearly scared out of their wits by deficits and the skyrocketing national debt, we are financing a tax cut by borrowing even more and accelerating deficits and the national debt further.

Last week, when the budget conference report was debated in the Senate, the distinguished chairman of the Senate Finance Committee made some interesting observations about the ratio of spending cuts in reconciliation compared to the revenues that would have to be raised by the Finance Committee. One reason I voted against the budget conference report was because there was too much emphasis on revenue increases and not enough on spending cuts. For example, in 1984 the budget resolution calls for about $3 of revenue increases for every $1 of spending cuts. Over the next 3-year period, the ratio is even worse: Only $1 of spending reduction for each $4.50 of revenue increases.

That is why I say that when the Senate has a chance to cut a dollar of spending for a dollar of revenue increased, we should take it.

Mr. President, I did not decide to support this bill without first looking at the arguments for and against it. I received information from the Treasury Secretary, as all Senators did, regarding the administration's opposition. When I reviewed the administration's case against this bill, however, I could not put out of my mind a statement the Treasury Secretary made just last month: "I will offer a prize to anyone who can show me the connection between high interest rates and high deficits." That was a takeoff on JACKIE KEMP's recent famous quote, "The Republican Party no longer worships at the altar of a balanced budget."

I had always respected that great political party's forthright stand for balanced budgets. Now they have traded it in for a new slogan, "Unbalanced budgets forever." With that kind of approach to the subject of deficits, it is not hard to see why the administration opposes this bill. Such an attitude is also bound to color the various statistical arguments that the Treasury Secretary has used against this effort which would cut the deficit in 1984 by $12 billion.

Allow us to separate fact from fiction. First, this is not a tax increase bill, despite the claim by the administration. Second, everybody in every income group is guaranteed a further tax cut. This bill simply specifies that no taxpayer gets a tax rebate of more than $720 for 1984. That is the reason it is correctly called a tax cap * * * limiting the amount any taxpayer can claim as a refund. Third, despite the tragically false claims by the administration that this tax cap hits hardest at middle Americans, it is simply nonsense.

This tax cap and spending reduction measure does not affect in any way 90 percent of all Federal taxpayers. Nine out of every 10 taxpayers will receive the full tax rebate as incorporated in the present law. Can any reasonable person buy the argument that the remaining 10 percent of Federal taxpayers make up the bulk of "middle America?"

While crying crocodile tears for "middle America" the administration cleverly indeed hit devastatingly and directly at "middle America" last year with the $98 billion tax increase in the so-called Tax Equity and Fiscal Responsibility Act of 1982 and the additional $46 billion in the 5 cents gas tax increase to say nothing of the tremendous additional tax increase on every "middle American" in the Social Security measure which raised payroll taxes. This Senator voted against all those measures because they were

truly burdensome on "middle America."

To repeat, there are approximately 80 million Federal taxpayers. Only 10 percent or about 8 million are affected by the "cap."

One of the Secretary of the Treasury's arguments which is misleading is the allegation that about half of the 8 million taxpayer returns which would be affected by a cap are filed by those earning less than $50,000. But what the Treasury Secretary fails to point out is that the amount by which such taxpayers would be affected is relatively small. When one knows that 89 percent of the revenue raised by this bill would come from taxpayers earning over $50,000 a year, it puts an entirely different light on the matter. Moreover, I have had letters from a great many Nebraskans who would very willing give up a few dollars of their tax cut in order to make progress in reducing huge Federal deficits.

At the opening of my remarks I said that this is a good bill for Nebraskans. Nebraska is a State in which neither government nor business pays high salaries in comparison with many other States in the Union. So while it may be true that 1 out of 10 taxpayers in the country would be affected by this tax cut cap, the fraction is much smaller in Nebraska.

According to the Nebraska Department of Revenue, for the latest year that data are available, only about 4.5 percent, or 1 return out of 22 taxpayers showed an income above $45,000. Only 9.9 percent or approximately 1 in 10 of the returns in Nebraska, represent an income of $35,000 or higher. Since the tax cap would affect family incomes of approximately $46,500 and above, and single taxpayers with an income of approximately $35,700 and above, far fewer Nebraskans would be affected by this legislation than would taxpayers nationally. Although data are not available to break down Nebraska taxpayers by joint or single filing status, my rough calculations indicate that this legislation would affect only about 1 of every 19 returns in Nebraska. This measure is fair and it is reasonable.

The Treasury Secretary has used some interesting national averages on salaries to try to show how this legislation would hurt middle-class taxpayers such as police officers, registered nurses, secretaries, engineers, and teachers. Let me use police officers as an example. The Treasury Secretary said $23,260 was an average salary. But, in Omaha, Nebr., $23,160 is in fact the top pay for police officers. In Lincoln, Nebr., the top is $21,500 and the average is another $2,000 lower than that. For Greater Nebraska, although I do not have figures, I am quite certain that police officers are paid a lower average.

Mr. President, I am only trying to put this into perspective as I must as a Senator from Nebraska. It is true that we are legislating for a whole Nation, not any individual State, but our agricultural economy in Nebraska has been extremely hard hit by this recession which has been heightened, if not caused, by huge Federal deficits. Large deficits have kept upward pressure on interest rates, regardless of what the Treasury Secretary thinks, and these high interest rates have caused an appreciation of the dollar such that our agricultural export markets have been severely affected if not irretrievably lost in foreign markets.

Those who wish to may argue against this legislation so as to preserve 89 percent of the tax breaks in question for people making over $50,000. But I say let us cut $12 billion off the deficit, get interest rates down, and start to recapture our export markets. This may be only a beginning point to reduce this administration's run-away deficits but its about time we start.

Mr. MATSUNAGA. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD. Mr. President, I wish to yield both to Mr. PELL and Mr. MATSUNAGA.

Mr. MATSUNAGA. How much time will the Senator need?

Mr. PELL. Four or five minutes.

Mr. MATSUNAGA. I will wait. I withdraw my request.

Mr. BYRD. I thank the Senator from Hawaii and I will yield time to him following Mr. PELL.

I yield to Mr. PELL such time as he requires.

Mr. PELL. I thank the minority leader very much.

Mr. President, I rise to support the proposed $700 cap on the tax-cut scheduled for July 1. I do so not out of any sense of pleasure at the prospect of curtailing tax relief but out of a sense of deep concern for our Nation's economy.

The fact is that we must make some hard decisions to redress the grievous imbalance in our national fiscal policies. Many of us on this side of the aisle who wished the President well when his term began in 1980, watched with increasing dismay as his economic program was unfurled. The 1981 tax law was, in retrospect, an unmitigated disaster from the point of view of fiscal integrity. Even after the correction of the 1982 tax act, the net revenue drain resulting from the 1981 law is estimated at $851 billion over the 1982-88 fiscal years.

To engage in a massive military buildup at the very time revenues are being slashed so drastically can only be described as utter folly. Yet that is what this administration has done, with the recklessness of an improvident householder using a giant credit card. They have charged it all to the future. I was appalled to see the figures which showed that the budget policies of the Reagan administration could add nearly $1.5 trillion to the national debt between 1982 and 1988, which is more than the total debt accumulated by all previous administrations over the past 192 years.

The disastrous economic consequences of such deficit financing has become patently clear over the past year to citizens in all walks of life in every corner of the country. This past May I sent a newsletter to my Rhode Island constituents which stated in part:

> The defense budget has soared, the Federal deficit has mushroomed, and interest rates have remained too high for too long, squeezing buyers out of the market and shutting down construction projects across our land. As the economy headed toward disaster, the Administration persisted in dismantling the very safety nets that Americans have every reason to expect will be there in time of need. The nation was asked to "stay the course" right into the eye of a hurricane, all in the name of untested theories of trickle down economic growth that just didn't work.
>
> The tragedy of it all is that this is a recession which did not have to happen. It was not caused by economic or natural accidents beyond our control or by malfunction of our economic system. It was caused by the deliberate imposition of the misguided policies of the present administration in Washington, whose leaders lacked the wisdom to foresee the consequences of their policies or the compassion and flexibility to change once their errors became apparent.

There has been only marginal improvement since those words were written. Interest rates are still too high and recovery is still uncertain. Over 9 percent of the Rhode Island work force was still unemployed in May. Looming behind this continuing distress is the mammoth Federal deficit which casts such a long shadow of uncertainty across the economic landscape. We should seize every opportunity to reduce it and we should oppose whenever possible any action to increase it.

The tax-cut cap proposal now before us offers just such an opportunity. It would recoup some $38.8 billion in revenue over the next 5 years. And it would do so with a minimum of discomfort for the Nation's taxpayers as a whole. Everyone would receive some tax reduction and in fact 90 percent of all taxpayers would receive the full cut. Of the revenue raised under the bill, 89 percent would come from taxpayers earning over $50,000.

Mr. President, I have long argued for proposals to restore fairness and balance to our tax system. I believe the cap proposal is a step in that direction. Moreover, it is an equitable and sensible way to stem the tide of deficit financing. It is surely a preferable alternative to automatic tax reduction at a time when the Nation cannot pay its bills. I urge its adoption.

Mr. BYRD. Mr. President, I thank the Senator from Rhode Island, and I yield to the distinguished Senator

from Hawaii, my friend SPARKY MATSUNAGA, whatever time he wishes. I believe we have 20 minutes remaining.

Mr. MATSUNAGA. I thank the Senator for yielding.

Mr. President, I rise in strong support of H.R. 1183, the Tax Rate Equity Act of 1983.

In voting for a measure, Mr. President, it is natural for those of us who are elected to office to ask ourselves where do the American people stand on this? Well, the fact, as has been pointed out time and time again by speakers before me, is that the tax cap would affect only 10 percent of the total taxpayers of America. Ninety percent of all taxpayers would receive the scheduled tax cut in full.

Now, let us take a look at the background of the tax cut. What needs to be remembered is that we are not by H.R. 1183 asking for any tax increase. We are merely asking for a reduction in the tax cut, and to place a cap on the tax cut at $720.

In 1981 the Congress enacted the Economic Recovery Tax Act, commonly referred to as ERTA, which provided for a 3-year program of individual tax cuts.

Under ERTA, individual income tax rates were reduced 5 percent on October 1, 1981, and 10 percent on July 1, 1982. A further reduction of 10 percent is scheduled to go into effect on July 1, 1983. It is this tax cut of 10 percent we are talking about here. We are proposing under H.R. 1183, to limit that tax reduction to $720. Unless H.R. 1183 is passed, a family of four earning $100,000 a year would get a tax cut of $2,368, while a family of four earning $20,000 would receive a tax cut of only $164. In all fairness, let us limit the tax cut to a reasonable $720 for all taxpaying families, regardless of income.

As a result of the passage of ERTA in 1981, Treasury revenues will be reduced by an estimated $507 billion over the 3-year period between 1984 and 1986, and by a total of $1.1 trillion over the 7-year period from fiscal year 1982 through 1988. Even after the enactment of the 1982 Tax Equity and Fiscal Responsibility Act, the projected revenue loss under ERTA is staggering.

Mr. President, I have been talking with many businessmen not only in Hawaii but in other parts of the country where I have had speaking engagements, and I have learned, and I am thoroughly convinced that the prime concern, even of those 10 percent of taxpayers who will be affected most by H.R. 1183, is the prevailing high interest rates—interest rates which are sure to escalate with increased Federal deficits.

Under the House and Senate passed budgets, the total deficits over the next 3 years, although less than under the Reagan budget, will exceed $450 billion.

With this kind of projected deficit, interest rates are bound to rise for the Federal Government will be competing with the private sector to borrow what little money there is available on the market. We must do everything possible to keep interest rates down and to reduce interest rates if we are to see any economic recovery.

H.R. 1183, which proposes to put a $720 cap on the tax cut, will be a step in the right direction. By its adoption, we will save $6 billion. In other words, we will have $6 billion additional in the Federal Treasury by adoption of H.R. 1183.

This is what we are talking about, Mr. President, to keep deficits down, to reduce deficits, if at all possible, and not to go in the direction that the present administration is taking us; $6 billion saved would be $6 billion in the right direction, and by so doing we will help to keep deficits down and by so doing we will keep interest rates down, which would be the prime factor toward economic recovery.

Given the true facts and a choice of consequences, I am confident all American taxpayers would be willing to accept a maximum tax cut of $720 on July 1, 1983, if it means lower interest rates, leading to economic recovery.

So, Mr. President, with that I urge my colleagues to vote for the adoption of H.R. 1183.

Mr. BYRD. Mr. President, how much time remains?

The PRESIDING OFFICER. Three minutes remain.

Mr. BYRD. Does Senator MELCHER wish to take that 3 minutes?

Mr. MELCHER. Yes.

Mr. BYRD. I ask unanimous consent that the remarks of Mr. MELCHER be joined with his earlier remarks in the RECORD so as to show no interruption.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The remarks of Mr. MELCHER at this point are printed at the conclusion of his earlier remarks, in accordance with the foregoing order.)

The PRESIDING OFFICER. The Senator's time has expired. All time has expired for the proponents.

Mr. DOLE. Mr. President, as I understand the parliamentary situation as far as time, the time for the proponents of the amendment has expired, is that correct?

The PRESIDING OFFICER. The Senate is correct.

Mr. DOLE. How much time is remaining on the opponents' side?

The PRESIDING OFFICER. The Senator has 76 minutes and 7 seconds remaining.

Mr. DOLE. I will assure the Chair that I do not intend to use 76 minutes or even 6 minutes. There will be another hour of debate tomorrow morning starting at 9 o'clock and we will again discuss this issue.

Again, I hope that the amendment will be defeated. As Senator MELCHER has indicated, we are going to have an opportunity later on this year and I can assure the Senator we are looking in our committee at preferences and compliance in areas that really talk about fairness, you ought to see some of the things that some taxpayers get away with. You talk about fairness, we are going to give everybody a chance to vote for fairness, for broadening the base of the Tax Code, and for equity.

This was a tax cut that was enacted. Let us face it, if we had a tax increase, if you made more money, you would pay more taxes. If you have a tax cut and you make more money, you get a bigger tax cut. That is what it is all about. It does not mean anybody is going to get rich over the tax cut. Some people earn more money and pay more taxes. If there is a tax reduction, they get a larger reduction. That is one of the details that has been overlooked in all of this debate.

So I just suggest that, again, we go back to the $100 billion tax bill last year. Not many of the people who have spoken supported that measure, and that really was aimed at closing loopholes and tax shelters and at big oil companies and big insurance companies and others who were getting away with paying very little tax. That was real tax reform.

But the first time we voted, not a single member of the Democratic Party voted for that $100 billion tax reform bill. The conference report, I say to the credit of the 11 who supported that, was vital.

So I hope that we understand that this is probably a total political exercise, maybe political on both sides. The President says he does not want the cap; the Democratic leadership says they do want a cap. So you have a Republican President who says, "No cap," and the Democratic leadership that is pretty well united saying, "We want a cap." So that makes it political. And I hope that it is understood in that way.

If, in fact, the amendment is not adopted, that does not diminish our responsibility to try to follow through with a budget resolution, though I think it is a lousy resolution, and I have said so. All it does is raise taxes and very little spending reduction. They even came up with some new invention called fencing in new programs that have not been approved, 10 billion dollars worth.

If you put that in the mix, in fact, there is an increase on the spending side rather than a decrease in nondefense domestic spending.

In the Senate Finance Committee, I guess we are fortunate, we get 88 percent of the responsibility for that. We are going to try to face up to that responsibility if the President of the United States indicates his support and if there is an indication that the

House and the membership of the House is willing to move on the budget resolutions. I assume they will be.

Mr. President, I have no quarrel with those who feel that there should be a cap. I disagree that that is an argument of whether you are fair or unfair. No one has ever defined what rich means in this Chamber. Everybody is rich, if there are political arguments. They say, "Well, we are going to tax the rich." That makes everyone feel good. I do not know anybody who will admit they are rich. Well, maybe 500 or 5,000 people in the country.

So it is a patently political argument. It may be good politics but it is certainly not good tax policies.

There will be other opportunities when this amendment is defeated to indicate our concern that the system is fair.

Six million people did not file tax returns last year we are told, and many of those because they do not think the system is fair.

The system is not fair. It is not because of the tax cuts. Everyone agrees that the marginal tax rates are too high. All we did with the so-called Reaganomics or tax cut was to reduce those marginal rates over a 3-year period.

So far as this Senator knows, no one is quarreling with that. But there is every right to quarrel, by Democrats, Republicans, and everyone else, that there is a lot of fat in the Tax Code that ought to be examined and ought to be tightened up.

Some companies and some institutions pay hardly any tax at all. In fact, we were told today that some of the large companies actually got refunds. They had a negative tax because of a lot of loopholes that have not been addressed for 10, 20, or 30 years.

In the process of the debate, let us not lose sight of our final responsibility, to try to reduce the deficits and certainly some of that must come from the revenue side.

I yield back the remainder of my time.

ROUTINE MORNING BUSINESS

Mr. STEVENS. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, not to extend beyond the hour of 7:30 p.m., during which Senators may speak therein.

The PRESIDING OFFICER. Without objection, it is so ordered.

FORMER ACDA DIRECTORS ON ARMS CONTROL POLICY

Mr. CRANSTON. Mr. President, on June 23, I submitted for reprinting in the RECORD arms control policy statements of former ACDA directors. Inadvertently, the Honorable Paul Warnke's name was omitted from the printing of this statement by the RECORD. I hereby resubmit these statements in their entirety and ask unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TESTIMONY OF GERARD C. SMITH

I

I have been asked to speak about some arms control aspects of the relationship between the U.S. and the USSR, including the effect of and on the ABM Treaty of the President's recent proposal for a major long-range effort to develop strategic defenses sometimes called his "star wars" dream.

II

First let me speak about the recent change in the "START" position which is said to reflect the findings of the Scowcroft Commission and presumably is the Administration's first move to keep its end of the bargain with Congress which led to the affirmative vote on the MX program last month.

If it is merely considered as an "opener" for a genuine negotiation, the Administration's move to raise the permitted levels for ballistic missile launchers seems a positive step.

If one can take literally the White House assurance that "everything is on the table," some movement in START may be possible. But we have heard this assurance before. Our chief negotiator's recent statement that he now has authority to listen to Soviet proposals makes one wonder about the nature of the START negotiations over the past year, when we were assured that progress was being made.

A fair inference from the Scowcroft Commission report is that the "window of vulnerability" never existed and that claims that the United States was a second class nuclear power based on alleged vulnerability of our ICBMs were unfounded. The Scowcroft Commission surprisingly reported "reasonable survivability of fixed targets, such as ICBM silos, may not outlast this century." But the latest START proposal seems to disregard the Scowcroft conclusions, which clearly state that we have no immediate or near term problem of vulnerability. It still seems to be trying to close that "window of vulnerability."

The proposal continues past effort to get the Soviets to shape their strategic forces after the United States model. If the Soviets accept, it would require vast new expenditures to reconstruct their forces. It has been reported that the Administration believes that Soviet economic difficulties will encourage them to bargain seriously. If our idea of a successful bargain is that the Soviets would have to invest large resources to alter their force posture, dependence on this economic motivation seems illusory.

In the past, progress in strategic arms negotiations was made when they were private. The publicity surrounding the new proposal suggests that its main purpose is propaganda—to appear to meet domestic and foreign pressures for change.

The one new element is to raise ballistic missile launcher ceilings from 850 to a level reported to be in the range of 1100/1200. That alteration seems aimed as much to ease American force planning as to limit Soviet forces. If we are to have 100 MXs and Midgetmen, the 850 limit would have been too tight.

Apparently all the other provisions of the earlier START position are retained—the 2500 ICBM warhead ceiling, the 210/100 Soviet MIRVed missiles limit. Ambiguity, if not silence, persists about our ideas on limiting cruise missiles—systems of special concern to the USSR. We apparently are willing to discuss any Soviet proposals. Proposed bomber limitations seem somewhat unequal—400 for the U.S. not including FB-111s, and 350 for the USSR including Backfires and the new bomber we call Blackjack.

The Soviets have to reduce ICBM warheads by about 3500—the U.S. could increase by about 250.

The Soviets would have to reduce MIRVed ICBMs by about two-thirds, while the United States could build 100 MIRVed MXs and some MIRVed Trident II missiles with hard target kill capability.

It has been calculated that Soviet missile throw weight would have to be reduced from 8.8 million to 4.2 million pounds.

All of this would result in substantially increased vulnerability of Soviet ICBMs and substantially decreased vulnerability of U.S. ICBMs.

It would tend to result in parity in ICBM throw weight while continuing United States superiority in bombers and cruise missiles. The proposal seems to add up to an offer that the Soviets can easily refuse. Have we not learned by past SALT experience that one-sided proposals cannot work and will only kill time, which is a wasting asset?

This criticism of the new START position is based on news reports about its content. But it would not be surprising if in addition the Geneva delegation had been made aware of possible other areas where concessions might be made if the Soviets engaged in serious negotiations. The most likely candidates would be the proposed ceiling for ICBM warheads and the sublimits on Soviet MIRVed warheads.

If such fallbacks were foreshadowed, prospects for realistic negotiation would be somewhat brighter. But a bargain seems unlikely if the U.S. remains equivocal about limitations on cruise missiles.

Until then the new proposal's main purpose seems to be to get MX safely underway, with public and Congressional anxieties tranquilized for a while. I wonder how long such a palliative will work. With the deepening public commitment to arms control and election year bearing down, more substantive moves seem called for.

I would say that the present status of the Administration-Congress bargain is that the Administration got what it wanted on MX. So far the Congress has only obtained a change of tone in the arms control rhetoric.

Criticism of the Administration's arms control policies should be tempered by recognition that the USSR bears a good part of the onus for lack of progress. Even if we refrain from express linkage of arms control to other aspects of Soviet-American relations, the somber messages of Afghanistan and Poland cannot be forgotten. Unanswered charges of possible Soviet violations of SALT and other arms control arrangements do not help. Soviet treatment of dissenters continues to shock even the most ardent American proponents of agreements to control arms. We would not be interested in negotiating with Soviet leaders but for the supreme urgency of controlling nuclear weapons.

III

The new proposal seems to reflect an attitude about strategic arms control that might be characterized as "well, if we can't get it, too bad—let the chips fall where they may." Contrast this with the conclusion of the Scowcroft Commission that effective arms control is essential to the nation's security.

I think we tend to overlook what a sharp setback for arms control was the failure to ratify SALT II. Coming on the heels of our failure to ratify two earlier control agreements, this collapse of a seven-year effort is still having prejudicial effects. Tacit honoring of SALT II, which the Administration found fatally flawed, is no substitute for embedding the treaty in international law by ratification. START was supposedly an effort to correct the "fatal flaws" of SALT II. So far it has not.

I think it is not unfair to say that our present national security managers bear a good part of the responsibility for SALT II's failure. And it is perhaps understandable that the USSR is now somewhat cautious about seriously negotiating for a fourth arms control agreement. In the face of our past failures, talk by high Administration officials about the need to prod or encourage the Soviets to negotiate must sound somewhat ironic to Soviet ears. They must wonder what prods are available to them to get America to ratify past agreements. The situation is not improved by the Scowcroft Commission's findings that serious flaws existed in our first START proposals—flaws which President Reagan quickly admitted.

Are these flaws corrected by the revised START proposal? Aside from its tone, which is said to reflect greater flexibility, the only change is in one number. I agree with Secretary Shultz' statement before this Committee last week that the prospect for early progress is not bright.

I believe that the Soviet greater interest now is in the INF negotiation where there is a year-end deadline. I doubt that they will work seriously on START until they have a better idea as to how the INF negotiation is going to come out.

The arrangement which the INF delegation leaders reportedly worked out last year where Soviet reductions in SS-20s would be matched by cancellation of proposed Pershing deployments but under which some U.S. cruise missiles could be deployed begins to look better as the date approaches for the Pershing deployment. Although both governments disclaimed interest in this deal, the circumstances are as yet unclear as to which was first to react.

The Administration's conviction that the Soviets will soon start negotiating in earnest will be put to a final test as winter approaches. If that belief proves wrong, we will face the likelihood of deployment of additional Soviet missiles targetted on the U.S. and Soviet withdrawals from the INF and perhaps even from the START talks. That would promise a cold winter and a collapse of hopes that some control of nuclear arms might be accomplished by this Administration. Calls are being heard in responsible quarters in Europe for reconsideration of the Nitze/Kvitsinsky bargain. Clarification for the Congress of the reasons for and timing of our rejection of this arrangement may be in order.

I do not sense in Washington even the beginnings of any alarm about a possible crisis. We are so sure it won't come to that—that the Soviets will concede to our views when the first Pershings appear in Germany. But are the Soviets bluffing in saying that they will counter-deploy some new system to put U.S. targets under similar time urgent duress? Their interest in negotiating any arms controls with this Administration will be reduced if the Pershings are deployed. No wonder some informed people here and abroad believe that it was a mistake to start down the "double track." I was struck by the statement in the recent staff report for this Committee that something along the lines of the Nitze-Kvitsinsky bargain may perhaps be the best chance of reaching agreement. Not since the Berlin crises of the 50s and 60s have the two sides faced similar challenges. I question whether a policy of "let the chips fall where they may" is either sufficient or appropriate for what may well develop into a major Soviet-American crisis.

IV

I was also asked to comment on the relation of the President's "star wars" proposal to the ABM limitation Treaty of 1972. On this score, I would like to submit for the record an analysis prepared by John Rhinelander who was legal advisor to the SALT I delegation and a participant in the ABM negotiation.

Very briefly, my understanding of the ABM Treaty is that (a) All ABMs were banned in 1972 except two fixed land-based systems having 100 launchers each to defend a nation's capital or one ICBM field; (b) In 1974 it was agreed to reduce the limits to one system for each side; (c) An ABM system was defined as then made up of launchers, radars and missiles; (d) Development testing and deployment of sea, air, space or mobile land-based systems was banned: (e) If land-based systems are developed using so-called "exotic" components—lasers, particle accelerators, etc.—they could not be deployed unless the Treaty was amended.

Any major program to implement the President's "dream" would very quickly run afoul of the ABM Treaty's constraints. Even engineering work to develop a space-based system is banned under the Treaty. Perhaps the machinery of the Standing Consultative Commission set up under the Treaty should be resorted to in the first instance in an effort to clear up ambiguities as to just how far the signatories can go without violating the Treaty.

We hear much these days about the importance of the stability of the strategic balance. Arms control treaties have an important part to play in this respect. By foreshadowing a program which would inevitably violate the ABM Treaty, I believe that we are introducing uncertainty which cannot fail to have a prejudicial impact on the current strategic balance. Gromyko's statement on June 16 contained language indicating Soviet concern on this score.

What the President had in mind, apparently, were defensive systems to protect not just the United States but all of its allies from attacks by ballistic and cruise missiles as well as bombers. Many have had the dream that the nuclear threat could be laid to rest by effective defensive systems. Mutual invulnerability would be a much better deterrent to war than the present mutual vulnerability. But I am told by knowledgeable scientists that the technical prospects for developing such systems are minimal to non-existent. If we seriously set out on a long-term quest for an impervious defense for our populations, serious near-term threats to the national security will arise. (One prejudicial effect may already be in train. It seems likely that U.S. refusal to negotiate controls over anti-satellite systems is motivated by an aim to avoid further restraints on exotic "star wars" components of defensive systems which would use similar technology.)

Not only would going for "star wars" systems signal our intent to annul the ABM Treaty, which for 11 years has staved off a superpower competition in defensive systems to match the present only informally and incompletely regulated race in offensive systems, it would signal to the Soviets a likely U.S. aim to neutralize their retaliatory capability to respond to any American first strike. The President himself recognized this danger by saying that, paired with offensive missiles, an effective defense could be viewed as fostering an aggressive policy, and he added that we did not want to give that signal.

But regardless of good intentions, could an effective defense of North America, Western Europe and our Far Eastern allies send any other signal to the Soviets? There seems to be no prospect that the United States or the USSR, if they ever mounted such defenses, would abandon offensive forces. Would the resultant strategic balance be more stable than the present?

Unmentioned in the talk of defenses (which presumably would be conveniently deployed out of sight in far away space) is the question of the consequential clear need for massive civil defense programs for populations. Unless the unwarranted assumption is indulged that an impermeable defense system could be mounted, it must be assumed that some attacking warheads would reach targets. Pressures would mount for gigantic blast and fall-out shelter programs to protect these unpredictable targets.

It seems a sure thing that an American program to try to realize the President's dream would promptly be matched, not only by a similar Soviet program, but by their development of new offensive systems designed to penetrate defenses. I am afraid that the President's dream would generate a more tense strategic relationship with the USSR while never attaining the defensive posture contemplated.

V

In 1969 a number of us tried in vain to persuade the government that a ban on MIRVs would advantage the nation's security. That was when we were beginning to test MIRVs and before the Soviets had tested theirs. Now 14 years later it is recognized that MIRV is a source of strategic instability that advantages the Soviets more than us because of their larger missiles. The Soviets in SALT II reportedly proposed that any new class of ICBMs have only one warhead. We did not accept because we wanted MX.

Now we are faced with somewhat similar situations. The Soviets have tested and we are soon to test systems to destroy satellites in space. It would seem to be all to America's advantage to ban such systems since we are more dependent than the Soviets on satellites for peacetime intelligence and communications and for controlling wartime operations. But the negotiation looking to controlling this threat has been suspended by the U.S. Such controls may be as important as those over strategic weapons. I urge the Commission to press for resumption of the negotiation.

Another decision we may well live to regret is to allow a free competition in long-range SLCMs. Simple geography suggests that the American homeland will be more

vulnerable than the Soviets' to this system. Deploying them in attack submarines can only prejudice the effective fulfillment of the normal role of such vessels. Verification problems will become much more complex if such systems are not banned at an early date.

As a former director of the Arms Control and Disarmament Agency, may I make a plea on behalf of this orphan. The various purges since 1973 have left ACDA weak. Its staff has minimal influence, although in years past ACDA members played key roles in developing and implementing arms control policy. More than in any other field of national security policy, it seems to me that bureaucratic memory is indispensible to the management of arms control affairs. What has happened to ACDA in the last decade has been prejudicial to the nation in this respect. I don't think it is too much to say that we cannot expect to have sound, strong, and vigorous arms control policies until ACDA's position in the bureaucracy is restored to something approximating that of the past. It is too much to expect that arms control programs engineered by Pentagon people, whose main and proper responsibilities are for weapons programs, will be sufficient to meet the arms control needs of the country which are now being recognized as essential, not just possibly useful. Let's face it, a basic asymmetry in the Soviet-American relationship is the fact that they have a foreign minister who has conducted arms control negotiations for over thirty years, since before some of our people working on arms control matters were born. What an advantage. At least we should have the institutional substitute for such long-term experience which was one of the reasons for the formation of ACDA. We do not have it.

What is needed:

(A) A strong staff, which means a larger budget and more positions. Restoration of ACDA computer facilities and library.

(B) A greater ACDA role in the national security bureaucracy—perhaps with the Director becoming a member of NSC.

(C) Clarification of the relation between the Director and the Secretary of State.

I urge the Congress to take a fresh look at ACDA to see if its legislative basis needs fortifying.

VII

The deeper we get into the valley of death of nuclear confrontation the more obvious it should be that solutions do not lie in more or better weapons systems. We should accept as literally true the conclusion of the Scowcroft Commission that effective arms control arrangements are essential to the security of the United States. And I think that term covers more than just strategic arms limitation. The security of the U.S. is also threatened by the prospective proliferation of nuclear weapons to additional nations—a threat which would be moderated if a comprehensive test ban were in place. And I am persuaded that such arms control arrangements are attainable, given the necessary political will—on both sides.

TESTIMONY OF PAUL WARNKE

TECHNOLOGICAL DEVELOPMENTS AND THE FUTURE OF ARMS CONTROL

Current developments in nuclear weaponry are inimical to our national security and increase the risk of nuclear war. New weapons systems are being developed, by both the United States and the Soviet Union, that will pose a greater threat to the survivability of the nuclear arsenals of each side and therefore erode the deterrent. Both nuclear superpowers seem bent on acquiring nuclear weapons with war-fighting capability, while the leaders of both sides purport to recognize that neither country could fight, survive and win a nuclear war.

Moreover, there is nothing in prospect, either in the form of more survivable and less threatening weapons or in the form of arms control proposals, that shows any promise of relief from this grim prospect. Neither in the INF talks, on intermediate range nuclear forces in Europe, nor in the START talks, on ICBMs, SLBMs and strategic bombers, is there any sign of progress. And given the proposals that have been made public, this lack of movement is not surprising.

There are some who express hope that greater "flexibility" is becoming apparent in the arms control stance of the Reagan Administration. Some profess to see movement toward the recommendations of the President's Commission on Strategic Forces. But here again I must say that I see only a greater rhetorical flexibility and that I find in the recommendations of the Scowcroft Commission nothing that will stop or even slow the slide toward nuclear confrontation.

If its recommendations can be ignored, as I believe they should be, the report of the Scowcroft Commission makes a lot of sense on strategic policy. It recognizes that intercontinental ballistic missiles with multiple independently targettable reentry vehicles, or warheads, with great accuracy create the greatest risk and are inherently destabilizing. No minimally rational leader of either country would initiate a strategic nuclear exchange as a matter of deliberate, reasoned decision. But with the growing counterforce capability of missiles that can launch 10 warheads against the missile silos of the other side, along with other destabilizing developments, the point could come at which a nuclear war starts because one side panics and strikes in desperation, from fear that adequate retaliatory forces could not survive a preemptive strike by the other.

Indeed, it is our concern with the Soviet MIRVed ICBMs that forms the basis for our START proposals asking that the Soviet SS-17s, 18s and 19s be cut back by 75%. Possibly we are tabling in the closed discussions in Geneva some suggestions that would give the Soviets some constraints on American forces that could lead them to consider this massive restructuring of their strategic arsenal. But no such quid pro quo can be seen in the proposals that have been made public. Nor do Soviet public reactions indicate that any such inducements have been made known to them.

Instead, the Administration appears insistent on building 100 MX missiles with 10 accurate warheads each, going ahead with thousands of air, sea and ground launched cruise missiles and developing and deploying the D-5 or Trident II submarine-launched missile. The Scowcroft Commission endorses both the MX and the Trident II, on the ground that they will enable us to put "Soviet hard target at risk." This is not a formula for restraint.

The apparent theory is that we can scare the Soviet Union into making sensible moves toward stabilizing systems by deploying destabilizing systems of our own. The rationale is expressed in terms of bargaining chips. But the theory seems to be that we can make the Soviet Union cry uncle at the bargaining table by, for example, deploying 100 MXs and threatening to build still more. But this is not bargaining. It is, instead, the arms race theory of arms control and it won't work.

The fact is that there exists today rough strategic equality. This has been recognized by the Joint Chiefs and even in posture statements of the Secretary of Defense. And this is the best that can be achieved, the situation most conducive to avoidance of nuclear war. It is for this reason that efforts should be made to achieve a mutual verifiable freeze. This freeze would of course have to be obtained on a step-by-step basis. An effort to stop everything at the same time would mean that nothing would be stopped for the indefinite future.

The Committee for National Security, of which I am the Chairman, proposed some weeks ago an approach to strategic arms that I believe does hold promise of improving, rather than reducing our national security. This would involve building on the provisions that were agreed upon in the SALT negotiations and moving away from greater emphasis on MIRVed counterforce missiles.

Instead of the MX, there would be a mutual ban on any new MIRVed ICBM—a ban that would stop testing of the Soviet solid fueled MIRVed SS-X-24. There would also be a 50 percent cut in the SALT II ceilings on MIRVed missiles. The total number would be cut from 1200 to 600, MIRVed ICBMs would drop from 820 to 410 and the Soviet SS-18s would be reduced from 308 to 154.

The Reagan Administration proposal of a limit of 5000 warheads on long range ballistic missiles would be retained, with a consequent reduction of about one-third of the currently deployed Soviet warheads.

The total number of strategic nuclear delivery vehicles would be cut from the SALT II ceiling of 2250 to 1650. Since this total would include strategic bombers, the missile numbers would be reduced as the Reagan Administration has proposed.

Finally, new MIRVed sea-launched missiles, both ballistic and cruise, would be subject to a moratorium which would retain their potential for bargaining leverage.

There are, of course, other formulas that might be equally effective. But, in contrast to the START proposals, both as originally presented and as modified, this approach would result in equivalent restraints and greater security for both sides. As publicly presented, the START proposals would require the Soviet Union to scrap the core of its strategic arsenal, while allowing the United States to proceed virtually unchecked with our plans for modernization of our strategic forces.

This is clearly not negotiable. And even if we could indulge this unreasonable hypothesis it would not be desirable. In the curious but inescapable logic of the nuclear age the security of the United States is not advanced by putting the strategic nuclear forces of the Soviet Union at risk. At a time of serious international crisis, this can only lead Soviet leaders to wonder whether and when they should launch their weapons to avoid their destruction.

Greater security and lower risk of nuclear war requires movement toward strategic forces that are the most survivable and the least threatening to the survivability of the other side's deterrent. Any new weapons programs and arms control proposals should be designed to move nuclear dependence away from MIRVed land-based ballistic missiles and toward submarine-launched ballistic missiles. Neither the report of the Scowcroft Commission nor the current START

proposals as publicly presented can have that desired effect.●

SOVIET CITIZENS' VIEW OF NUCLEAR WAR

Mr. PELL. Mr. President, I recently read in the May 29 issue of the Santa Barbara, Calif., New-Press a very moving interview with Mr. Frank Kelly of that city, following his return from a 10-day trip to the Soviet Union.

The author of the article, Sally Davis of the News-Press staff, has done an excellent job of capturing Mr. Kelly's insights as he reflected on his experiences as 1 of 29 participants in a U.S.A.-U.S.S.R. citizens' dialog. Mr. Kelly is an officer of the Nuclear Age Peace Foundation and a board member of the National Peace Academy Campaign here in Washington. He was deeply involved in the establishment of the Center for the Study of Democratic Institutions.

According to the article, Mr. Kelly left the Soviet Union convinced that the people of the two countries will see to it that nuclear war does not occur. The Soviets he encountered, Mr. Kelly said, possess a really deep desire to prevent a nuclear war.

As Mr. Kelly told one Russian mother who asked whether her 10-year-old son would be destroyed in a nuclear war, "No; I have hope."

I have known Frank Kelly for a number of years, and I have come to admire the drive, energy, and intelligence he brings to the quest for peace. He knows there are problems, but he knows also that our future is at stake, and he will never falter in his search for peace in the world.

Mr. President, I commend the News-Press article to my fellow Senators and ask unanimous consent that it be printed in the RECORD following my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WRITER FINDS, SOVIETS SHARE NUCLEAR WAR FEARS—PEACE ADVOCATE FRANK KELLY RETURNS FROM VISIT TO RUSSIA

(By Sally Davis)

The woman, a reporter for a Soviet radio station, looked for a quiet spot to talk with Frank Kelly. She found one.

"I'm the mother of a 10-year-old boy," she confided. "Is there any hope for my son? Won't he be destroyed in a nuclear war?"

"No," replied Kelly. "I have hope."

He meant it.

The woman reporter, heartened, then turned her tape recorder on and chatted with him about lighter things—his impressions of the country, the visits to cathedrals, museums and the theater, the trip to Estonia.

Kelly, who lives in Santa Barbara, recountered the conversation after his return from a recent 10-day trip to the Soviet Union because to him it illustrates that the Soviets are just as frightened as Americans—if not more so—about the possibility of nuclear annihilation.

The Soviets possess "a really deep desire to prevent a nuclear war," he said.

The Santa Barbara writer said he left the USSR convinced that the people of both countries will see to it that nuclear war doesn't happen.

Kelly was a delegate at the U.S.A.-U.S.S.R. Citizens' Dialogue, and American organization that since 1979 has arranged exchange visits to promote "trust and understanding" between citizens of both countries.

An officer of the local Nuclear Age Peace Foundation, and a board member of the National Peace Academy Campaign based in Washington, D.C., Kelly was one of 29 participants who made the 10-day trip to the Soviet Union in April.

Kelly said he has long been an opponent of war.

"My father was badly wounded in World War I, and I've seen the devastation of Europe," he said. Kelly, who interrupted his Nieman Fellowship at Harvard to enlist in the Army during World War II, was a war correspondent for Stars and Stripes, the Army's newspaper.

After an impressive career that included a stint writing speeches for President Truman, Kelly helped his friend Robert Hutchins establish the Center for the Study of Democratic Institutions, partly because he hoped the center could devise ways of achieving world peace. He was a vital part of the center for 16 years, and has published a book about its sometimes controversial history entitled "Court of Reason.")

Ever since he was a teen-ager, when he began to write and publish science fiction stories, Kelly said he has been aware of the Earth as a single "planetary civilization." In other words, he said, he became proponent of the "Spaceship Earth" concept.

Subsequent strides in space exploration convinced him that for civilization to survive and prosper, there would need to be unity on the planet and peace between the two world leaders.

When a Soviet cosmonaut became the first to orbit the earth in 1961, Kelly proposed that a statue be presented to the Soviet Union as a gift from the United States to "celebrate man's leap toward the stars," just as the gift to the U.S. of the Statue of Liberty from France symbolizes the friendship between the two countries, he said.

When the Americans landed on the moon, and photographs from the moon's perspective were transmitted of the planet, Kelly said he became even more aware of the need to preserve "the fragile blue ball on which we live."

He discussed his feelings about the importance of world peace in the speech he gave at the dialogue. He spoke of the strong support American voters gave to the proposed nuclear arms freeze, and of the myriad peace movements being organized by churches and other groups.

Kelly recently published a book summarizing the history of efforts by Americans to establish a National Peace Academy. The academy would be "dedicated to the education and training of professional peacemakers and to the dissemination of information about the developing art of peaceful conflict resolution."

In his speech, he said the academy is likely to be approved by Congress this year, and that it "will be a signal to the world that the United States is dedicted to the peaceful resolution of all conflicts."

He said the part of his speech that aroused the most interest was a proposal that either the United States or the Soviet Union dismantle half of its nuclear weapons and invite the world to witness the event.

"Would not that nation open a new era in history, with humanity set free from the nightmare of a nuclear war?" he asked his audience.

Afterward, he recalled, a Soviet writer approached him and said he approved the idea. "But," the man said, "wouldn't that be interpreted as a sign of weakness?"

Kelly replied that leaders in Washington felt the same way. Yet, "somebody's got to take the initiative."

Despite his long-held desire for peace, and his interest in establishing friendly relations with the Soviet Union, Kelly said at first he was hesitant to accept the dialogue's invitation to be a delegate.

"Because relations are so complicated and so difficult, I wondered whether I could make a contribution," he said, attempting to explain the reasons for his reluctance. "I decided to do the best I could."

The dialogues were informational and inspiring, Kelly said. Yet what impressed him most about his trip was the chance to meet the Soviet people. None of them showed any hostility toward Americans, he said.

He admitted he was surprised to find their delegation greeted by "smiling people holding bunches of yellow daffodils," and that wherever they went, people "beamed at us and wished us well."

He said Russians are exceptionally interested in Americans and equally concerned about peace. On the train to Estonia, he and two other Americans shared a compartment with a Russian man who could not speak English.

At some point during the night, Kelly awoke, freezing, and the Russian somehow realized it. "He got a blanket without saying a word. It was really very touching, I thought."

They talked through an interpreter, and the man said Kelly reminded him of his father. The relations between the two countries, the man told him, are like the relations between "brothers in a family. We're not going to kill each other."

Kelly also had the opportunity to speak with a bishop for the Russian Catholic Church, and he told him he had heard that there had been more Christian baptisms in the Soviet Union than in the U.S. recently. He asked the church leader if that were true.

"Oh you Americans," laughed the bishop, Kelly recalled. "You're always so interested in numbers. Are you trying to start a baptismal race, too?"

RHODE ISLAND

Mr. PELL. Mr. President, the Wall Street Journal this morning carried a story about the State of Rhode Island which calls for a prompt public response. The article by Stephen P. Morin recites a lengthy catalog of the qualities—including many of the faults—of my home State. Much of what Mr. Morin says is true.

It is true, as he says, that Rhode Island is very small and that it is an intimate place. It is also true that Rhode Island has had its share of blemishes, that it has the patina of age and that, for a variety of reasons,

its economy is still evolving to new stages of vitality.

Those who do not know the State might think there is no more to be said. But speaking as one who has known and loved Rhode Island all my life and represented it in this body for more than two decades, I know Mr. Morin tells only half the story.

Rhode Island is as big as Alaska in terms of the wealth of its human resources and its rich cultural heritage. These are a part of its charm. It asks no favors because of its size. And it stands ready to compete on equal terms with States dozens of times larger.

Those who would still doubt should come and see for yourself. Walk the ancient streets of Newport or Providence. Regard the statute of the Independent Man atop the statehouse and contemplate the heritage of Roger Williams that still infuses our community with a spirit of compassion. Stand at Point Judith and look to the sea and reflect on the fact that this smallest of States was founded on the largest of principles.

In fact, come for the Fourth of July weekend and you will want to stay for the summer.

RHODE ISLAND'S MANY CHARMS

Mr. CHAFFEE. Mr. President, today's Wall Street Journal carries an article that is highly uncomplimentary to the State of Rhode Island.

Nobody who has visited Rhode Island needs to be convinced of its beauty and pleasant living conditions.

Our State has economic problems which we freely acknowledge and are working to solve. It is pleasing that our unemployment has remained less than the national average during the current recession.

We do not have to trumpet to the world that Brown University received more applicants this year than any Ivy League colleges including Harvard and Yale.

Our Trinity Square Theater has received international acclaim, and Narragansett Bay's beauty and sailing conditions make it the prime east coast yachting center.

We are delighted that Newport is one of the outstanding naval education centers in our Nation and produces more naval ensigns than all the naval ROTC's and the Naval Academy combined.

Cross pens, Gorham silver, Bostitch staplers, Brown & Sharpe machine tools, Trifari jewelry, American Tourister luggage, General Dynamics submarines, all these and many more are products of Rhode Island.

There is no need to dwell on the attributes of the ocean State.

The Wall Street Journal did not harm Rhode Island by its sour article. Instead, the reputation of the Journal for objectivity has been brought into serious question.

A LEGACY TO THE POOR

Mr. MATSUNAGA. Mr. President, recently we were called upon to disclose our outside earnings apart from our salaries as Members of Congress. It is with a degree of ambivalence that I so comply since my share of the world's goods tends to pull down the median personal worth of my colleagues. I take solace, however, in the Sermon on the Mount regarding the poor and their eventual inheritance. It was with keen and especial interest, therefore, that I read of the plans of Mr. Harry Weinberg, said to be Hawaii's richest man, to give his vast holdings, estimated to be far in excess of $200 million, to the poor.

As one who was born into a poverty-stricken family, but whose personal holdings today may not be sufficiently paltry to qualify me for any part of Mr. Weinberg's largess, I am intrigued that the Aloha State is home to a modern-day Andrew Carnegie. Since Mr. Weinberg has acquired his wealth in business dealings in Scranton, Pa., Baltimore, Md., and in the State of Texas as well as California and Hawaii. I thought a number of my colleagues would be interested also. Earlier in his career his interest in public transit stocks brought him to public attention.

With your permission, Mr. President, I would like to insert into the CONGRESSIONAL RECORD two articles from the May 18 issue of the Honolulu Star-Bulletin, one a news story on the financier's plans, and the other a column by the retired and contributing editor of the paper, Mr. A. A. "Bud" Smyser, so that people familiar with Mr. Weinberg outside of Hawaii may learn of his current plans and views at the age of 74. I ask unanimous consent that the articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Honolulu Star-Bulletin, May 18, 1983]

WEINBERG LEAVING ESTATE TO CHARITY

(By A. A. Smyser)

Harry Weinberg, reported to be Hawaii's richest man, says he will leave his entire estate to charity when he dies.

Weinberg, now 74 and suffering from bone cancer, said yesterday he even may turn his wealth over to trustees before he dies to be used "all to the poor, not to the rich."

The single exception, he said, is that he will provide for his wife. But when she dies, all of her wealth also will go to charity. Weinberg said he already has given to other family members all that he plans to give to them. He said he made his son a millionaire a long time ago.

Hawaiian Trust Co. has the documents establishing the trust, he said. Weinberg has in mind trustees he hopes will follow his financial principles, but only for the benefit of the poor.

Weinberg's comments were made at the annual stockholders meeting yesterday of HRT Ltd., a public corporation whose stock is more than 95 percent controlled by Weinberg.

Forbes Magazine last year placed Weinberg among the 400 richest people in America. It estimated his personal fortune at "far in excess of $200 million."

Contributing Editor A. A. Smyser relates details of the meeting in an editorial column on Page A-16.

WEINBERG MAKES HIS PLANS

Since I own five shares of HRT, Ltd., and am not too busy these days, I turned up at the company's annual meeting yesterday.

When I bought my HRT shares it was a bus company, but now it is pretty much the personal property of Harry Weinberg, who probably is Hawaii's richest resident.

He and his family own over 95 percent of the shares and use the company as an investment vehicle—he once described it as a "mutual fund" for shareholders.

But since it is a public corporation, HRT, Ltd., still must hold public annual stockholder meetings. It occurred to me that this shareholder might quiz management or comment on it in much the same way Weinberg has sounded off at meetings of other corporations in town.

A few years ago his public mutterings of dissatisfaction presaged the restructuring of Dillingham Corp. that gave shareholders around $45 for shares that then had been selling for only about $10.

This year Weinberg enlivened the annual meeting of one of Hawaii's Big Five companies, Alexander & Baldwin, Inc., with sharp criticism of management for taking big pay increases while denying increases to A&B sugar workers. He is A&B's largest stockholder.

I thought I might ask Weinberg about his own salary at HRT, Ltd., and whether he thought he was worth it.

HRT, Ltd., operates from an unpretentious office at 373 N. Nimitz Highway in a warehouse district.

Weinberg's cluttered office, which was barely big enough to accommodate all nine stockholders who showed up, resembles an office at a construction job site. No frills. Just plain, simple work-space with some personal mementos hanging on the wall.

HRT regularly pays its shareholders a dividend of 50 cents a share, but that isn't the half of it. It earned $4.41 a share last year and $21.53 the year before that, the 1981 figures reflecting big gains from the spin-off of Dillingham Corp. assets.

Weinberg had to check his accountant to find out what his salary is—$110,000 a year "and if I got a million a year it wouldn't be too much." He added that no one else in his family is on the payroll.

The salary he particularly objected to at A&B was President Robert Pfeiffer's gross at $470,000 in salary, fees and bonuses for 1982.

That represented a $149,000 increase from 1981. To Weinberg it was a case of the rich taking away from the poor since A&B that year had obliged its sugar workers to settle for no pay increases.

To show that he wasn't against any and all salary increases, Weinberg produced a letter Pfeiffer of A&B had written him in 1980. That expressed "many thanks for your kind support" in initiating a "generous

increase in my salary" which Pfeiffer then had just received. But 1980 was a good year for the company, Weinberg said, whereas the 1982 situation was very different.

Weinberg ventured that A&B directors are frittering away their company's assets on a succession of bad deals whereas he is building the assets of HRT, Ltd., in a strong annual growth pattern.

"Who in the state of Hawaii comes in my class?" he asked, meaning as a businessman. And the answer that he sees is clearly no one. It is an answer with a record of developing wealth through sound investments that is hard to dispute.

Weinberg is 74 and has health problems—bone cancer. He walks with a cane and has learned to live with pain. "I wouldn't be here today if it were not for modern medical advances," he says. He makes periodic visits to Johns Hopkins Hospital in Baltimore for outpatient treatment and appears to be doing quite well. He remains robust and in full mental vigor.

So long as he is around he said, HRT, Ltd., will continue "going good". After that only God can tell, he says.

But then he made a disclosure he has never discussed in public before. All of the wealth represented by his HRT, Ltd., holdings—upwards of $30 million, well upwards probably, plus all the rest of his personal wealth will go into a trust for the poor when he dies.

Hawaiian Trust Co. has the documents already. He may even turn some of his wealth over to the trust before he dies.

A Forbes Magazine article last year listed Weinberg as one of America's 400 richest citizens with wealth probably far in excess of $200 million. Weinberg said HRT is a very small part of his total assets.

He sees himself as working now to make money for the poor since that is where all of his estate will go except for a sum to go to his wife. After she dies, that, too, will go to the trust, he said. The trustees will be directed to use the assets for helping the poor.

Weinberg said other family members already have received all he intends to give them. There will be no more from his estate. He contrasted this with other families keeping their wealth to themselves.

At the end of the meeting, Weinberg followed his annual custom of inviting the shareholders to join him afterward at lunch at the Tahitian Lanai restaurant in Waikiki.

But before he departed I got into an argument with him over whether he is a tough guy. I said he is. He said he is a soft touch for anyone who is poor.

Would you settle for calling yourself a tough guy with a soft spot? No, he said, he really isn't tough at all.

People think he is, he said, because he can't stand to see money frittered away, companies wasting their assets. Directors get angry at him and jealous, he said, when he shows up their foibles.

But, no, he isn't tough, he contends. He's just a man gifted with a good brain who wants to use it to make money for the poor.

Considering where his wealth is going, maybe he is calling that right, just as he built that wealth by calling so many other things right.

U.S. POLICY TOWARD CENTRAL AMERICA

Mr. CRANSTON. Mr. President, I am speaking today to indicate my strong support for two measures relating to U.S. policy toward Central America.

The first is the proposal of Senators MATHIAS and JACKSON to establish a bipartisan commission to consider long-range approaches for U.S. policy toward the crisis in Central America.

The second is an amendment I intend to offer to the fiscal year 1984 foreign aid bill barring any continued U.S. military aid to El Salvador unless Congress affirms that the Salvadoran Government has demonstrated its willingness to pursue an unconditional dialog with opposition groups and has made significant progress toward key human rights, judicial and land reform goals.

KEY U.S. INTERESTS AT STAKE

The United States has vital interests at stake in Central America. We want to see democratic institutions develop in the nations of that region. We want to advance human rights and economic development. And we want to thwart the spread of totalitarian governments.

I do not believe these interests are being served by President Reagan's continued pursuit of primarily military solutions to what are fundamentally economic, social, and diplomatic problems.

It should be clear that Reagan administration policies toward El Salvador are not working. For more than 2 years Congress has granted most of the administration's Salvadoran funding requests. Over $1 billion in U.S. taxpayers' dollars has been sent or is on request from the Reagan administration for the civil war in El Salvador.

What are the results of this enormous infusion of guns and ammunition? More than 30,000 civilians have been killed in El Salvador, the majority of them by Government security forces and assassination squads armed with American guns and bullets. We have already spent more than $140,000 for each of the estimated 7,000 armed Salvadoran guerrillas. And today American dollars are reportedly flowing out of El Salvador faster than President Reagan can send them in—flowing to Miami real estate and to Swiss bank accounts.

I am convinced that the administration's current course in El Salvador increases the chances for a takeover by pro-Marxist guerrillas hostile to American interests. The administration remains committed to a course which ignores the words of President John Kennedy, who warned, "Those who make peaceful revolution impossible will make violent revolution inevitable."

We have a national interest in countering Soviet influence in this hemisphere. But the greatest and most immediate threat to U.S. interests in Central America is not potential Soviet aggression. Our greatest enemies are poverty, injustice, underdevelopment, and murder-by-government. This is the legacy of decades of oligarchy that has left the vast majority of people hungry for change. It has left El Salvador and other nations vulnerable to the violent appeals of leftist guerrillas.

I believe the only way the United States can hope to prevent a takeover by pro-Communist rebels in El Salvador is to press relentlessly for reform. The Salvadoran military must stop indiscriminate killing by its forces. Land reform must move forward. And means must be devised for including all Salvadorans in elections without imminent threat of assassination.

There are too many similarities between El Salvador and Vietnam—where we backed totalitarian Saigon and got totalitarian Hanoi. The policy has failed repeatedly in this hemisphere; we backed Cuban dictator Batista—and got Castro; we backed Nicaraguan dictator Somoza—and got the Sandinistas.

REGIONAL APPROACH NEEDED

Mr. President, in recent weeks the Reagan administration has pursued a two-track approach to Central American policy. It has pursued a public relations campaign at home designed to build support in Congress and among the general public for increased military aid and use of U.S. military personnel in Central America. And it has pursued an inflexible course in discussions with key Central American governments, a course that, unless changed, threatens to widen the military conflicts in the region.

The first track saw the dispatch of Ambassador Richard Stone to regional capitals without any apparent shift in the administration's position on key issues. And it saw the establishment of not a new policy, but a new acronym, the Central American Policy Outreach Group (CAPOG), as a means of selling the White House position to the American public.

The second track saw the dismissal of Assistant Secretary of State Tom Enders and Ambassador Deane Hinton, who were said by certain White House aides to be too willing to consider negotiation options. It was the shift of 100 U.S. military trainers to Honduran bases. It was the dispatch of more Army medical personnel to El Salvador. It saw the stepping up of cooperation with the Honduran military on construction of several airfields near the Nicaraguan border. And it saw no progress toward involvement of key regional powers in any negotiations to reduce the danger of a widened military conflict, a danger that grows every day the administration continues its "secret" war in Nicaragua.

I see serious danger ahead in the administration's increased willingness to take irresponsible risks. There is

danger that a border conflict between U.S.-funded Somocistas operating out of Honduras and Sandinistas in Nicaragua will drag Honduras into war. There is danger of greater American military involvement—including eventually the deployment of combat troops—in the regional conflict. There is danger of further advances for pro-Communist forces as the gross abuses of human rights and political liberties perpetrated by U.S.-backed repressive regimes continues.

These are among the many reasons that I recently joined with Senators MATHIAS and JACKSON to cosponsor their proposal that a fair, bipartisan U.S. commission be established to present a full range of recommendations to encourage democratic development in Central America. I wholeheartedly endorse this proposal to work with leaders in this country and Central America to promote diplomatic solutions to regional tensions and to reduce the risk of a widening war.

I believe we may need nothing less than a Marshall plan for Central America—a commitment to use our economic and diplomatic resources across the board to build a more firm basis for democracy in Central America. We should use our economic resources in a multilateral development program worthy of the support of the American people.

The approach of a bipartisan commission must not be to legitimize open-ended spending of taxpayer dollars to support any rightwing dictatorship that resists changes in the status quo. Such a commission should explore all options for involving key nations in the region that share American concerns in a negotiation process. It should critically examine policies that turn a blind eye to the failure of the military rulers of Guatemala to hold elections but which back secret wars against the authorities in Nicaragua who have not met pledges for elections. And it should offer a comprehensive policy to spur democratic development throughout the region.

AID TO EL SALVADOR

While the goal of a commission on Central America must be to devise policies that can lead us far into the future, the immediate obligation of Congress is to vote on pending requests for Central American aid programs. We have been deluged by Reagan administration requests for more and more funds for military aid to El Salvador. I recently joined with colleagues on the Senate Foreign Relations Committee to trim the Reagan administration's military assistance request by some $70 million for fiscal years 1983 and 1984. The committee also forged an important bipartisan consensus regarding the critical need for reforms and dialog in El Salvador as the best hope of averting an ultimate takeover by forces hostile to U.S. interests and the best means of advancing a policy that is consistent with our national principles.

I believe it is now incumbent upon the full Senate to write into law our conviction that negotiations toward a cease-fire and free and secure elections should be given a chance in El Salvador.

When the Senate takes up the foreign assistance legislation for fiscal year 1984, I will offer the attached amendment placing strict conditions on any further military aid to El Salvador.

The purpose of my amendment is to tie any continued U.S. military assistance for El Salvador to a congressional finding (by joint resolution) that significant progress is being made on judicial and land reforms, as well as human rights goals, and that Salvadoran authorities have offered to undertake an unconditional dialog with opposition forces for the purpose of achieving an equitable solution to the conflict, two essential elements of which would be first, free and fair elections, and second, provisions to assure the physical security of all participating political groups before, during, and after elections.

This amendment outlines the same reform, human rights and negotiation objectives as the provision adopted in the House Foreign Affairs Committee by a 36 to 1 vote in May.

However, my proposed amendment goes one crucial step further. It conditions any continued U.S. military assistance on an affirmative congressional decision that a negotiating initiative has in fact been made on key human rights and reform goals. I believe this additional provision is essential, given our experience on previous certification procedures, where serious questions have been raised regarding the credibility of administration claims of progress toward key Salvadoran reform goals.

For 2 years, the Catholic Church in El Salvador, along with the democratic governments of Mexico, Colombia, Venezuela, and Panama have urged the United States to join in the effort to produce a negotiated cease-fire, secure elections and a just settlement to regional disputes. The U.S. Government should heed their concerns and press for a cease-fire under the supervision of appropriate organizations such as the Organization of American States.

The guerrillas and other opposition forces in El Salvador have asserted their willingness to participate in negotiations. Many of us are skeptical regarding the willingness of some members of the divided Salvadoran opposition to discuss anything other than powersharing under arrangements that would subvert a democratic electoral process. We should test the willingness of the opposition to pursue a negotiated cease-fire. We should test their sincerity and their willingness to pursue a democratic, nonmilitary solution. We should put the ball in their court and see if they are able to produce a consensus from within their divided ranks in support of such a solution.

I also believe it is incumbent upon the Congress to accept the responsibility for affirming that satisfactory progress is being made in El Salvador on key objectives. I believe it is essential for Congress to accept this responsibility if the conditions we place on U.S. aid are to have any meaning and if our goals in El Salvador are to be achieved.

I have joined with members of the Foreign Relations Committee and others in Congress in the successful effort to enact the present limited certification requirements on aid to El Salvador. But these limited certification requirements have been circumvented by Orwellian reports from the Reagan administration that have distorted the reality of the worsening situation in El Salvador. To achieve congressional objectives, these certification requirements need greater specificity and need to condition any further military aid on an affirmative congressional finding that an offer for unconditional negotiations has been made by the Salvadoran Government and that significant progress is being made on human rights as well as key judicial and land reforms.

I believe the full Senate should thus adopt my amendment to halt any and all U.S. military aid to El Salvador 90 days after enactment of the foreign aid bill—including aid in the pipeline—unless Congress enacts a joint resolution finding that the Salvadoran Government has demonstrated its willingness to pursue an unconditional dialog with opposition groups and has made significant progress toward key human rights, judicial, and land reform goals.

The alternative is continued bloodshed, continued compromise of basic American principles, and an increasing likelihood that the worst-case scenario of a Communist takeover in El Salvador will come true.

I ask unanimous consent that the text of my proposed amendment be printed in the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

CRANSTON AMENDMENT ON EL SALVADOR

SEC. . (a) Not later than 45 days after the date of enactment of this Act, the President shall submit to the Speaker of the House of Representatives and the chairman of the Committee on Foreign Relations of the Senate a detailed report fully describing steps taken by the Government of El Salvador to achieve the following objectives:

(1) Active preparation by the Government of El Salvador for an engagement (commencing within 90 days after the date of en-

actment of this section) in a dialogue, in good faith and without preconditions, with all major parties to the conflict in El Salvador for the purpose of achieving an equitable solution to the conflict, two essential elements of which would be (A) free and fair elections, and (B) provisions to assure the physical security of all participating political groups before, during, and after elections.

(2) Establishment of effective control by the Government of El Salvador over the military, security, and police forces and the paramilitary groups of the country so as to end the involvement of members of such forces and groups in indiscriminate violence as well as secret detention, abduction, torture, and murder.

(3) Establishment by the Government of El Salvador of an effective judicial system which promotes respect for human rights and protects participants in the judicial system from intimidation.

(4) Completion of a successful land reform program, including the payment of fair compensation to previous landowners, the prompt issuance of provisional and definitive land titles, the furnishing of necessary credits, administrative support, technical assistance and services to beneficiaries, the safeguarding against illegal evictions, and the providing for the restoration of lands of those who have been illegally evicted.

(5) Involvement of the Organization of American States or, as appropriate, other international organizations or countries interested in facilitating the discussions among all major parties to the conflict in El Salvador.

(b)(1) Unless, at the end of a 90 calendar day period beginning on the date of enactment of this Act, Congress enacts a joint resolution confirming that the Government of El Salvador has made significant progress toward the achievement of each of the goals enumerated in paragraphs (2-5) of subsection (a) and is actively engaged in a dialogue, in good faith and without preconditions, described in paragraph (1) of subsection (a) (unless it has been unable to enter into such a dialogue because of the refusal of the major opposition groups to participate in such a dialogue), delivery of any and all U.S. military assistance to El Salvador—including all arms sales, deliveries and credits, all U.S. military education and training, and all deployment of United States Armed Forces personnel in El Salvador—shall immediately be suspended.

(2) A joint resolution under this subsection shall be considered in the Senate in accordance with the provisions of section 601 of the International Security Assistance and Arms Export Control Act of 1976.

(3) For the purpose of expediting the consideration and adoption of a joint resolution under this subsection, a motion to proceed to the consideration of such a resolution after it has been reported by the Committee on Foreign Affairs shall be treated as highly privileged in the House of Representatives. If the Committee on Foreign Affairs has not reported a resolution under this subsection within 10 days after such resolution is referred to that committee (excluding days on which either House is not in session because of an adjournment of more than three days to a day certain), it shall be in order to move to discharge that committee from further consideration of that resolution, except that no motion to discharge shall be in order after the committee has reported a resolution to the same effect as that resolution. A motion to discharge under this subparagraph is highly privileged.

MILITARY AND INTELLIGENCE LEADERS AFFIRM VERIFIABILITY OF NUCLEAR FREEZE

Mr. CRANSTON. Mr. President, one of the principal assertions made by opponents of the nuclear freeze resolution has been that such a freeze would not be verifiable.

Those of us who have led the fight for the nuclear freeze have made clear that this charge is spurious, that U.S. satellites, ground monitoring stations, and other intelligence gathering capabilities are quite sufficient to detect any strategically significant violation of a nuclear freeze. We have also noted that under the freeze resolution, any nuclear arms developments which could not be adequately detected could not be frozen. We have further noted that a freeze would be far easier to verify than either the Reagan START proposals or the build-down concept endorsed by some Senators.

The fact that a nuclear freeze can be verified adequately was underscored in most impressive fashion last week in the Senate Foreign Relations Committee hearing on the freeze. The committee was privileged to receive testimony from two distinguished former national security officials who support the freeze, Adm. Noel Gayler (ret.), former commander in chief for all Naval Forces in the Pacific and William Colby, former Director of the Central Intelligence Agency. Their unimpeachable testimony based on decades of experience in the national security field was that a freeze is, of course, verifiable. The bottom line here is that the risk of a strategically significant violation of a nuclear freeze is far, far smaller than the risks and costs entailed by a continued, unrestrained nuclear arms race. As Admiral Gayler and Mr. Colby also made clear, the freeze is the best means of halting the qualitative arms race while we continue efforts to reduce the bloated United States and Soviet nuclear arsenals. This point was underscored by the following exchange:

Senator CRANSTON. It is also argued that a freeze might undermine the Administration's efforts in START. What comment do you have on that?

Admiral GAYLER. A freeze is a way of maintaining the status quo while making serious efforts in arms negotiations to make cuts. These are not exclusive ideas. It is only the commonsense idea that we do not add to weapons while we are negotiating cuts in them. So my reaction is it would not mitigate against serious arms reduction proposals.

Mr. COLBY. Quite the contrary, Senator, I believe a freeze would assist the process of reduction because without a freeze then the momentum of development of new weapons, of testing of new weapons—in our case the MX, in the Soviet case a new intercontinental weapon—will complicate any attempt to work out reductions, and a freeze would stop it so that you could work out a sensible system of reductions.

Mr. President, I ask unanimous consent that the opening statements of Admiral Gayler and Mr. Colby be printed in the RECORD at this point, along with excerpts from committee questioning of these distinguished witnesses.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT OF ADM. NOEL GAYLER, U.S. NAVY (RET.), ON BEHALF OF THE AMERICAN COMMITTEE ON EAST-WEST ACCORD

Admiral GAYLER. What I will do, Mr. Chairman, then, is to tic off the principal points, but in the order in which they appear in my statement.

The first is, we have to have arms control in order to improve the security of the United States, as well as to reduce the risk of nuclear war.

Second, we can define that security as freedom from war or threat of war or military action.

Third, that we have to reduce the risk of nuclear war to the vanishing point, and that it is entirely possible to do that, given the political will to do it.

The first point, as George Kennan has said, is that there is no issue at stake in our relations with the Soviet Union which is worth a nuclear war. This is not a doctrine of red nor dead. We do not have to be either one, because in my judgment, by the proper support of competent sea, land and air forces, we can defend ourselves and our allies and our interests without resort to nuclear weapons or the threat of nuclear weapons.

There are measures that we can take, any one of which is good, all of which together will in my judgment reduce the risk of nuclear war practically to zero. One is that we knock off this insulting and pointless rhetoric between the two countries principally involved, the United States and Russia.

The second is that we renounce once and for all all nuclear war-fighting and counterforce doctrines, and this will force profound changes in the physical world, in our weapons programs and deployments.

That we stop attempting to injure each other. It is simply not true that what injures the Soviet Union helps the United States and vice versa. There are many things which are helpful to both of us, and an end to this nuclear arms race is the prime such thing.

The fourth measure is that we should redeploy shorter range weapons out of range of each other, in order to mitigate the hair-trigger situation that exists, for example, in Europe.

That we should adopt a policy of no first use of nuclear weapons. This of course would be a reciprocal policy to that of the Soviet Union, and I want to point out that it would result in real difference in weapons supplied, in the deployment and position of those weapons, in the doctrines, the training, the exercises. In effect, it would have results in the real world, not be merely a paper declaration.

That we should—and I am choosing my words carefully now, in light of the freeze testimony—declare a moratorium on the development, testing, and deployment of new nuclear weapons, so long as the other side exhibits similar restraint. A moratorium, of course, need not be negotiated but can be simply declared and observed along the lines of the moratorium on open air testing

that President Kennedy and Chairman Khruschev had many years ago.

Finally and most important, that we accomplish deep and continuing cuts in the nuclear stockpiles by the actual and verified destruction of the weapons and their fissionable material.

Now, the American Committee on East-West Accord for which I am appearing here, has developed, with the help of nuclear scientists, with the help of industrialists, particularly with the help of political scientists and under the leadership of George Kennan, a proposal that the U.S. and the U.S.S.R. turn in to a depot large numbers of nuclear weapons, verify, weigh, extract the fissionable material, dilute that to power plant material, burn it up irrevocably in electric power plants, the military elements of the weapons ground up beyond reverse engineering and disposed of.

That each side choose the weapons that it turns in. Now this has the advantage that it accomplishes actual destruction of weapons, it is verifiable—you see this thing happening, and that these agonizing questions of definition are done away with. Particularly the question of equity as between the two powers is taken care of by the fact that each continuously chooses its own strategy as it goes along in turning in these weapons.

We think that the proposal is equitable and practical and verifiable, and we have some reason to believe that it may well be negotiable. The point there is that it can support any other arms reduction measure or it can stand on its own.

To that, add a complete stop on the production of weapons-grade fissionable material and inspection to international standards of electrical power plants against diversion of material from them.

Now, are the Soviets ready for an agreement of this kind or any similar agreement which reduces nuclear weapons? You have just had testimony from probably the most astute and experienced observer of the Soviet scene living in America, Averell Harriman, who has just talked to the Chairman, Mr. Andropov. And what Governor Harriman reports as the Chairman's statement is:

"Today the Soviet people and the American people have a common foe—the threat of a war incomparable with the horrors we went through previously."

And Governor Harriman's comment on that statement is that, while he does not believe that Chairman Andropov will pursue Soviet goals and objectives with any less vigor, that he, Andropov, realizes that the avoidance of mutual destruction is the foremost Soviet objective.

We and the Soviet Union have two very important interests in common: One is that we not be blown up: and the other is that we not see nuclear weapons proliferated around the world in the hands of irresponsible governments or even terrorist groups.

On these two powerful common interests we can build agreement, but only if we separate nuclear weapons control from all other issues between us. We cannot expect the Soviets to shape up by our standards on every difference that we have. We can reasonably expect that we can reach agreement on these two matters of such overwhelming importance to us both.

Let me end, Mr. Chairman, by expressing my conviction that real nuclear arms reductions require only political will to succeed. There is no technical obstacle, no security problem, no military consideration that cannot be handled safely, given the will to do so.

STATEMENT OF WILLIAM COLBY, FORMER DIRECTOR OF CENTRAL INTELLIGENCE, ON BEHALF OF THE COMMITTEE FOR NATIONAL SECURITY

Mr. COLBY. Thank you, Mr. Chairman.

On behalf of the Committee for National Security, I would like to urge that this Committee report out favorably the Kennedy-Hatfield resolution and that we proceed to a mutual and verifiable freeze on the production, testing and deployment of nuclear weapons.

I think it is my particular contribution to this effort to assure you—let me assure you that if you do this that it is a practical step and that any such agreement can be verified adequately to protect the security of our country. That requires a couple of summary points.

First, we are going to be following the development of Soviet weaponry whether there is an agreement between us or not, because we have to protect our country. The Defense Department's recent booklet on Soviet military power shows the comprehensive nature of our knowledge of their weapons systems, including many weapons which are in essence nonverifiable: the numbers of tanks, the numbers of pieces of artillery and all that sort of thing.

Now, any of those can be hidden under barns, developed in factories in the Urals, and yet we have perfectly adequate estimates of the total numbers of those weapons. Now, that, as I say, we are going to be doing whether there is an agreement between us or not.

If there is an agreement, that process becomes easier, not harder, because these agreements in recent years have all contained provisions which make it easier to monitor the matters limited by the treaties. This includes restrictions on concealment, non-interference with the other side's collection capabilities, declarations of forces, notification of tests.

There are even in some of these treaties provisions for the exchange of geological information, for the implantation of black boxes or sensors, and in one of them the development of the idea of the inspection team, which was the phobia which caused the failure of our first nuclear freeze proposal in 1946, when Stalin rejected it as a form of American espionage.

Now, the fact is that the Soviets in recent years have been forced by the development of technology and by the development of communications, transportation and so forth, toward greater visibility of their affairs, and that in these treaties they have shown a willingness to take steps that will help this process when a treaty is in their interest. They are never going to have an open society, I do not think, and there is never going to be a Moscow edition of Aviation Week.

But nonetheless, we are going to know the size and development of their forces sufficiently to protect our country, whether there is an agreement between us or not, and it will be easier with one.

The second point is that a freeze makes this process easier. The more comprehensive a restriction, the easier it is to monitor it. If you get into these complex numerical numbers games, then you require a lot of cross-checking, a lot of examination of all different elements in order to see whether the totals come out right.

A freeze which says stop, you merely look to see if there is any activity in violation of the freeze. Therefore, a freeze by definition is easier to monitor than one of these complex reduction arrangements and formulae.

Thirdly, the fact is that with a treaty, with a freeze treaty, there is an additional feature to our benefit and that is the opportunity for communication about ambiguous Soviet behavior. If we see some activity going on in the Urals today and we wonder what it is and we go over and ask the Soviets to help us resolve that bit of ambiguity, they tell us it is none of our business, and it is not because they have not agreed to any supervision over there.

But the SALT I experience indicates that when we see ambiguous activity, we have raised it with the Soviets and we have been able to ascertain what that activity is, either that it is not in violation of the treaty, as some of them turned out, or that actions were taken which were apparently leading to violations of the treaty, and the effect of it was to stop that action.

In other words, an agreement between us allows us not only to know more about the Soviet activity, but to influence their behavior in a positive manner and in a way to protect our security.

Now, the fourth major point is that an agreement between us is a better form of protecting our security than continuing this arms race. We protect our country better by causing the Soviets not to develop additional weapons than by developing the weapons on our side to shoot them down if they are launched against us.

Now, the fact is that what we are interested in is the protection of our country, not legal evidence for a court of law in a breach of contract suit. We are collecting this information, and will be under a freeze agreement, to protect our country.

Now, when you consider the reality of these weapons systems, you must realize that any violation which would give a substantial strategic advantage would have to be of a size and a complexity which would make it literally impossible to be done on a hidden basis. There could be marginal violations, let us admit it, although the evidence, as I say, in the Defense Department's booklet does not indicate that there are going to be very much and that our coverage is indeed comprehensive.

But if we do reach an agreement with them, then it is plain that any marginal agreement cannot threaten our country as much as a development of additional weapons systems, that indeed the marginal violation will undoubtedly be caught long before it becomes a strategic threat to us.

Now, I think these are the key points. There is one additional fact. If we reach a freeze agreement with the Soviets it will be touted on both sides as a great contribution to the safety of our countries and of the world. If the Soviets decide to launch some program of treachery in violation of that agreement, they would have to have literally thousands of Soviet citizens involved in that.

I think one can say that among those thousands there would be at least a few who would be so repelled by that kind of treachery that they would do what Colonel Oleg Penkovsky did in the late 1950's—make contact with American intelligence to alert them. Now, he paid with this life for doing that, but he contributed to the safety of the world in the Cuban missile crisis, and I think you will find other brave Soviet citizens would also undertake that kind of action if they saw any substantial program of violation by the Soviet Union.

For these reasons, then, Mr. Chairman, let me urge you not to be paralyzed by the problem of verification. Let me urge you not to be stopped by those who would take an absolutist view toward it. Let us move toward protecting our country by a freeze agreement better than we can by continuing to build arms.

Thank you.

* * * * *

Senator CRANSTON. I pose this question to either Admiral Gayler or Mr. Colby. Critics have charged that a nuclear freeze would preserve nuclear instability and perpetuate Soviet advantages. What is your comment on that?

Admiral GAYLER. I do not think the Soviets have an advantage of any kind and if there were in fact a discrepancy between the nuclear forces at this level it would not make any difference anyway. I think it has no political utility. It has no military utility.

I think a freeze which actually stopped the weapons growth on both sides would simply adhere to the advantage of both sides.

Senator CRANSTON. It is also argued that a freeze might undermine the Administration's efforts in START. What comment do you have on that?

Admiral GAYLER. A freeze is a way of maintaining the status quo while making serious efforts in arms negotiations to make cuts. These are not exclusive ideas. It is only the common sense idea that we do not add to weapons while we are negotiating cuts in them. So my reaction is it would not mitigate against serious arms reduction proposals.

Mr. COLBY. Quite the contrary, Senator, I believe a freeze would assist the process of reduction because without a freeze then the momentum of development of new weapons, of testing of new weapons—in our case the MX, in the Soviet case a new intercontinental weapon—will complicate any attempt to work out reductions, and a freeze would stop it so that you could work out a sensible system of reductions.

Senator CRANSTON. Critics in the Administration argue that a freeze would undercut whatever Soviet incentives there are to negotiate arms control and arms reduction agreements. What is your comment on that?

Mr. COLBY. The Soviets have the same incentive after a freeze as right now without one. Their incentive is to lessen the danger of nuclear war to themselves, aside from to us, and I think that would continue, that a freeze would actually lessen that danger because of the restriction it would place on the development of the new more destabilizing weapons, the higher accuracies and the other features of the newer weapons that are making it more dangerous rather than less.

Senator CRANSTON. Mr. Colby, do you see any risks in a freeze and do any of them exceed the risks that are inherent in the arms race itself?

Mr. COLBY. I see the risk of a minor marginal violation in a freeze. There are certain elements that might be a little more difficult to verify than others, but the major danger is the continued growth of these weapons, and I cannot see the possibility of a strategic advantage to either side in the result of a freeze.

Senator CRANSTON. I thought your statement on verifiability at the outset was very, very helpful. What problems are we likely to face in verification if the arms race continues? What problems specifically do we face with regard to cruise missile verification?

Mr. COLBY. There is a problem on how you distinguish a nuclear-armed cruise missiles from a conventionally-armed cruise missile, but we have that same problem with respect to bombers and we work our way through that by various indicators in the bombers, by the support structure for nuclear weapons as against conventional weapons that surround the airfields from which they fly—that sort of control that you look at to determine whether they are nuclear-armed or not.

We are going to be doing that whether there is a treaty between us or not. A freeze would make that process easier.

Admiral GAYLER. I think I would add to that, sir, if I might, that the growth of a very large cruise missile component on either side cannot make verification of reduction agreements very much more difficult.

Senator CRANSTON. Admiral, do you have any suggestions as to ways to improve the concept of the freeze?

Admiral GAYLER. I think that as a practical matter to treat it perhaps as a moratorium, a restraint by mutual informal agreement would avoid the otherwise necessity for a long negotiating period, and that might be a good thing to do. I think that would improve it without changing its thrust.

Senator CRANSTON. What about incremental approaches?

Admiral GAYLER. There are some elements of the freeze proposition, such as comprehensive test ban, which are highly understandable, highly negotiable, highly verifiable, and I think you could proceed with those incrementally in a formal way. But I would advocate an overall moratorium on new things at the same time.

Senator CRANSTON. What do you say to those who say, "well, how can we safely cut back on any of the weapons we have after a freeze?"

Admiral GAYLER. I think we can safely cut our arsenals on both sides to a minimum invulnerable deterrent against nuclear attack, a nuclear deterrent against nuclear attack, and if we design our weapon systems on either side for that purpose they would not in any way resemble what we have now. They might be a tenth or less, of a special invulnerable kind.

And if that were to take place through mutual agreement, the world would be a much safer place and this country would be a much safer place.

Senator CRANSTON. What do you say to those who say one cannot trust the Russians?

Admiral GAYLER. I say that you can trust the Russians to act in the Russian interest and that we have a long record under SALT I of Russian adherence to agreements which are in their interest and which are written in specific and concrete terms. You do this; we will do that—not vague expressions of good will or the spirit of Camp David or something, but simply simple, concrete agreements the Russians will live up to because it is in their interest.

Mr. COLBY. I would like to add to that, Senator, that I do not trust the Russians. I do not think you have to. You can watch them and you can catch them long before they can do anything that would be of substantial danger to us.

Senator CRANSTON. Do you feel that nuclear weapons are really militarily usable under any circumstances?

Admiral GAYLER. No, sir, I do not. I have looked for many years at the possibility of the useful military employment of nuclear weapons—at sea, in the Pacific theater for which I used to be responsible, in the Middle East, and in the defense of Europe. I cannot see any way in which we could use them that would not result in shooting ourselves in the foot and their boomeranging against us as well as taking the terrible risk of escalation to total war.

Senator CRANSTON. You spoke in your opening testimony about no-first use and your advocacy of American adoption of that policy. Some people question whether it really serves any significant purpose since neither side is really apt to believe that the other side under all circumstances would stick to a no-first-use policy.

How do you respond to that question?

Admiral GAYLER. A first-use policy over a period of some time will result in concrete physical changes in the weapons that are made available because some will be inappropriate except for first-use against a conventional attack, in the deployment of all nuclear weapons, in the doctrines and training for the employment of forces on land and at sea and in the air, in the exercises that we observe and in many other ways.

So it would not be a mere paper declaration which could be overturned but would actually result in a change in the forces involved, which could not be overturned overnight.

Senator CRANSTON. The Soviets have made a no-first-use declaration. I presume they have not made any noticeable changes as a consequence of that up to now. If not, why not? Is that because we have not reciprocated?

Admiral GAYLER. Certain Soviet spokesmen have said that they are in fact making such changes and that if we keep our eyes open we will see them. I think we should adopt a wait-and-see attitude on that.

Senator CRANSTON. Do you believe that that is the case at present?

Admiral GAYLER. I think it is plausible. As I say, I think we should adopt a wait-and-see attitude, and if they do in fact make these changes in doctrine, weapons deployment and everything else, we will see them.

Senator CRANSTON. I want to be clear we were talking about a "no-first-use" policy.

* * * * *

Mr. COLBY. May I suggest, Senator, that it is pretty clear in that booklet that the Defense Department put out. It just covers a whole lot of things, and if you read the preface of it, it shows you what the Soviets have done in the last year and a half since the first edition of that booklet, and if that is not verification, I do not know what is.

Senator GLENN. A lot of them are estimates, and estimating the numbers of tanks and so on that you estimated a little while ago, that is a little different ball game. If we are off by 20 percent there, it is maybe not as cataclysmic in its potential as if we were off 20 percent on the estimates of nuclear weaponry.

Mr. COLBY. I respectfully wish to differ on that, Senator. If we are talking about more than enough of these weapons on both sides to destroy the world many times over, a 20 percent error, which I say is not a reasonable percentage, that we can come much closer than that on these weapons. A 20 percent error is a great deal safer for our country than to continue to build more and better of these weapons.

Senator GLENN. Thank you.

Senator PRESSLER. Senator Cranston?

Senator CRANSTON. The thrust of your testimony seems to be that the risks of verification failure are really far outweighed by the risks of the arms race. With regard to on-site inspection, if the two powers continue with modernization and more and more complicated weapons systems are developed, do you believe we will come to a time when on-site inspection will be imperative, or is it more likely that we will always be able to verify safely by other means?

Mr. COLBY. I think that on-site inspection can assist the process of verification. I do not think it can provide it alone. And I do not think without it the process of verification is impossible. It is one of those additional sources of information that can help you.

Senator CRANSTON. Is it not true that with regard to on-site inspection, the U.S. is probably just as unwilling to have communists running around our defense plants as the Soviets are to have capitalists running their defense plants?

Mr. COLBY. Well, I am not sure that Lockheed would particularly like to see Soviet colonels walking through their secret skunk works.

Senator CRANSTON. Can either of you conceive of a rational, deliberate, calculated decision by either side to launch a first strike?

Admiral GAYLER. I cannot.

Mr. COLBY. I cannot. The retaliation is absolute on both sides.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Saunders, one of his secretaries.

ANNUAL REPORT OF THE RAILROAD RETIREMENT BOARD FOR FISCAL YEAR 1982—MESSAGE FROM THE PRESIDENT—PM 62

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report; which was referred to the Committee on Labor and Human Resources:

To the Congress of the United States:

I hereby submit to the Congress the Annual Report of the Railroad Retirement Board for fiscal year 1982, pursuant to the provisions of Section 7(b)6 of the Railroad Retirement Act, enacted October 16, 1974, and Section 12(l) of the Railroad Unemployment Insurance Act, enacted June 25, 1938.

The Railroad Retirement Board informs me that despite major changes in railroad retirement negotiated by rail labor and management and enacted in the Omnibus Budget Reconciliation Act of 1981, the railroad retirement system faces a serious funding shortfall. In addition, the continuing decline of railroad employment has left the railroad unemployment and sickness system deeply in debt. Prompt legislative action is needed to resolve the serious financial problems facing these systems and assure continued payment of benefits.

RONALD REAGAN.

THE WHITE HOUSE, *June 28, 1983.*

AGREEMENT ON SOCIAL SECURITY BETWEEN THE UNITED STATES AND BELGIUM—MESSAGE FROM THE PRESIDENT—PM 63

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with accompanying papers; which was referred to the Committee on Finance:

To the Congress of the United States:

Pursuant to section 233(e)(1) of the Social Security Act as amended by the Social Security Amendments of 1977 (P.L. 95-216, 42 U.S.C. 433(e)(1)), I transmit herewith the Agreement between the United States of America and Belgium on Social Security and the Final Protocol to the Agreement, both signed on February 19, 1982, and the Administrative Agreement for the Implementation of the Agreement and Additional Protocol, both signed on November 23, 1982.

These United States-Belgium agreements are similar in objective to the social security agreements already in force with Italy, the Federal Republic of Germany, and Switzerland. Such bilateral agreements, which are generally known as totalization agreements, provide for limited coordination between the United States and foreign social security systems to overcome the problems of gaps in protection and of dual coverage and taxation for workers who move from one country to the other.

I also transmit for the information of the Congress a comprehensive report prepared by the Department of Health and Human Services, which explains the provisions of the Agreements and provides data on the number of persons affected by the Agreements and the effect on social security financing as required by the same provision of the Social Security Act.

The Department of State and the Department of Health and Human Services join with me in commending the United States-Belgium Social Security Agreement and related documents.

RONALD REAGAN.

THE WHITE HOUSE, *June 28, 1983.*

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. HATCH, from the Committee on Labor and Human Resources:

Report to accompany the bill (S. 1008) to make certain technical amendments to improve the implementation of the Education Consolidation and Improvement Act of 1981, and for other purposes (Rept. No. 98-166).

By Mr. PERCY, from the Committee on Foreign Relations, without amendment:

H.R. 1271. An act with regard to Presidential certifications on conditions in El Salvador.

By Mr. MATHIAS, from the Committee on Rules and Administration, without amendment:

S. Res. 66. Resolution to establish regulations to implement television and radio coverage of the Senate (with minority views) (Rept. No. 98-167).

By Mr. DOMENICI, from the Committee on the Budget, without amendment:

S. Res. 157. Resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of H.R. 1746.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. HATCH, from the Committee on Labor and Human Resources:

Peter H. Raven, of Missouri, to be a member of the National Museum Services Board for a term expiring December 6, 1987.

(The above nomination was reported from the Committee on Labor and Human Resources with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. STAFFORD, from the Committee on Environment and Public Works:

Lee M. Thomas, of South Carolina, to be an Assistant Administrator of the Environmental Protection Agency.

By Mr. PERCY, from the Committee on Foreign Relations:

Langhorne A. Motley, of Alaska, to be an Assistant Secretary of State;

Robert Brendon Keating, of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Democratic Republic of Madagascar and to serve concurrently and without additional compensation as Ambassador Extraordinary and Plenipotentiary of the United States to the Federal and Islamic Republic of the Comoros:

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Robert Brendon Keating.

Post: Ambassador of United States to Madagascar.

Contributions, amount, date, donee.

1. Self: Yes, $1,000, April 8, 1980, Ronald Reagan for President campaign.
2. Spouse: None.
3. Children and spouses names: None.
4. Parents names: None.
5. Grandparents names: None.
6. Brothers and spouses names: None.
7. Sisters and spouses names: None.

L. Paul Bremer, III, of Connecticut, a career member of the senior Foreign Service, class of minister-counselor, to be Ambassador Extraordinary and Plenipotentiary of the United Kingdom of the Netherlands:

Contributions are to be reported for the period beginning on the first day of the

fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: L. Paul Bremer, III.

Post: Netherlands.

Contributions, amount, date, donee.

1. Self: None.

2. Spouse: None.

3. Children and spouses names: Paul Bremer, none; Leila Bremer, none.

4. Parents names: Father (deceased), Nina Bremer, none.

5. Grandparents names: Deceased, none.

6. Brothers and spouses names: Duncan and Michelle Bremer, none; Mike and Mari Bremer, none;

7. Sisters and spouses names: Margaret Bremer, none; Lynette Bremer Chivvis, $5, October 26, 1982, New Canaan Republican committee; Arthur Beecher Chivvis, none.

Hume Alexander Horan, of New Jersey, a career member of the senior Foreign Service, class of minister-counselor, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Democratic Republic of the Sudan:

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Horan, Hume A.

Post: Sudan.

Contributions, amount, date, donee.

1. Self: None.

2. Spouse: None.

3. Children and spouses names: None.

4. Parents names: None.

5. Grandparents names: None.

6. Brothers and spouses names: None.

7. Sisters and spouses names: None.

Robert E. Fritts, of Maryland, a career member of the senior Foreign Service, class of minister-counselor, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Ghana:

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Robert E. Fritts.

Post: Ambassador to Ghana.

Contributions, amount, date, donee.

1. Self: Robert E. Fritts, none.

2. Spouse: Audrey N. Fritts, none.

3. Children and spouses: Susan A. Fritts, none; Robin L. Fritts, none.

4. Parents: Mrs. D. M. Fritts, about $20 annually 1978–82, Republican National Committee.

5. Grandparents: Deceased.

6. Brothers and spouses: Garland G. Fritts, $150 total, 1978–82, Zell Miller (Lt. Gov., GA); $25, 1978–82, Joe Frank Harris (Gov., GA); $75 1978–82, Ben O'Callaghan (Candidate, Co. Commissioner); $50, 1978–82, Richard Guthman (Atlanta City Council); Ruth Fritts, none.

7. Sisters and spouses: None.

(The above nominations were reported from the Committee on Foreign Relations with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. SPECTER:

S. 1551. A bill to amend the Labor-Management Reporting and Disclosure Act of 1959 to permit States to impose measures for the prevention of criminal infiltration of unions in casino hotels; to the Committee on Labor and Human Resources.

S. 1552. A bill for the relief of the Williamsport-Lycoming County Chamber of Commerce of Williamsport, Pa.; to the Committee on Commerce, Science, and Transportation.

By Mr. STENNIS:

S. 1553. A bill for the relief of Col. John R. Vincent, U.S. Air Force Reserve; to the Committee on Armed Services.

By Mr. STAFFORD (by request):

S. 1554. A bill to provide for the recovery of certain capital and operation and maintenance expenditures assignable to commercial waterway transportation for certain Tennessee Valley Authority and Army Corps of Engineers inland waterway projects, and to authorize construction in specified circumstances; to the Committee on Environment and Public Works.

By Mrs. HAWKINS (for herself, Mr. D'AMATO, Mr. DODD, and Mr. GARN):

S. 1555. A bill to amend section 134 of the Truth in Lending Act and section 916 of the Electronic Fund Transfer Act; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. DURENBERGER (for himself and Mr. BOSCHWITZ):

S. 1556. A bill to amend the Internal Revenue Code of 1954 to exclude from gross income grants paid by the U.S. Forest Service as a result of restricting motorized traffic in the Boundary Waters Canoe Area; to the Committee on Finance.

By Mr. CHAFEE (for himself and Mr. BENTSEN):

S. 1557. A bill to amend the Internal Revenue Code of 1954 to repeal the 30 percent tax on interest received by foreigners on certain portfolio investments which operates as a tariff to prevent such investments from entering the United States; to the Committee on Finance.

By Mr. DECONCINI:

S. 1558. A bill to amend chapter 25 of title 18, United States Code to provide penalties for the forging of endorsements on, or fraudulently negotiating, U.S. checks or bonds or securities, and for other purposes; to the Committee on the Judiciary.

By Mr. MOYNIHAN (for himself, Mr. DOLE, and Mr. MATSUNAGA):

S. 1559. A bill to amend sections 2314 and 2315 of title 18, United States Code, relating to stolen archeological material; to the Committee on the Judiciary.

By Mr. DODD:

S. 1560. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to increase the amount of death benefits payable to public safety officers; to the Committee on the Judiciary.

By Mr. DOLE:

S. 1561. A bill entitled "The National Joint Research and Development Policy Act of 1983"; to the Committee on the Judiciary.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. DECONCINI (for himself, Mr. PERCY, Mr. PELL, and Mr. TSONGAS):

S. Res. 168. Resolution expressing the sense of the Senate with respect to the provision of emergency assistance to the people of Ethiopia; submitted and placed on the calendar.

By Mr. STEVENS (for Mr. HUDDLESTON (for himself and Mr. HELMS)):

S. Res. 169. Resolution to express the sense of the Senate that July 15, 1983, should be observed as "National Ice Cream Day"; submitted and placed on the calendar.

By Mr. STEVENS (for Mr. BAKER (for himself and Mr. BYRD)):

S. Res. 170. Resolution to authorize the testimony of Carol Mantle in the trial of *United States of America* v. *Kenneth Travis Bynum*, Cr. No. 83-00408 (N.D. Fla.); considered and agreed to.

By Mr. BAKER:

S. Con. Res. 48. Concurrent resolution providing for an adjournment of the Senate from June 29, 1983, June 30, 1983, or July 1, 1983 to July 11, 1983, and an adjournment of the House from June 30, 1983 to July 11, 1983; considered and agreed to.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. SPECTER:

S. 1551. A bill to amend the Labor-Management Reporting and Disclosure Act of 1959 to permit States to impose measures for the prevention of criminal infiltration of unions in casino hotels; to the Committee on Labor and Human Resources.

(The remarks of Mr. SPECTER on this legislation appear earlier in today's RECORD.)

By Mr. SPECTER:

S. 1552. A bill for the relief of the Williamsport-Lycoming County Chamber of Commerce of Williamsport, Pa.; to the Committee on Commerce, Science, and Transportation.

(The remarks of Mr. SPECTER on this legislation appear earlier in today's RECORD.)

By Mr. STAFFORD (by request):

S. 1554. A bill to provide for the recovery of certain capital and operation and maintenance expenditures assignable to commercial waterway transportation for certain Tennessee Valley Authority and Army Corps of Engineers inland waterway projects, and to authorize construction in specified circumstances; to the Committee on Environment and Public Works.

INLAND WATERWAY IMPROVEMENT AND COST RECOVERY ACT OF 1983

● Mr. STAFFORD. Mr. President, the administration recently developed a new proposal involving the controversial issue of inland waterway user charges. This proposal, a variation on legislation that it introduced during the 97th Congress, calls for 70 percent

cost recovery from the commercial users of the Nation's inland waterways, payments that are intended to offset Federal expenditures for these waterways. This bill was received by the Senate as executive communication No. 1292, on June 16, 1983.

In its letter to the Congress transmitting this proposal, the administration stated that it was "committed to recovery of a substantial portion of Federal expenditures for the construction, operation, and maintenance of our Nation's inland waterway system from the commercial barge industry."

In my view, it is most helpful that this proposal has been sent up to allow it to be the subject of hearings on inland waterway issues before the Subcommittee on Water Resources. I commend the administration.

Mr. President, it is an honor for me to introduce this bill, by request, on behalf of the administration. I ask unanimous consent that a copy of the bill, together with the transmittal letter, be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1554

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as: "The Inland Waterway Improvement and Cost Recovery Act of 1983."

SEC. 2. As used on this Act:

(a) "Commercial waterway transportation" means any use of a vessel on the inland waterway system of the United States—

(1) in the business of transporting persons or property for compensation or hire, or

(2) in transporting property in the commercial business of the owner, lessee, or operator of the vessel (other than fish or other aquatic animal life caught on the voyage);

(b) "Corps" means the United States Army Corps of Engineers.

(c) "Inland waterway system" means the following inland and intracoastal waterways and associated harbors of the United States:

(1) the Mississippi River and its natural and manmade tributaries and connecting channels upstream from Baton Rouge, Louisiana;

(2) all waterways of the United States and their tributaries with an authorized depth of 14 feet or less emptying into the Gulf of Mexico west of the Mississippi River;

(3) the Gulf Intracoastal Waterway from Saint Marks River, Florida, to Brownsville, Texas;

(4) the Apalachicola River and its tributaries upstream from its junction with the Gulf Intracoastal Waterway;

(5) the Columbia River and its tributaries upstream from a point immediately downstream of the Bonneville Lock and Dam project;

(6) the Pearl River and its tributaries upstream from the junction of the West Pearl River with the Rigolets;

(7) the Mobile River and its tributaries, including the Tennessee Tombigbee Waterway project, upstream from the Mobile Harbor project;

(8) the Atlantic Intracoastal Waterway between Norfolk, Virginia, and Miami, Florida, via both the Albemarle and Chesapeake Canal and Great Dismal Swamp Canal routes; and

(9) the portions of the Willamette River and its tributaries with authorized depths of 14 feet or less.

(d) "Secretary" means the Secretary of the Army.

SEC. 3. (a) The Secretary, in consultation with the Secretary of Transportation, shall levy ton-mile fees on commercial waterway transportation on the inland waterway system as follows:

(1) system-wide fees, adequate to recover annually 70 per centum of anticipated operation and maintenance expenditures of the Tennessee Valley Authority and of the Corps, irrespective of the source of such funds, assigned to commercial waterway transportation. Fees will be set at an initial rate of 1.1 mills per ton mile on shipments originating after September 30, 1983.

(2) segment-specific fees, starting after September 30, 1984, to provide for the recovery of 70 per centum of the capital expenditures of the Tennessee Valley Authority and of the Corps, irrespective of the source of such funds, assigned to commercial waterway transportation on projects, or physically separable project features or activities, as determined by the Secretary, for which construction is initiated after September 30, 1983. Expenditures to be recovered for such work shall be limited to funds appropriated for fiscal year 1984 and thereafter, with interest, over the economic life of the improved facility, but not to exceed a period of fifty years from the date of: (A) through traffic for construction of new waterways; and (B) completion of the work for other improvements or modifications including, but not limited to, rehabilitation or replacement of existing structures.

(b) The Secretary, in consultation with the Secretary of Transportation, shall adjust fees authorized under this section at least every five years on the basis of (1) anticipated Tennessee Valley Authority and Corps expenditures for the inland waterway system and segments thereof; (2) corrections for actual expenditures and amounts recovered; (3) the expected volume of commercial traffic; and (4) any other factors that the Secretary finds reasonable and equitable.

(c) The Secretary, in consultation with the Secretaries of Agriculture and Transportation, is authorized to levy congestion fees, on all users of specific facilities, designed to reduce delays in order to improve the efficiency of the inland waterway system.

(d) Fees collected under this section shall be credited to the Inland Waterways Trust Fund established by Section 203 of the Inland Waterways Revenue Act of 1978 (Public Law 95-502). Amounts in the Trust Fund shall be available as provided by appropriations acts for making capital improvements and operation and maintenance expenditures on the inland waterway system as defined in this Act.

SEC. 4. (a) For the purposes of developing or assisting in the development of any schedule of fees and determining whether any person is in violation of any requirement of this Act—

(1) the Secretary may require any person engaged in commercial waterway transportation, who is subject to the requirements of this title, to establish and maintain such records, submit such reports, and provide such other information, as the Secretary may reasonably require;

(2) the Secretary may utilize any documents or other information obtained under section 11 of the Act of September 22, 1922 (33 U.S.C. 555); and

(3) upon presentation of credentials, the Secretary or an authorized Federal representative shall have a right of entry to, upon, or through any vessel or any other premises owned or operated by any person engaged in commercial waterway transportation, who is subject to the requirements of this title, and may, at reasonable times, have access to, and make copies of, any records.

(b) Section 11 of the Act of September 22, 1922 (33 U.S.C. 555), is amended by inserting "no more than $200,000" in lieu of "$100".

SEC. 5. (a)(1) Whenever, on the basis of any information available and after opportunity for a hearing, the Secretary finds that any person or entity is in violation of any requirement of this Act, the Secretary shall order the person or entity to comply with the Act, including payment, with interest, of any fees which the Secretary determines to have been wrongfully withheld. Thirty days after the date of an order from the Secretary to a person or entity to be in compliance with this Act, it shall be unlawful for that person or entity to engage in commercial waterway transportation during any period when that person or entity is in violation of any requirement of this Act.

(2) The interest rate used in computing the payments required by this section shall be determined annually by the Secretary of the Treasury as a rate equal to 150 percent of the average interest rate on 13-week Treasury bills auctioned during the preceding three months.

(b) Upon request of the Secretary, the Attorney General may bring a civil action for a permanent or temporary injunction, to assess and recover a civil penalty of not more than $200,000, or both, whenever any person or entity violates any requirement of this Act or fails or refuses to comply with any order issued under subsection (a) of this section. Such penalty shall be deposited in the general fund of the Treasury.

(c) Any action under this section may be brought in the United States District Court for the district in which the defendant resides, does business, or is engaged in commercial waterway transportation. Such courts shall have jurisdiction to require compliance, assess appropriate fees or civil penalties, and grant injunctive or other equitable relief. Any vessel or watercraft on account of which any user fee shall have accumulated shall be liable for such fees and may itself be arrested and proceeded against upon principles applicable to Admiralty actions in rem.

SEC. 6. Expenditures for operation and maintenance and for construction and rehabilitation of inland waterway projects subject to recovery in accordance with Section 3 of this Act shall be as follows:

(1) for projects authorized only for navigation, costs assigned to commercial navigation will be 100 per centum of costs remaining after subtracting any specific costs for recreation;

(2) for multiple-purpose projects for which costs have been assigned to navigation, costs assigned to commercial waterway transportation will be in accord with that assignment or any subsequent reassignment;

(3) for other multiple-purpose projects providing navigation benefits but for which

there have been no cost assignments, costs assigned to commercial waterway transportation will consist of all specific navigation costs, plus 10 per centum of joint-use costs; and

(4) for the Mississippi River and Tributaries project, harbor improvement features shall be considered as individual projects pursuant to the above provisions of this section. For other features of the Mississippi River and Tributaries project, costs assigned to commercial waterway transportation will consist of (A) all specific navigation costs of the Channel Improvement feature consisting of: (i) maintenance dredging, and (ii) construction and maintenance of dikes, and (B) one-third of the joint-use costs consisting of: (i) construction dredging and construction, operation and maintenance of revetments of the Channel Improvement feature, and (ii) construction, operation and maintenance of the Old River control feature. Expenditures on construction and rehabilitation for the Mississippi River and Tributaries project, except for harbor improvement features, will be considered maintenance.

(5) Costs assigned pursuant to this section may be adjusted to reflect project modifications or other work for which reimbursement is provided under other provisions of law.

SEC. 7. Title II of the Inland Waterways Revenue Act of 1978 (92 Stat. 1696) is amended by deleting Section 204 and renumbering Sections 205 and 206 as Sections 204 and 205, respectively, and by amending the Table of Contents to be consistent with this section.

SEC. 8. Except as otherwise provided in Section 5(a), the interest rate used pursuant to this Act shall be determined by the Secretary of the Treasury, taking into consideration the average market yields on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the reimbursement period of the project, during the month preceding the fiscal year in which funds for the construction of the project are first disbursed.

SEC. 9. (a) After coordination with affected Federal agencies and non-Federal public interests, the Secretary, acting through the Chief of Engineers, is authorized to study, plan, design, construct, and operate and maintain such new improvements and rehabilitations and modifications of existing improvements on the inland waterway system as the Secretary determines to be reasonable and desirable for commercial waterway transportation.

(b) Capital and operation and maintenance expenditures of the Corps for work undertaken pursuant to this section, irrespective of the source of such funds, shall be subject to recovery through fees levied on commercial waterway transportation pursuant to Section 3 of this Act.

(c)(1) Before the Secretary, acting through the Chief of Engineers, may initiate construction on a plan of improvement authorized by subsection (a) of this section the Secretary shall submit to Congress—

(A) a final environmental impact statement for the plan of improvement, if the Secretary determines that the statement is required by the National Environmental Policy Act of 1969; and

(B) a statement of the Secretary's compliance, at that time, with the Clean Water Act, the Fish and Wildlife Coordination Act and other statutory requirements applicable to the improvement.

(2) The statements required under paragraph (1) of this subsection and any other actions required by the National Environmental Policy Act of 1969 and other applicable statutes shall be completed on an expedited basis pursuant to schedules, established by the Secretary after consultation with other Federal and State officials having responsibilities therewith. Thereafter, these officials shall make any necessary decisions and provide data and comment, as they deem appropriate, in accordance with the Secretary's schedules.

(3) A plan of improvement, addressed by an environmental impact statement that is submitted to Congress, in accordance with paragraph (1) of this subsection, shall be eligible for construction appropriations and implementation, under subsection (a) of this section, and may be undertaken unless Congress passes and the President approves a Joint Resolution disapproving the environmental impact statement within one hundred and eighty calendar days of its receipt by the Congress.

(d) An environmental impact statement, which is submitted to Congress in accordance with subsection (b)(1) of this section and is not disapproved pursuant to subsection (b)(3) of this section, shall be deemed to satisfy the requirements of section 102(2) of the National Environmental Policy Act of 1969.

(e) Claims, alleging that work authorized by this section will deny rights under the Constitution of the United States or that the work is beyond the scope of authority conferred by this section, shall be filed only in a United States District Court for a district where the work is located or to be located, or where the alleged injury occurs. Such courts shall have original jurisdiction over the proceedings and shall assign them for hearing at the earliest possible date. Such courts shall not have jurisdiction to grant any injunctive relief against any actions pursuant to this section except—

(1) in conjunction with a final judgment entered in a case involving a claim filed under this section, or

(2) where the petitioner presents a clear and convincing showing that the petitioner is likely to prevail on the merits, that without such an injunction the petitioner will suffer irreparable harm, and that issuance of an injunction will not lead to unreasonable harm to other parties and is in the public interest.

SEC. 10. The Secretary, in consultation with the Secretaries of Commerce, Transportation, Treasury, Energy and Agriculture, the Attorney General of the United States, the Administrator of the Environmental Protection Agency and the Director of the Office of Management and Budget, may promulgate, and may from time to time revise, regulations and guidelines to govern the programs authorized by this Act, including but not limited to the determination of inland and intracoastal segments and associated harbors for purposes of establishing a system of segment-specific fees implemented pursuant to Section 3(a)(2).

SEC. 11. There are authorized to be appropriated to the Secretary such sums as are necessary to carry out this Act.

DEPARTMENT OF THE ARMY,
Washington, D.C., May 19, 1983.

Hon. GEORGE BUSH,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: As you know, the Administration is committed to recovery of a substantial portion of Federal expenditures for the construction, operation, and maintenance of our Nation's inland waterway system from the commercial barge industry. This commitment is founded not only on budgetary considerations, but also on a conviction that charging the actual beneficiaries will result in greater efficiency in the operation and future development of the Nation's commercial transportation system.

Accordingly, the Department of the Army transmitted to the 97th Congress proposed legislation for recovery of costs assignable to commercial waterway transportation for major navigation channels handling the bulk of the Nation's commercial barge traffic. The Administration has continued to analyze and refine its inland waterway cost recovery legislation. We have sought to establish a meaningful dialogue with members of Congress, the public, and industry. On the basis of these discussions, the proposal has been revised and is submitted as part of the Army Civil Works legislative program for the 98th Congress. The Office of Management and Budget advises that enactment of the proposal would be in accord with the program of the President. The Department strongly recommends that Congress enact the proposed legislation.

PURPOSE OF THE LEGISLATION

The purpose of the proposed legislation is similar to our earlier proposals. That is, it provides for the recovery of certain capital, operation, and maintenance expenditures assignable to commercial waterway transportation for certain Tennessee Valley Authority and Army Corps of Engineers inland waterway projects, and it authorizes construction in specified circumstances.

Unlike our previous proposals, which would have authorized recovery of 100 percent of operation and maintenance (O&M) and new construction costs assigned to commercial navigation, this legislation would provide for recovery of 70 percent of these costs. It is hoped that by reducing the level of recovery to 70 percent we can achieve a workable compromise to allow early enactment of this legislation and thereby provide a firm financial basis for continued development and rehabilitation of the inland waterway system to accommodate future traffic growth.

Ton-mile fees would be used to recover costs. This mechanism is both equitable and easy to administer. The information needed to administer the program is generally available from waybills and other data currently collected as part of the Corps of Engineers Waterborne Commerce Statistics System.

Operation and maintenance costs would be recovered on a system-wide basis, while future construction costs (construction initiated after September 30, 1983) would be recovered on a segment-specific basis. System-wide O&M fees would minimize disruption of existing traffic patterns and would avoid imposing the burden of operating and maintaining existing improvements, constructed with general revenues, on any particular group. On the other hand, recovery of future capital improvement costs on a segment-specific basis means that, in the future, commercial operators would pay for improvements on stretches of the river which they actually use and would have to weigh their desire for those improvements against the costs for which they would ultimately be responsible. By requiring the direct beneficiaries to pay for the portion of the costs of future investment expenditures, we believe that the Federal government

would receive better advice from users as to the type and timing of capital improvements to the system than is certainly now the case, where improvements are made at no cost to the users, or would be the case were these costs to be shared with waterway shippers who do not directly benefit from the improvements.

Any projects, or physically separable features or activities of larger projects, initiated after September 30, 1983, would be subject to cost recovery under this proposal. Costs would be recovered for all future projects or physically separable features or activities.

The proposed legislation would also authorize imposition of congestion fees on all users of specific facilities to improve efficiency in the operation of the system.

In addition, it would provide for specific enforcement powers to allow the Secretary of the Army to insure accurate reporting and collection. The primary enforcement mechanism would be authority to prohibit violators from using the inland waterway system until all delinquent fees are paid, including realistic interest. The bill would also provide civil penalties of up to $200,000 for violations of the Act and increase the maximum penalty under existing reporting requirements to $200,000.

Furthermore, the proposed legislation includes streamlined authority for the Secretary of the Army to study, construct, operate, and maintain new navigation improvements and to rehabilitate and modify existing navigation facilites. Such improvements would be premised on the ability, and willingness, of commercial users to determine the need and pay for future projects and would be undertaken in compliance with the substantive provisions of all applicable laws.

Prior to the construction of such an improvement, the Secretary would submit to Congress any final environmental impact statement required by the National Environmental Policy Act of 1969 (NEPA) and a statement of the Secretary's compliance, at that time, with other statutory requirements applicable to the improvement. These statements and other necessary actions to comply with NEPA and other applicable statutes would be subject to schedules, consistent with existing laws, established by the Secretary, after consultation with other responsible Federal and State officials, that would govern the requirements for administrative review and decision-making. The plan of improvement would be eligible for construction funding and implementation, unless the environmental impact statement were disapproved by Joint Resolution approved by the President within 180 calendar days of its receipt by the Congress. Congress would also continue to exercise its important oversight responsibility through the appropriations process since expenditures from the Inland Waterways Trust Fund would continue to require Congressional appropriation.

Environmental impact statements for such improvements submitted to Congress prior to authorization, unless disapproved by the Congress, would be deemed to satisfy the requirements of NEPA. Specified Federal judicial jurisdiction and review would be limited to claims alleging that construction of the improvement would deny rights under the Constitution of the United States or would be beyond the scope of the authority conferred by the proposed legislation. In such a proceeding, injunctive relief could not be issued prior to a final order, unless the petitioner makes a clear and convincing showing that "the petitioner is likely to prevail on the merits; that without such an injunction the petitioner will suffer irreparable harm, and that issuance of the injunction will not lead to unreasonable harm to other parties and is in the public interest."

COST AND BUDGET DATA

Enactment of the enclosed draft legislation would require reimbursement to the Federal government for certain navigation expenditures of the Tennessee Valley Authority and the Army Corps of Engineers for waterway transportation on the inland and intracoastal waterways of the United States. This would result in significant savings to the Federal government.

Sincerely,

WILLIAM R. GIANELLI,
Assistant Secretary of the Army
(Civil Works).●

By Mrs. HAWKINS (for herself, Mr. D'AMATO, Mr. DODD, and Mr. GARN):

S. 1555. A bill to amend section 134 of the Truth in Lending Act and section 916 of the Electronic Fund Transfer Act; to the Committee on Banking, Housing, and Urban Affairs.

CREDIT CARD FRAUD

● Mrs. HAWKINS. Mr. President, today I am introducing a bill to strengthen the current credit and debit card fraud provisions of title 15 of the United States Code in behalf of myself and Senators D'AMATO, DODD, and GARN. Hearings that I chaired on May 18, 1983, before the Senate Consumer Affairs Subcommittee dramatically illustrate the need for this legislation.

THE SCOPE OF THE PROBLEM

According to witnesses appearing before the subcommittee, credit card fraud in the United States now exceeds $1 billion annually. The fraudulent use of credit cards over the past few years has spiraled to incredible heights, far out of proportion to the increase in the legitimate use of the cards. And although individual consumers have limited liability if they quickly report the misuse of their cards, that is not true in the aggregate. This $1 billion is passed on as a cost of doing business to all consumers. For this reason, credit card interest rates would be a full percentage point lower if fraud were eliminated. The purpose of my bill is to deter those who are considering engaging in credit card fraud by stiffening penalties received if convicted.

CREDIT CARD SCAMS

Formerly, credit card fraud generally occurred only after cards were lost or stolen. Those bold enough to try using these cards continued doing so only until they felt that knowledge of the theft had been widely distributed. As reporting and authorization systems improved, reducing the period during which stolen cards were usable, more sophisticated approaches were devised.

Fundamental to most scams today is obtaining valid credit card account numbers then listing these numbers on manufactured cards that appear valid. Witnesses testified that there are several methods for fraudently obtaining credit card numbers:

First, some search merchants' trash and recover carbon sheets from valid card transactions that contain legible cardholder information.

Second, others buy stolen cards, frequently from prostitutes.

Third, another technique requires posing over the telephone as a card company representative or legitimate businessman and persuading cardholders to give their account numbers.

Fourth, finally, rings often use confederates in banks, post offices, or retail establishments to obtain cardholder information.

Once account numbers are obtained, they are embossed on pieces of plastic and used in various fraudulent schemes. The following examples illustrate the increased sophistication of scams as criminals strive to stay ahead of industry efforts to protect against losses.

SHAVE AND PASTE

The "shave and paste" scheme requires manually altering credit cards. Account-holder information on the face of lost or stolen cards is removed using a razor blade. New numbers removed from other credit cards are then glued on to the credit cards using fast-drying cement. Attempts have been made to change validation and expiration date lines as well as account numbers.

WHITE PLASTICS

A more sophisticated scheme requires manufacturing "white plastics." "White Plastics" are made from plain plastic and they fit in sales draft embossing equipment widely available. These blank cards are embossed with an account number, cardholder name, and expiration date; without any issuer's name. These frauds require the cooperation of collusive merchants who submit bogus sales slips for transactions that never took place to their banks.

OTHER ABUSES

Recently banks and credit card holders in Florida experienced a serious problem with a credit card registration service based in the State. The company maintained a telephone solicitation staff who called consumers to sell them a form of credit card insurance. By paying a fee, a customer could call up this company if their cards were misplaced. The company then notified all card issuing firms that no charges should be processed using the customer's account numbers until further notice.

Although many consumers declined the offer, they were nevertheless billed for the service. The company

had purchased lists of credit card holders' names, addresses, credit card numbers, and used this information to process phony credit card charges for their unwanted service. Of course, there was an enormous number of consumer complaints. Although the Florida Department of Legal Affairs issued an emergency order for the firm to cease and desist from these fraudulent activities, this group, and I am sure others, are continuing their activities in other parts of the country under other business names.

PREVENTIVE ACTION NECESSARY

Testimony from the Department of Justice highlighted that counterfeiting and unauthorized access to account information is due in large part to the lack of security built into the charging system. The Department urged the credit card and electronic fund transfer industry to improve security at all steps in the process. In addition, the Department felt card issuers need to be more selective in their application and approval processes. In the past, credit card issuers provided cards for anyone and everyone.

Industry witnesses testified that they agree and are taking steps to make counterfeiting or alteration more difficult. One card issuer has announced plans to have all cards issued in his system include holograms, fine line printing, and ultraviolet inks. This will require anyone who wishes to defraud them to surmount a new technological barrier of a significant magnitude.

The American Bankers Association Task Force on Credit Card Fraud is taking steps to safeguard account number access. They are urging banks and processors to restrict access to account information or use only that portion of an account number necessary to identify the account in in-house activities. Merchants are counseled to use perforated carbons and carbonless sales slips and to take other precautions in disposing of carbons and duplicate sales slips. Consumers are cautioned to safeguard account numbers and sales receipts.

NEED FOR LEGISLATION

While these initiatives are commendable, private sector efforts alone are insufficient to combat credit card fraud. Credit and debit cards are replacing checks and cash as the principal means of exchange in retail transactions. Therefore, credit card fraud jeopardizes the national payments system. A Federal, not a State or a local, response is necessary because credit card fraud is usually interstate in nature. In addition, groups operating in one State respond to local enforcement activity by moving to another State to perpetuate their frauds.

The hearings illustrated the need for an immediate attack on credit card fraud. The first step would be to modernize and strengthen the current credit and debit card fraud statutes in the Truth in Lending and Electronic Fund Transfer Acts found in title 15 of the United States Code. Many of the card-related abuses were—unimaginable—when these crime laws were enacted. Only fraud involving stolen cards were thoroughly treated. The bill I am introducing today contains amendments to close the loopholes in these statutes. For example, courts have held that misuse of account numbers does not technically constitute fraudulent use of a "credit card," and is therefore not prohibited by the existing criminal provisions of the Truth in Lending Act. My bill closes this loophole by defining "credit card fraud" to include misuse of an actual or fictitious account number. The bill also covers for the first time schemes where criminals obtain credit cards or account numbers for fraudulent purposes. It includes, for instance, obtaining an account number directly from cardholders over the telephone or in person in order to use their numbers to incur fraudulent charges. It also makes it a crime to obtain account numbers in unauthorized fashion from sales receipts or carbons obtained collusively or by theft from merchants. And it prohibits selling lists of account numbers for fraudulent purposes. The penalty for a subsequent violation would be increased from the current sanctions of a fine of not more than $10,000 and an imprisonment of not more than 10 years to $100,000 and 20 years respectively.

It is essential that these statutory loopholes be closed so that we can begin vigorous enforcement against credit card fraud immediately. The loss of $1 billion annually to sophisticated thieves is unnecessary.

I request unanimous consent that the text of the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1555

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 134 of the Truth in Lending Act (15 U.S.C. 1644) is amended to read as follows:

"§ 134. Fraudulent use of credit card

"(a) Whoever—

"(1) knowingly in a transaction affecting interstate or foreign commerce, uses or attempts or conspires to use any counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained credit card to obtain money, goods, services, or anything else of value which within any one-year period has a value aggregating $1,000 or more;

"(2) with unlawful or fraudulent intent, transports or attempts or conspires to transport in interstate or foreign commerce a counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained credit card knowing the same to be counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained;

"(3) with unlawful or fraudulent intent, uses any instrumentality of interstate or foreign commerce to sell or transport a counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained, credit card knowing the same to be counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained;

"(4) knowingly receives, conceals, uses, or transports money, goods, services, or anything else of value (except tickets for interstate or foreign transportation) which (A) within any one-year period has a value aggregating $1,000 or more, (B) has moved in or is part of, or which constitutes interests or foreign commerce, and (C) has been obtained with a counterfiet, fictitious, altered, forged, lost, stolen, or fraudulently obtained credit card;

"(5) knowingly receives, conceals, uses, sells, or transports in interstate or foreign commerce one or more tickets for interstate or foreign transportation, which (A) within any one-year period have a value aggregating $500 or more, and (B) have been purchased or obtained with one or more counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained credit cards;

"(6) in a transaction affecting interstate or foreign commerce furnishes money, property, services, or anything else of value, which within any one-year period has a value aggregating $1,000 or more, through the use of any counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained credit card knowing the same to be counterfeit, fictitious, altered, forged, lost, stolen, or fraudulently obtained;

"(7) in a transaction affecting interstate or foreign commerce, knowingly furnishes, transfers, or obtains a credit card for use in connection with a scheme to defraud a consumer or any other person; or

"(8) in a transaction affecting interstate or foreign commerce, with unlawful or fraudulent intent, furnishes, acquires, or uses any actual or fictitious credit card account numbers or identification or other access codes, whether alone or together with names of credit card holders, or other information pertaining to a credit card account in any form, and as they may be reflected or retained in any medium,

shall be fined not more than $10,000 or imprisoned not more than ten years, or both.

"(b)(1) In determining the aggregate value for the purpose of any provision of subsection (a), there shall be included the dollar value of all transactions by a person using one or more credit cards in a course of conduct in violation of such provision.

"(2) As used in this section, the term 'credit card' includes account numbers or any other means of account access that can be used, alone or in conjuction with another means of access to obtain money, goods, services, or any other thing of value.

"(c) Any person who is convicted of a violation of any provision of subsection (a) or section 916 shall, for any subsequent violation of a provision of subsection (a) or section 916, be fined not more than $100,000 or imprisoned not more than 20 years, or both.".

SEC. 2. (a) Section 916(b) of the Electronic Fund Transfer Act (15 U.S.C. 1693n(b)) is amended by striking out "obtained—" in paragraph (6) and inserting in lieu thereof the following: "obtained;

"(7) in a transaction affecting interstate or foreign commerce, knowingly furnishes, transfers, or obtains a debit instrument for

use in connection with a scheme to defraud a consumer or any other person; or

"(8) in a transaction affecting interstate or foreign commerce, with unlawful or fraudulent intent, furnishes, acquires, or uses any actual or fictitious account numbers or identification or other access codes, whether alone or together with names of account holders, or other information pertaining to a debit instrument in any form, and as they may be reflected or retained in any medium—".

(b) Section 916(c) of such Act is amended by inserting after "card, code," the following: "account number, other means of account access (that can be used, alone or in conjunction with another access device, to obtain money, goods, services, or any other things of value or for the purpose of initiating a transfer of funds (except a transfer originated solely by a paper instrument)),".

(c) Section 916 of such Act is amended by adding at the end thereof the following:

"(d) In determining the aggregate value for the purpose of any provision of subsection (b), there shall be included the dollar value of all transactions by a person using one or more credit cards in a course of conduct in violation of such provision.

"(e) Any person who is convicted of a violation of any provision of subsection (b) or of section 134 shall for any subsequent violation of a provision of subsection (b) or section 134, be fined not more than $100,000 or imprisoned not more than 20 years, or both.".●

● Mr. D'AMATO. Mr. President, I am proud to join my distinguished colleague, Senator HAWKINS, as an original cosponsor of this much needed legislation. The credit and debit card industries have greatly expanded, mainly as a result of technological advances in the communications field. These advances have, for the most part, facilitated the free flow of commerce in this country and provided consumers with a high quality of service in the provision of credit and debit card services.

Unfortunately, those same technological advances that have made it possible for the credit card industry to flourish have been turned against the industry. Sophisticated criminals have utilized technologically advanced and innovative methods in the commission of crimes which were beyond the imagination of the most clever draftsman of applicable criminal statutes.

At hearings held by Senator HAWKINS, chairman of the Consumer Affairs Subcommittee, on May 18, 1983, testimony revealed the drastic need for the tightening of certain provisions in both the Truth in Lending Act and the Electronic Fund Transfer Act to give our enforcement officials the statutory authority and flexibility to address this more innovative and advanced criminal behavior. One provision of particular interest to me in this legislation is one that would include, in the definition of credit card, an account number or other means of account access used to obtain money, goods, or services. I, personally, have been the victim of a crime in which my credit card number was misappropriated—probably from a carbon imprint—and an unauthorized charge was made to my credit card account. I was surprised to hear that a Federal circuit court had ruled such fraudulent use of account numbers would not be covered by criminal provisions of the truth in lending law as the tangible credit card was not used in the commission of the crime. I am pleased to say that this legislation will correct this and other glaring deficiencies in current law.

Mr. President, I have a special interest in seeing these revisions written into law. New York, I am sorry to say, has the dubious distinction of being the credit card fraud capital of the world, especially in the area of counterfeiting credit cards. VISA estimates that nearly 50 percent of its losses due to counterfeiting occur in New York State. If this behavior is not swiftly and adequately addressed we can be certain of its proliferation to other States throughout the Union.

I believe the changes mandated by this legislation, especially the increased penalties, will go far to deter the spread of this criminal activity, the burden of which is ultimately borne by the consumer through increased costs for credit and debit card services. As a member of the Senate Subcommittee on Consumer Affairs, I urge my colleagues to support swift passage of this legislation.●

By Mr. DURENBERGER (for himself and Mr. BOSCHWITZ):

S. 1556. A bill to amend the Internal Revenue Code of 1954 to exclude from gross income grants paid by the U.S. Forest Service as a result of restricting motorized traffic in the Boundary Waters Canoe Area; to the Committee on Finance.

TAXATION OF BWCA GRANTS TO SMALL BUSINESSES

● Mr. DURENBERGER. Mr. President, the bill I introduce today will settle a question that should never have arisen. In the 1978 Boundary Waters Canoe Area Wilderness Act, Congress curtailed motorized access to much of the million-acre wilderness along Minnesota's border with Canada. This act had a significant impact on resort owners and outfitters because they had substantial investment in motorized equipment. To help compensate these small businesses for their direct economic losses, and to help them conform to the new law, Congress authorized the U.S. Forest Service to develop an adjustment assistance program to aid those affected in shifting from motorized to nonmotorized operations.

The Internal Revenue Service now wants to tax these compensatory payments. Clearly, it makes little sense for the Federal Government to help defray, in a very small way, the cost of complying with legislation that we thrust upon them and then taking this money back through the tax system. With one hand the Government is reaching out to help these small businesses, while slapping them down with the other hand.

It was not the intent of Congress that these payments be taxed. Taxation of these payments violates the spirit of the agreement reached and substantially nullifies the effect of the adjustment assistance Congress authorized.

In comparison to total Federal spending and taxing, we are not talking about a great deal of money. Between 1980 and 1982 about $1.3 million has been distributed. Individual businesses have received between $2,500 and $52,500 in 3 years.

But to the businesses affected, these funds are crucial. The grants can be the difference between surviving the changes thrust upon them by Congress and ceasing to exist.

The resort owners and outfitters who received adjustment assistance payments are bitter and angry over what they feel is a betrayal by the Federal Government. The Federal Government has changed the basis of the bargain. If these business people had known that these payments were to be taxed, many may have taken another option included in the 1978 bill—to sell their places to the Government and pull out of the area.

This bill will make it clear that adjustment assistance payments pursuant to section 19 of the Boundary Waters Canoe Area Wilderness Act will not be taxed. The faith these business people had, that the Federal Government would keep its bargain, should be restored. The intent of Congress when enacting the legislation in the first instance should be carried out. I ask my colleagues to give this measure their rapid and favorable consideration.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There beng no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1556

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 1. EXCLUSION FROM GROSS INCOME OF PAYMENTS FROM THE U.S. FOREST SERVICE AS A RESULT OF RESTRICTING MOTORIZED TRAFFIC IN THE BOUNDARY WATERS CANOE AREA.

(a) IN GENERAL.—Part III of subchapter B of chapter 1 (relating to items specifically excluded from gross income), is amended by redesignating section 132 as section 133 and by inserting after section 131 the following new section:

"SEC. 132. PAYMENTS BY THE U.S. FOREST SERVICE AS A RESULT OF RESTRICTING MOTORIZED TRAFFIC IN THE BOUNDARY WATERS CANOE AREA.

"(a) EXCLUSION FROM GROSS INCOME.—Gross income does not include amounts received by the taxpayer from the U.S. Forest

Service as a result of restricting motorized traffic in the Boundary Waters Canoe Area.

"(b) DEFINITION.—For the purpose of this section, the term 'payments by the U.S. Forest Service' shall mean any payments made by the U.S. Forest Service pursuant to Sec. 19(a) of P.L. 95-495, An Act to Designate the Boundary Waters Canoe Area Wilderness, to Establish the Boundary Waters Canoe Area Mining Protection Area, and for Other Purposes", approved October 21, 1978.

SEC. 2. CLERICAL AMENDMENT.

The table of sections for part III of subchapter B of chapter 1 is amended by striking out the item relating to section 132 and by inserting in lieu thereof the following items:

"Sec. 132. Payments by the U.S. Forest Service as a result of restricting motorized traffic in the Boundary Waters Canoe Area.
"Sec. 133. Cross references to other Acts."

SEC. 3. EFFECTIVE DATE.

The amendments made by this section 1 shall apply to taxable years beginning after December 31, 1979 and before January 1, 1984.●

By Mr. CHAFEE (for himself and Mr. BENTSEN):

S. 1557. A bill to amend the Internal Revenue Code of 1954 to repeal the 30 per centum tax on interest received by foreigners on certain portfolio investments which operates as a tariff to prevent such investments from entering the United States; to the Committee on Finance.

REPEAL OF TAX ON INTEREST ON CERTAIN FOREIGN INVESTMENTS

Mr. CHAFEE. Mr. President, today Senator BENTSEN and I are introducing legislation amending the Internal Revenue Code of 1954 to repeal the 30-percent tax on certain interest payments received by foreigners.

This bill exempts foreign persons and corporations from U.S. income and withholding taxes on interest income from debt obligations guaranteed by domestic corporations.

Current law levies and withholds a 30-percent income tax on nonresident aliens and foreign corporations receiving interest payments from U.S. corporations. This 30-percent tax effectively operates as a tariff, preventing the influx of foreign capital to help finance American business.

One result of the current law is that in order to sell bonds and other obligations abroad, U.S. corporations must assume the cost of the withholding tax by increasing the rate of interest. Accordingly, to blunt the effect of the withholding rule, U.S. corporations have established offshore finance subsidiaries that take advantage of favorable tax treaties. The most prominent of the tax havens is the Netherland Antilles. These financing subsidiaries erode confidence in the integrity of the U.S. tax system, promote treaty shopping, and may interfere with treaty negotiations.

Foreign investments provide needed capital for our own domestic business expansion and for the creation of new jobs. It is important to have access to this source of capital. Repeal of the withholding requirements would benefit the U.S. economy in the following ways:

First. More capital at lower long-term rates, increasing investment, R&D, jobs, and lowering Treasury borrowing costs;

Second. Reassertion of U.S. control of a large part of the offshore dollar bond market;

Third. Allow all U.S. companies and Treasury access to the worldwide dollar bond market, thus effectively ending the use of tax havens for tax avoidance; and

Fourth. Revenue increase to Treasury, estimated to be as much as $50 million.

The bill applies to the following three categories of U.S. issuers:

First. Interest paid on obligations sold to foreign persons by finance subsidiaries prior to the enactment of this bill and later assumed by a domestic corporation.

Second. Interest paid on new obligations sold directly or through underwriters under arrangements designed to insure their initial sale only to foreign persons.

Third. Interest paid on obligations not in bearer form where the withholding agent has received a statement to the effect that the beneficial owner of the obligation is a foreign person.

Exempted from the bill is interest on commercial bank loans with foreigners.

This bill has had bipartisan support in the House and Senate; Congressmen GIBBONS and CONABLE have introduced a similar bill this year. The Treasury Department's support is demonstrated by its letter to Congressman GIBBONS, which I ask be printed in the RECORD following my remarks. Moreover, the Finance Committee unanimously reported this measure in 1979.

I request unanimous consent that the bill appear in the RECORD following my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1557

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. TREATMENT OF CERTAIN INTEREST

(a) In General.—Subsection (a) of section 871 of the Internal Revenue Code of 1954 (relating to income not connected with United States business—30 percent tax) is amended by adding at the end thereof the following new paragraph:

"(4) INCOME OF NONRESIDENT ALIEN INDIVIDUALS RECEIVED FROM CERTAIN PORTFOLIO DEBT INVESTMENTS.—No tax shall be imposed under subsection (a)(1) on interest (including original issue discount) received by a nonresident alien individual if—

"(A) the interest is paid on an obligation which resulted from the assumption after the date of enactment of this Act by a domestic corporation of an obligation which was issued on or prior to such date and which when issued, was guaranteed by a domestic corporation and was sold pursuant to arrangements described in section 163(f)(2)(B)(i),

"(B) the interest is paid on an obligation which is not in registered form and which is described in section 163(f)(2)(B), or

"(C) the interest is paid on an obligation which is in registered form, the United States person who would otherwise be required to deduct and withhold tax from such interest under section 1441 (a) has received a statement that the beneficial owner of the obligation is not a United States person and such statement meets the requirements of subsection (g),

but in the case of interest paid on an obligation described in subparagraph (B) or (C) only if (i) in the case of interest received from a corporate, the nonresident alien individual does not own, and is not considered as owning (within the meaning of subsection (h)), 10 percent or more of the total combined voting power of all classes of stock entitled to vote of such corporation, or (ii) in the case of interest received from a partnership, the nonresident alien individual does not own and is not considered as owning (within the meaning of subsection (h)), 10 percent or more of the capital or profits interest in such partnership. For purposes of this paragraph the term 'registered form' has the same meaning as when used in section 163 (f).".

(b) CERTAIN STATEMENTS; CONSTRUCTIVE OWNERSHIP.—Section 871 of such Code (relating to tax on nonresident alien individuals) is amended by redesignating subsection (g) as subsection (i) and by adding after subsection (f) the following two new subsections:

"(g) CERTAIN STATEMENTS.—A statement with respect to the ownership of an obligation shall meet the requirements of this subsection if such statement represents that it is from the beneficial owner of the obligation or such statement is from a securities clearing organization, a bank, or other financial institution that holds customers' securities in the ordinary course of its business, and within the period ending 1 month prior to the payment of interest the Secretary has not published a determination to the effect that statements from such securities clearing organization, bank, or other financial institution, or any class of such persons, may not be accepted for the purposes of this subsection.

"(h) CONSTRUCTIVE OWNERSHIP.—Section 318(a) (relating to the constructive ownership of stock), other than paragraph (1) thereof, shall apply for the purposes of determining ownership of stock of the corporation under subsection (a)(4) and section 881(c), and similar rules shall apply for the purposes of determining ownership of an interest in a partnership under subsection (a)(4) and section 881(c). For the purposes of the preceding sentence, section 318(a)(2)(C) shall be applied without regard to the 50-percent limitation contained therein, and stock of the corporation or an interest in a partnership owned by a person by reason of the application of section 318(a)(4) shall not, for the purposes of applying paragraphs (2) and (3) of section 318 (a), be considered as actually owned by such person.".

(c) CONFORMING AMENDMENT.—Section 871(a)(1) of such Code (relating to income other than capital gains) is amended by striking out "There" and inserting in lieu thereof "Except as provided in paragraph (4), there".

SEC. 2. FOREIGN CORPORATIONS

(a) IN GENERAL.—Section 881 of the Internal Revenue Code of 1954 (relating to tax on income of foreign corporations not connected with United States business) is amended by redesignating subsection (c) as subsection (d) and by adding after subsection (b) the following new subsection:

"(c) INCOME OF FOREIGN CORPORATIONS RECEIVED FROM CERTAIN PORTFOLIO DEBT INVESTMENTS.—No tax shall be imposed under subsection (a) on interest (including original issue discount) received by a foreign corporation if—

"(1) the interest is paid on an obligation described in section 881(a)(4)(A),

"(2) the interest is paid on an obligation described in section 871(a)(4)(B), or

"(3) the interest is paid on an obligation which is in registered form, the person who would otherwise be required to deduct and withhold tax from such interest under section 1442(a) has received a statement that the beneficial owner of the obligation is not a United States person, and such statement meets the requirements of section 871(g),

but in the case of interest paid on an obligation described in subsection (2) or (3) only if (i) the interest is not interest received by a controlled foreign corporation, (ii) except for interest paid on an obligation of the United States, the interest is not interest received by a bank on an extension of credit made pursuant to a loan agreement entered into in the ordinary course of its banking business, (iii) in the case of interest received from a corporation, the corporation receiving the interest does not own, and is not considered as owning (within the meaning of section 871(h)), 10 percent or more of the total combined voting power of all classes of stock entitled to vote of such corporation, and (iv) in the case of interest received from a partnership, the corporation receiving the interest does not own, and is not considered as owning (within the meaning of section 871(h)), 10 percent or more of the capital or the profits interest in such partnership. For purposes of this subsection the term 'registered form' has the same meaning as when used in section 163(f).".

(b) CONFORMING AMENDMENT.—Section 881(a) of such Code (relating to imposition of tax) is amended by striking out "There" and inserting in lieu thereof "Except as provided in subsection (c), there".

SEC. 3. AMENDMENT OF SECTION 864(c)(2).

Paragraph (2) of section 864(c) of the Internal Revenue Code of 1954 (relating to effectively connected income, etc.) is amended by striking out "section 871(a)(1) or section 881(a)" and inserting in lieu thereof "section 871(a)(1), section 871(a)(4), section 881(a) or section 881(c)".

SEC. 4. REMOVAL OF EXEMPTION FROM TAX IN CASE OF INADEQUATE EXCHANGE OF INFORMATION.

(a) Subpart C of part II of subchapter N of chapter 1 of the Internal Revenue Code of 1954 (relating to miscellaneous provisions) is amended by adding at the end thereof the following new section:

"SEC. 898. REMOVAL OF EXEMPTION FROM TAX IN CASE OF INADEQUATE EXCHANGE OF INFORMATION.

"Whenever the Secretary determines that the exchange of information between the United States and a foreign country is inadequate to prevent evasion of the United States income tax by United States persons, the exemption from tax contained in section 871(a)(4) and section 881(c) shall not apply to any payment or payments addressed to or for the account of persons within such foreign country after the date specified in the Secretary's determination. Any such removal shall not apply to interest on obligations issued on or before the date of publication of such determination. The removal of the exemption from tax contained in section 871(a)(4) and section 881(c) shall continue until the Secretary determines that the exchange of information between the United States and the foreign country of such information is adequate to prevent the evasion of the United States income tax by United States persons.".

(b) The table of sections for such subpart C is amended by adding at the end thereof the following new item:

"Sec. 898. Removal of exemption from tax in case of inadequate exchange of information.".

SEC. 5. AMENDMENT OF SECTION 2105.

Subsection (b) of section 2105 of the Internal Revenue Code of 1954 (relating to property without the United States) is amended to read as follows:

"(b) BANK DEPOSITS AND CERTAIN OTHER DEBT OBLIGATIONS.—For purposes of this subchapter—

"(1) amounts described in section 861(c), if any interest thereon would be treated by reason of section 861(a)(1)(A) as income from sources without the United States were such interest received by the decedent at the time of his death,

"(2) deposits with a foreign branch of a domestic corporation or domestic partnership, if such branch is engaged in the commercial banking business, and

"(3) debt obligations, if, without regard to whether a statement meeting the requirements of section 871(g) has been received, any interest thereon would be eligible for the exemption from tax under section 871(a)(4) were such interest received by the decedent at the time of his death,

shall not be deemed property within the United States.".

SEC. 6. WITHHOLDING.

(a) NONRESIDENT ALIENS.—Subsection (c) of section 1441 of the Internal Revenue Code of 1954 (relating to withholding of tax on nonresident aliens) is amended by adding at the end thereof the following new paragraph:

"(9) INCOME EXEMPT FROM TAX.—No deduction or withholding shall be required in the case of interest (including original issue discount) described in subparagraph (A), (B), or (C) of section 871(a)(4) unless the person otherwise required to deduct and withhold shall know, or have reason to know, that such item of income is not exempt from tax because of clause (i) or (ii) of section 871(a)(4).".

(b) FOREIGN CORPORATIONS.—The last sentence of section 1442(a) of such Code is amended—

(1) by striking out "and" after "section 881(a)(4),"; and

(2) by inserting ", and the reference in section 1441(c)(9) to clauses (i) and (ii) of section 871(a)(4) shall be treated as referring to clauses (ii), (iii), and (iv) of section 881(c)" after "section 881(a)(3)".

SEC. 7. EFFECTIVE DATES.

(a) The amendments made by this Act (other than section 5) shall apply to amounts paid after the date of enactment of this Act.

(b) The amendment made by section 5 shall apply to the estates of decedents dying after the date of enactment of this Act.

DEPARTMENT OF THE TREASURY,
Washington, D.C., May 23, 1983.

Hon. SAM M. GIBBONS,
House of Representatives,
Washington, D.C.

DEAR MR. GIBBONS: I am writing to reiterate the Administration's support for your proposal to exempt foreign persons from U.S. tax on certain interest payments, which had been introduced by you and Mr. Conable in the last Congress as H.R. 4618, and to urge that a similar measure be introduced in the present Congress.

Such a measure would improve access to foreign capital markets for American business. We believe that such access is an important element in achieving increased capital formation and sustained economic growth in this country. As you are well aware, access to the Eurobond market on a competitive basis requires that interest be paid free of tax in the source country.

Presently, access to these capital markets is possible, but American companies must establish complex and costly mechanisms, generally by interposing a financing subsidiary in a treaty-protected jurisdiction such as the Netherlands Antilles, to attempt to eliminate the 30 percent U.S. tax on interest. Furthermore, some uncertainty now surrounds the U.S. tax consequences resulting from these structures. Legislation, such as H.R. 4618, would permit Americans to borrow directly in these capital markets, thereby obviating the need to create "backdoor" routes, and eliminating the uncertainty.

Direct issuance of Eurobond obligations by U.S. issuers, as envisioned by your proposal, would result in a net gain in U.S. revenues. More specifically, based on the factors of (1) the current level of Eurobond issuances by Netherlands Antilles finance subsidiaries, and the resultant U.S. and Netherlands Antilles tax consequences (particularly the allowance of a foreign tax credit in the United States for the Antilles corporate tax imposed on the finance subsidiaries), and (2) the tax collected under present law on interest payments to foreign persons, the net revenue gain from such an amendment to the Internal Revenue Code would on a conservative basis be $35 million, and could well be as much as $50 million.

I would be pleased to discuss these matters further with you.

Sincerely,

JOHN E. CHAPOTON,
Assistant Secretary
(Tax Policy).

By Mr. DECONCINI:

S. 1558. A bill to amend chapter 25 of title 18, United States Code to provide penalties for the forging of endorsements on, or fraudulently negotiating, U.S. checks or bonds or securities, and for other purposes; to the Committee on the Judiciary.

PENALTIES FOR FRAUD CONNECTED WITH GOVERNMENT CHECKS AND BONDS

● Mr. DECONCINI. Mr. President, the legislation that I am introducing today will, if adopted, correct certain omissions in current law and prescribe penalties for forging endorsements on Treasury checks, bonds, or securities

of the United States, passing such obligations bearing forged endorsements, or possessing, selling, or exchanging such obligations, if they are stolen or bear forged endorsements. This legislation will make it possible for the Justice Department to prosecute both forgeries of endorsements and related crimes involving obligations of the United States under one section of the United States Code, and greatly assist the U.S. Secret Service—the agency with primary jurisdiction in this area—to investigate crimes involving obligations and securities of the United States.

Specifically, Mr. President, here is what this legislation would do and why it is needed. Presently, violations for forgery of endorsement or fraudulent negotiation of a Treasury check or bond or other security of the United States are being prosecuted under section 495 of title 18, United States Code, which specifically covers contracts, deeds, powers of attorneys, and applies to the forgery or altering of "other writings." However, that section was not specifically drafted to deal with Treasury checks or bonds or other obligations. The basis for using section 495 to prosecute these violations is the provision therein which penalizes the forgery or altering of "other writings." Sections 471 and 472 of title 18 are concerned with forgery and uttering forged obligations or securities of the United States. However, these sections apply to forgery of the security, not forgery of endorsements. Because section 495 was not drafted to deal with Treasury checks, bonds, or other obligations of the United States, many of the variations of offenses involved with the forgery of obligations are not included under section 495. Case in point: Presently, it is possible for a thief to steal a Treasury check endorsed by a payee, endorse his own name and obtain the proceeds without violating section 495. It is also possible for a thief to steal one or more Government checks or bonds and sell or exchange them to a middle man and not violate section 495. These kinds of situations require the prosecutors to "hunt around" for a statute which often does not fit the crime. As a result, these cases are often either not prosecuted or the charges are dismissed.

The creation of section 510 to title 18, United States Code, would make it a felony: First, to forge an endorsement or signature on a U.S. Treasury check or bond or security of the United States; or second, to pass or attempt to pass such an obligation with the knowledge that it has been forged. It would also make it a felony to knowingly exchange or possess such an obligation of the United States which has been stolen or bears a forged endorsement. Furthermore, the penalty for such violation would be a fine of not more than $10,000 or imprisonment not to exceed 10 years, or both. While section 495 is strictly a felony statute, the proposed section 510 also allows for prosecution as a misdemeanor for those obligations which do not exceed $500. This will greatly enhance the judicial process since the great majority of such cases are under the $500 amount.

Mr. President, back on April 2, 1981—only 2 days after the tragic assassination attempt on President Reagan at the Washington Hilton—the Subcommittee on Treasury, Postal Service, and General Government held a hearing on the Secret Service' fiscal year 1982 budget request. As the ranking minority member on that subcommittee, I asked then Secret Service Director Stu Knight to provide for the record a package of recommended statutory changes that would enhance the Secret Service's investigative authorities and improve their ability to carry out their important criminal investigative and protective responsibilities. One of several proposed legislative changes that was submitted by the Secret Service to the committee for its review was the creation of the new section 510 in title 18 of the United States Code I am proposing in this bill today.

On June 18, 1981, I introduced the Secret Service Reform Act of 1981 which included, among other things, the new section 510 provision and appropriate penalties, as recommended by the Secret Service in their prepared responses to questions raised during the April hearings before the Appropriations Committee. Unfortunately, the bill was not reported out of the Judiciary Committee on which I serve. Certain provisions in that bill have subsequently passed as amendments to other legislative vehicles; however, the section 510 provision has not been approved by the Congress. It is my understanding that the administration supports the creation of the new section 510 under chapter 25 of title 18 of the United States Code and has submitted such legislation to Congress. It is this identical legislation that I am introducing today.

Mr. President, the Treasury Department and I are not the only ones who feel that the passage of this forgery legislation is long overdue. The General Accounting Office has recently prepared a draft report on forgery of U.S. Treasury checks and recommended that a Federal misdemeanor law be enacted by the Congress. According to GAO, Secret Service and U.S. attorneys' offices throughout the country generally agreed that various benefits would result if a Federal misdemeanor forgery statute were enacted, including the following specific benefits:

First. Result in more forgers being prosecuted by U.S. attorneys;

Second. Eliminate the need for creating "legal fictions" which result from prosecuting under misdemeanor laws that may not directly address the forgery offense;

Third. Increase plea negotiation flexibility and guilty pleas;

Fourth. Increase use of the U.S. magistrates in check forgery cases and reduce the number of felony trials, thereby reducing the burden on the Federal district courts;

Fifth. Provide more accurate conviction records which may be useful in future prosecutions of repeat offenders; and

Sixth. Provide a realistic penalty structure.

So the legislation that I am introducing today would address these concerns and the other concerns of the administration that the law regarding forged Government securities be clarified for use in Treasury investigations and prosecutions by the Justice Department.

Mr. President, the Secret Service has been involved in assuring the integrity of Government obligations for well over 100 years and has obviously accumulated more than a century of experience and operational knowledge in the area of forged and stolen Government securities. Section 510 will undoubtedly ameliorate many of the judicial problems and bridge some existent gaps in current law that allow hundreds of important cases involving forged and stolen Government obligations to fall through the cracks. The Secret Service investigates thousands of Treasury check forgery cases. In fiscal year 1982 alone, the Secret Service closed almost 83,000 cases involving checks totaling $26.5 million, with check forgery cases resulting in 4,652 arrests. Add to this, the hundreds of cases involving other forms of Government securities and it is clear that Secret Service has a major investigative workload in the area of forged and stolen Government securities to go along with its other crucial protective functions. The legislation that I am introducing today, if enacted by Congress, will take a significant step in the direction of improving our Federal law enforcement effort in the area of Government securities. I urge the prompt passage of this legislation.

Mr. President, I ask unanimous consent that the full text of the bill be printed in the RECORD at the end of these remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1558

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 25 of title 18, United States Code, is amended by adding the following new section:

SEC. 510. FORGING ENDORSEMENTS ON TREASURY CHECKS OR BONDS OR SECURITIES OF THE UNITED STATES.

(a) Whoever, with intent to defraud—

(1) falsely makes or forges any endorsement or signature on a Treasury check or bond or security of the United States; or

(2) passes, utters, or publishes, or attempts to pass, utter, or publish, any Treasury check or bond or security of the United States bearing a falsely made or forged endorsement or signature shall be fined not more than $10,000 or imprisoned not more than 10 years, or both.

(b) Whoever, with knowledge that such check or bond or security of the United States is stolen or bears a falsely made or forged endorsement or signature buys, sells, exchanges, receives, delivers, retains, or conceals any such check or bond or security of the United States that in fact is stolen or bears a forged or falsely made endorsement or signature shall be fined, not more than $10,000 or imprisoned not more than 10 years, or both.

(c) If the face value of the Treasury check or bond or security of the United States or the aggregate face value, if more than one Treasury check, bond or security of the United States, does not exceed $500, in any of the above-mentioned offenses, the penalty shall be a fine of not more than $1,000 or imprisonment for not more than 1 year, or both.

SEC. 2. Section 3056(a) of title 18, United States Code, is amended by inserting in the fifth clause the number "510," after "509,".

SEC. 3. The analysis of chapter 25, of title 18, United States Code, immediately preceding section 471 of such title, is amended by adding at the end thereof the following:

"510. Forging endorsements on Treasury checks or bonds or securities of the United States."●

By Mr. MOYNIHAN (for himself, Mr. DOLE, and Mr. MATSUNAGA):

S. 1559. A bill to amend sections 2314 and 2315 of title 18, United States Code, relating to stolen archeological material; to the Committee on the Judiciary.

STOLEN ARCHEOLOGICAL MATERIAL

● Mr. MOYNIHAN. Mr. President, I am pleased to introduce, with Senators DOLE and MATSUNAGA, legislation to amend the National Stolen Property Act as it applies to imported archeological and ethnological materials.

This bill is a companion piece of legislation to title II of H.R. 4566, a miscellaneous tariff bill reported on September 21, 1982, by the Finance Committee and signed into law by the President January 12 of this year. That title contains the implementing legislation for the 1972 UNESCO Convention on the means of prohibiting and preventing the illicit import, export, and tranfer of cultural property. This new Cultural Properties Act presents a clear and comprehensive statement of our national policy concerning the importation of cultural property. Its passage came after a long and arduous process of compromise; this important implementing legislation has properly balanced all competing interests, public and private.

During the course of the Finance Committee's consideration of H.R. 4566 we became convenced that Congress should establish a definitive policy for controlling the import of archeological and ethnological material and that any inconsistent provisions of law should be brought into accord. The Finance Committee, however, was unable to act in as comprehensive a fashion as warranted because doing so would have involved legislative changes that are within the jurisdiction of the Judiciary Committee. Consequently, Senators DOLE, MATSUNAGA, and I introduced a separate bill to resolve the one remaining problem.

We did so late in the 97th Congress in the form of S. 2963; today we are reintroducing that legislation. We hope that hearings will be scheduled promptly and the bill will be enacted into law this year.

The need for this bill arises from a controversial decision construing the National Stolen Property Act by the Court of Appeals for the Fifth Circuit in United States against McClain. That decision, Mr. President, appears to be flatly inconsistent with traditional American common law jurisprudence. It has created widespread confusion in the American art community and represents an intrusion by the courts into an area of international policymaking best left to the Congress. But, most fundamentally, it is inconsistent with Congress recent policy judgment in passing the Cultural Properties Act.

Under McClain, it appears that one might be convicted of stealing cultural property without any proof whatsoever that the property was in fact stolen in any traditional understanding of the word. That decision permits cultural property to be considered stolen under our laws simply because a foreign country declares that it owns all art objects found within its boundaries—even though citizens of that country may possess and trade in the objects.

We should not permit our citizens and institutions to be subject to criminal prosecution by substituting declarations of foreign ownership for the time-tested requirement that an owner have a real possessory interest in property before it can be considered stolen.

Moreover, I want to insure that the U.S. Customs Service does not use McClain to interpret our laws in a way that will enforce the legislative decisions of foreign nations.

The McClain decision is inconsistent with a basic principle of the UNESCO Convention implementing legislation—specifically, that U.S. participation in controlling the international movement of cultural properties shall be part of a concerted international effort. The McClain decision represents a unilateral rather than multilateral, response to the problem of the illegal pillage of cultural property.

Finally, as a result of the broad sweep of the McClain decision, the interpretation of the National Stolen Property Act effectively turns on the meaning of foreign law (largely unavailable in translation) and on legal concepts alien to American common law. Our Federal law should embrace American—not foreign—legal principles.

As part of the compromise discussions last fall that led to the passage of the Cultural Properties Act, it was agreed by all parties, public and private, that the McClain decision should be overturned by statute. Indeed, I considered that commitment to be an essential element of the understanding that led to the uncontested passage of the act. Enactment of that law and repeal of McClain were a package.

The bill we are introducing today rejects the puzzling judicial interpretation of stolen. It sets forth the principle that restrictions on the import of cultural property will be established in accordance with the policies of Congress as expressed in the UNESCO Convention implementing legislation. Our bill rejects the notion that one who brings an antiquity or other cultural property into the United States may be subject to criminal prosecution—or be faced with a de facto Customs embargo—simply because a foreign country supplements its restrictions on exports with a broad-based claim to ownership of all such property.

Mr. President, this clarification of American law goes hand in hand with, and is essential to, the successful implementation of the Cultural Properties Act. I trust that hearings on the bill will reflect the broad support for the repeal of McClain pledged last fall by all parties.

These hearings will also afford an opportunity to explore a recent Customs directive based largely on the McClain decision which appears to be grossly inconsistent with congressional policies regarding the Cultural Properties Act. I understand that that directive can lead to a virtual embargo of pre-Columbian objects. This seems to flaunt the procedures we established in the Cultural Properties Act. Specifically, the customs embargo is a unilateral U.S. program, while the Cultural Properties Act authorized U.S. participation in a multinational effort. Also, the Customs embargo enforces a foreign nation's declaration of ownership; the Cultural Properties Act rejects that approach and directs our officials to make independent determinations of what is in our own best interests. Finally, the Customs policy is an across-the-board embargo of all pre-Columbian objects. This is inconsistent with Congress declaration that a

U.S. import ban would respond to the problem of pillage of specific sites or objects. These glaring contradictions—and their lack of any proper foundation in the McClain decision—should be fully explored in the hearings on this bill.

Mr. President, last year Congress produced a comprehensive statement of policy on the importation of cultural property. The bill we are introducing today is consistent with—indeed, integral to—that policy. I urge its speedy passage.●

By Mr. DODD:

S. 1560. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to increase the amount of death benefits payable to public safety officers; to the Committee on the Judiciary.

PUBLIC SAFETY OFFICERS' BENEFITS

● Mr. DODD. Mr. President, I am today introducing legislation to increase the benefit paid to the families of public safety officers killed in the line of duty. This bill is identical to one introduced in the House of Representatives by Representative BARBARA KENNELLY of Connecticut, and would raise that payment from $50,000 to $100,000.

When Congress enacted the Public Safety Officers Benefit Act in 1976, the death benefit was created in recognition of the many risks and dangers these officers face daily on our behalf. It was intended to help offer assurances that their families would be provided for in the event of tragedy.

The debt we owe to these officers and their families can never be fully paid, certainly not with money alone. The stresses faced by survivors are severe, both emotional and financial. Congress did commit itself, however, to make an effort to comfort the families in such situations, and to provide some financial relief for them. Unfortunately, the amount set for this purpose 7 years ago no longer insures the same security today, due to inflation in the intervening years. This legislation proposes to raise the benefit payment to $100,000 to bring it up to date with current economic reality.

I hope that the Senate will be able to act swiftly and affirmatively on this legislation.●

By Mr. DOLE:

S. 1561. A bill entitled "The National Joint Research and Development Policy Act of 1983"; to the Committee on the Judiciary.

NATIONAL JOINT RESEARCH AND DEVELOPMENT POLICY ACT OF 1983

● Mr. DOLE. Mr. President, I am pleased to introduce today the National Joint Research and Development Policy Act of 1983. This legislation is designed to encourage and promote joint research and development ventures by providing limited antitrust protections to those ventures which meet the bill's simple disclosure requirements.

Joint research and development ventures play an important procompetitive function. Research and the development of new ideas into marketable products, services, or technology are expensive and speculative undertakings, the profits of which may not emerge for several years. As a result, joint ventures, which permit firms to pool their resources and share the risks, can lead to important advances in new technology, which otherwise would not be achieved because of excessive risk or cost to the individual firm. Joint R&D ventures can, in particular, enable smaller businesses to stay competitive in new or technologically evolving markets, and stimulate productivity growth, enabling the United States to maintain leadership in world trade.

Despite these procompetitive benefits, many businesses, ironically, may be reluctant to engage in joint R&D activities out of fear of an antitrust challenge.

As a general rule, courts have carefully analyzed and weighed the risks and benefits of such ventures in resolving antitrust challenges. Nevertheless, a few earlier cases seem to imply that joint ventures might be viewed as unlawful, per se, under the antitrust laws. Thus, a perception of uncertainty as to the lawfulness of such ventures may still linger.

Second, if a court were to determine that a joint research and development venture violated the antitrust laws, the consequence could be the imposition of mandatory treble damages in a private suit, or even possible criminal liability. Faced with lingering uncertainty about the appropriate legal standard to be applied to joint R&D ventures, coupled with the possibility of such severe penalties, the sound business judgment of many firms may strongly suggest that such ventures should not be undertaken.

This bill would address these problems by providing that joint ventures formed to engage in joint research and development programs shall not be deemed unlawful, per se, under the antitrust laws. It should be emphasized that this provision would not permit anticompetitive behavior to escape condemnation. Rather, it would simply oblige the courts to consider the actual economic effect of the venture's activities before ruling on their legality under antitrust laws.

The bill would also provide immunity for joint R&D ventures from criminal liability under the antitrust laws, and limit recovery in private civil suits to actual damages.

Unlike other proposals, this bill would not require a joint business venture to meet detailed and complex self-certification requirements, nor to undergo cumbersome regulatory review procedures. Rather, to avail itself of these antitrust protections, the venture would simply have to file a disclosure statement with the Justice Department upon formation, and submit annual reports updating where necessary the information required in the statement.

I am introducing this proposal because I believe that joint R&D ventures can play a unique and critical role in this country's continued ability to maintain leadership and competitiveness in the production of new technology. Our antitrust policy should encourage, not retard, this vital activity.

On the other hand, I am sensitive to the concern that joint R&D ventures can assume a variety of forms and that it is impossible to predict in each and every case that their procompetitive benefits will outweigh possible anticompetitive harm. For example, industrywide research projects that include most or all firms in a line of commerce may present serious antitrust problems. Thus this legislation does not seek to grant total antitrust immunity, nor does it foreclose an injured party from recouping actual damages.

Mr. President, uncertainties and misperceptions about the application of antitrust law to joint R&D ventures may be discouraging investment in joint projects, which could lead to important advancements in new technology. I hope the Congress will act swiftly to pass legislation which will remedy this problem.●

ADDITIONAL COSPONSORS

S. 17

At the request of Mr. DOLE, the name of the Senator from Rhode Island (Mr. PELL) was added as a cosponsor of S. 17, a bill to expand and improve the domestic commodity distribution program.

S. 155

At the request of Mr. INOUYE, the name of the Senator from Arizona (Mr. DECONCINI) was added as a cosponsor of S. 155, a bill to amend subchapter I of chapter 73 of title 38, United States Code, to provide for the payment of incentive special pay to Veterans' Administration psychologists who obtain certain board certification in a professional specialty.

S. 337

At the request of Mr. PACKWOOD, the name of the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 337, a bill to amend the Internal Revenue Code of 1954 to make permanent the deduction for charitable contributions by nonitemizers.

S. 540

At the request of Mr. GOLDWATER, the name of the Senator from Pennsylvania (Mr. SPECTER) was added as a cosponsor of S. 540, a bill to amend

11-059 O-87-22 (Pt. 13)

the Public Health Service Act to establish a National Institute of Arthritis and Musculoskeletal and Skin Diseases, and for other purposes.

S. 564

At the request of Mr. MATSUNAGA, the name of the Senator from South Carolina (Mr. HOLLINGS) was added as a cosponsor of S. 564, a bill to establish the U.S. Academy of Peace, and for other purposes.

S. 719

At the request of Mr. THURMOND, the name of the Senator from Virginia (Mr. WARNER) was added as a cosponsor of S. 719, a bill to amend subchapter II of chapter 73 of title 10, United States Code, to eliminate the social security offset against annuities provided for under such subchapter to the extent that the social security benefits of the annuitant are based on the annuitant's own employment.

S. 873

At the request of Mr. LUGAR, the name of the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 873, a bill to help insure the Nation's independent factual knowledge of the Soviet Union and Eastern European countries, to help maintain the national capability for advanced research and training on which that knowledge depends, and to provide partial financial support for national programs to serve both purposes.

S. 905

At the request of Mr. EAGLETON, the names of the Senator from Massachusetts (Mr. KENNEDY), the Senator from Florida (Mrs. HAWKINS), the Senator from Nebraska (Mr. EXON), the Senator from Montana (Mr. MELCHER), the Senator from North Dakota (Mr. ANDREWS), the Senator from Arkansas (Mr. PRYOR), and the Senator from Mississippi (Mr. STENNIS) were added as cosponsors of S. 905, a bill entitled the "National Archives and Records Administration Act of 1983."

S. 994

At the request of Mr. PRYOR, the names of the Senator from California (Mr. CRANSTON) and the Senator from Kansas (Mrs. KASSEBAUM) were added as cosponsors of S. 994, a bill to prohibit the production of lethal binary chemical munitions by the United States and to call on the President to continue and intensify recently begun efforts in the Committee on Disarmament with the Government of the Union of Soviet Socialist Republics and other countries to achieve an agreement establishing a mutual, verifiable ban on the production and stockpiling of chemical weapons.

S. 1005

At the request of Mr. D'AMATO, the name of the Senator from Montana (Mr. MELCHER) was added as a cosponsor of S. 1005, a bill to provide assistance for the construction, acquisition, and renovation of State and local correctional facilities.

S. 1090

At the request of Mr. WALLOP, the name of the Senator from Illinois (Mr. PERCY) was added as a cosponsor of S. 1090, a bill to establish a National Outdoor Recreation Resources Review Commission to study and recommend appropriate policies and activities for government agencies at the Federal, State, and local levels and for the private sector, to assure the continued availability of quality outdoor recreation experiences in America to the year 2000, and for other purposes.

S. 1145

At the request of Mr. DENTON, the names of the Senator from Maine (Mr. COHEN) and the Senator from Tennessee (Mr. SASSER) were added as cosponsors of S. 1145, a bill to recognize the organization known as the Catholic War Veterans of the United States of America, Inc.

S. 1194

At the request of Mr. DANFORTH, the name of the Senator from Iowa (Mr. GRASSLEY) was added as a cosponsor of S. 1194, a bill to amend the Internal Revenue Code of 1954 to encourage the contribution of scientific equipment to elementary and secondary schools and institutions of higher education and to foster university research and scientific training.

S. 1226

At the request of Mr. CRANSTON, the name of the Senator from Ohio (Mr. GLENN) was added as a cosponsor of S. 1226, a bill to amend the Public Health Service Act to authorize appropriations to be made available to the Secretary of Health and Human Services to respond to public health emergencies.

S. 1244

At the request of Mr. PACKWOOD, the names of the Senator from Vermont (Mr. STAFFORD) and the Senator from Colorado (Mr. HART) were added as cosponsors of S. 1244, a bill to amend title XVIII of the Social Security Act to provide for a program of health care for elderly individuals who require long-term care.

S. 1305

At the request of Mr. PACKWOOD, the name of the Senator from Massachusetts (Mr. TSONGAS) was added as a cosponsor of S. 1305, a bill to amend the Internal Revenue Code of 1954 to extend the energy tax credit for investments in certain classes of energy property, and for other purposes.

S. 1306

At the request of Mr. MATHIAS, the name of the Senator from Kentucky (Mr. HUDDLESTON) was added as a cosponsor of S. 1306, a bill to amend the patent law to restore the term of the patent grant for the period of time that nonpatent regulatory requirements prevent the marketing of a patented product.

S. 1400

At the request of Mr. PERCY, the name of the Senator from New York (Mr. D'AMATO) was added as a cosponsor of S. 1400, a bill to enhance the detection of motor vehicle theft and to improve the prosecution of motor vehicle theft by requiring the Secretary of Transportation to issue standards relating to the identification of vehicle parts and components, by increasing criminal penalties applicable to trafficking in stolen vehicles and parts, by curtailing the exportation of stolen motor vehicles and off-highway mobile equipment, and by establishing penalties applicable to the dismantling of vehicles for the purpose of trafficking in stolen parts, and for other purposes.

S. 1434

At the request of Mr. D'AMATO, the name of the Senator from Mississippi (Mr. COCHRAN) was added as a cosponsor of S. 1434, a bill to amend the Internal Revenue Code of 1954 to provide that a spouse having compensation shall not be disqualified from having a spousal individual retirement account.

S. 1465

At the request of Mr. LUGAR, the names of the Senator from Delaware (Mr. ROTH), the Senator from Tennessee (Mr. BAKER), the Senator from Kansas (Mr. DOLE), the Senator from North Carolina (Mr. EAST), the Senator from Arizona (Mr. GOLDWATER), the Senator from Utah (Mr. HATCH), and the Senator from Florida (Mrs. HAWKINS) were added as cosponsors of S. 1465, a bill to designate the Federal Building at Fourth and Ferry Streets, Lafayette, Ind., as the "Charles A. Halleck Federal Building."

S. 1475

At the request of Mr. WALLOP, the name of the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1475, a bill to amend the Internal Revenue Code of 1954 to repeal the highway use tax on heavy trucks and to increase the tax on diesel fuel used in the United States.

S. 1545

At the request of Mr. HEINZ, the names of the Senator from Pennsylvania (Mr. SPECTER) and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of S. 1545, a bill to clarify the oversight role of the Congress with respect to Presidential decisions under section 203 of the Trade Act of 1974.

SENATE JOINT RESOLUTION 1

At the request of Mr. LONG, the names of the Senator from Texas (Mr. BENTSEN), the Senator from Kentucky (Mr. FORD), the Senator from Georgia (Mr. NUNN), and the Senator from Arkansas (Mr. PRYOR) were added as cosponsors of Senate Joint Resolution 1,

a joint resolution proposing an amendment to the Constitution of the United States with respect to fixing the compensation of Members of the Congress.

SENATE JOINT RESOLUTION 5

At the request of Mr. THURMOND, the name of the Senator from California (Mr. WILSON) was added as a cosponsor of Senate Joint Resolution 5, a joint resolution proposing an amendment to the Constitution relating to Federal budget procedures.

SENATE JOINT RESOLUTION 19

At the request of Mr. INOUYE, the names of the Senator from Minnesota (Mr. BOSCHWITZ), the Senator from North Dakota (Mr. BURDICK), the Senator from Florida (Mr. CHILES), the Senator from Rhode Island (Mr. CHAFEE), the Senator from Kansas (Mrs. KASSEBAUM), the Senator from Kansas (Mr. DOLE), the Senator from Ohio (Mr. GLENN), the Senator from Arizona (Mr. GOLDWATER), the Senator from Washington (Mr. GORTON), the Senator from Pennsylvania (Mr. HEINZ), the Senator from North Carolina (Mr. HELMS), the Senator from Wisconsin (Mr. KASTEN), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Michigan (Mr. LEVIN), the Senator from Hawaii (Mr. MATSUNAGA), the Senator from Georgia (Mr. NUNN), the Senator from Mississippi (Mr. STENNIS), the Senator from Indiana (Mr. QUAYLE), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Maryland (Mr. SARBANES), the Senator from California (Mr. WILSON), and the Senator from Rhode Island (Mr. PELL) were added as cosponsors of Senate Joint Resolution 19, a joint resolution to authorize and request the President to designate the period August 26, 1983, through August 30, 1983, as "National Psychology Days."

SENATE JOINT RESOLUTION 54

At the request of Mr. NICKLES, the name of the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of Senate Joint Resolution 54, a joint resolution to authorize and request the President to designate the month of January 1984 as "National Eye Health Care Month."

SENATE JOURNAL RESOLUTION 77

At the request of Mr. DOLE, the name of the Senator from Kansas (Mrs. KASSEBAUM) was added as a cosponsor of Senate Joint Resolution 77 a joint resolution designating "National Animal Agriculture Week."

SENATE JOINT RESOLUTION 97

At the request of Mr. BOSCHWITZ, the names of the Senator from Utah, (Mr. HATCH), the Senator from Colorado (Mr. ARMSTRONG), and the Senator from Indiana (Mr. QUAYLE) were added as cosponsors of Senate Joint Resolution 97, a joint resolution to authorize the erection of a memorial on public ground in the District of Columbia, or its environs, in honor and commemoration of members of the Armed Forces of the United States and the allied forces who served in the Korean war.

SENATE JOINT RESOLUTION 98

At the request of Mr. TOWER, the names of the Senator from Arkansas (Mr. BUMPERS), the Senator from Texas (Mr. BENTSEN), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from North Dakota (Mr. BURDICK), and the Senator from Virginia (Mr. WARNER) were added as cosponsors of Senate Joint Resolution 98, a joint resolution to designate October 2 through October 9, 1983, as "National Housing Week."

SENATE JOINT RESOLUTION 106

At the request of Mr. SIMPSON, the names of the Senator from Arkansas (Mr. PRYOR), the Senator from California (Mr. CRANSTON), the Senator from Maryland (Mr. SARBANES), and the Senator from Mississippi (Mr. COCHRAN) were added as cosponsors of Senate Joint Resolution 106, a joint resolution designating August 3, 1983, and "National Paralyzed Veterans Recognition Day."

SENATE JOINT RESOLUTION 112

At the request of Mr. INOUYE, the name of the Senator from Maryland (Mr. SARBANES) was added as a cosponsor of Senate Joint Resolution 112, a joint resolution to proclaim the month of March 1984 as National Social Work Month.

SENATE JOINT RESOLUTION 113

At the request of Mr. WILSON, the names of the Senator from California (Mr. CRANSTON) and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of Senate Joint Resolution 113, a joint resolution to provide for the designation of the week beginning June 3 through June 9, 1984, as "National Theatre Week."

SENATE JOINT RESOLUTION 117

At the request of Mr. HUDDLESTON, the names of the Senator from South Carolina (Mr. HOLLINGS), the Senator from Massachusetts (Mr. KENNEDY), and the Senator from California (Mr. WILSON) were added as cosponsors of Senate Joint Resolution 117, a joint resolution to authorize and request the President to designate July 15, 1983, as "National Ice Cream Day."

SENATE RESOLUTION 115

At the request of Mr. PRESSLER, the name of the Senator from New York (Mr. D'AMATO) was added as a cosponsor of Senate Resolution 115, a resolution to express the sense of the Senate on the need to facilitate U.S. exports by opposing international restrictions on the marketing and distribution of such exports.

SENATE RESOLUTION 126

At the request of Mr. WALLOP, the names of the Senator from Mississippi (Mr. COCHRAN) and the Senator from Texas (Mr. TOWER) were added as cosponsors of Senate Resolution 126, a resolution to express the sense of the Senate that the changes in the Federal estate tax laws made by the Economic Recovery Tax Act of 1981 should not be modified.

SENATE RESOLUTION 127

At the request of Mr. ANDREWS, the name of the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of Senate Resolution 127, a resolution to make the Select Committee on Indian Affairs a permanent committee of the Senate.

SENATE RESOLUTION 149

At the request of Mr. DODD, the name of the Senator from Maine (Mr. COHEN) was added as a cosponsor of Senate Resolution 149, a resolution to express the sense of the Senate that the laws which insure equal rights with regard to education opportunity for women should be maintained.

AMENDMENT NO. 1299

At the request of Mr. BOSCHWITZ, the names of the Senator from New York (Mr. D'AMATO), the Senator from South Dakota (Mr. PRESSLER), the Senator from Ohio (Mr. GLENN), the Senator from Utah (Mr. HATCH), the Senator from Iowa (Mr. GRASSLEY), the Senator from Massachusetts (Mr. TSONGAS), the Senator from North Carolina (Mr. EAST), the Senator from Maine (Mr. COHEN), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from North Carolina (Mr. HELMS), the Senator from Alabama (Mr. HEFLIN), the Senator from Wisconsin (Mr. KASTEN), the Senator from Indiana (Mr. LUGAR), the Senator from Minnesota (Mr. DURENBERGER), and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of amendment No. 1299 intended to be proposed to S. 869, a bill to amend the Export-Import Bank Act of 1945.

AMENDMENT NO. 1316

At the request of Mr. GLENN, the names of the Senator from Minnesota (Mr. BOSCHWITZ) and the Senator from Tennessee (Mr. SASSER) were added as cosponsors of amendment No. 1316 intended to be proposed to S. 869, a bill to amend the Export-Import Bank Act of 1945.

SENATE RESOLUTION 168—EMERGENCY ASSISTANCE TO ETHIOPIA

Mr. DECONCINI (for himself, Mr. PERCY, Mr. PELL, and Mr. TSONGAS) submitted the following resolution; which was placed on the calendar:

S. RES 168

Whereas hundreds of thousands of Ethiopians are presently threatened with starvation:

Whereas tens of thousands of Ethiopian children will not live until the November harvest unless emergency food assistance is provided them in the immediate future;

Whereas existing supply routes and transportation facilities are inadequate to get emergency food aid to relief distribution points in Ethiopia;

Whereas the United States has a longstanding policy of providing emergency humanitarian relief to the people of a foreign country threatened with starvation regardless of the political differences the Government of the United States may have with the Government of that foreign country; and

Whereas the humanitarian assistance programs of the United Nations and European countries cannot adequately meet the extraordinary needs of the Ethiopian people without the help of the United States: Now, therefore, be it

Resolved, That it is the sense of the Senate that the President should exercise the authority vested in him by law to make available immediately to the starving people of Ethiopia emergency food supplies and other emergency supplies and to take such actions as may be necessary to insure that the food and other emergency supplies made available by the United States are transported to those areas of Ethiopia that are experiencing famine.

Mr. DECONCINI. Mr. President, the people of the United States have always taken great pride in our will and ability to help poor and needy people all over the world. Our Nation is based on the principle of helping both those who come to our shores in need as well as those who are homeless or hungry residing abroad. Sadly, this principle seems to have fallen victim, at least in one instance, to our desire to make a small gain in our ongoing struggle with the Soviet Union.

I refer to the severe famine in Ethiopia. The dimensions of the problem are staggering. It is a tragedy that is costing the lives of 50 to 100 children a day, a tragedy which experts predict will ultimately take the lives of at least 200,000 people. The United Nations and our European allies have joined together to provide emergency assistance, but knowledgeable observers agree that adequate relief cannot be provided to the 3 million in dire need without the assistance of the United States.

What is holding us back? The United States has the largest food surpluses of any nation in the world. We have a long history of giving humanitarian assistance regardless of political considerations. In fact, we once provided extensive assistance to the Soviet Union in the 1920's to help them fight a famine, even though we did not even recognize their newly formed Communist government. So what is keeping us from putting our wealth and our good hearts to work to help the desperate people of Ethiopia?

Basically, Mr. President, it seems that we are using the hunger of the Ethiopian people to teach their government a lesson. The lesson is that they should not have switched their friendship to the Soviet Union and away from the United States in 1974. I, too, ardently wish that Ethiopia had remained alined with the West. I pray that that present government will recognize its mistake and return to the Western fold. But I do not wish for the United States to contribute—through inaction—to the deaths of tens of thousands in Ethiopia—many of whom are women and children—to teach them a lesson. The United States can make its point in a much better way by helping these starving people; by showing the Ethiopians that their Soviet ally is, at best, impotent and, at worst, heartless in terms of providing anything but military assistance.

Mr. President, I am submitting a resolution today which calls upon the administration to apply our longstanding policy of helping the world's poor to the crisis in Ethiopia. The resolution urges that we undertake immediate efforts to supply food and to assist in transporting supplies to the many needy but difficult to access regions of Ethiopia. I hope that my colleagues will join with me in this effort to send a message to the administration that assisting the people of Ethiopia is not only consistent with our Nation's heritage and in keeping with our current foreign policy goals, but, most important, it is an action which will save the lives of thousands.

Mr. President, I ask unanimous consent that the resolution be held at the desk until the close of business today.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 169—NATIONAL ICE CREAM DAY

Mr. STEVENS (for Mr. HUDDLESTON and Mr. HELMS) submitted the following resolution; which was ordered placed on the calendar:

S. RES. 169

Whereas ice cream is a nutritious and wholesome food enjoyed by millions of people throughout the United States;

Whereas the ice cream industry uses nearly 10 percent of the milk produced by United States dairy farmers, thereby contributing substantially to the economic well-being of the Nation's dairy industry;

Whereas the ice cream industry has annual sales of over $3,000,000,000 and provides jobs for thousands of U.S. citizens; and

Whereas the Nation's dairy farmer-owned cooperatives will hold a National Ice Cream Celebration during the week of July 10 through 16, 1983: Now, therefore, be it

Resolved, That it is the sense of the Senate that July 15, 1983, should be celebrated as "National Ice Cream Day", and that all citizens should be encouraged to observe such day with appropriate ceremonies and activities.

SEC. 2. The Secretary of the Senate shall transmit copies of this resolution to the President and the Secretary of Agriculture.

● Mr. HUDDLESTON. Mr. President, the resolution will express the sense of the Senate that July 15, 1983, should be observed as National Ice Cream Day. I urge my colleague to join me in voting to approve the resolution.

Ice cream is a nutritious and wholesome food that is the favorite dessert of many Americans.

The ice cream industry uses nearly 10 percent of the milk produced by U.S. dairy farmers, thereby contributing substantially to the economic well-being of the Nation's dairy industry. And, with annual sales of over $3 billion, the ice cream industry provides jobs for thousands throughout the Nation.

By making it the sense of the Senate that July 15, 1983, should be observed as National Ice Cream Day, we will be saluting this important agricultural product and honoring the dairy farmers and others responsible for making ice cream available to us for our enjoyment.

A national ice cream celebration has been held in each of the past 5 years by our Nation's dairy farmer-owned cooperatives. The celebration this year will be held during the week of July 10 through July 16. the theme of the celebration will be "America loves ice cream."

I believe it appropriate that tribute be paid to the ice cream industry in conjunction with the dairy farmers' special celebration.

Mr. President, the resolution I am introducing today is similar to Senate Joint Resolution 117, which I introduced on June 16, and which 45 Senators have joined me in cosponsoring.

It now appears that Congress will be unable to complete action on Senate Joint Resolution 117 before July 15, the day planned to be celebrated as National Ice Cream Day.

The resolution I am introducing will, however, enable the Senate to act in a timely manner on this noncontroversial matter. It merely puts the substance of Senate Joint Resolution 117 into the form of a sense of the Senate resolution. I urge my colleagues to support the resolution.●

NOTICES OF HEARINGS

COMMITTEE ON SMALL BUSINESS

Mr. WEICKER. Mr. President, I would like to announce that the Senate Small Business Committee's Subcommittee on Urban and Rural Economic Development will hold a hearing on July 13, 1983, at 10 a.m. in room 428A, Senate Russell Office Building on various small business capital formation proposals and their job creation potential. For further information please contact Steve Williams of the committee staff at 224-5175. Senator D'AMATO will chair the hearing.

Mr. President, I would like to announce that the Senate Small Business Committee will hold a full committee markup on pending legislation

on July 14, 1983, at 9:30 a.m. in room 428A, Senate Russell Office Building. For further information please contact Mike Haynes of the committee staff at 224-5175.

Mr. President, I would like to announce that the Senate Small Business Committee will hold an oversight hearing on the Small Business Administration's program delivery, on July 21, 1983, at 9:30 a.m. in room 428A, Senate Russell Office Building. For further information please contact Robert Dotchin of the committee staff at 224-5175.

SUBCOMMITTEE ON INNOVATION AND TECHNOLOGY

Mr. President, I would like to announce that the Senate Small Business Committee's Subcommittee on Innovation and Technology hearing on the IRS ruling dealing with computer software for July 15, 1983, in Boston, Mass., has been postponed until further notice.

SELECT COMMITTEE ON INDIAN AFFAIRS

Mr. ANDREWS. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a field hearing which will focus upon issues related to the reauthorization of the Indian Health Care Improvement Act, as well as issues of general concern affecting the health of American Indians. The hearing is scheduled to commence at 10 a.m., on July 8, 1983, in the Granite Room at the Sheraton Hotel at 27 North 27th Street, Billings, Mont. Those wishing to testify or submit written testimony should contact Max Richtman of the Select Committee on Indian Affairs at 202-224-2251.

COMMITTEE ON GOVERNMENTAL AFFAIRS

Mr. ROTH. Mr. President, the Senate Committee on Governmental Affairs will hold a continuation of hearings on trade reorganization on Wednesday, June 29, at 10 a.m. in room SD-342 of the Dirksen Senate Office Building. For further information, please contact Mr. Mike Mitchell at 224-4751.

SUBCOMMITTEE ON CONSUMER AFFAIRS

Mrs. HAWKINS. Mr. President, the Subcommittee on Consumer Affairs will hold a hearing on July 13, 1983, on S. 1152, a bill to amend the Consumer Credit Protection Act with respect to consumer leases and rental-purchase agreements. The hearing will be held at 9:30 a.m. in room SD-538 of the Dirksen Senate Office Building.

For further information, please contact Linda C. Zemke at 224-1566.

SUBCOMMITTEE ON PULBIC LANDS AND RESERVED WATER

Mr. WALLOP. Mr. President, I would like to announce for the information of the Senate and the public, the scheduling of public hearings before the Senate Subcommittee on Public Lands and Reserved Water, on Thursday, July 21, 1983, in Bend, Oreg., and on Thursday, August 25, 1983, in Salem, Oreg. The subcommittee will receive testimony on H.R. 1149, to designate certain national forest system and other lands in the State of Oregon for inclusion in the National Wilderness Preservation System, and for other purposes.

The July 21 hearing will be held at the Central Oregon Community College, Northwest College Way, Bend, Oreg., from 9 a.m. to 4 p.m. Those wishing to testify in Bend should contact the office of Senator HATFIELD, room 114, Pioneer Courthouse, Portland, Oreg. 97204, phone (503) 221-6374. Those wishing to testify in Bend must sign up no later than July 11, 1983.

The August 25 hearing will be held at the Kresge Auditorium, Willamette University, 400 State Street, Salem, Oreg., from 8 a.m. to 4 p.m. Those wishing to testify in Salem should contact the office of Senator HATFIELD, room 114, Pioneer Courthouse, Portland, Oreg. 97204, phone (503) 221-6374. Those wishing to testify in Salem must sign up no later than August 15, 1983.

Oral testimony will be limited. Witnesses will be placed in panels. Because of the number of witnesses expected to testify, individuals are requested to choose which day of hearings they would like to present their testimony. Witnesses are requested to bring 15 copies of their testimony with them to the hearing.

For further information regarding these hearings, please contact Senator HATFIELD'S office at the above listed numbers or Mr. Tony Bevinetto of the subcommittee staff at (202) 224-5161.

SUBCOMMITTEE ON ENERGY AND MINERAL RESOURCES

Mr. WARNER. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a public hearing before the Subcommittee on Energy and Mineral Resources to receive testimony on the subject of enhanced coal technology: coal's market for the 1980's. The hearing will be held on Saturday, July 16, beginning at 1 p.m. and ending at 5 p.m., in the auditorium of the Donaldson Brown Center for Continuing Education, Virginia Polytechnic Institute, Blacksburg, Va.

Those wishing to testify or who wish to submit written statements for the hearing record should contact Mr. Roger Sindelar, Subcommittee on Energy and Mineral Resources, Committee on Energy and Natural Resources, U.S. Senate, Washington, D.C. 20510. Telephone: 202-224-5205.

Witnesses are requested to submit 25 copies of their testimony to Mr. Sindelar at the above address prior to July 15, or on the day of the hearing to Dr. Dick Harshberger, VCCER, Virginia Polytechnic Institute, 1617 North Main Street, Blacksburg, Va. 24060. Telephone: 703-961-5242.

For further information regarding the hearing you may wish to contact Mr. Sindelar at the above number.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON GOVERNMENTAL AFFAIRS

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Wednesday, June 29, to continue a hearing on trade reorganization legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on Energy and Natural Resources be authorized to meet at 10 a.m. until 12 noon on Wednesday, June 29, to hold a business meeting to consider S. 615, Natural Gas Legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON THE JUDICIARY

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to meet during the session of the Senate on Wednesday, June 29, in order to receive testimony on the following nomination:

Mr. Stephen Trott, of California, to be Assistant Attorney General for the Criminal Division.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to meet during the session of the Senate on Wednesday, June 29, in order to receive testimony concerning S. 568, S. 737, and S. 1383, legislation to allow businesses to jointly perform research and development.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON INTERGOVERNMENTAL RELATIONS

Mr. STEVENS. Mr. President, I ask unanimous consent that the Subcommittee on Intergovernmental Relations of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Wednesday, June 29, at 1:30 p.m., to hold a hearing on the Uniform Single-Audit Act of 1983.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

AMENDMENT NO. 1434 TO S. 1287, PROVIDING 1984 AUTHORIZATIONS OF PUBLIC BUILDING PROJECTS

● Mr. STAFFORD. Mr. President, last Thursday, the Committee on Environment and Public Works considered and approved an amendment to S. 1287. On behalf of the committee, I have introduced the amendment (No. 1434) and wish to explain its provisions, in effect supplementing Senate Report 98-114.

This action by the committee completes this year's authorization of the General Services Administration's public buildings program. As reported to the Senate on May 16, 1983, S. 1287, the Public Buildings Authorization Act of 1983 (S. Rept. 98-114), provided only monetary authorizations for fiscal year 1984 without specification of individual major construction, acquisition, and repair and alteration projects. The committee was unable to evaluate these projects in time to meet the May 15 reporting deadline established by the Budget Act, because the submission by GSA of its fiscal year 1984 budget and supporting committee documentation was tardy and incomplete.

On May 24 and June 7 the committee held hearings to obtain additional information on individual public buildings and on GSA's overall management of the program. Testimony by officials of GSA and other Federal agencies has been instrumental in defining the views of the committee on projects and issues addressed in this amendment.

One such specific issue is the disposition of the old General Post Office Building currently referred to as the U.S. International Trade Commission Building. An interest in this building has long been expressed by the Smithsonian Institution in order to expand the public space available for the collections of the National Museum of American Art, the National Portrait Gallery, and the Archives of American Art. These collections, only 5 percent of which can be displayed at one time, are currently housed in the Patent Office Building, directly across F Street from the General Post Office Building and connected to it by an underground tunnel. Both buildings were designed by architect Robert Mills in the mid-19th century.

Section 7, added to S. 1287 by this amendment, mandates the transfer of the General Post Office Building—now occupied by the U.S. International Trade Commission and the U.S. Postal Service—to the Smithsonian Institution for use by its art galleries. This transfer is to take place without reimbursement.

The decision which has been reached in this case is intended to satisfy the needs of both the International Trade Commission and the Smithsonian Institution, for both seek quality space suitable to their respective missions. The General Post Office Building does not contain efficiently configured, modern office space of sufficient dimensions to house all of the headquarters operations of the International Trade Commission. On the contrary, the arrangement of space in this historic building and the architectural heritage it shares with the Patent Office Building suggest the appropriateness of awarding its stewardship to the Smithsonian. Only then can the building and art collections it would house receive the public exposure both so richly deserve.

The relocation of the offices of the International Trade Commission is a priority concern. Section 7 charges the Administrator of General Services with finding the agency a quality building, conveniently located in downtown Washington, which facilitates the carrying out of its mission. Progress in meeting this goal will be carefully monitored by the Committee on Environment and Public Works and the other congressional committees specified as recipients of the reports required on this matter.

Also addressed in section 7 are the maintenance and rehabilitation of the General Post Office Building itself. The Administrator is charged with undertaking repairs and preventive maintenance sufficient to arrest building deterioration prior to transfer. After transfer of the property to the Smithsonian, the Administrator is authorized to renovate the building to house art galleries and related activities on a reimbursable basis.

Another issue to which the committee has responded in this amendment is the housing of the Social Security Administration's functions in Wilkes-Barre, Pa. SSA's Data Operations Center in Wilkes-Barre is one of three facilities in the Nation which process earnings information from 5 million employers and maintain files for the retirement and survivors insurance, disability insurance, and supplemental security income programs. The Wilkes-Barre facility handles 8.5 million SSI folders, 62 million annual wage reports (W-2's and W-3's), and 9.2 million social security number applications. Notwithstanding the permanent nature of its functions and extensive documentation of its need for secure records storage space, the Wilkes-Barre DOC has been housed in leased space. The inadequacy of this space had been recognized for several years before 1977, when SSA first formally requested additional space. GSA leased additional space to accommodate the expansion of the Wilkes-Barre operation, but the expansion space is not contiguous to the original operation. Further demands will be imposed on the Wilkes-Barre DOC in August 1983 with transfer of active storage of 8 million SSI folders from the Chicago Federal Records Center.

GSA's initial inability to find a long-term solution to the Wilkes-Barre DOC problem prompted the committee to respond by reporting Senate Resolution 514, directing the Army Corps of Engineers to seek alternatives. The resolution passed in the lameduck session of the 97th Congress. The corps submitted a study which identifies a building available for purchase, the Luzerne Products Plant, located 4 miles from downtown Wilkes-Barre and suitable with alteration to meet SSA's long-term DOC needs.

I believe that the potential purchase of the Luzerne facility is a viable though not exclusive alternative for meeting the Social Security Administration's needs. Because GSA has funds available from its fiscal year 1983 appropriations for the opportunity purchase of buildings, this amendment authorizes $14 million for renovations and repairs of buildings so acquired, subject to prior approval by the Senate Committee on Environment and Public Works and the House Committee on Public Works and Transportation. By authorizing renovation of a purchased building on a contingent basis, the Luzerne Products Plant or any other facility acquired by GSA can be expeditiously made ready for occupancy by the Wilkes-Barre Data Operations Center.

GSA has recently emphasized the role of opportunity purchases as a means to increase its inventory of Government-owned space. A well-constructed commercial building offered for sale can provide such space more rapidly than Federal construction and facilitates the elimination of expensive leasing arrangements. GSA's approach is a sensible one and thus $60 million has been included in this amendment for selected purchases of buildings. However, it is expected that GSA will provide complete and timely information on all pending transactions.

NEW CONSTRUCTION

Portland, Oreg., Federal Building	$67,475,000

The Bonneville Power Administration's headquarters office is currently dispersed in six separate locations on the east side of Portland. Insufficient office space exists in the Federal Building at 1002 N.E. Holladay Street, where BPA is the principal tenant. To consolidate the agency's operations, GSA proposes to construct a new Federal Building on Government-owned land at a site adjacent to the Holladay Street facility with which it would share conference, cafeteria, and parking space. The proposed Federal Build-

ing will have 385,000 square feet of office and related space and 130,000 square feet of basement parking.

This construction project is intended to remedy the inefficiencies resulting from fragmentation of BPA's operations and to provide expansion space anticipated in conjunction with increased agency responsibilities. Relocation from the existing Holladay Street Federal Building will also make available, after a recommended building renovation project has taken place, sufficient office space to consolidate the operations of the Department of the Interior currently housed in multiple leased locations.

GSA has requested $67,475,000 for fiscal year 1984 to fund construction and associated costs for the new Federal Building to house BPA's operations; $3,300,000 has already been provided in fiscal year 1982 for building design. By directly and indirectly facilitating consolidation of the operations of two Federal agencies and eliminating the need for over 300,000 square feet of leased space, this project addresses the requirements of GSA's client agenices and contributes to GSA's own goal of improving the ratio of Government-owned to leased space.

Knoxville, Tenn., Federal Building $14,990,000

GSA proposes to construct a 107,898 occupiable square foot Federal building to house the offices of 12 Federal agencies currently located in leased space scattered throughout the city of Knoxville. At the present time 86 percent of all Government space controlled by GSA in Knoxville is leased resulting in a very high dependency upon a rental market subject to cost escalation. Contruction of a Federal office building would substantially reduce the number of leases and consolidate the housing arrangements for Federal agencies in the central business area of the city making public access to Government offices more convenient.

GSA estimates that the proposed facility will house 567 employees, with interior parking for 30 and exterior parking for 75 vehicles.

WALTHAM, MASS., FEDERAL ARCHIVES AND RECORDS CENTER (EXTENSION)

A 32,000 occupiable square foot extension to the existing 92,135 occupiable square foot building will be needed to house incoming records. By October 1984 it is estimated that 98 percent of current storage capacity will be filled.

The proposed extension will be a single story masonry structure with fire sprinklers and a design which emphasizes energy conservation. It can be constructed without disruption to current parking and driveway configurations. Costs are based on a construction start date of March 1985.

SEATTLE, WASH., FEDERAL ARCHIVES AND RECORDS CENTER (EXTENSION)

GSA proposed to construct a 53,000 occupiable square foot extension to existing 122,595 square foot facility. It is estimated that the present building will be filled to capacity by the end of 1984. The special responsibility of this center is the long-term retention of corporate tax records for all of the United States west of the Mississippi River.

The proposed extension would be constructed on the existing Government-owned site, woud extend from the south end of the existing building at the same width and would be designed in accordance with the special National Archieves and Records Service firesafety requirements.

DEMOLITION

Los Angeles, Calif., Warehouses .. $599,000

In a real estate exchange with the city of Los Angeles GSA acquired two warehouses adjoining the parking area behind the Federal Building at 300 North Los Angeles Street. Both warehouse buildings are structurally unsafe and pose a significant fire- and lifesafety hazard. GSA proposes the demolition of the two buildings and the immediate interim use of the site for additional official parking for the adjacent Federal Building and the nearby U.S. Courthouse.

The warehouse property covers 178,600 square feet. When combined with the buildable portion of the Federal Building parking area, the result is a 291,000 square foot construction site. From the northeast portion of the site 50,000 square feet will be made available to the Veterans' Administration for the construction of an outpatient clinic and regional office. The remainder of the site will be held in reserve for construction of a future Federal building.

RENOVATIONS, REPAIRS, AND ALTERATIONS

The following major renovation, repair, and alteration projects have received prior partial authorization as components of the fiscal year 1983 program. In each case the level of funding requested for fiscal year 1984 is required for project completion.

Little Rock, Ark., Post Office-Courthouse $4,269,000

Since its original construction in 1932 and its extension in 1940, this building has not been upgraded by means of a major repair and alteration project. Many of the building systems have deteriorated beyond repair that can be provided by day-to-day maintenance and suffer from basic uncorrected operational deficiencies. Funds have already been appropriated to construct a new buildilng extension in order to provide expansion space for the U.S. courts.

GSA proposes renovation work which will rectify inadequacies in plumbing, lighting, electrical, and air-conditioning systems. Modifications of the existing structure will also respond to firesafety and energy conservation requirements.

Of the $1,570,000 requested for fiscal year 1983, $1,269,000 had been reprogramed to the rental of space activitiy. Therefore this amount has been included in the $4,269,000 authorization for fiscal year 1984.

Washington, D.C., Liberty Loan Building $2,757,000

GSA has requested $2,757,000 for work planned during fiscal year 1984 in order to complete this $7,217,000 project. Repairs and alterations to be performed include replacement of elevators, upgrading of office space, and restrooms, upgrading of electrical and domestic water systems, and the provision of exterior landscaping.

Baltimore, Md., Middle River Federal Depot. $1,892,000

In order to complete planned work on this $4,756,000 project, GSA has requested $1,892,000 for fiscal year 1984. Proposed repairs and alterations include replacement of the underground electrical distribution system and freight elevators, improvement of stairways, and resurfacing of the parking area.

Detroit, Mich., Federal Building-Courthouse $4,957,000

For diverse repairs to this monumental building, GSA has requested $4,957,000 to be obligated during fiscal year 1984, an amount sufficient to complete this $7,806,000 project. Work to be performed includes repairs to the roof and the heating, ventilating, and air-conditioning system; provision of space for the bankruptcy courts; and the installation of firesafety equipment.

Cincinnati, Ohio, Post Office-Courthouse $1,138,000

GSA has requested $1,138,000 to complete this $6,485,000 project. Upgrading of office space, installation of firesafety equipment, and the provision of facilities for the handicapped are among the work items to be performed during fiscal year 1984.

Ogden, Utah, Internal Revenue Service Center $3,036,000

To correct the problem responsible for roof deterioration, GSA proposes to install a drainage system. Also required to complete this $5,815,000 project is the modification of the heating, ventilating, and air-conditioning system for energy conservation and the resurfacing of the parking lot.

Yakima, Wash., Federal Building-Courthouse $1,025,000

This monumental building, listed on the National Register of Historic Places, had been purchased from the U.S. Postal Service. GSA has requested $1,025,000 for fiscal year 1984 to complete this $2,363,000 project. Remaining work includes plumbing re-

pairs, interior painting, extension landscaping, office space upgrading, and firesafety system installations.

RENOVATION OF HISTORIC BUILDINGS

Washington, D.C., Blair House $6,500,000

Last June, the Blair House complex, the President's guest house for foreign dignitaries, was closed due to conditions potentially dangerous to human safety. On August 5, the committee approved on an emergency basis a prospectus to authorize the renovation of Blair House based on cost estimates then available. Total project costs were to be limited to $7,020,000. For fiscal year 1983 GSA received an appropriation of $2 million for the Blair House project. GSA has applied part of these resources to architectural and engineering studies in order to establish with greater precision the estimated cost of the renovation.

On May 24, 1983, at a committee hearing on public buildings, GSA testified on the Blair House project and proposed to amend its scope to include the construction of a new primary suite to accommodate foreign heads of state. The security of these dignitaries could be provided more readily in such a new wing than in the renovated portions of the existing structure. Subsequent to the hearing GSA has provided new cost estimates inclusive of the primary suite addition. The amount approved in this legislation reflects the increased scope of the project. Total project costs (including $2 million appropriated in fiscal year 1983) are $8,500,000.

District of Columbia, Pension Building $2,650,000

The Pension Building has long been a topic of committee interest and concern. Renovation of the building and its utilization as a museum for the building arts were proposed as the subject matter of preliminary studies authorized by Public Law 95-596, (S.J. Res. 160, as reported by the committee) on November 4, 1978. Two years later the National Historic Preservation Act Amendments of 1980, Public Law 96-515, authorized renovation of the Pension Building and the establishment of a National Museum of the Building Arts.

Recognizing the complexity of a project to renovate a historically and architecturally significant building, last year the committee included in S. 2451, the Public Buildings Authorizations Act of 1982, $1,750,000 for the preliminary design of work on the Pension Building. This amount was appropriated in the continuing resolution for fiscal year 1983. The estimated total cost of building renovations is $24 million.

GSA and the National Building Museum have recently discussed accelerating some of the work in order to enhance the Museum's ability to implement its programs. These are renovations which can be undertaken immediately without prejudicing other work that must await the architects' detailed designs. Some of the accelerated work will provide ancillary benefits for the 1985 inaugural ball by upgrading the appearance of the building.

The committee approves this accelerated schedule and authorizes the following specific work items at a total cost not to exceed $2,650,000.

A. Interior work including restoration of Presidential reception rooms and renovation of the provisional gallery and conference rooms.

B. Replacement of roof level D with lightweight concrete planks, reconstruction of fourth floor ceiling and lighting, and replacement, restoration, and reattachment of all modillions.

C. Restoration and cleaning of exterior brick work and terra-cotta detailing.

HEALTH AND SAFETY

California, San Francisco Appraisers Building	$1,290,000
Colorado, Denver Federal Center No. 20	6,427,000
Illinois, Chicago, J. C. Kluczynski Federal Building	3,319,000
Boston, Mass., John F. Kennedy Federal Building	2,499,000
Detroit, Mich., Patrick V. McNamara Federal Building	5,474,000
Cleveland, Ohio, Anthony J. Celebrezze Federal Building	3,951,000

Four of the buildings listed above—the Kluczynski, Kennedy, McNamara, and Celebrezze Federal Buildings—are structures in excess of 20 stories which do not meet recognized life- and firesafety code requirements. Project proposals for each building were originally submitted to the committee in February 1982. It was assumed then that authorization and funding would be sought to include these projects in the fiscal year 1984 program.

The potential danger to Federal workers and other occupants of these buildings in the event of fire makes the installation of needed firesafety equipment a priority concern. Last year, the committee acted to reduce the risks involved by including these four firesafety projects in S. 2451, the bill to authorize the fiscal year 1983 public buildings program. No funds, however, were appropriated to commence work on these projects.

GSA now proposes to include the four projects in its fiscal year 1985 program and has submitted escalated cost data based upon this deferred scheduling. It is recommended that these projects be included instead in the fiscal year 1984 program to facilitate their rapid completion and to avoid the escalation of costs that postponement would cause. Authorized amounts for each project therefore reflect GSA's original cost estimates.

The Appraisers Building in San Francisco also requires the installation of firesafety equipment. However, GSA has proposed the costly replacement of the exterior terra-cotta veneer of the building as well. Compelling evidence in support of this replacement has yet to be presented.

The two components of the proposed renovation of the Appraisers Building are completely independent of each other and therefore are separable. Installation of an automatic sprinkler system to protect this 17-story structure and its occupants is essential. Replacement of the exterior facing of the building has lower priority and should be deferred pending more persuasive advocacy of the need to do so. The amount included in this amendment—$1,200,000—is to be obligated during fiscal year 1984 solely for work related to firesafety.

Last year the committee authorized the expenditure of $10,287,000 for the first phase of a renovation project in Federal Center Building 20 located in Denver, Colo. GSA proposed the conversion of this building into laboratories for the Food and Drug Administration and the U.S. Geological Survey. The laboratories of both agencies are currently housed in office buildings that are totally unsuitable for laboratory operations and are rendered unsafe by their presence. Rapid completion of this project is imperative to eliminate these hazardous conditions.

The remaining $6,427,000 of this $16,514,000 project is to be used to complete laboratory space and supporting office space and to provide firesafety improvements.

VACANT SPACE ALTERATIONS

Atlanta, Ga., Federal Annex	$9,193,000
Pittsburgh, Pa., Post Office-Courthouse	8,975,000
San Antonio, Tex., Post Office-Courthouse	6,190,000

GSA has purchased or is negotiating the purchase of each of the above buildings from the U.S. Postal Service. Renovation of the space thus acquired will enable it to relocate Federal agencies presently housed in leased space into Government-owned space, resulting in long-range savings for the Federal Government. Housing plans for these three buildings propose the collective accommodation of 2,216 employees above their current occupancy levels. In approving the listed amounts for renovation, it is assumed that the transfer of title to these buildings will occur in sufficient time for work on the projects to commence during fiscal year 1984. Presently only the San Antonio facility has been transferred to GSA's inventory.

BASIC REPAIRS

District of Columbia, Auditors Building	$9,294,000
Asheville, N.C., Grove Arcade Federal Building	8,364,000

As a part of the fiscal year 1983 public buildings program, the commit-

tee authorized $656,000 for the preliminary design of major repair and alteration work needed to facilitate the continued use of the historic Auditors Building. To complete this project $9,294,000 is required. Work to be performed during construction includes structural repairs, replacement of mechanical systems, installation of a heating, ventilating, and air-conditioning system, and upgrading of office space.

Also, as a component of the fiscal year 1983 program, the committee had approved $550,000 for the preliminary design of the Grove Arcade facility. During this fiscal year GSA reprogramed to the rental of space activity the funds appropriated for this purpose in order to cover a shortfall in revenues of the Federal buildings fund. The amount approved in this legislation, $8,364,000, therefore covers all project costs including design.

The Grove Arcade Federal Building was originally built as a shopping mall in 1929 and is listed on the National Register of Historic Places. Its continued use by Federal agencies requires the renovation of its architectural, electrical, mechanical, structural, and firesafety systems and components.

SPECIAL PROGRAM NEEDS

Suitland, Md., Naval Intelligence Command Building No. 1 ..... $9,760,000

This repair and alteration project is required to meet the needs of the U.S. Naval Intelligence Command for a secure facility. Work to be performed includes upgrading the heating, ventilating, and air-conditioning system, upgrading the electrical system, provision of fire- and life-safety items, replacement of windows, and upgrading office space. Much of this work is directly or indirectly required to convert this building into a restricted-access facility sufficiently secure to handle classified materials.

Originally included in the fiscal year 1983 public buildings program for partial funding, this project received no appropriation. Taking into account its importance for national security, the $9,760,000 authorized by this legislation covers all renovation costs.

DESIGN OF RENOVATIONS, REPAIRS, AND ALTERATIONS

District of Columbia, Steam Distribution System $886,000
New Orleans, La., Hebert Federal Building 611,000

The District Heating System currently serves 117 buildings, approximately 42 million gross square feet of space, and 110,000 Federal workers. About 25 percent of the steam produced is supplied to non-Federal buildings in the District of Columbia. GSA has proposed a $37,825,000 renovation project for the three major components of the District Heating System—the Central Heating and Refrigeration Plant, the West Heating Plant, and the Steam Distribution Complex.

To design repairs and alterations for the steam distribution complex, GSA has requested $886,000 of the total $15,200,000 project cost. Proposed work includes tunnel repairs and the upgrading of mechanical and electrical systems.

For design of renovations to the Hebert Federal Building GSA has requested $611,000. Total project costs of $9,265,000 include upgrading of existing office space and plumbing, electrical, heating, ventilating, and air-conditioning systems; installation of fire- and life-safety equipment; and conversion of U.S. Postal Service workroom space to office space. On completion 153 Federal employees will be moved from leased space into this building, increasing its occupancy to 667.

PROJECT NOT RECOMMENDED FOR AUTHORIZATION

New York, N.Y., Federal Building, 252 7th Avenue $577,000

GSA has requested authority for the preliminary design of a renovation project having a total estimated cost of $39,500,000. This building houses the Regional Office, Prosthetics Center, and Outpatient Clinic of the Veterans' Administration, its primary occupant agency. The Veterans' Administration has recently informed GSA of its plans to relocate its Prosthetics Center in 1985 and its Outpatient Clinic in 1990 to the Veterans' Administration Medical Center, Manhattan, upon completion of planned construction projects at that site. The VA has also expressed its willingness to relocate its Regional Office if GSA decides that the renovation of the 252 Seventh Avenue facility is not economically feasible.

The impending relocation of the primary tenant agency of this building to whose needs proposed renovations were to be tailored makes this project unnecessary. GSA must determine what future role this building is to play in meeting Federal space requirements in New York City and advise the committee accordingly. Since the relocation of VA facilities to its Medical Center is to occur over an extended period of time, it is recommended that GSA use minor repair and alteration funds to maintain the building in a habitable condition.

MECHANICAL SERVICES

Section 8 would prohibit GSA from firing mechanics employed in GSA controlled buildings and contracting out their services to the private sector. Last year the Congress passed legislation to limit contracting of guards, elevator operators, messengers, and custodial services, but mechanics were not included in the series of jobs referenced by the legislation.●

BELLEVILLE'S BASEBALL AMBASSADORS

● Mr. DIXON. Mr. President, it is, indeed, an honor for me to rise today to pay tribute to a group of 8- and 9-year-old boys who will soon represent the United States on a good will tour to Japan. On July 25, 1983, 12 young men, all from my hometown of Belleville, Ill., will be going to Japan as good will ambassadors. I am proud of these young men who have demonstrated great talent in our Nation's favorite sport, baseball.

At a time when much is written about Japan's success in technology and trade, I would venture that we Americans remain unsurpassed on at least one field—the baseball field. Baseball is a part of the United States heritage and these young men from Illinois are keeping the tradition strong. It is important to me, as well as other Americans, to see such traditions preserved. America may be a melting pot of all cultures, but one aspect of our culture, baseball, is distinctively our own.

I know the representatives from the Khoury League of Belleville will prove themselves worthy diplomats for the United States. While serving as representatives from America, these young men will have the opportunity to enrich their own lives by travel. Opportunities like this are not handed out, they are earned. The Khoury League has achieved honored recognition through hard work and determination.

I am sure these outstanding young people will make the most of this trip and will remember it in the years to come as a highlight of their early years. I wish them the best of luck, and commend them to you for their accomplishments.●

LEGISLATIVE VETOES AND THE TRADE LAWS

● Mr. DOLE. Mr. President, a Supreme Court decision last week in Immigration and Naturalization Service against Chadha requires all of us to reflect very deeply on the practical manifestations of our constitutional system of checks and balances. The Congress has sought in many ways to maintain its legislative preeminence in the past 50 years of increasing Government regulation. By broadly declaring that one-House vetoes of decisions by the Attorney General regarding deportations constitute an unconstitutional manner of legislating, the Court called into question an extensively utilized tool by which the Congress has sought to insure the adherence by administrative agencies to congressional intent across a wide spectrum of subjects.

The ultimate sweep of the Court's decision is not now determinable, al-

though it clearly casts doubt on the constitutionality of all legislative vetoes. Nor does it necessarily follow that the loss of this controlling device must portend a diminished congressional role in the governance of this country to the detriment of those caught in the ever-widening web of agency intrusions into private lives and the marketplace. As Justice White noted in his dissent, the legislative veto was spawned in response to the growth of the Federal Government's size and complexity. One must wonder whether the availability of this device has led the Congress to contribute unwittingly to this vast growth under the illusion that it retained significant oversight of the results. I hope that the Chadha decision at least will cause us to examine much more carefully any delegations of authority to the executive branch; by taking greater legislative responsibility ourselves, perhaps we can control Government costs more effectively and restrain the bureaucratic imperative to accrete authority at every opportunity.

While we sort out the breadth and effects of the Supreme Court's decision, I wish to assure my colleagues that the Committee on Finance will examine closely the continuing validity of provisions in various trade laws that are comparable to the one-House veto struck down in Chadha. Over the years, the Congress has delegated to the President broad authority to negotiate trade agreements and to proclaim import restraints, pursuant to certain standards and subject in some cases to subsequent legislative override. Examples include the Jackson-Vanik amendment, under which the President extends most-favored-nation status to Communist countries if certain emigration practices are observed, and title II of the 1974 Trade Act, pursuant to which United States Industries may obtain temporary relief from injurious surges of imports. These trade laws and others like them embody a fine balancing of interests in increased trade and the protection of U.S. firms and workers. I know that Senator DANFORTH, chairman of the Subcommittee on International Trade, and other members are vitally interested in seeking to maintain the congressional purposes with regard to these laws through some mechanism, if not the legislative veto. The Finance Committee will make every effort to accomplish this purpose in the months ahead.●

JIM CAPUTO STEPS DOWN

● Mr. GARN. Mr. President, last month a great participant and supporter of the CYO in the State of Utah retired. After 56 years of serving the youth of Utah, Jim Caputo has stepped down as the director of CYO activities.

He exemplifies the volunteer spirit that President Reagan has spoken so much of recently. I feel that Jim Caputo deserves special thanks for all that he has done for the betterment of youth in Utah. In this connection, I submit an article from the Salt Lake Tribune praising Mr. Caputo to be printed in the RECORD.

The article follows:

[From the Salt Lake Tribune, May 1, 1983]

JIM CAPUTO STEPS DOWN

(By John Mooney)

Jim Caputo had played two games in the White Sox' Comiskey Park years before Walker Cooper, the St. Louis Cardinal catcher, was introduced to rookie umpire Augie Guglielmo and made the comment, "Guglielmo, Passarella, Pinelli, Dascoli, Donatelli and Paparella. Does every Eye-talian get a dark suit, a whisk broom and a chest protector when he gets off the boat?"

Cooper and many of those "Eye-talian" umpires hung up their gear many years ago, and Caputo joined the retirement corps Saturday night when he stepped down as director of CYO activities after fifty-six years of serving the youth of the state.

His square monicker is A. James Caputo, and he boasts of Italian ancestry not only on his father's but also on his mother's side of the family. But to thousands of boys in the valley, he's been "Jay" over all those years.

It all started back in 1927 when two brothers, Father Pat Kennedy at St. Patrick's church and Father Bill Kennedy at the Tooele church formed baseball teams, which evenutally became the Catholic Youth Organization, which flourished under Caputo's guiding hands for almost 40 years.

Caputo was a member of that first baseball team, representing St. Pat's.

So spirited was the rivalry that after the baseball season, it was natural the two church groups continued the competition in basketball, at the old Police gym on First South and at Tooele High School.

Jay was a baseball player and kept active in the Amateur Federation as a player and manager for many years with the Pullman Railroad team managed by H.O. Turville (the founder of Utah soccer), and later with the S & H Green Stamps, the Sugarhouse team and finally the CYO.

He also began coaching the St. Pat's CYO basketball team in his spare time.

"That basketball team got me into almost a lifetime job," Caputo recalled.

"I had my brothers Roy and Frank, John McGurk, Leo Pignanelli and Larry Pagnanelli, Bill McKague, Ralph Smith and the Barber brothers, Bill and Gene, on those teams and we beat everyone."

TURNING POINT

Actually, CYO baseball received its biggest boost when the late Duane G. Hunt, the Catholic bishop of the Salt Lake diocese, wangled an invitation for the Utah boys to play in a national baseball tournament in Comiskey Park in Chicago during the 1933 World's Fair.

Since few of the Utah boys had been out of the state, this was quite an experience for Jay, Roy and Frank Caputo, Larry Brennan, Johnny Vaughan, Cy Bodgen, "Lefty" O'Brien, Jack Argentos, Jack Guthrie, Ralph Smith, Ralph Jerome, Tony Salazar and "Spongey" Pagnotta.

"Art and Dan Connole raised a lot of the money to finance the trip and we had our own private pullman on the train," Caputo recalled. "They put us up at the Illinois Athletic Club and we played in the tournament in the White Sox Park.

"Afterwards, each of us got $2 to attend the World's Fair. That wasn't too bad because we could get a meal for that and many of the exhibits were free. The thing I remember most about the Fair was the booths with the new dial telephones, where you could call anyone in the country free.

"I waited in line to call my girl friend, Josephine, but everyone could listen to the conversation. But 'Spongey,' who had all the angles, fooled the crowd by speaking to his mother in Italian," Jay laughed.

Next year, the CYO team took a trip to San Francisco.

Over the years, Caputo had lots of volunteer helpers, but every Saturday and Sunday for the basketball months, for 37 years, Jay was on hand directing the league and tournament play.

In addition, during the week he had the job of collecting entry fees, contacting and hiring officials and generally keeping the organization running, in addition to doing all the printing and mailing for the leagues.

In retrospect, Jay laughed, "I had a chance to play semipro baseball, but I couldn't take the time from my job at the Salt Lake Hardware (where I spent 42½ years). I guess you could say I never lost my amateur standing."

Which was a good thing for thousands of youngsters who grew up in clean sports and saw their children and grandchildren play in the same leagues, under the direction of Jay Caputo.

OBSERVATION WARD

My baseball scouting report read, "He hits right-handed, left-handed, and seldom."●

TECHNOLOGICAL INNOVATION BY FLUID CONSERVATION SYSTEMS

● Mr. DURENBERGER. Mr. President, at a time when many are questioning America's ability to maintain its international edge in technological innovation, it is a great pleasure to witness breakthroughs in American technology. It is an even greater pleasure when those breakthroughs originate in Minnesota.

Several weeks ago I had the pleasure of reading an article on leak detection in the May 1982 edition of American City & County magazine. That article was authored by Douglas S. Greeley, P.E., chief of the repairs section of the New York City Department of Environmental Protection. It dealt with New York City's experience in utilizing a Minnesota invention designed to locate leaks in underground water systems in the most efficient manner possible.

American cities are currently losing millions of gallons of water through leaks in underground waterpipes. New York City loses an estimated 100 million gallons per day, 15 to 20 percent of the city's supply. Boston may lose 2 gallons of water through leaks for every 1 gallon delivered. The State of California recently determined that it loses 80 billion gallons per year, cost-

ing Californians more than $16 million per year. In Philadelphia, 15 percent of the city water disappears before reaching homes and factories. Nearly all of our cities face the same problem as aging waterpipes decay. Nationally, it is estimated that 20 percent of our municipal water supply is lost through leaking pipes. With our urban areas facing water system maintenance bills estimated at $75 to $100 billion over the next 20 years, it is essential that economical ways be developed to pinpoint and repair municipal water leaks.

In the past, underground water leaks had to be located in what amounted to a hit or miss manner. It was an expensive, inconvenient, and inefficient system. A group of engineers in Duluth, Minn., set out to find a better way. Their development—which they call the locate a leak and detect a leak systems—is now being used by 42 municipalities across the Nation.

In his article, Mr. Greeley credits the system with saving an estimated 43 million gallons per day in 1 year of use, no small feat in a city which typically excavates 500 dry holes annually in attempts to find leaking pipes. The West Virginia Water Co. reports saving nearly 12 million gallons per month, and the Western Pennsylvania Water Co. reports that in the first 4 days of use, the system pinpointed nine leaks which together were losing an estimated 720,000 gallons of water per day.

I am hopeful that other Senators will enjoy reading about these developments as much as I did, and I ask that the article from American City & County magazine be printed in the RECORD.

The article follows:

[From the American City & County magazine, May 1982]

LEAK LOCATION ENTERS COMPUTER AGE

(By Douglas S. Greeley, P.E., Chief, Repairs Section, NYC Dept. of Environmental Protection, Bureau of Water Supply)

(Faced with drought conditions, New York City turned to a computerized leak detection patrol to stop wastage of valuable water. After one year, some 43 mgd in leaks were found and fixed thanks to its high-tech leak location unit)

The Drought of 1980–81 hit the City of New York at a particularly bad time. Just recovering from its fiscal problems of the late 1970s, the city was being pressured to maintain or increase municipal services in order to stem the departure of its tax paying residents, as well as to stimulate economic growth by persuading businesses to remain and even expand.

In the Department of Environmental Protection, as well as other agencies, this pressure was compounded by a seriously depleted work force and a discontinuous flow of knowledge and on-the-job experience from senior to junior personnel. Many of the "Old Masters" in all job titles had departed for better wages, or had simply retired.

This problem was especially true for the Bureau of Water Supply's leak detection effort. The ability to accurately pinpoint leaks using the traditional methods of sounding bars, geophones and aquaphones takes years of practice and experience in a city like New York with its complex subsurface environment. When the drought struck, the few remaining leak detection experts were not able to train younger workers in time to mount a productive leak detection program.

During the early fall of 1980, when the warning signs of the impending drought became apparent, the Commissioner of the Department of Environmental Protection and the Director of the Bureau of Water Supply became aware of a new leak pinpointing device which had been successfully used in other large cities. The Locate-A-Leak system was successfully demonstrated for the Bureau engineering staff, and when the city reservoir system storage fell below 50 percent of capacity, orders were placed for two of the computer-based systems.

To fast-track deployment time, the manufacturer, Fluid Conservation Systems of Houston, Texas, was requested to procure van-type vehicles and install its equipment to provide the city with a fully functioning leak detection van, rather than have the city assemble its own units. Despite, or in the spite of, the rigors of governmental purchasing, the units were delivered one month after the specifications were written.

As part of the city's Drought Emergency Plan, which included the establishment of valve and regulator maintenance units, reducing system pressures to breakpoint, the letting of leak and vacant building shutoff contracts and the installation of hydrant restriction devices, the Bureau developed a leak detection unit consisting of a district foreman, four foreman and 22 heavy duty laborers under the direction of a civil engineer.

When the first mobile leak detection van was delivered in mid-December of 1980, the manufacturer provided an intensive classroom training session to familiarize the laborers with the New York City water supply system, fundamentals of leak detection and the principles behind the Locate-A-Leak system. Using tape recordings of leaks which had been pinpointed in various municipalities across the country, the class was able to learn the operation of the system in the classroom, without the distractions of traffic or pedestrian interference.

After the class had mastered the operation of the equipment and what leak noises sounded like. FCS instructors trained the personnel in how to make proper field connections and how to shorten scan distances to improve the accuracy of leak pinpointing. At the end of the one week session, the class had gone five-for-five in pinpointing leaks which had defied location through the use of conventional means.

Since the Leak Detection Unit was to play a part in promoting public awareness of the drought and was to act as the "flagship" in conservation efforts, the leak detection vans and support vehicles of the unit became the first in the Bureau's fleet to be painted in a new color scheme. In addition, the vans were supplied with press releases and handouts concerning conservation to pass out to interested passersby and school children.

The equipment and the unit proved so successful that three more leak detection vans were purchased in June 1981 as the effects of the drought intensified.

The Detect-A-Leak unit, which is about the size of a portable radio, enables a surveyor to listen to line valves, hydrant valves, and service lines along a water main. When a leak noise is picked up, the surveyor brackets the leak by identifying the points of maximum noise on the main. When the surveyor brackets the leak, he then marks the distribution system map and continues surveying. The maps of each surveyor are referred to a follow up crew in a leak detection van which wires the Detect-A-Leak's transducer connections into the Locate-A-Leak console inside the van.

The operator, using the microprocessor and an oscilloscope and knowing the diameter of the water main, the centerline distance between the transducers and the required scanning time will get an oscilloscope trace of water main noise. The point or points of maximum amplitude, which resemble an "explosion" of dots, is a characteristic leak picture. By lining the cursor dot up with the point of maximum amplitude, the operator is able to pinpoint the exact location of the leak.

The operator has the ability to alter the spanning distance to key in on a particular segment of main without changing transducer settings. This improves the accuracy of the leak location. The operator may also change the length of scanning time to eliminate the effects of ambient noise, such as car horns. This scanning time change acts much like the shutter speed of a camera. If you were to pass your hand in front of a camera set at a speed of 1/100 of a second at the exact time the shutter tripped, the picture would appear blurry. However, if the camera was set for a time exposure, your hand would not affect the picture as much, if at all.

The van-mounted leak location system enables the operator to tape-record leak sounds as "heard" by the equipment. This permits the operator to communicate with a follow-up crew or to further refine the leak's location back at the shop.

The Locate-A-Leak system also provides the ability to rapidly evaluate long sections of water main and to detect and pinpoint multiple leaks. And, in the event that the operator does not bracket the leak the first time, the system will indicate in which direction the operator should then move. In one residential neighborhood in Staten Island, the unit "chased" a leak detection crew three blocks before the leak was finally bracketed.

The first concern of the city's Leak Detection Unit was to assist the department's public relations experts in esablishing that the city was undertaking a credible conservation effort. In short, this meant the resolution of longstanding leak complaints which had previously defied location, particularly on or near department facilities. In some cases, as we were to learn, the leaks had been running for years. These old "in-house" leaks had to be found and fixed to convince city residents that water conservation was a reality.

Our next priority was to assist city repair forces in minimizing the leak complaint backlog. Since we were able to stay with a leak until it was located, rather than be called away as in the case of complaint investigators from the repair shops, we were able to reduce the repair time for leaks requiring excavation.

Our next priority was to deal with other bureaus within the Department of Environmental Protection and other New York City agencies.

At the onset of the drought, the Department of Housing Preservation and Development had furnished the Bureau with com-

puter lists of vacant and abandoned buildings. These lists were given to contractors to have services shut off. These buildings tended to be concentrated within certain parts of the city, and we knew that the lists did not provide a complete picture of the abandonment problem.

In the one year of the leak detection unit's existence, in addition to training approximately two-thirds of the personnel, the unit has pinpointed more than 500 leaks, saving an estimated cumulative total of 43 mgd.

Concurrent with the city's conservation public relations efforts, our sewage treatment plants noted significant drops in sewage inflows within most treatment plant districts. However, in certain instances the flows did not drop appreciably, and the areas coincided with those of high abandonment. By surveying these areas on a block by block basis, we were able to sweep the areas clean of leakage. In one district, that of the 26th Ward Water Pollution Control Plant, the leak detection unit was able to resolve approximately 150 leaks and reduce average plant inflow by 1 mgd, about 13 percent.

Finally, as a result of the actions taken to minimize the effects of the drought, the city has been able to reduce the average daily demand on the water supply system from a pre-drought 1.5 billion gallons per day to the safe system yield of 1.29 billion gallons per day.

Our next objective is to more closely align the unit with the repair forces to minimize the excavation of dry holes. These presently account for about 10 percent of our street openings, limiting crew productivity, as well as unnecessarily disturbing pavement. To justify the procurement of the leak detection vans, we found that if each of our five vans could eliminate 100 "dry" openings, then the purchase would be economical, without any consideration of water saved, treatment and pumping cost reductions, or reduced water damage to property, utility structures and transportation systems.

The leak detection effort was only one part of overall drought strategy, however. As the effects of the drought wane, many drought actions may not prove to be efficient or cost effective. However, we feel that the Leak Detection Unit, equipped with the Locate-A-Leak system, will continue to provide material savings and increased labor productivity.●

DEATH OF MIKE MANATOS

● Mr. SARBANES. Mr. President, America lost a fine public servant with the death of Mr. Mike N. Manatos on May 27, 1983. Mike Manatos had a distinguished record both on Capitol Hill and in the White House during his 46-year career of public service.

Born in 1914 in Rock Springs, Wyo., the son of Greek immigrants from the island of Crete, Mike Manatos arrived on Capitol Hill in 1937 and in the ensuing 24 years, served in senior staff positions with five U.S. Senators from his home State. In 1961, Mr. Manatos was appointed by President John F. Kennedy as Administrative Assistant to the President for Congressional Relations and was one of the few top Kennedy aides to continue in his position through the entire Johnson administration. During his service in the White House, Mr. Manatos presided over what is historically known as the most productive legislative period in American history.

Mr. Manatos holds the distinction of being the first American of Greek decent to hold senior staff positions both in the Congress and the White House and was extremely active in Greek-American affairs and on behalf of Greek Americans throughout his career.

Mr. President, I submit the following articles regarding Mr. Manatos' fine career in public service for inclusion in the RECORD.

The articles follow:

[From the Washington Post, May 30, 1983]

MIKE N. MANATOS, DEAD AT 68

Mike N. Manatos, 68, a White House legislative aide during the Kennedy and Johnson administrations who later was a lobbyist for Procter & Gamble here for 10 years before retiring in 1979, died of congestive heart failure May 27 at Georgetown University Hospital. He lived in Sumner.

He joined the White House staff in 1961, serving under Lawrence F. O'Brien, the president's special assistant for congressional relations.

During the next eight years Mr. Manatos worked as a liaison with the Senate's Democrats, and contributed to the passage of landmark legislation in the fields of civil rights, housing and transportation.

Mr. Manatos was a native of Wyoming. From 1937 to 1961, he was an administrative and legislative assistant to several Wyoming senators. He also had served as president of the Senate Administrative Associates Association.

He was a member of the St. Sophia Greek Orthodox Cathedral in Washington, and was a grand archon of the Greek Orthodox Church, the highest position a layman can reach. He was a member of the Pan Cretan Association and AHEPA. Presidents Johnson and Carter both assigned him to missions in Greece.

Mr. Manatos was a past president of the Association of Former Senate Aides, and a member of the Business Government Relations Council, and the Jefferson Group of Washington.

Survivors include his wife, Dorothy V., of Sumner; three children, Kathy Shand of Salt Lake City, and Ann Sikand and Andy Manatos, both of Bethesda; two brothers, George, of Modesto, Calif., and Tom, of Rock Springs, Wyo.; two sisters, Sylvia Johannessen of Arlington, and Tina Mamalis of Rock Springs, Wyo., and nine grandchildren.

[From the Hellenic Times]

MIKE MANATOS IS DEAD AT 68

Mike Manatos, the first Greek-American to hold positions of major influence in Washington, D.C., died of congestive heart failure on May 27, 1983 in Washington, D.C. Mr. Manatos served as Administrative Assistant for Senate Liaison to Presidents Jack Kennedy and Lyndon Johnson. He was the first Greek-American to hold senior staff positions in the United States Senate, where he worked from 1938 to 1961.

For the last twenty years, Mr. Manatos had been on a first-name basis with the nation's Presidents, Speakers of the House, Majority Leaders of the Senate, Cabinet Members, Supreme Court Justices and others in Washington's policy process.

Throughout his career, Mr. Manatos played a major role in America's policy toward Greece and Greek-Americans. He was involved in the actions of President Johnson which stopped the Turkish invasion of Cyprus in the late 1960's. With his son Andy, who was Legislative Assistant to Senator Thomas Eagleton during the consideration of the Cyprus/Turkey issue in Congress and Assistant Secretary of Commerce in the Carter Administration, they played pivotal roles on the Greece-Turkey-Cyprus issue.

He played a critical role in substantially increasing America's immigration quota from Greece. He helped numerous Greek-Americans to get into the U.S. and with their problems with the government. For many years he provided the country's Greek-American leadership with access to the White House.

Most recently, President Carter invited Mr. Manatos to serve as a member of the American delegation to bring to the United States the Olympic flame for the 1980 Winter Olympics held in the United States. President Johnson appointed Mr. Manatos and former President Truman to represent him at the funeral of King Paul of Greece.

Mr. Manatos was a Grand Archon of the Greek Orthodox Church, a member of the AHEPA, and past-President of his local chapter of the Pan-Cretan Association.

Mr. Manatos was most well-known in Washington for his work on non-Greek related matters. He was recognized as one of the nation's leaders with regard to his ability to shape American public policy. He was credited by Presidents Kennedy and Johnson with having played a major role in the enactment of the plethora of legislation from 1961 to 1968—the most legislatively productive period in American history.

For ten years subsequent to his work in the White House, Mr. Manatos was the Director of Government Affairs in Washington, D.C. for the Proctor and Gamble Corporation. Since 1981, he had been involved in his son's consulting business.

Mr. Manatos was born in 1914 in Rock Springs, Wyoming to Nicholas and Anna (former Anezakis) Manatos. His father was from Chiliomoudou, Crete and his mother was from Lakous, Crete.

He is survived by his wife, Dorothy of Bethesda, Maryland; his son, Andy, also of Bethesda, Maryland and his four children, Mike, Nick, Tom and George; his daughter, Kathy Shand, of Salt Lake City, Utah, and her three children, Dori, Nathan and Rebecca; his daughter, Ann Hatsis Sikand of Bethesda, Md., and her children, Chuck and Julie Hatsis; his brothers, George Manatos of Modesto, California; and Tom Manatos of Rock Springs, Wyoming; and his sisters, Sylvia Johannessen of Arlington, Virginia, and Tina Mamalis of Rock Springs, Wyoming.

[From the Hellenic Chronicle]

MIKE MANATOS, AIDE TO PRESIDENTS, 69

WASHINGTON.—Mike Manatos, the first Greek-American to hold positions of major influence here, died recently of congestive heart failure. He was 69.

Mr. Manatos had served as administrative assistant for Senate liaison to Presidents John F. Kennedy and Lyndon B. Johnson. He was the first person of Greek descent to hold senior staff positions in the Senate,

working there from 1938 to 1961, when he joined the Kennedy Administration.

For the past 20 years, Mr. Manatos had been on a first-name basis with presidents, speakers of the House, Senate majority leaders, members of the Cabinet, Supreme Court justices and others in positions his authority in the capital.

Throughout his career, Mr. Manatos had played a major role in the policy of the United States toward Greece and toward Greek-Americans. Among these actions was his role in the Johnson Administration which led to the halting of potential invasion of Cyprus by Turkey by President Johnson.

Some years later, along with his son, Andrew, who was legal assistant to Sen. Thomas F. Eagleton, he was involved in the consideration of the Cyprus-Turkey question in Congress. Young Manatos was assistant secretary of commerce in the Carter Administration. He and his father played a critical role in substantially increasing the immigration quota for Greece in this country.

Mr. Manatos helped numerous Greeks in their efforts to gain admission into the United States. For many years, he provided the only leadership for Greek-Americans seeking access to the White House and other power centers here.

In 1980, President Carter invited Mr. Manatos to serve as a member of the American delegation bringing the Olympic flame from Greece to the winter games at Lake Placid, N.Y.

President Johnson had appointed former President Truman and Mr. Manatos to represent him at the funeral of King Paul of Greece, and Mr. Manatos, his father, Nicholas, and brother, Tom, were honored guests at the White House during the Kennedy Administration for a dinner honoring King Paul.

President Kennedy also had appointed Mrs. Manatos, the former Dorothy Varanakis of Salt Lake City, to coordinate for him the government-sponsored open heart surgery being afforded to a critically ill young Greek girl.

Mr. Manatos was also active in the Greek Orthodox Church laity and in various fraternal and civic activities. He was a grand archon of the Order of St. Andrew the Apostle and a past president of the Pan Cretan Association chapter. He belonged to AHEPA as well.

His influence extended beyond the Greek community as he was recognized here as one of the leaders in shaping American public policy. He was credited by Presidents Kennedy and Johnson with having played a key role in the enactment of much legislation from 1961 to 1968, called by many the most legislatively productive period in U.S. history.

For the decade subsequent to his work in the White House, Mr. Manatos was director of government affairs here for Proctor and Gamble Corp. Since 1981, he had been involved in the consulting business established by his son. Shortly before his death, the Manatoses had established Manatos & Manatos Inc. here.

Born in 1914 in Rock Springs, Wyo., a son of Nicholas and Anna (Anexakis) Manatos, he was brought up in that region and had resided with his wife, Dorothy, in Bethesda, Md. His father was a native of Chiliomoudou, Crete, and his mother, Lakous, Crete.

Besides his wife and son, also of Bethesda, he leaves two daughters, Mrs. Kathy Shand of Salt Lake City and Mrs. Ann Hatsis Sikand of Bethesda; two brothers, George Manatos of Modesto, Calif., and Tom Manatos of Rock Springs; two sisters, Sylvia Johannessen of Arlington, Va., and Tina Mamalis of Rock Springs; 6 grandsons and 3 granddaughters.

MANATOS MAKES MARK

Among all the Greek-Americans with influence in the United States capital none has left a greater administrative imprint than Mike Manatos, and his was the first influential Greek-American voice.

Mike Manatos died recently at 69, active almost to the end. He died of congestive heart failure. His heart just plumb gave out; but before it did, it had propelled him to a mountain of achievement.

Mike Manatos came to Washington in 1938 when most Greek-Americans were still trying to pull themselves out of the Depression and worrying about Hitler.

He came as a member of a senator's staff and he remained such until 1961, when President Kennedy tapped him for his liaison assistant to the Senate. For the next eight years, he served Kennedy and his successor, Lyndon Johnson, from the White House, becoming involved in presidential assignments that took him to many places doing many things, including representation of Mr. Kennedy at the funeral of King Paul of Greece. On this occasion, he was accompanying President Truman as well.

Mike Manatos was on a first-name basis with all of the presidents since 1960 and with the leaders of the House and Senate.

He was always a willing participant in endeavors to help his fellow Greek-Americans. He was there when the first representatives of Greek descent were elected to the Congress. He was there and ready to help. He was helpful to the cause of Greece and Cyprus; and it was his and his son Andy's great assistance that got Sen. Thomas F. Eagleton involved on the side of the Cypriots in the period of the embargo. He passed along his public service record to his son, Andy, who became assistant Commerce Secretary under President Carter.

Many others from among Americans of Greek descent have come to Washington since 1938, but it is safe to say that few have amassed as great a store of service credits as Mike Manatos had.

May God keep his memory eternal.●

REMARKS ON RISK ASSESSMENT BY THE HONORABLE WILLIAM D. RUCKELSHAUS

● Mr. QUAYLE. Mr. President, as you know the Labor and Human Resources Committee has been conducting hearings recently on the application of the law to assure food safety by the Food and Drug Administration. Of particular interest to the committee, of which I am a member, has been the processes used by the Food and Drug Administration to assess the safety of newly developed food additives. Relevant to the committee's examination of this issue are remarks made on Wednesday, June 22, 1983, by the Honorable William D. Ruckelshaus, Administrator of the Environmental Protection Agency, to a group of scientists and engineers at the National Academy of Sciences.

In his talk Mr. Ruckelshaus called for a Government-wide new process for assessing and managing the health, safety, and environmental risks posed by contaminants threatening the American people. The points made by Mr. Ruckelshaus further the discussions of this important issue. I commend his talk both to my colleagues on the committee and the Senate as a whole, therefore, I ask that the full text of Mr. Ruckelshaus' speech be printed in the RECORD.

The speech follows:

SCIENCE, RISK, AND PUBLIC POLICY

(By William D. Ruckelshaus)

We are now in a troubled and emotional period for pollution control; many communities are gripped by something approaching panic and the public discussion is dominated by personalities rather than substance. It is not important to assign blame for this. I appreciate that people are worried about public health and about economic survival, and legitimately so, but we must all reject the emotionalism that surrounds the current discourse and rescue ourselves from the paralysis of honest public policy that it breeds.

It is no accident that I am raising this subject here in the house of science. I believe that part of the solution to our distress lies with the idea enshrined in this building, the idea that disciplined minds can grapple with ignorance, and sometimes win: the idea of science. We will not recover our equilibrium without a concerted effort to more effectively engage the scientific community. Frankly we are not going to be able to emerge from our current troubles without a much improved level of public confidence. The polls show us that scientists have more credibility than lawyers or businessmen or politicians and I'm all three of those. I need your help.

Those of you who are scientists may think you have heard this before, but this is not a naive plea for science to save us from ourselves. Somehow our democratic technological society must resolve the dissonnance between science and the creation of public policy. Nowhere is this more troublesome than in the formal assessment of risk—the estimation of the association between the exposure to a substance and the incidence of some disease, based on scientific data.

Here is how the problem emerges at the Environmental Protection Agency. EPA is an instrument of public policy, whose mission is to protect the public health and environment in the manner laid down by its statutes. That manner is to set standards and enforce them; and our enforcement powers are strong and pervasive. But the standards we set, whether technology or health-related, must have a sound scientific base.

Science and the law are thus partners at EPA, but uneasy partners. It's a shotgun wedding. The main reason for the uneasiness lies, I think, in the conflict between the way science really works and the public's thirst for certitude that is written into EPA's laws. Science, as you all know, thrives on uncertainty. The best young scientists flock into fields where great questions have been asked but nothing is known. The greatest triumph of a scientist is the crucial experiment that shatters the certainties of the past and opens up rich new pastures of ignorance.

But EPA's laws often assume, indeed demand, a certainty of protection greater than science can provide at the current state of knowledge. The laws do no more than reflect what the public believes and what it often hears from people with scientific credentials on the 6 o'clock news. The public thinks we know what all the bad pollutants are, precisely what adverse health or environmental effects they cause, how to measure them exactly and control them absolutely. Of course, the public and sometimes the law are wrong, but not all wrong. We do know a lot about some pollutants and we have controlled them effectively using the tools of the Clean Air Act and the Clean Water Act. These are the pollutants for which the scientific community can set safe levels and margins of safety for sensitive populations. If this were the case for all pollutants, we could breathe more easily (in both senses of the phrase); but it is not so.

When I left EPA over 10 years ago as its first Administrator, we had the Clean Air Act, the Clean Water Act, a solid waste law, a pesticide law and laws to control radiation and noise. Yet to come were the myriad of laws to control toxic substances from their manufacture to their disposal—but that they would pass was even then obvious.

When I departed a decade ago, the struggle over whether the Federal Government was to have a major role in protecting our health safety and environment was ended. The American people had spoken. The laws had passed, the regulations were being written. The only remaining question was whether the staututory framework we had created for our journey made sense or whether, over time, we would adjust it.

Ten years ago I though I knew the answer to that question as well. I believed it would become apparent to all that we could virtually eliminate the risks we call pollution if we wanted to spend enough money. When it also became apparent that enough money for all the pollutants was a lot of money, I further believed we would begin to examine the risks very carefully and structure a system which forced us to balance our desire to eliminate pollution against the costs of its control. This would entail some adjustment of the laws, but really not all that much, and it would happen by about 1976. I was wrong.

It may be that God is repaying me for my error by causing me to be reincarnated as Administrator of EPA. Whether God or President Reagan is the cause this time around, I am determined to improve our country's ability to cope with the risk of pollutants over where I left it 10 years ago.

It will not be easy, because we must now deal with a class of pollutants for which a safe level is difficult, if not impossible, to establish. These pollutants interfere with genetic processes and are associated with the diseases we fear most: cancer and reproductive disorders, including birth defects. The scientific consensus has it that any exposure, however small, to a genetically active substance embodies some risk of an effect. Since these substances are wide-spread in the environment, and since we can detect them down to very low levels, we must assume that life now takes place in a minefield of risks from hundreds, perhaps thousands, of substances. No more can we tell the public: you are home free with an adequate margin of safety.

This worries all of us, and it should. But when we examine the premises on which such estimates of risk are based, we find a confusing picture. In assessing a suspected carcinogen, for example, there are uncertainties at every point where an assumption must be made: in calculating exposure; in extrapolating from high doses where we have seen an effect to the low doses typical of environmental pollution; in what we may expect when humans are subjected to much lower doses of the same substance that caused tumors when given in high doses to laboratory animals; and finally, in the very mechanisms by which we suppose the disease to work.

One thing we clearly need to do is insure that our laws reflect these scientific realities. The Administrator of EPA should not be forced to represent that a margin of safety exists for a specific substance at a specific level of exposure where none can be scientifically established. This is particularly true where the inability to so represent forces the cessation of all use of a substance without any further evaluation.

It is my strong belief that where EPA or OSHA or any of the social regulatory agenices is charged with protecting public health, safety or the environment, we should be given, to the extent possible, a common statutory formula for accomplishing our tasks. This statutory formula may well weigh public health very heavily in the equation as the American people certainly do.

The formula should be as precise as possible and should include a responsibility to assess the risk and to weigh that, not only against the benefits of the continued use of the substance under examination, but against the risks associated with substitute substances and the risks associated with the transfer of the substance from one environmental medium to another via pollution control practices. I recognize that legislative change in the current climate is difficult. It is up to those of us who seek change to make the case for its advisability.

I did not come here today to plead for statutory change. My purpose is to speak of risk assessment and risk management and science's role in both. It is important to distinguish these two essential functions, and I rely here on a recent National Academy of Sciences report on the management of risk in the Federal government. Scientists assess a risk to find out what the problems are. The process of deciding what to do about the problems is risk management. The second procedure involves a much broader array of disciplines, and is aimed toward a decision about control.

Risk management assumes we have assessed the health risks of a suspect chemical. We must then factor in its benefits, the costs of the various methods available for its control, and the statutory framework for decision. The NAS report recommends that these two functions be separated as much as possible within a regulatory agency. This is what we now do at EPA and it makes sense.

I think we also need to strengthen our risk assessment capabilities. We need more research on the health effects of the substances we regulate. I intend to do everything in my power to make clear the importance of this scientific analysis at EPA. Given the necessity of acting in the face of enormous scientific uncertainties, it is more important than ever that our scientific analysis be rigorous and the quality of our data be high. We must take great pains not to mislead people regarding the risks to their health. We can help avoid confusion both by the quality of our science and the clarity of our language in explaining the hazards.

I intend to allocate some of EPA's increased resources, which everyone seems determined to give us, toward these ends. Our 1984 request contains significant increases for risk assessment and associated work. We have requested $31 million in supplemental appropriations for research and development and I would expect that risk assessment will be more strongly supported as a result of this increase as well.

I would also like to revitalize our long-term research program to develop a base for more adequately protecting the public health from toxic pollutants. I will be asking the advice of the outside scientific community as how best to focus those research efforts.

I am sure that in the future, this being an imperfect world, the rigor and thoroughness of our risk analyses will be affected by many factors, including the toxicity of the substance, the populations exposed, the pressure of the regulatory timetable, and the resources available.

Despite these often conflicting pressures, risk assessment at EPA must be based on scientific evidence and scientific consensus only. Nothing will erode public confidence faster than the suspicion that policy considerations have been allowed to influence the assessement of risk.

Although there is an objective way to assess risk, there is, of course, no purely objective way to manage it, nor can we ignore the subjective perception of risk in the ultimate management of a particular substance. To do so would be to place too much credence in our objective data and ignore the possibility that occasionally one's stomach is right. No amount of data is a substitute for judgement.

Further, we must search for ways of describing risk in ways the average citizen can comprehend. Telling a family living close to a manufacturing facility that no further controls are needed on the plant's emissions because, according to our linear model their risk is only 10-6, is not very reassuring. We need to describe the suspect substances as clearly as possible, tell people what the known or suspected health problems are and help them compare that risk to those with which they are more familiar.

To effectively manage the risk, we must seek new ways to involve the public in the decision-making process. Whether we believe in participatory democracy or not it is a part of our social regulatory fabric. Rather than praise or lament it, we should seek more imaginative ways to involve the various publics impacted by the substance at issue. They need to be involved early on and they need to be informed if their participation is to be meaningful. We will be searching for ways to make our participatory process work better.

For this to happen, scientists must be willing to take a larger role in explaining the risks to the public—including the uncertainties inherent in any risk assessment. Shouldering this burden is the responsibility of all scientists, not just those with a particular policy end in mind. In fact all scientists should make clear when they are speaking as scientists—ex cathedra—and when they are recommending policy they believe should flow from scientific information. What we need to hear more of from scientists is science. I am going to try to provide avenues at EPA for you to become more involved in the public dialogue in which the scientific problems are described. Our country needs the clear unbiased voice of science. Now is not the time to jeer as the "ship of state" floats by. Now is the time to get into the boat and row.

Lest anyone misunderstand, I am not suggesting that all the elements of managing risk can be reduced to some neat mathematical formula. Going through a disciplined approach can help. It will assist in organizing our thoughts to include all the elements that should be weighed. We will build up a set of precedents that will assist later decision-making and provide more predictable outcomes for any social regulatory programs we adopt.

It is clear to me that in a society in which democratic principles so dominate, the perceptions of the public must be weighed. Instead of objective and subjective risks, the experts sometimes substitute "real" and "imaginary" risks. There is a certain arrogance in this—an elitism which has ill served us in the past. Rather than decry the ignorance of the public and seek to ignore their concerns, our governmental processes must accommodate the will of the people and recognize its occasional wisdom. As Thomas Jefferson observed:

"If we think (the people) not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to inform their discretion."

Up to this point I have been suggesting how risks should be assessed and managed in EPA. Much needs to be done to coordinate the various EPA programs to assure a consistent approach. I have established a task force with that charter.

I further believe we should make uniform the way in which we manage risk across the Federal regulatory agencies. The public interest is not served by two Federal agencies taking diametrically opposed positions on the given health risks of a given toxic substance and then arguing about it in the press. We should be able to coordinate our risk assessment procedures across all Federal agencies. The risk management strategy that flows from that assessment may indeed differ, depending on the agency's statutory mandate or the judgment of the ultimate decision maker.

But even at the management stage there is no reason why the approaches cannot be coordinated to achieve the goal of risk avoidance or minimization with the least societal disruption possible. In the last few weeks I have been exploring with the White House and the Office of Management and Budget the possibility of effecting a better intragovernmental coordination of the way in which we assess and manage risk.

To push this one step further, I believe it is in our nation's best interest to share our knowledge of risks and our approach to managing them with the other developed nations of the world. The environmental movement has taught us the interdependencies of the world's ecosystems. In coping with the legitimate concerns raised by environmentalism we must not forget that we cope in a world with interdependent economies. If our approach to the management of risk is not sufficiently in harmony with those of the other developed nations, we could save our health and risk our economy. I don't believe we need abandon either, but to insure it does not happen, we need to work hard to share scientific data and understand how to harmonize our management techniques with those of our sister nations.

Well, I have gone from the particular to the sublime. Let me avoid moving out into space by summing up.

I didn't return to EPA to get a before and after picture on the wall. I want to help achieve a better conceptual, statutory and societal framework to cope with risk in our country.

To do that we need to get the emotion out of and the scientist into the process:

I need science's help.

I'll try to make it easier to access what we're doing at EPA.

But if I can't do that, I need your help anyway.

What I'm after is a government-wide process for assessing and managing health, safety and environmental risks.

This will take coordination, cooperation and good will within EPA, within the Executive Branch agencies and between the Congress and the Administration.

In other words, this will take a miracle.

Now I know science doesn't believe in miracles, but I need your help if this one's going to happen.

What's at stake is no less than whether this country works. It's worth the effort of all of us.●

A MONROE DOCTRINE FOR THE EIGHTIES

● Mr. EAST. Mr. President, have the men and women of the United States lost the will to live? Are we so blinded and corrupted by our prosperity and creative comforts that we will meekly allow our southern neighbors to fall to Communist aggressors?

I believe that the American people will rally around the President when they understand the enormity of the Soviet threat in our hemisphere. In the June issue of Conservative Digest, Mr. Richard A. Viguerie succinctly describes the threat and recommends some strong, yet peaceful, measures to counter that threat. I hope all of my colleagues will read what Mr. Viguerie has to say. I ask that his article entitled "A Monroe Doctrine for the 1980's" be printed in the RECORD.

The article follows:

A MONROE DOCTRINE FOR THE 1980'S

(By Richard A. Viguerie)

Americans are without doubt the most sophisticated people in the world. We are light-years ahead of anyone else in the development of manned spaceflight. Our agricultural system is the most productive ever known. In millions of American homes, six-year-olds are learning how to program computers.

But when it comes to understanding the communists, we are woefully ignorant. Some of our leaders seem to have formed their opinions about communism a hundred years ago, when it was just a theory.

Since then it has been put into practice.

In the last 65 years, the communists have conquered 43 sovereign nations with a current combined population of 1.6 billion.

Although the Soviets have the most powerful army in the world, they seldom engage in direct military action. So far, they have used nuclear weapons only for intimidation. For the most part, they keep their own boys out of war, letting others do their fighting for them.

Today a Soviet-supported revolutionary movement will use fighter pilots trained by the PLO and weapons supplied by Vietnam. Most of its military advisers are Cubans. And, once the existing government is overthrown, the communists maintain control with secret police trained by the East Germans.

The Soviets carefully undermine their adversaries by the use of infiltration, espionage and propaganda. They constantly cultivate "agents of influence" at every level of society to erode the support of the people for their national institutions.

During the Vietnam War, the communists conducted a public relations campaign designed to discourage our support for the people of South Vietnam. They recognized that the object of war is to break the enemy's will, and they used every means at their disposal to do so.

Their diplomats met regularly with our diplomats, convincing them that a negotiated settlement was possible, that the communists would settle for less than total victory. Repeatedly, they raised our hopes and then dashed them.

That psychological warfare continues today. Each year, the Soviets and their puppets send hundreds of performing arts groups, sports teams, scientists, diplomats, bureaucrats and many thousands of others to the Western nations.

On any given day the Soviet-block countries have over 3,000 government personnel in the U.S., including over 300 Soviets based at the U.N. It is estimated that as many as 40 percent may be engaged in espionage.

During the last 15 years, the Soviets bought or stole our most sophisticated computers, oil and gas drilling technology, and ball bearings for missiles. On credit guaranteed by the American taxpayer, U.S. firms built the world's largest truck factory in the Soviet Union; many of the trucks built there are used to carry soldiers to Afghanistan to crush the freedom fighters there.

As Lenin said, "When the time comes to hang the capitalists, they will gladly sell us the rope with which to do it."

Americans are sophisticated, all right, but that sophistication is limited. They know a lot about home computers but almost nothing about modern warfare as practiced by the Soviet Union.

Probably no nation on earth has risen to challenges as the United States has. We have faced war, depression and disease with unparalleled vigor and determination. But we as a nation simply do not understand the challenge that faces us now.

We are involved in a prolonged conflict with an adversary who is ready and willing to fight us on any battlefield, at any time, by any means. The question is: Will the American people realize that we are engaged in this war before we have lost it?

In our own hemisphere the Soviet pattern of takeover is well underway. Communist-supported terrorists now control Cuba, Nicaragua, Guyana, Grenda and Suriname with aid and/or comfort from left-leaning regimes in Mexico, Belize, Panama, Venezuela and Colombia.

The communists are working and fighting to topple pro-Western governments in El Savador, Guatemala, Honduras and Costa Rica.

Since 1962 the Soviet Union has shipped nearly 700,000 tons of arms to Cuba—131,000 tons in just the last two years.

Soviet economic assistance to Cuba totals $9-14 million a day.

There are at least 2,600 Soviet soldiers in Cuba, plus 8,000-10,000 Soviet military and civilian advisers.

At the present time the Soviets have in the Western Hemisphere at least two Foxtrot attack submarines and at least four bombers capable of destroying any city in

the continential United States. In Cuba alone, the Soviets have more than 650 tanks, 555 combat aircraft, and 50 torpedo and missile attack boats; 140 surface-to-air missiles were delivered just last December.

We will be defeated unless we act now to meet the Soviet threat. If we allow the Soviets to complete the conquest of Central America, the people of Texas, Arizona, New Mexico and California will be face-to-face with the Soviet military within 3-4 years.

In 1823, President James Monroe set forth a policy that became known as the Monroe Doctrine. Partly in response to Russian activity, Monroe pledged that any attempt by a European power to create or maintain a colony in the New World would be opposed by the U.S. as "dangerous to our peace and safety."

The United States would steadfastly oppose foreign interference in the affairs of the nations of the Western Hemisphere "for the purpose of oppressing them, or controlling in any other manner their destiny . . ."

It is time for the United States to recognize once again that keeping this hemisphere free of our enemies is vital to our national security. It is time to restate and update the Monroe Doctrine.

Therefore, I propose that, as long as the Soviet Union is involved in the affairs of any country in the Western Hemisphere, the United States will:

Cut off any financial aid, including credits and loan guarantees, that benefits directly or indirectly a Soviet-bloc country.

End U.S. participation in any international organization that lends money to the Soviet bloc.

Forbid the sale to the Soviet bloc of any item that could be used for military purposes.

Give material aid and encouragement to any group fighting a communist government (for example, Nicaragua, Angola, Mozambique, Afghanistan, or Ethiopia).

Immediately expel all citizens of Soviet-bloc nations except the ambassadors and their immediate staffs.

Require that the United Nations headquarters be located outside the U.S. by 1986.

Aggressively broadcast the truth into all communist countries (for example, telling the Cuban people about the large number of their sons who are fighting and dying as Russian surrogates in Africa).

Finally, it should be the policy of the United States to promote democracy, peace and freedom throughout the Western Hemisphere and to take all steps short of military action to ensure free elections for all the peoples of the Americas.

The steps I have outlined do not involve military action by the U.S. They are peaceful means of achieving the important result of protecting the men, women and children of this hemisphere from becoming Soviet slaves.

U.S. policy on Central America will be a major issue of the 1984 campaign and the American people have clearly demonstrated that they will not elect any Democrat who is perceived as "weak" on foreign policy. Those Democrats who have opposed the President's efforts in Central America are reversing the anti-Communist stance that was traditional in the Democratic party before McGovern. They have put themselves out on a very long limb and that sound you hear from the White House may be President Reagan sawing the limb off.

But I hope that no one gets the chance to make political hay out of the question: Who lost Central America? That is a human tragedy that is within our power to prevent.●

PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

● Mr. PERCY. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under the act in excess of $50 million, or in the case of major defense equipment as defined in the act, those in excess of $14 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sales shall be sent to the chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the RECORD in accordance with previous practice.

I wish to inform Members of the Senate that three such notifications were received on June 20, 1983.

Interested Senators may inquire as to the details of these preliminary notifications at the offices of the Committee on Foreign Relations, room SD 427.

The notifications follow:

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., June 20, 1983.

In reply refer to: I-20094/83ct.

Dr. HANS BINNENDIJK,
Professional Staff Member, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR DR. BINNENDIJK: By letter dated 18 February 1976, the Director, Defense Security Assistance Agency, indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to an East Asian recipient tentatively estimated to cost in excess of $50 million.

Sincerely,

PHILIP C. GAST,
Director.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., June 20, 1983.

In reply refer to: I-20093/83ct.

Dr. HANS BINNENDIJK,
Professional Staff Member, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR DR. BINNENDIJK: By letter dated 18 February 1976, the Director, Defense Security Assistance Agency, indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to an East Asian recipient tentatively estimated to cost in excess of $50 million.

Sincerely,

PHILIP C. GAST,
Director.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., June 20, 1983.

In reply refer to: I-20095/83ct.

Dr. HANS BINNENDIJK,
Professional Staff Member, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR DR. BINNENDIJK: By letter dated 18 February 1976, the Director, Defense Security Assistance Agency, indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to an East Asian recipient tentatively estimated to cost in excess of $50 million.

Sincerely,

PHILIP C. GAST,
Director.

PROPOSED ARMS SALES

Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive prior notification of proposed arms sales under that act in excess of $50 million or, in the case of major defense equipment as defined in the act, those in excess of $14 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulated that, in the Senate, the notification of proposed sales shall be sent to the chairman of the Foreign Relations Committee.

In keeping with the committee's intention to see that such information is available to the full Senate, I ask to have printed in the RECORD at this point the notifications which have been received. The classified annex referred to in one of the covering letters is available to Senators in the office of the Foreign Relations Committee, room 4229 Dirksen Building.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., June 22, 1983.

In reply refer to: I-01927/83ct.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 83-39 and under separate cover the classified annex thereto. This Transmittal concerns the Department of the Navy's proposed Letter of Offer to Egypt for defense articles and services estimated to cost $20 million. Shortly after this letter is delivered to your office, we plan to notify the news media of the unclassified portion of this Transmittal.

Sincerely,

WALTER B. LIGON,
Acting Director.

[TRANSMITTAL No. 83-39]

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act

(i) Prospective purchaser: Egypt

(ii) Total estimated value:

	Millions
Major defense equipment [1]	$18
Other	2
Total	20

[1] As defined in Section 47(6) of the Arms Export Control Act.

(iii) Description of articles or services offered: One hundred fifty AIM-9L Sidewinder air-to-air missiles with repair parts and support equipment.

(iv) Military department: Navy (AAJ).

(v) Sales commission, fee, etc., paid, offered, or agreed to be paid: None.

(vi) Sensitivity of technology contained in the defense articles or defense services proposed to be sold: See annex under separate cover.

(vii) Section 28 report: Included in report for quarter ending March 31, 1983.

(viii) Date report delivered to Congress: June 22, 1983.

POLICY JUSTIFICATION

EGYPT—AIM-9L SIDEWINDER MISSILES

The Government of Egypt has requested the purchase of 150 AIM-9L Sidewinder air-to-air missiles with repair parts and support equipment at an estimated cost of $20 million.

This proposed sale will contribute significantly to U.S. foreign policy and national security objectives by helping to increase the security of a friendly country of vital interest to the United States.

The Government of Egypt will use the AIM-9L Sidewinder air-to-air missiles on Egyptian Air Force (EAF) F-16 aircraft which have already been procured. The missile has the capability of a head-on attack against high speed hostile aircraft, enhancing the ability of the EAF to deter or destroy attacking aircraft before they can reach vital areas of the country. EAF personnel will be able to absorb this missile into the inventory inasmuch as they already operate and maintain Sidewinder missiles.

The sale of this equipment will not affect the basic military balance in the region.

The prime contractor will be the Raytheon Company of Lowell, Massachusetts.

The implementation of this sale will not require the assignment of any additional U.S. Government or contractor personnel to Egypt.

There will be no adverse impact on U.S. defense readiness as a result of this sale.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., June 27, 1983.

In reply refer to: I-01994/83ct.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 83-41 and under separate cover the classified annex thereto. This Transmittal concerns the Department of the Army's proposed Letter of Offer to Saudi Arabia for defense articles and services estimated to cost $26 million. Shortly after this letter is delivered to your office, we plan to notify the news media of the unclassified portion of this Transmittal.

Sincerely,

PHILIP C. GAST,
Director.

[TRANSMITTAL No. 83-41]

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act

(i) Prospective purchaser: Saudi Arabia.

(ii) Total estimated value:

	Millions
Major defense equipment [1]	$22
Other	4
Total	26

[1] As defined in Section 47(6) of the Arms Export Control Act.

(iii) Description of articles or Services Offered: A quantity of 2,538 Improved-TOW anti-armor missiles.

(iv) Military department: Army (VFE).

(v) Sales commission, fee, etc., paid, offered, or agreed to be paid: None.

(vi) Sensitivity of technology contained in the defense articles or defense services proposed to be sold: See annex under separate cover.

(vii) Section 28 report: Case not included in section 28 report.

(viii) Date report delivered to Congress: June 27, 1983.

POLICY JUSTIFICATION

SAUDI ARABIA—IMPROVED-TOW MISSILES

The Government of Saudi Arabia has requested the purchase of 2,538 Improved-TOW (I-TOW) anti-armor missiles at an estimated cost of $26 million.

This sale is consistent with the stated U.S. policy of assisting other nations to provide for their own defense by allowing the transfer of reasonable amounts of defense articles and services. It will demonstrate the continuing willingness of the U.S. to support Saudi Arabia which is an important force for moderation in the region.

The I-TOW missiles will be used to maintain war reserve stock levels and will support the modernization of the Saudi Arabian Land Forces (SALF) by enhancing its anti-armor capability. The SALF will have no difficulty in absorbing these items.

The sale of this equipment and support will not affect the basic military balance in the region.

The prime contractor will be the Hughes Aircraft Company of Canoga Park, California.

Implementation of this sale will not require the assignment of any additional U.S. Government or contractor personnel to Saudi Arabia.

There will be no adverse impact on U.S. defense readiness as a result of this sale.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., June 27, 1983.

In reply refer to: I-02151/83ct.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 83-47, concerning the Department of the Army's proposed Letter of Offer to Lebanon for defense articles and services estimated to cost $57 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

PHILIP C. GAST,
Director.

[TRANSMITTAL No. 83-47]

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act

(i) Prospective purchaser: Lebanon.

(ii) Total estimated value:

	Millions
Major Defense Equipment [1]	$46
Other	11
Total	57

[1] As defined in Section 47(6) of the Arms Export Control Act.

(iii) Description of articles or services offered: A quantity of 220 tracked vehicles (102 M113A2 armored personnel carriers, 25 M577A2 command post carriers, and 93 M125A2 mortar carriers) with communications equipment, M2 .50 caliber machine guns, spares, and ancillary support equipment.

(iv) Military department: Army (UTE and UTK).

(v) Sales commission, fee, etc., paid, offered, or agreed to be paid: None.

(vi) Sensitivity of technology contained in the defense articles or defense services proposed to be sold: None.

(vii) Section 28 report: Case not included in section 28 report.

(viii) Date report delivered to Congress: June 27, 1983.

POLICY JUSTIFICATION

LEBANON-TRACKED VEHICLES

The Government of Lebanon has requested the purchase of 220 tracked vehicles (102 M113A2 armored personnel carriers, 25 M577A2 command post carriers, and 93 M125A2 mortar carriers) with communications equipment, M2 .50 caliber machine guns, spares, and ancillary support equipment at an estimated cost of $57 million.

This sale will contribute to the foreign policy objectives of the United States by enabling Lebanon to increase its capability to provide for its own security and defense. As the Lebanese Government reasserts itself in the wake of recent hostilities, well equipped and trained armed forces are essential to assure the nation's sovereignty.

These M113 derivative tracked vehicles will be used to upgrade the brigades of the Lebanese Army. The sale of this equipment and support will not affect the basic military balance in the region.

The prime contractor will be the FMC of San Jose, California.

Implementation of this sale will require the assignment of four additional U.S. Government personnel to Lebanon for 56 days.

There will be no adverse impact on U.S. defense readiness as a result of this sale.●

UNGLAMOROUS GUERRILLAS

● Mr. ARMSTRONG. Mr. President, there is an inexplicable—and ugly—tendency among some elements of the news media to lionize guerrillas fighting for totalitarianism, for expansion of the Communist empire, but to ignore or deprecate guerrillas who fight for freedom against Communist imperialism. The New Republic magazine took note of this phenomenon in

an editorial, entitled "Unglamorous Guerrillas," in its edition of June 13, 1983. Meanwhile, Newsweek magazine, in a report published in its issue of June 6, 1983 entitled "The Betrayal of a Revolution," provides additional information about why so many former Sandinistas have taken up arms to turn out the regime they helped bring to power. I ask that these articles be printed at this point in the RECORD, and I urge each of my colleagues to read them both carefully.

The articles follow:

UNGLAMOROUS GUERRILLAS

There are few intellectual and political spectacles more satisfying to see than the transformation of a piety into a perplexity. Sloganeers, after all, deserve to squirm. Some of them may be squirming soon, for history is playing a cruel and confounding joke upon one of the pieties of American political culture of the past two decades, which is the moral glamor of the guerrilla. The guerrilla seems to be slowly changing sides. He is still struggling with imperialism, to be sure, but more and more the imperialism is not American. It is Russian. The figure that a lot of the left most loved is fighting for the faith that it most hated; the guerrilla, in brief, is an anti-Communist.

Not everywhere, certainly. Soviet-sponsored guerrilla movements, which disguise national repressions as national revolutions, have not passed from the earth; the Sandinistas and the P.L.O. are the most obvious examples. But a different pattern of guerrilla activity has emerged. Many of the most stirring guerrilla struggles now take place against Soviet power, or Soviet proxy power. In Afghanistan, Cambodia, Nicaragua, and Angola the art of revolutionary warfare has been turned against those who rule in the name of revolution. Of course there is no single type of anti-Communist guerrilla; the dreams and the objectives of all these forces are not the same. In Afghanistan the fighters in the mountains seek sovereignty. In Nicaragua the fighters in the forests seek democracy. And the West must not deceive itself that every enemy of communism is a friend of Western institutions. Still, the West has a new kind of friend, and the East a new kind of enemy. The geopolitical consequence of guerrilla movements are no longer horrible for the West to contemplate. They are horrible for the other side.

The debate about the proper American attitude toward this phenomenon rages. "Isolationists" confront "interventionists." There are practical reasons for carefully calibrating the nature of American aid to these various guerrilla forces; a big stick in Central America may damage us, as it may not in Afghanistan. But in the matter of morality we should be clear. All of these guerrilla forces—Son Sann's, Edèn Pastora's, Jonas Savimbi's, and the Pathan tribesmen's—are fighting the good fight. They are fighting colonialism or totalitarianism or a mixture of both. These are greater abominations than covert operations. While the political calculus of the American people may be complicated, then, its moral calculus may be simple. In the opinion of this country, these men and women, resisting Russian domination almost without arms and almost without sleep, should be high.

Perhaps there was no image more emblematic of the political exfoliation of the 1960s than the acrylic poster of Ché Guevara, which was hung first in dorm rooms and later in storefronts. Will there be a poster of Edèn Pastora? It is not likely. Part of the reason is that times have changed, and posters are no longer about political subjects. But this is not the whole reason. The lionization of the anti-Communist guerrilla goes against a cultural grain. For a large segment of the progressive population of this country, a pro-American insurrectionary movement is an oxymoron.

The history of the political prejudices of the children of the American middle class will be of little interest in the Central American jungles or the Central Asian hills. There help is needed, and deserved. If it comes, and when it comes, and how it comes, and why it comes, remains to be seen.

THE BETRAYAL OF A REVOLUTION—FOUR STORIES OF HOPE, TRIUMPH AND DISENCHANTMENT UNDER THE SANDINISTA REGIME

(By Beth Nissen)

July 19, 1979, was a "day of dreams" for Juan Francisco López García. The 15-year-old Sandinista rebel could not believe the news—that the dictator Anastasio Somoza had fled, that the invincible National Guard was surrendering to farm boys like him. the bitter war was over, after two years and 40,000 deaths. "Now we'll have peace and plenty and freedom, just like the revolution promised," he told his mother. "Nicaragua belongs to the people!"

But almost four years later, the dreams of that giddy day have not come battles with stubborn remnants of the old guard and U.S.-backed counterrevolutionaries. There is no plenty: the country is short of jobs, money and food. Freedom of press, speech and assembly is sadly restricted. In the U.S. Congress, in Europe and throughout Nicaragua, there are serious questions about whether the "people's revolution"—under the hardening Marxist leadership of the Sandinistas—still represents the people of Nicaragua. "Ask the people themselves—they are the only experts on their own revolution," Sandinista coordinator Daniel Ortega challenged me during the first days of the revolution. "Nicaraguans will tell you the truth."

UNLIKELY ALLIES

I decided to follow his advice. For the past four years, as assignments took me to Nicaragua, I have been keeping in touch with different Nicaraguans: Jaime Montealegre, a wealthy businessman; Alberto Flores Murillo, an illiterate servant; Juan Francisco López García, the son of an impoverished family in the town of Boaco, and Ximena Barreto, a clean-cut daughter of Managua's bourgeoisie. They were unlikely allies at the start of the revolution, united then by their common hatred of the repressive 46-year Somoza dynasty. Now they are divided by politics and by borders. One has become a strident Sandinista; another is in exile. One has profited from the revolution; another is leaving it. Collectively theirs is the story of the unraveling of one of the most broad-based, genuinely popular insurrections of our time.

For Juan Francisco López García, the summer of '79 was an exciting time. All remnants of the old repressive authority were gone. Juan Francisco strutted through Boaco, brandishing a captured M-16 and searching with exaggerated bravery for any last holdouts of the hated National Guard.

Juan Francisco had lived in terror of the Guardia all his life. He had heard terrifying stories about Somoza's soldiers—how they would spread animal fat on the gentials of suspected Sandinista sympathizers and then set hungry dogs on them, how they would scalp men alive with razors. Now that 7,500 members of the Guardia were the prisoners, Juan Francisco thought they should be tortured and killed, but the Sandinistas said no. "Why did we make this revolution if we are going to do the same things they used to do?" declared the new Sandinista minister of the interior, Tomás Borge. Juan Francisco saw the logic and the humanity in that. He volunteered to help organize Sandinista neighborhood committees; he joined the new militia. "This revolution is like a wonderful fever," he said then.

Ximena Barreto was also entranced by the revolution. A 26-year-old advertising executive, she had been a passive spectator during the fighting. But for her, July 19 was "like a religious vision—everybody was loving everybody else." Pregnant with her first child, she said that the revolution was also "something beautiful growing inside me." She quit her job to work at the new Ministry of Culture; she wanted her baby born "to a mother who was working for the people." Ximena's husband, Carlos, was not so enthusiastic. A lawyer and small landowner, he and Ximena argued about the new government's real intentions.

Alberto Flores Murillo, a 54-year-old house servant in the northern countryside near Estelí, was baffled by the new postrevolutionary world. "Suddenly, nothing is the way it used to be," he told his eldest son, Roberto. For 22 years Alberto had worked for Doroteo Rodríguez Castillo, the political boss of Estelí and a close friend of Somoza's Don Doroteo gave expensive parties. "They would kill a whole cow, just for the dinners of a few," Alberto remembers.

CAMPESINOS

Don Doroteo and his family fled to Miami in the last days of the war. The Sandinistas expropriated his land—along with 2.5 million other rich acres that had once belonged to the Somoza family and its associates; they turned it over to the campesinos. Alberto was now part owner, with 19 other workers, of his master's old farm. That new situation raised a disturbing question in Alberto's mind. If Don Doroteo was gone, who would tell him what to do?

Jaime Montealegre was also worried about the changes the revolution might bring. A well-educated financier from a prominent Nicaraguan family, Montealegre, 35, had joined many other members of the private sector in opposing the corrupt Somoza regime. The Sandinista revolutionaries had promised to hold Nicaragua's first free elections in a hundred years. Jaime knew that some of the Sandinistas were avowed Marxist-Leninists; still, the revolution's five-member junta was an eclectic group that even included a businessman, Alfonso Robelo. Robelo had personally assured Jaime that the revolution needed a strong private sector and the talents of businessmen to rebuild the bankrupt and broken country.

Jaime and other business leaders soon found that the Sandinistas' actions in the first months of the revolution "spoke in a louder voice than the comandantes." The Government of National Reconstruction nationalized private banks, as well as the fishing, forestry and mining industries. And national elections were postponed indefinitely. The private sector, said Jaime, "was trying desperately to discuss with the Sandinistas

the 'deviations' we were observing. But their doors were closing on us." By the end of 1979, Jaime already felt shut out of the revolution.

THE CHILLS OF 1980

What happened the following spring was called, simply, la crisis. Alfonso Robelo, the key moderate in the junta, abruptly resigned to protest the Sandinistas' decision to enlarge the newly formed Council of State and give themselves control of the majority. (Violeta Chamorro, the only other moderate on the junta, resigned for health reasons.) Jaime Montealegre agreed with Robelo's angry charges that there was an "excessive" communist influence in the revolutionary regime.

But to Jaime's surprise, the Sandinistas then took steps that temporarily quelled the fears of the private sector. The government named two other respected moderates to the junta, announced an end to arbitrary confiscation of land and companies and promised to give a date for municipal elections during the first anniversary celebrations on July 19, 1980. As Jaime said, the weeks following Robelo's resignation were "when I had the most hope for the revolution." Jaime agreed to accept the vice presidency of the Council of State. "The council had no real power, but that didn't matter," he said. "There were going to be elections soon."

The first anniversary of the revolution was a momentous day for Alberto Flores. He had ridden a crowded bus for four hours from Estelí to the huge, dusty Plaza of July 19 on the outskirts of Managua so that he could celebrate and "see Fidel and the heroes of the revolution." In the vast sea of people and flags, Alberto strained to get glimpses of the elaborate parade of high-stepping soldiers, armored trucks and polished jeeps; he heard Castro praise the revolution as "an example to the rest of Latin America."

The revolution seemed a very fine thing to Alberto. It had given him land and work he could finally be proud of—and young teachers, some Nicaraguan, some Cuban, had come to his house and taught him to read. "Imagine that they would bother with these old eyes!" Alberto said. Every morning, he painstakingly read the headlines about the imperialists in Barricada, the government newspaper. Alberto heard a lot about imperialists that day in the plaza as well. It made him feel a chill, even in the oppressive July heat, to hear Comandante Tomás Borge speak about the threats to his revolution from the United States, and to hear about a candidate for the American presidency named Ronald Reagan. "He wants to weed the revolution from the earth," Alberto said.

Jaime Montealegre had other things on his mind. He was sitting on the reviewing stand directly behind Fidel Castro. He was bothered by all the hammer-and-sickle flags. With sinking hopes, Jaime listened to Borge's speech for the promised announcement about elections. There was none. Jaime was now convinced that the Sandinistas were interested only in complete control of the country. His friend Jorge Salazar, the president of the Nicaraguan Coffee Growers' Association, told Jaime not to worry. The revolution "would be rescued" from the Sandinistas, Jorge said cryptically; Jaime should wait for the news.

The news came on Nov. 17, 1980: Jorge was killed near Managua by government security police. The Sandinistas claimed he had been at the center of a counterrevolutionary plot; they said they had no choice but to kill him. Jaime Montealegre was stunned. Why had his friend not been put on trial? Even the Guardia had been given that much. It would be years before Jaime knew the truth—that Tomás Borge and Cuban advisers had attempted to entrap Robelo and other leaders of the private sector in a fake coup plot against the Sandinista leadership, and that Salazar alone had been taken in.

THE EXCESSES OF 1981

By the start of the following year, Ximena Barreto had become a vigorous defender of the revolution, even of what she called its "necessary" excesses. "One has a right to fight back when attacked," she argued—and the revolution was certainly beset. The second pair of moderates on the junta had resigned. The newly inaugurated Reagan administration had stopped aid to Nicaragua and was releasing statements "full of lies," Ximena said, about Nicaraguan support of the guerrillas in El Salvador. Ximena herself was willing to fight. She had been among the first to volunteer for the militia.

Her husband, Carlos, was losing patience with what he described as the "empty" word and "inconsistent" actions of the Sandinistas. If production was so important to the revolution, he asked Ximena, why did the government hinder it with so much arbitrary bureaucracy? The comandantes were asking the people to make sacrifices, but Carlos didn't see the comandantes sacrificing much; they had fine houses they had taken over from the Somocistas and new Mercedeses. Carlos hated the Sandinistas' propaganda—and was angered to hear it echoed by his wife. "How can you rant about the bourgeoisie?" he asked her during one argument. "We have a nice house and car; we own a farm—we *are* the bourgeoisie!" Carlos was especially worried about his baby son. "I don't want him growing up brainwashed," Carlos grumbled.

In the autumn of 1981, it was clear to Jaime Montealegre that "the worst fears about the revolution were its truths." The Sandinistas, in the name of "popular power," had begun confiscating any land they deemed "idle." They had sentenced three business leaders and four trade unionists to seven months in prison for criticizing the government. Minister of Defense Humberto Ortega announced that the revolution's "doctrine is Marxist-Leninist"—and that those who opposed the Sandinistas "will be hanging from the lampposts."

Scores of Jaime's friends had left Nicaragua. On Oct. 20, Jaime himself left for a meeting in Caracas. There, he was warned that the Sandinistas had ordered his arrest in Nicaragua. "I have accomplished all I can in the revolution, and I have had the fortune to come out in one piece," he said. Jaime went to Costa Rica to start a new life. He has never been back to Nicaragua.

THE WORRIES OF 1982

As last year began, Juan Francisco López García, the young farm boy from Boaco, was sorely worried about the future. He was living in Managua, attending university on a Sandinista scholarship. He had just married Josefa Migdalia Delgado, and they wanted to start a family, but he was afraid he might have to go to war. If there was a war, Juan Francisco thought, it would be the *Yanquis'* fault; everyone knew how the Americans were letting the contras train in Florida and helping them strike inside Nicaragua. Even so, he did not want to fight. "I hate the idea that the beast of the Guardia might come back," he said. "But I hate the idea of war more."

Ximena Barreto was also worried about American intervention and a war with Honduras. What did Washington want? she demanded. The Sandinistas had released the private-sector leaders from jail after they had served only half their terms; they had announced new economic incentives that would help the private sector. As Ximena saw it, the revolution was being damaged "by men without revolutionary minds"—men like Edén Pastora, the revolution's popular Commander Zero, who had defected from the Sandinistas and called his former colleagues "traitors and assassins." Ximena felt betrayed; she had once admired Pastora.

By early 1983, Ximena's husband, Carlos, was threatening to go. Carlos told her that if the Sandinistas took over his farm he would leave for Costa Rica, or "wherever a decent man could work." Ximena said she would not leave the revolution when it was facing growing threats from the imperialists. The couple's "pluralistic" marriage was under heavy strain. Their son Gerónimo, now an impressionable three-year-old had heard so many disputes that he called his mother *compa*—short for the revolution's all-purpose address of *compañero*—and called his father "the reactionary."

NO MONEY

Juan Francisco was also making plans to leave Nicaragua. He lost his Sandinista scholarship to the university then lost his job as a bus inspector; with roughly half the work force, he was now unemployed. He and his wife, Josefa, and their newborn baby daughter were living on Josefa's meager salary as a policewoman. Only 19 years old, Juan Francisco had the sunken cheeks and rickety walk of a person who had lived too long on an insufficient diet of rice and beans. "I understand that the revolution has to spend money on defense, on fighting the imperialists," Juan Francisco told a visitor recently. "But the revolution promised progress—and all I have for three years' work is a wood shack, no money for rice and a hungry baby."

In contrast, Alberto Flores had done well since the revolution. His cooperative was flourishing. Still, Alberto admitted there were "rocks in the path." Four of his eight children were in the militia; his son Roberto had served two tense months at the border. Alberto was also torn by the enmity between the revolution and the church. He was a good Roman Catholic, and he was deeply disturbed by the way the Sandinistas had shouted down the pope when he came to Managua. "If I ever break with the revolution, it will be because someone made me choose between my revolution and my church," he said. "I could never choose against God."

The revolution has already forced countless Nicaraguans to make difficult choices. Jaime Montealegre decided to leave the country he still loves out of fear for his safety. Both Juan Francisco and Ximena Barreto are confronted with a choice between family and nation: Juan Fransisco would leave Nicaragua to make a better life for his wife and child, Ximena is willing to see her marriage break up rather than abandon her commitment to the Sandinistas. None has made the more dramatic choice some Nicaraguans have—of going into the jungles to fight another war for another change of government. Yet whatever

positions Nicaraguans take, uncertainty, defensiveness and disillusionment now pervade the country—a country of increasingly divided loyalties. "There is no pluralism, there is no democracy, there isn't even much of a revolution," Ximena Barreto's husband says bitterly. "There are only Sandinistas in place of Somoza." Just so, the revolution's bright promise has faded into a sad old story.●

ERRATA AND CORRECTIONS IN CONFERENCE REPORT ON HOUSE CONCURRENT RESOLUTION 91

● Mr. DOMENICI. Mr. President, I submit for printing in the CONGRESSIONAL RECORD the following errata and corrections in the conference report on House Concurrent Resolution 91, the first concurrent resolution on the budget for fiscal year 1984. These changes are to reflect printing errors, and represent what was agreed to in each House of Congress when the budget was approved on June 23, 1983.

Copies of the errata and corrections are available from the House and Senate Budget Committees.

The material is as follows:

ERRATA AND CORRECTIONS [1]

(Conference Report to accompany H. Con. Res. 91, the First Concurrent Resolution on the Budget for fiscal year 1984)

S. REPT. 98-155, JUNE 20, 1983

H. REPT. 98-248, JUNE 21, 1983

Page 5.—In section (6)(A), the word "sections" on the second line should be "section".

Page 6.—In the section on National Defense, for each of fiscal years 1984 and 1985 add "(E) New secondary loan guarantee commitments, $0.".

Page 13.—In section (11)(i), the heading should read "Health (550), including amounts reserved pursuant to section 2:".

Page 20.—In section (20) Allowances, there should be a period at the end of line (E) in fiscal year 1983 and fiscal year 1984.

Page 25.—In Miscellaneous Provisions, Sec. 4, on the sixth and twelfth lines after the words "Congressional Budget Act" add ", made pursuant to section 302(a) of such Act,".

Page 25.—In Miscellaneous Provisions, Sec. 5(b) third line, "jurisdication" should be "jurisdiction".

Page 26.—In Miscellaneous Provisions, Sec. 6: In subsection (1) first line, "betweeen" should be "between". In subsection (2), the period at the end of the second line should be a comma. In the second line of the full paragraph after subsection (6), the word "committee" should be capitalized.

Page 27.—In the table, fiscal year 1983 outlays ("O") for function 350: Agriculture should be "24,450".

Page 31.—In the table in the Economic Assumptions section:

The first line should be "Gross national product:".

The fifth line from the bottom should be "Three-month Treasury bill rate (percent)".

Page 32.—In the table, the Revenue change for Fiscal year 1986 should be "+46.0".

Page 33.—In the section on Function 570: Medical Insurance and Function 650: Social Security, in the third line from the bottom "surviviors" should be "survivors".

Page 33.—In the section heading "Function 920. Allowances", the period should be a colon.

Page 33.—In the table:

The correct amount for Senate-passed Revenues is "603,325" and the correct amount for Conference substitute Revenues is "604,300".

For function 270—Energy, House-passed Budget authority should be "4,050".

Page 34.—In the table, for function 920—Allowances, Second budget resolution Outlays should be "−2,816".

Page 35.—In the table, for function 300—Natural resources and environment, House-passed Budget authority should be "11,550".

Page 36.—In the table at the top of the page, the title of the last function should be "950—Undistributed offsetting receipts:".

Page 44.—In the table, for function 950—Undistributed offsetting receipts, House-passed Outlays should be "−23,550".

Page 45.—In both tables, under "Total FY 1984-86", the heading above the left-hand column should be "BA".

Page 45.—In the table showing Conference Substitute Reconciliation Instructions for House Committees:

The sixth line should be "Small Business".

On the Total spending reductions line, FY 1984 budget authority ("BA") should be "−1,986".

Page 46.—In the Deferred Enrollment section:

The last word in the third line of the second paragraph should be "the".

The last word in the third line of the third paragraph should be "procedures".

Page 47.—In the section on Monetary Policy, in subsection (4) of the conference substitute, the period at the end of the second line should be a comma.

Pages 52 and 53.—The heading on the table that begins on page 52 and ends on page 53 should read as follows: "Fiscal Year 1984—Credit Budget Aggregates and Functional Categories Excluding Credit Budget Impact of Amounts Reserved Pursuant to Section 2".

Page 53.—In the table that begins on page 53, the title of the third functional category should be preceded by "300—".

Page 57.—In the table, for function 500—Education, training, employment, and social services, House-passed New primary loan guarantee commitments should be "6,650" and Senate-passed New primary loan guarantee commitments should be "6,600".●

[1] Includes corrections to reflect the resolution as agreed to by the House and Senate.

S. 1400, THE MOTOR VEHICLE THEFT LAW ENFORCEMENT ACT

● Mr. D'AMATO. Mr. President, it is with great pleasure today that I add my name as a cosponsor of S. 1400, the Motor Vehicle Theft Law Enforcement Act. This bill adds new and needed strength to our battle against the pressing national problem of motor vehicle theft. I commend my distinguished colleague, Senator PERCY, for his leadership in developing this comprehensive initiative.

Motor vehicle theft represents a major crime problem in the United States today. Every 32 seconds a car is stolen in this country. That means that there are over 1 million auto thefts annually. The average value of each car stolen exceeds $3,000. Unfortunately, while auto theft has become a well-organized and profitable criminal activity, our laws combating it have not changed since the days when car theft was the province of amateur "joy riders." Ten years ago, 80 percent of all stolen vehicles were recovered. Today, that percentage is down to 52 percent. In some communities, of course, the recovery rate is even lower.

In my own State of New York, approximately 140,000 motor vehicles are reported stolen annually. The value of the vehicles stolen in New York approaches $500 million every year.

Even those who never have their cars stolen, however, are the victims of motor vehicle theft. They pay for these crimes in the form of inflated insurance premiums. For example, the average annual insurance premium for a driver in New York City is approximately $300 above the national average. Although there are no precise figures indicating how much of that amount is due to auto theft, it is a fact that New York City drivers pay far more in car insurance because 104,000 instances of auto theft took place in New York City last year alone. In the New York City metropolitan area, it is estimated that 80 percent of comprehensive automobile premiums charged are attributable to theft losses. Although there are fewer car thefts in the rest of the State, 30 percent of comprehensive premiums are attributable to car thefts in those areas.

S. 1400 addresses the problem of automobile theft in two ways. First, it improves our ability to trace stolen vehicles and vehicle parts by requiring the Secretary of Transportation to issue new identification regulations. These new rules will require motor vehicle manufacturers to place a vehicle identification number on major vehicle components, provided that the cost of this identification program not exceed $10 per vehicle and that the entire program be found cost effective.

Second, S. 1400 improves our ability to prosecute motor vehicle theft cases. Under current law, once a component or part has been separated from a stolen vehicle, it is almost impossible to trace it back to that vehicle. This bill remedies this deficiency in our law. It also increases Federal criminal penalties for trafficking in stolen motor vehicles and vehicle parts. It provides for criminal penalties of up to $25,000 in fines or 10 years' imprisonment, or both.

Mr. President, 3,000 motor vehicles worth close to $10 million are stolen in this country every day. S. 1004 is a major effort to halt this highly profitable criminal activity. I urge all my

colleagues to support this important legislation.●

UNIFORM SINGLE FINANCIAL AUDIT ACT OF 1983

● Mr. DURENBERGER. Mr. President, on Tuesday, June 21, 1983, my good friend and colleague from Illinois, Senator DIXON, addressed the National Association of Governmental Accountants at their annual conference in Chicago.

The topic of Senator DIXON's speech that Tuesday morning was the Uniform Single Financial Audit Act of 1983, of which I am the author and which Senator DIXON is cosponsoring. Mr. President, this speech explains very effectively the purpose and need for this legislation, and how this approach, the single audit approach, is by far superior to the fragmented system which we have today.

Mr. President, I ask that the text of that speech be printed in the RECORD.

The text follows:

NATIONAL ASSOCIATION OF GOVERNMENTAL ACCOUNTANTS, JUNE 21, 1983

Good morning. I appreciate the opportunity to speak to you today. I want to thank your officers and my good friend, Bob Cronson, for inviting me. Bob and I have worked together in Government over many years. He is an outstanding public servant and leader who has served with distinction as auditor general in Illinois.

This week, I am joining with my good friend and colleague, Senator DAVE DURENBERGER of Minnesota, who ably serves as chairman of the Subcommittee on Intergovernmental Relations, in introducing legislation establishing uniform single financial audit requirements for State and local governments and nonprofit organizations receiving Federal funds. The bill is called the Uniform Single Financial Audit Act of 1983.

All of you are aware of the single audit concept, because it has been floating around for some time. The Senate, as a matter of fact, has previously passed similar legislation. The House, for a variety of reasons, has balked in the past at this idea. Chances on the House side this session, however, seem to be much more favorable than at any time before.

So perhaps the long quest to inaugurate the single audit is finally on the verge of fruition. Let us hope so. Anything you can do to make your personal views known to your Senators, and later, your Congressmen, will be very helpful.

Just yesterday, I received from Doug Norton, president of the National State Auditors Association, a copy of that organization's resolution endorsing our bill.

One can readily see the need for single audit legislation by simply examining the audit requirements currently contained in existing law or similar provisions proposed in legislation pending in Congress. These audit requirements are diverse and confusing.

Because you work with them all of the time, you are well aware that the Federal Government's auditing standards are specified in the General Accounting Office's so-called yellow book, known more formally as Standards for Audit of Governmental Organizations, Programs, Activities and Functions.

Despite the existence of these guidelines and requirements, however, the General Accounting Office still reminds us that most legislation introduced in Congress requiring audits contains incomplete and insufficient audit language. The problem is compounded if the faulty language eventually becomes law.

Our legislation is designed to solve this and other problems. We steer away from the requirements and compliance regulations implemented by the Office of Management and Budget. OMB's position is that every grant, no matter what size or dollar amount, must be audited and comply with all Federal requirements and regulations. Such a complicated approach is very burdensome and costly to State and local governments—as you all know, since you deal with these situations almost daily.

Federal grants to State and local governments have, of course, been traditionally audited on a grant-by-grant basis. Numerous studies conducted over the past several years, however, have sharply criticized this approach to auditing as uncoordinated, inefficient, and ineffective in insuring accountability in the use of Federal funds. As long ago as 1977, the joint financial management improvement program set up an audit improvement project. This undertaking involved the General Accounting Office, the Office of Management and Budget, the Treasury Department, and the Office of Personnel Management.

This agency's report ended on a critical note of our audit procedures involving Federal funds. The report concludes by saying, "Our study corroborates the findings of previous studies by other organizations that considerable duplication and overlap of effort exist in auditing federally assisted programs and that there are substantial gaps in audit coverage. Also, there is limited coordination of audits between Federal auditors or with State and local auditors and public accountants hired by recipients."

That language pretty clearly states the case for our legislation. The report went on, of course, to examine in detail what the problems are. In reviewing the causes of audit gaps, duplication, and overlap, for example, the report noted that under the grant-by-grant approach, there is limited coordination even among Federal auditors. This lack of communication occurs because each Federal agency typically audits its own grants with little or no concern for the grant funds of other Federal agencies, thus requiring separate audits by each.

Such an uncoordinated approach results in rather substantial gaps in compliance audit coverage or the need for additional audits by Federal auditors. The overall picture confronting us on the audit scene is one of a lack of coordination, a lack of communication, and a lack of effectiveness.

Our bill is aimed at overcoming these problems by introducing the single audit concept. Senator DURENBERGER's subcommittee will be holding hearings on this proposal on June 29. He has asked me to say to you that he will be more than happy to receive any written comments you may want to submit on this legislation. He tells me the subcommittee record will probably be held open for 30 to 60 days. I have brought a copy of the bill with me today, and I am sure my good friend, Bob Cronson, will see to it that copies are made available to those of you who are interested.

This legislation will, we hope, lessen audit confusion on Federal, State, and local levels, while simultaneously saving governmental agencies money at a time when many governmental bodies are cutting back. All of us must, however, stick to our determination to perform important essential services for our citizens. Auditing ranks right up there on the list, to assure that our tax dollars are spent honestly, wisely, and well.●

EXPORT-IMPORT BANK

● Mr. BOSCHWITZ. Mr. President, today I am pleased to add a number of my distinguished colleagues as cosponsors of amendment No. 1299, which will require the Export-Import Bank to do more business with small business. When I introduced the amendment on May 25, Senator D'AMATO and Senator PRESSLER were inadvertently omitted as original cosponsors. I have asked unanimous consent that they be added as cosponsors and that the RECORD be corrected to show them as original cosponsors. Since that time, the amendment has gained momentum and bipartisan support. Senators GLENN, HATCH, GRASSLEY, TSONGAS, EAST, COHEN, HUDDLESTON, HELMS, HEFLIN, KASTEN, LUGAR, DURENBERGER, and RANDOLPH are welcome additions as cosponsors of the amendment.

I am especially pleased that Senator GLENN has cospsonsored my amendment because he has introduced an amendment that seeks the same goal. I believe that now is the time for us to join forces and demonstrate early on that there is strong, bipartisan support for giving small business better access to Exim's programs.

I just want to say one more thing about Senator GLENN's amendment. It is a good amendment that contains some provisions that will strengthen small business participation in Exim's programs. I am pleased to join forces with him and cosponsor his amendment. I will continue to work with Senator GLENN, so that when my amendment is considered on the Senate floor, his concerns will be addressed satisfactorily.

I thank the Senators who have cosponsored my amendment and urge my other colleagues to join us in our efforts.●

NATIONAL FITNESS ACADEMY

● Mr. LUGAR. Mr. President, I bring to the attention of my colleagues an important event for the health of this Nation that occurred in my hometown of Indianapolis on June 18.

George Allen, the chairman of the President's Council on Physical Fitness and Sports, announced that Indianapolis will be the site of the National Fitness Academy.

Coach Allen said at a news conference:

We're doing something we should have done 40 years ago. This is a great undertaking.

While many other countries have maintained national fitness academies, and sports and physical fitness has always been as American as apple pie, we had never established an educational institution to train fitness leaders to sponsor research of fitness programs and equipment, and to offer reliable information on exercise, nutrition, and health. This is the mission of the National Fitness Academy.

The National Fitness Academy will be constructed and operated by the nonprofit National Fitness Council, on which I have the privilege of serving. In addition to the President's Council on Physical Fitness, the National Fitness Academy is also receiving support from our Armed Forces, the national sports governing bodies, the various multisports agencies, the U.S. Olympic Committee, the American Alliance for Health, Physical Education, Recreation and Dance, and the National Recreation and Sports Association.

I believe that the National Fitness Academy, which will be supported by both private and public funds, will be a vital tool in our continuing efforts to build a strong and healthy America. For too long America has been without an educational institution dedicated to helping the thousands of private and public physical fitness programs in our country, and especially the many volunteers who coach youth sports programs.

Over the years I have shared the enthusiasm of many of my Senate colleagues in promoting and participating in sports and fitness activities. Several weeks ago I had the opportunity to run with some of our troops stationed in West Germany along the East German border. I can assure you they are fit and ready. I have also had the pleasure of running with many high school and college students in my state. Earlier this month in Indianapolis, thousands of Hoosiers attended my fifth annual health fair and run, which was consponsored by Hooks Family Drug Stores and WRTV Channel 6.

Despite the number of Americans who are actively involved in sports and fitness programs, new national statistics show that our youth may actually be less fit than earlier generations. A decline in fitness has dangerous consequences for our Nation. As health fitness declines, medical expenditures grow unnecessarily large.

One of our major objectives in Congress should be to encourage sound programs of preventive medicine, nutritional research, and exercise programs which will make a substantial difference in the health of all Americans. The National Fitness Academy will go a long way toward the success of that endeavor.●

CLINCH RIVER—THE RAND REPORT IS IN

● Mr. HUMPHREY. Mr. President, by withholding funds until industry contributes more, the Senate last week took a major step toward resolving the controversy surrounding the Clinch River breeder reactor project. I think that as soon as industry's plan is presented and hearings are held, the difficulty of such schemes vis-a-vis the State public utility commissions will become clear. Given industry's lack of venture capital and utilities' difficulties in completing construction work in progress, the last thing State utility commissions are going to want their utilities to do is invest more money into distant demonstration efforts such as Clinch River. Certainly, it would be embarrassing if Congress approved alternative financing only to find 2 years later that the public utility commissions are unwilling to allow any industry funds to move.

There are, however, more substantial reasons for Congress to refuse to participate in alternative financing for the project. In specific, demonstrating commercial-sized breeders now is both economically and technically premature.

I have argued this before but it is frequently brushed aside. It ought not to be. Indeed, recently Senator HEINZ and I asked the Rand Corp. to evaluate the merits of proceeding with the project. We did this because so many claims have been made by both sides and because the Rand Corp. was the one consultant firm both sides saw fit to cite.

The Rand Corp.'s reply, authored by its president, Dr. Donald Rice, was blunt and to the point. Arguments about how technically advanced the project is are largely irrelevant and ultimately leads down blind policy alleys. Nor should the debate focus on how the project's design compares to that of its foreign competitors. "This issue," Dr. Rice notes, "should not be permitted to distract attention from more serious matters that bear directly on whether to continue the project."

Again, the key question with regard to Clinch River is whether or not it is the "best path to meeting long-term national energy goals and a sound strategy for insuring that nuclear energy supply options are available." The Rand Corp.'s answer here is no and the reason why is simple: Before the project might make sense, five conditions would need to be met and none are yet present.

The first condition is that there be high growth in electricity demand for the next 20 years, as high as estimates made in the early 1970's. The second is that there be a large and growing fleet of light water reactors. When Clinch River was first conceived the assumption was that there would be nearly 1,200 reactors on line by 2000, not 150. The third is substantially higher uranium prices than those now current or projected through the year 2020. The fourth is the availability of inexpensive light water reactor fuel reprocessing plants, none of which now exist. And finally the absence of better breeder alternatives, which now even Secretary Hodel has expressed doubt about.

Mr. President, I think it is important that Congress understand that what justified Federal support for the Clinch River breeder reactor back in the early 1970's no longer makes sense. I ask that the Rand Corp.'s evaluation of the project's merits, the original request that Senator HEINZ and I made, and the joint "dear colleague" we sent out last Friday concerning the report be printed in the RECORD.

The material follows:

RAND,
Santa Monica, Calif., June 9, 1983.

Hon. JOHN HEINZ,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HEINZ: Your letter of 13 May asked that we assess the adequacy and sophistication of the technology demonstrated in the Clinch River Breeder Reactor Project and estimate its importance to a national breeder reactor program. The discussion that follows reflects the views of several of our experienced staff on these issues. As you will see, we believe that the first issue is not the right question. The sophistication of the technology embodied in the Clinch River Breeder Reactor (CRBR) is discussed below. But it cannot settle the question of whether the CRBR project should be continued. Instead, the fundamental issue is whether the present CRBR project and LMFBR program are essential to and consistent with national energy requirements. I will first discuss why we feel that technological sophistication should not be the focus of Congressional concern, then suggest criteria for assessing the project's national importance and reaching a judgment on whether it should be continued.

TECHNOLOGY OF THE CRBR

Disagreements about the CRBR technical design have two dimensions. First, several of the design features that Westinghouse mentions are more advanced than comparable features of the five principal breeder reactor design favored elsewhere in the world. But it is also true that the general conceptual design of the CRBR stems from the late 1960s, although detailed design began only in 1974. Of course, the foreign designs all date from the same era.

Second, it is not the case that newer design features are necessarily better than older concepts. Incorporating such features entails a tradeoff between potential improvements and risks. For example, Westinghouse emphasizes that the upper intervals of the reactor vessels are Inconel clad, which substantially improves their life expectancy. The 1979 White House Paper argues that this innovation is a liability, pointing out that because the selected alloy cannot be welded with present technology, the system must incorporate mechanical fasteners that cost more and complicate the design. Both observations are basically correct and reflect the best technical judg-

ments of different experts. Only time will tell whether higher cost and complexity outweigh longer component life, or vice versa.

The CRBR could undoubtedly be made to appear more attractive (less costly, more productive, safer, etc.) by incorporating different design features. But this is true of any new technology. At some point, any new project must freeze the key design features. Moreover, experience with nuclear installations in the U.S. and elsewhere suggests that the theoretical promise of new design features is often not fulfilled.

For these reasons, we believe that the Congress should not concern itself with how the CRBR design compares to that of its foreign competitors. In fact, this issue should not be permitted to distract attention from more serious matters that bear directly on whether to continue the project.

CRITERIA FOR ASSESSING NATIONAL IMPORTANCE

As suggested above, the fundamental issue is whether the CRBR project, and the program of which it is a part, constitute the best path to meeting long-term national energy goals and a sound strategy for ensuring that nuclear energy supply options are available as needed. Another way of stating the issue is to ask how the United States can best invest its R&D resources so as to ensure an adequate electricity supply in the next century. Only if we could reasonably expect the costs of electricity from the combination of LWRs and LMFBRs to be less than the cost of alternative systems of supply—nuclear or non-nuclear—does the CRBR project make sense. A number of conditions must be met if that lower cost of electricity criterion is to be achievable.[1] They include:

High growth in electricity demand the next two decades,

A large and growing number of light water reactors in operation during the '80s and '90s,

Uranium prices were forecast to be much higher than current prices,

Cost effective reprocessing capability for both LWRs and LMFBRs, and

The absence of better breeding alternatives.

At this time, neither we nor most observers believe that any of these conditions hold. I will discuss each in turn.

(1) Projections of national energy requirements have changed radically since the early 1970s. The Department of Energy (DoE) recently released data indicating that per capita consumption of energy fell last year to its lowest level since 1967. The DoE currently estimates that electricity consumption will grow at less than four percent a year for the remainder of this decade. That is roughly half the growth rate predicted by ERDA when the CRBR design was stabilized in 1974. These estimates reflected the classical (and erroneous) assumption that total energy demand was solidly coupled to GNP growth, independent of the relative price of energy. But the amount of energy needed to produce a specified increment of GNP growth has fallen appreciably since 1974, and by 1990 it promises to decrease by another 20 to 30 percent. As early as 1975 I reported to the head of ERDA that the electricity demand assumptions used in economic justifications of the CRBR project appeared to be much too high and suggested halving the estimates. Experience of the past eight years has indicated that my estimate still overstated growth in demand.

(2) If earlier demand projections had been correct, it is at least possible that the number of LWRs in the United States would have continued to grow at a rapid rate. In fact, however, the LWR industry has taken a profound and lasting downturn beginning in 1974—the last year in which a nuclear power plant was ordered in the United States. Since then, scores of reactor projects have been canceled, including some under construction. This downturn stems not only from the decrease in electricity demand but also from the relentless increase in LWR capital costs.[2] Thus the LWR population is not expanding. Without a large and expanding population of light water reactors, a breeder to produce fuel for LWRs loses its justification.

(3) The basic premise of the LMFBR program is the assumption that nuclear fuel will be needed for a large number of electricity-generating reactors in the early years of the next century. However, although estimates vary, the expectations of the early 1970s that economically accessible uranium sources would be largely exhausted by the 1990s have proved unfounded. If sufficient uranium to support the nuclear plant inventory of the early 21st century can be obtained more cheaply than the plutonium generated CRBR-type plants, there is no economic justification for continuing the present line of LMFBR development. An alternative technical approach that provided a higher assurance of sound economic return could be attractive.

(4) It is also necessary to acknowledge explicitly that a commitment to breeder reactors is also a commitment to reprocessing for both light water reactors and for breeders. Developing that essential reprocessing capability may be as difficult as developing the breeder reactor itself. The associated waste disposal, fuel transport, nuclear safety, accountability, and security issues all require demonstrated solutions, currently lacking.

Because economical LWR reprocessing is essential to breeder economics, it is reasonable to argue that a native reprocessing capability for nuclear fuel should have a higher priority than a breeder reactor. Such reprocessing can substantially extend the availability of fissile fuel, even without breeder development. Thus demonstrating the existence of acceptable solutions to reprocessing problems is at least as important as acquiring a functional breeder demonstration plant.

(5) Even if the first four conditions could somehow be met, it is still not clear that an LMFBR is the most promising nuclear power generation technology. Rand and other institutions have suggested several alternatives to the LMFBR. One is the accelerator breeder concept that would result in breeding plutonium from a uranium fuel cycle, or fissile uranium from a thorium-based fuel cycle. For the long term, an even more promising breeder concept may be the hybrid fusion system, which like the accelerator breeder could breed reactor fuel while not coupled to a power producing reactor. The uncoupled breeders also lend themselves to the support of improved fission power reactor systems of several types.[3] "Improved" fission reactors have, among other improvements, higher conversion ratios than current LWRs.

Since none of the five conditions has been met, we feel that the current strategy for breeder development cannot be justified on economic grounds and is also extremely problematic on grounds of energy security or "keeping options open."

As I mentioned briefly above, almost eight years ago the director of ERDA, concerned about the validity of the CRBR project, asked me to review its status and prospects. In response, I urged a cautions, sequential approach that, in time, could demonstrate whether the technology was appropriate, the need sufficient, and the potential cost reasonable. (See enclosed Paper) Time has passed, and the probable cost has grown, the national need for the project still remains to be confirmed, and the technology remains controversial. In addition, it seems apparent that the currently proposed schedule for the CRBR and follow-on LMFBR facilities is insufficiently consistent with the potential availability of reprocessing facilities. In view of the lessened apparent urgency of the CRBR project and its clearly diminished role in the national energy program, I would again urge that the nation explore its technical options and possibilities, and that we eschew committing ourselves to the CRBR and the strategy that it embodies.

I would recommend that the Department of Energy be asked to develop an alternative, lower cost R&D program that emphasizes step-by-step sequential development of several technical approaches, pointing toward a much later deployment time than that currently envisioned for the LMFBR.

Sincerely yours,

DONALD B. RICE,
President.

U.S. SENATE,
Washington, D.C., May 13, 1983.

Dr. DONALD RICE,
President, the Rand Corp.,
Santa Monica, Calif.

DEAR DR. RICE: During the last two years there has been considerable congressional debate over continued federal support for the Clinch River Breeder Reactor Project. One of the key issues in this controversy has been whether or not the project's design is obsolete. Those who are opposed to the project argue that the reactor's design is obsolete and that the project is not necessary to our breeder research and development program. Those who favor the project argue that it is the most advanced reactor design in the world and that the project is essential to our breeder reactor research and development efforts.

It is important that we have the best information possible on this question. We believe that the RAND Corporation can be of help. Your corporation has done extensive work for the Department of Energy and the Nuclear Regulatory Commission concerning the nuclear fuel cycle, nuclear safety, and licensing and safety issues associated with the liquid metal fast breeder reactor. Several of these studies—"Some Implications of the Three Mile Island Accident on LMFBR

[1] The full set of conditions is presented and the relationships between them modeled in K. A. Solomon, "Valuation of Nuclear Reactor Spent Fuel: Method, Application, Analysis," The Rand Corporation, R-2239-DOE, February 1978.

[2] See William E. Mooz, "Cost Analysis of Light Water Reactor Power Plants," The Rand Corportion, R-2304-DOE, June 1978; and "A Second Cost Analysis of Light Water Reactor Power Plants," R-2504-RC, December 1979.

[3] See B. W. Augenstein et al., "An Examination of Alternative Nuclear Breeding Methods," The Rand Corporation, R-2267-DOE, July 1978.

Safety and Licensing: The Design Basis Issue," "A Review of Cost Estimation in New Technologies," "Anticipated Transients Without SCRAM for Light Water Reactors: Implications for Liquid Metal Fast Breeder Reactors"—have been cited by both sides of the Clinch River debate. Given the fair and thorough work your corporation has done in these areas and the widespread respect its work is accorded, we hope your staff would comment on the enclosed materials.

The first set of materials—a white paper prepared for the Congress May 11, 1979 by the White House—argues that the Clinch River Breeder Reactor's design is obsolete. These materials also argue that the project is not essential to the U.S. having a sound breeder reactor research and development program.

The second set of materials—Department of Energy documentation along with materials presented by the Westinghouse Electric Corporation—argues that the Clinch River Breeder Reactor has the most advanced breeder design in the world and that the project is essential to our long-term breeder reactor research and development effort.

We are at a loss to evaluate these materials by ourselves—although we know that they could not all be correct—and would appreciate it if your staff would critique both sets of material. If this analysis could help us answer the questions of how advanced the project's design is and how essential the project is to our long-term breeder reactor research and development program, it would be of tremendous public service.

With warmest regards, we are

Sincerely,

GORDON J. HUMPHREY.
JOHN HEINZ.

U.S. SENATE,
Washington, D.C., June 24, 1983.

DEAR COLLEAGUE: During the last two years, there has been considerable Congressional debate over continued federal support for the Clinch River Breeder Reactor Project. Controversy has centered not only on the project's design but also on the basic question of the need for a breeder demonstration project at this time, considering the nation's real energy needs and rising budget deficits.

In an effort to answer several of the questions which have been asked about Clinch River, we recently asked the Rand Corporation to provide an independent assessment of the Clinch River Project. The findings of the Rand study (which is enclosed for your review) lead us to conclude that it would be difficult to justify continued federal funding for the Clinch River in the absence of a viable industry cost sharing plan.

The FY '84 Energy and Water Appropriations bill provides no funds for the Clinch River Breeder Reactor. The Senate report accompanying the legislation states, "Until an alternative financing arrangement is enacted no funds should be obligated or expended for additional major equipment orders or construction on any permanent structures or facilities." We believe this is good policy. Although it is necessary to maintain a balanced national energy program including important research and development activities for breeder reactor technologies, we believe industry must bear the burden of co-financing expensive demonstration projects.

We hope that the Rand study is informative and useful to you. If you have any further questions, please contact Henry Sokolski of Senator Humphrey's staff at x48766 or George Tenet of Senator Heinz's staff.

Sincerely,

GORDON J. HUMPHREY.
JOHN HEINZ.●

COURAGEOUS MEN

● Mr. ARMSTRONG. Mr. President, the Wall Street Journal of June 23 carried articles about two enormously courageous men whose lives prove the truth of Voltaire's assertion that "more powerful than the tread of a mighty army is an idea whose time has come."

I doubt that the 20th century has produced any greater men than Alexandr Solzhenitsyn or Karol Wojtla, Pope John Paul II.

Alexandr Solzhenitsyn is an embarrassment to many in the West, because he steadfastly refuses to call evil by anything other than its right name. He has nothing but scorn for the euphemisms which those in diplomatic, journalistic, political, and academic circles constantly use to describe the leaders of the Soviet Union and other Communist states. While others speak of "conciliation," and "accommodation," Solzhenitsyn speaks of good and evil, of right and wrong. And he makes many of us uncomfortable thereby.

Pope John Paul II is a man cut from the same bolt of cloth. Imprisoned by both the Nazis and the Communists for doing the work of God, he knows better than most how high the price can be for speaking the truth. Yet by quietly, but firmly, declaring a simple truth—that people everywhere have a right to be free—a truth that the leaders of the powerful nations of the West have been too timid to say—Karol Wojtla sent a shiver of fear down the spines of the dictators in Poland and their masters in the Kremlin. Joseph Stalin once asked, sardonically: "How many divisions has the Pope?" His successors are finding out.

Neither Alexandr Solzhenitsyn nor Pope John Paul II command armies or large public treasuries. But they command something far more important. They command respect.

The power of Solzhenitsyn and John Paul II comes not from the barrel of a gun, as it does for the rulers of the East, or from skill at combining special interest groups into an electoral majority, as it does for the rules of the West. Their power comes instead from moral courage, for their willingness to stand firm for what is right and true and good no matter how much pressure is brought to bear against them.

The ideas that drive Alexandr Solzhenitsyn and Pope John Paul II are not new, and there are some in the West—those whose historical memories extend little farther than yesterday's newspaper—deride them for that reason. But what matters most about ideas is not whether they are new or old, but whether they are good or bad, right or wrong, and whether or not we will stand firmly behind what we know to be right.

The behavior of the Western democracies vis-a-vis first Hitler, and then the Soviet Union and her satellites has lent bitter confirmation to the truth of Burke's dictum that: "all that is required for the triumph of evil is that good men do nothing." Alexandr Solzhenitsyn and Pope John Paul II, on the other hand, show that nothing so terrifies evil as good men who stand firm.

I ask that the articles entitled: "The Lonely Voice of Alexandr Solzhenitsyn," and "The Pope in Poland" from the Wall Street Journal of Thursday, June 23, be printed at this point in the RECORD.

The articles follow:

[From the Wall Street Journal, June 23, 1983]

THE LONELY VOICE OF ALEXANDR SOLZHENITSYN

(By John Train)

When Alexandr Solzhenitsyn came to America nine years ago, the then incumbent of the White House declined to see him. Such a gesture might annoy the Soviets, it was thought.

I recently accompanied Mr. Solzhenitsyn and his wife to England. What a difference! He was welcomed by the royal family, addressed over a thousand notables in London's Guildhall to acknowledge the Templeton Prize, spent an evening with the archbishop of Canterbury, was pictured on the front pages conferring with Prime Minister Thatcher and brought a roar of approval from the boys of Eton after addressing them in chapel. Television coverage was extensive. The Times of London printed his Guildhall address in full and carried a long editorial on it. Day after day the Times ran a stream of letters; its eminent editorialist Bernard Levin wrote a column, and later consecrated an entire page to an interview.

The American press, although present, virtually ignored these events. Indeed, says Mr. Solzhenitsyn, the Washington Post through selective editing misrepresented his message. What does he in fact have to say? And why are his words so differently received in the two countries?

The families of the Russian dissidents are exceedingly close to Mr. Solzhenitsyn's heart, and in his London talks he often turned, anguished, to their plight. In the Soviet Union a husband and wife can still barely support a family even if both work. When a dissident, exercising his rights under the Helsinki agreement (which Mr. Solzhenitsyn, has always warned the Soviets would ignore), is sent to prison, his wife alone may no longer be able to earn enough to feed the children and herself. Ordinarily, the wives are also deprived of work, and heavy official disfavor falls on any who help such families. So their situation is desperate.

REASONS OF CONSCIENCE

While still in Zurich in 1974, after leaving Russia but before coming to America, Mr. Solzhenitsyn, created the Russian Social Fund to help the families of Russian dissidents imprisoned, contrary to the Soviet Constitution, for reasons of conscience. To this fund of which his wife is president, Mr.

Solzhenitsyn assigned all the proceeds of "The Gulag Archipelago," his most valuable asset.

The fund has assisted many hundreds of families, including more than a thousand children. Its directors inside Russia, who look after the distribution of what is brought in (perforce unofficially), are heroes and martyrs, like a doctor who works on during a plague knowing that sooner or later he must fall victim himself. Such is the hatred of freedom in the Soviet Union that helping the families of prisoners of conscience to stay alive has been declared an act of treason. In 1981 Valery Repin, who ran the fund in Leningrad, was seized and flung into solitary confinement for over a year of the KGB's inimitable treatment, after which, broken, he was exhibited on television to "confess" that the fund was engaged in a witches' brew of anti-state machinations. It was all a fake, since the fund, a Swiss—i.e., neutral—foundation, is purely philanthropic. Mr. Repin has been tried and convicted. The fund's chief Soviet Union representative, Sergei Khodorovich, has just been arrested also. If he, too, can be broken, he may be subjected to a show trial. If, as seems more likely since he is a man of spiritual strength, he stands fast, then, condemned in secret, he will disappear. His only hope is Western public opinion. If we manifest enough concern in the media and in Washington, he may be saved.

A successor, Andrei Kistyakovsky, has stepped into Mr. Khodorovich's place, an act of extraordinary courage. Mr. Kistyakovsky's time of travail has yet to come.

"Do you believe," I asked Mr. Solzhenitsyn, "that the Soviet government is indeed a 'focus of evil,' to use President Reagan's words?"

"Of course. But nobody has a monopoly on evil or good. There is also evil in the West. Still, the Soviet government is the home of communism, and communism is the most dreadful engine of oppression on our planet. Besides bringing about the annihilation of tens of millions, and the physical and spiritual crushing of countless more, it has destroyed the Soviet economy. And no conqueror in history has taken over so much territory."

Does Andropov represent a change?

"Not in the least. I am constantly struck by the ignorance of so-called experts on Soviet matters, who seem to think that the change of one face, or many faces, in the Kremlin can possibly affect how Soviet communism will act. This is a naive view of communism, not based on observation. The only thing that would change the behavior of the Soviet Union would be the accession to power of a noncommunist leader. He would reverse Soviet policy, both domestically and internationally."

What have been the West's chief mistakes?"

"Since 1918, the West has made only mistakes, one after another, in dealing with the Soviet Union. Since the discovery of the atomic bomb it had just one good idea—the Baruch Plan, to put the atom under international control—which Stalin brushed aside.

"Sixty-five years ago Lenin pronounced a sentence of death on the Western world. Sixty years ago nobody seriously supported the Russian forces fighting communism. There was a torrent of fugitives, including some of the finest persons in the country, who testified that what was happening was unprecedented, horrible. Rather than listen to them, the West listened to Bernard Shaw. Forty years ago, after the war, there was a second wave of emigrants, bearing witness to Stalin's mass murders. Again, the West was indifferent. Thirty years ago, Kravchenko defected, revealing to the West the terrible things that were going on; people preferred to listen to Bertrand Russell. Eight or nine years ago I described what was really happening—and again, except for a few, the West paid no attention. At that time, I proposed specific political remedies for the desperate problems we face. Nothing was done. Now it is probably too late.

"The single worst mistake of the post-war era was relying on the 'nuclear umbrella.' False confidence in this 'umbrella' relaxed the West, sapping its strength, its moral qualities, its courage. Freedom does not depend on any 'umbrella,' it depends on stout hearts and steadfast men. Today the 'umbrella,' neutralized, no longer protects, but the habit of weakness, of lack of courage, persists. As a result, the West lies gravely weakened before the expansionist aims of the Soviet Union."

What next?

"It is far better to fight on your feet than on your knees, but you can still fight on your knees. The Russian people are still resisting after 65 years. One man in the Soviet Union wrote me to urge Western scientists to invent a do-it-yourself copying machine. In a dictatorship, that would be a lot more valuable than an arms cache."

What hope is there, then, for the West?

"The time when the West could save itself by its own exertions may already have passed. To save itself would require a complete change in its attitudes, when in fact these attitudes are still going the wrong way. Instead of girding itself for struggle, the West is still hoping for outside forces to save it, through some kind of miracle . . . perhaps a miracle in the Kremlin. Solidarity was hailed as such a miracle. But the only miracle that the people of the West can pray for is a profound change in their own hearts."

And what about Afghanistan?

"In the three years of Soviet aggression against that country, the West has in essence done nothing. Had it dared, it could by now have supported several regiments of ex-Soviet soldiers—defectors—who would be ready to fight against this aggression. Then things would look very different."

Could Western broadcasting to the Soviet Union be more effective?

"Yes. In fact, that is a matter of the greatest importance. Today, all broadcasts into the Soviet Union are shackled by the naive and idealistic concept that we need above all to have good relations with the Soviet government: not to vex the Kremlin. As long as this delusion is considered a prime policy objective, the Western governments will be responsible for undermining their own world. Such broadcasting is currently bound by a narrow limitation: It should say nothing against Lenin, it should never insult the Soviet government. This policy is insane. Almost every man, woman and child in Russia is sick of Leninism. The West, standing on the brink of catastrophe, has immensely strong allies of which it makes no use: the people of the Soviet Union, and, indeed, of the other subject nations. It must stretch out its hands to those oppressed people."

A NEED FOR SELFLESSNESS

Is the Soviet Union serious about arms control?

"There are two Soviet Unions. The people—millions of them—dream of an end to wars, to armaments. The government, on the contrary, does not contemplate that idea even for a minute. It does, of course, want the West to disarm. But not one item of Soviet military equipment will ever be given up."

What about our younger people and their concern for disarmament?

"It is normal to be afraid of nuclear weapons. I would condemn no one for that. But the generation now coming out of Western schools is unable to distinguish good from bad. Even those words are unacceptable. This results in impaired thinking ability. Isaac Newton, for example, would never have been taken in by communism! These young people will soon look back on photographs of their own demonstrations and cry. But it will be too late. I say to them: You are protesting nuclear arms. But are you prepared to try to defend your homeland with nonnuclear arms? No: These young people are unprepared for any kind of struggle."

Do we have a single main underlying moral ill that one can identify?

"Besides cowardice, selfishness. We hear a constant clamor for rights, rights, always rights, but so very little about responsibility. And we have forgotten God. The need now is for selflessness, for a spirit of sacrifice, for a willingness to put aside personal gains for the salvation of the whole Western world."

Such, then, is Mr. Solzhenitsyn's message. It was received in England as an inspiring evocation of ancient values.

In America, Mr. Solzhenitsyn is often taken as a repetitious Cassandra, whose concerns need not be faced, because even if true, they're not new. As the hostile tide rises around us, we would rather, as he says, hope to be saved by some miracle.

THE POPE IN POLAND

For the past week, the image of Pope John Paul II in Poland has been everywhere—on the evening news, on the front pages, on the covers of news magazines. It was a most impressive emotional experience to see upward of a million Poles spread out toward the horizon to glimpse or hear the pope as he stood beneath a towering floral crucifix.

It is surely correct to view the pope's trip to Poland as giving a huge lift to that country's fledgling free-labor movement, Solidarity. Nonetheless, as we watched these highly charged images and descriptions spill out of Poland, we found ourselves troubled at the thought that the pope and Solidarity were disappearing into the media's nether world of highly romanticized resistance movements. It is a world that lives more on the power of its images than the power of its ideas. We have been there before.

We were there in South and North Vietnam in the 1960s and 1970s, in the mountains of Bolivia with Che Guevara and in the streets of Uruguayan towns with the Tupamaro guerrillas. We fastened for months on the image of Ayatollah Khomeini seated on the floor of his apartment in Paris, and we watched a revolution sweep through the streets of Iran and later over the countryside of Nicaragua. In short, we have been in a situation for some time now where many of the world's great political upheavals remain in popular memory primarily as romantic or dramatic images.

Though one cannot help but be overwhelmed at the spectacle of John Paul's visit to Poland, we think it is extremely important to regard the details of what the pope has been saying in his speeches there. Poland is indeed yet another of the great political movements of the past 20 years, but it is becoming evident that Poland and this pope represent a distinct break with the theories of political change that have held the world's attention.

During the 1960s and '70s, an entire culture of support grew up around the idea of political change based on resistance, violence and the elimination of classes of people defined as oppressors. These notions became the basis for revolutionary movements in Latin America, Africa and Asia, and political writers in Europe and the U.S. defended these movements as essentially popular uprisings. While that definition was often inaccurate it gave them political legitimacy.

Revolutions in Cuba, Vietnam, Angola and Zimbabwe, which received enormous good will and moral support in the West, have resulted in repressive, one-party political systems in which elections are not held, however, this has in no way called into question the legitimacy of the claims of succeeding movements in countries like Peru, Colombia or El Salvador. These guerrilla movements are persistently described as civil wars based on indigenous local conditions, and little serious effort is made to explain the political ideas and power-seeking methods of guerrilla leaders. The political beliefs of the Nicaraguan Sandinista leaders Thomas Borge and the Ortegas were no secret before they took power but received scant attention. Can anyone recall reading a serious discussion of the beliefs or goals of el Salvador's Farabundo Marti coalition?

These unexamined ideas are important, because in the end the cameraman's or reporter's evocative portraits of armed struggle are replaced by ideas transformed into a political system. Vietnam and Nicaragua have two such political systems.

What we are seeing this week in Poland is a notion of political change whose philosophy is quite different from the revolutionary forms that have won the admiration of so many cafe liberals year in and year out.

The central idea coming out of Poland is self-determination—the belief that the individual citizens of a nation ought in some manner to contribute their ideas to a nation's politics, free of both internal and external forces of repression. Poland's Solidarity is a movement for which self-determination is the reason for being, and Pope John Paul II raised this idea repeatedly the past week. He has spoken of "the fulness of civic rights and the social structures which correspond to its just requirements," of a state that must fulfill its role with "the consent of the governed" and of his hope for "full participation in deciding common life."

What we have here, at its most basic level, is a call for the establishment of the right of free speech, which in turn is a prerequisite to the formation of political parties and popularly elected governments. Indeed before Poland imposed martial law, Solidarity was essentially an umbrella over a variety of political groupings, such as the KOR Group (social democrats), the Young Poland Movement (representing conservative Catholic intellectuals) and the Labor Party.

Additionally, John Paul has exhorted the Poles to resist violence and class conflict, notions central to Latin American "liberation theology." "Hatred is a destructive force," said the pope, "and we must neither destroy nor be destroyed by it."

We will not soon forget the image of John Paul II standing below the high cross in Katowice, but we hope it is not forgotten that in Poland this week the pope re-conferred legitimacy on ideas with few active defenders among the world's intellectual elites the past 20 years. But it should be clear by now that they still awaken powerful aspirations in the hearts and minds of the masses of people those elites have so often falsely claimed to represent.●

OCEAN DISCHARGE WAIVERS

● Mr. DODD. Mr. President, I ask that the following sectional analysis of S. 1536, a bill I introduced last week to strengthen the provisions of the Clean Water Act regarding ocean waivers, be printed in full in the RECORD.

The analysis follows:

SECTION-BY-SECTION ANALYSIS OF S. 1536

SEC. . (a) This section re-numbers the existing provisions in Sec. 301(h) of the Clean Water Act to facilitate inclusion of the proposed amendments.

(b) This section adds three new requirements that must be met for an applicant to receive an ocean discharge waiver.

PRIMARY TREATMENT

Paragraph (H) requires that discharges under a waiver achieve full primary treatment. As presently written Sec. 301(h) allows a variance of secondary treatment without specifying that full primary treatment must still be maintained (or attained), and the courts have decided that there is insufficient basis in the law for EPA to require such treatment. However, a 1981 amendment prohibiting the discharge of sewage sludge under a waiver suggests that Congress intended ocean discharges to receive the minimum of primary treatment. The proposed language explicitly defines the processes that primary treatment must include or be equivalent to, since it is not defined in the law.

CONTROL OF TOXICS

Paragraphs (I) and (J) are designed to strengthen control of toxic pollutants by specifying a particular level of treatment and of effluent concentration. Toxics from industries discharging into municipal treatment works are supposed to be controlled by the Act's pretreatment program, cited in 301(h)(5), but categorical standards for many industries have not yet been promulgated. The proposed language requires (a) that any large treatment works (those likely to have significant industry influent) have a pretreatment program in effect which, together with its own treatment, provides the equivalent of secondary treatment for toxics; and (b) that effluent from discharges under a waiver meet EPA marine water quality criteria for toxics after initial dilution. Since secondary treatment removes many toxics, this equivalency requirement ensures that waivers for treatment of less harmful biodegradable pollutants do not allow increased levels of toxic pollutants in coastal waters.

GEOGRAPHIC LIMITATION

(c) This section re-defines the geographic limitation on discharges which are eligible for waivers. The proposed language restricts eligibility to discharges into deep waters of the territorial sea or contiguous zone; to small discharges within the territorial baseline; or to other discharges within the baseline which are into deep coastal waters (saline estuarine waters, sounds, channels, or bays) with flushing action and other characteristics necessary to maintain water quality throughout the confined waters. This clarifies and strengthens the existing provision regarding near-coastal waters.

(d) This section adds two new provisions that mandate consideration of the environmental context in which an application is made.

CUMULATIVE IMPACTS

The first provision requires that explicit consideration be given to the cumulative effect of many discharges of less than secondary effluent in a particular area. This cumulative effect, the so-called "tragedy of the commons", could lead to degradation even when the discharge of any single treatment plant could not be shown to impair water quality. Under present law a waiver must not result in additional treatment requirements for other sources, but no explicit consideration is given to the cumulative effect of many waivers and no statutory basis is given for determining how waivers should be allocated among the eligible applicants in an area prone to degradation.

In the proposed language the Administrator is required to consider the collective impact of discharges under waivers from all eligible municipal treatment plants in an area which are of equal or lesser size to an applicant and to deny the applicant a waiver if the collective test fails. The consideration of discharges from plants smaller than an applicant ensures that smaller dischargers are not penalized by a few larger dischargers which significantly impact an area. However, an exemption from this restriction is allowed where all the plants in an area are administratively interrelated, as in a single municipality or in a regional compact among municipalities; in this case the municipality or regional entity can decide how best to allocate its treatment requirements and waivers as long as overall water quality is maintained.

STRESSED WATERS

The second provision prohibits the issuance of waivers in areas which are already significantly polluted from other sources for any significant portion of the year. While existing law is vague on this point, such a prohibition is necessary to prevent further degradation of stressed waters. Degradation is defined in terms of the biological community found in the waters, the recreation of potential of the waters, and the level of water quality. The presence of a "balanced indigenous population" is avoided as a criterion because of the difficulty of evaluating the impacts of existing sources on a hypothetical indigenous biological community; instead, the actual species present in the waters and their population structure are compared to those in similar waters which are known to be polluted.●

"STAR WARS" DEFENSE

● Mr. ARMSTRONG. Mr. President, the Detroit News, in an editorial published June 6, 1983, has made what I believe to be the finest and most succinct explanation why President Reagan's plans to shift our emphasis in nuclear strategy from offense to defense are sound, and how such a

homeland defense could be achieved. I ask that it be printed at this point in the RECORD.

The editorial follows:

[From the Detroit News, June 6, 1983]

"STAR WARS" DEFENSE

The skeptics who scoff at President Reagan's proposal to build space-age defensive systems would do well to read the "High Frontiers" thesis of Lt. Gen. Daniel Graham.

Gen. Graham, former deputy director of the CIA and a military adviser to Mr. Reagan during the campaign, developed the thesis for the Heritage Foundation last year. It is a benchmark work that is reflected in President Reagan's March 23 call for a switch to a defensive posture that could, by the turn of the century, render intercontinental ballistic missiles (ICBMs) impotent.

The general begins with the assertion that today's strategic doctrine is not defensive. The two superpowers possess sufficient missiles to destroy each other's society, and there is no defense against them except for the anti-ballistic missiles (ABMs) in place around Moscow.

The peace has been kept for 38 years by a "balance of terror" that holds civilian populations hostage. In theory, no nation could attack another without risking a retaliatory holocaust. This is the doctrine of Mutually Assured Destruction (MAD).

The old strategy has been invalidated by the Soviet Union because (says the presidential strategic arms commission) that country "probably possesses" enough weapons with sufficient accuracy to destroy America's 1,047 ICBM silos "using only a portion of their own ICBM forces." The United States can't do such damage to the Soviet Union using all of its weapons. This is what is meant by the "window of vulnerability."

Gen. Graham is against "MAD-ness." He says the United States and its allies can't hope to match the growing mass of Soviet weaponry, strategic and conventional, and would be foolish to play a quantitative game that the Soviet Union could win.

Instead, the United States should do an "end run" around Soviet global strategy, engaging Moscow on technological high ground where Moscow is weakest. This leads away from proliferation of nuclear weapons (it might even make the MX missiles unnecessary) to the acquisition of earth-orbit, non-nuclear defensive weapons designed to destroy nuclear warheads before they do harm.

"High Frontiers" postulates three main layers of defense, all of which employ known technologies:

A "point" defense system, batteries of launchers at ICBM sites that would throw out swarms of unguided rockets—small, steel-case projectiles with enough mass and velocity to smash a warhead just before it reaches detonation range. These could be in use within two or three years.

Space-borne "trucks" that orbit the earth, each with sensing, control and guidance devices, and numbers of non-nuke projectiles that knock out missiles just after launch. These could be operational in the 1990s.

Laser, particle-beam energy, or microwave weapons to destroy missiles in space. These technologies, now under intensive research here and in the Soviet Union, could be ready in a decade.

Back in 1962, the skeptics thought John F. Kennedy was daft when he committed the United States to put a man on the moon within the decade. But the goal was achieved seven years later. From that day, anything in space became possible.

Since then, we have witnessed faultless space shuttle flights, and most people are now indifferent to the everyday miracles of satellites that bring us TV programs, distant telephone calls, insights into our geography, more accurate weather forecasts, more accurate navigation for ships and planes, and even such spin-off products like better ovenware.

But what of the legal arguments?

Liberals decry space defense, arguing that the atmosphere should be sanitized of weaponry and, further, that the ABM treaty and resolutions of the United Nations prohibits militarization.

This is naive. Space is already militarized. Both sides use passive systems to "sky spy" the other side and the disarmament treaties forbid interference with such "eyes."

In addition, the Soviet Union has never shown much interest in far space. The USSR launches 75 satellites a year, four or five times more than the United States, all in low earth orbit. Seventy percent have purely military roles, 15 percent combine military and civil uses, and only 15 percent purely civil purposes.

The Soviet Union is the only nation that has successfully killed one satellite with another, a crude experiment that has no known peaceful applications.

On the second point, the ABM treaty is ambiguous and Gen. Graham's weapons are outside its definitions. In any event, the treaty sets up a forum for discussion of new issues and can be canceled by either side on six months' notice.

Space is the last arena where the Soviet Union wants a High Noon meeting with the United States. Why? Because the United States has the lead in miniaturization of components and can do infinitely more with one pound of freight. Further, the United States has the space shuttle delivery and maintenance capability the Soviet Union lacks.

Gen. Graham meets two other critical arguments head on. It would be foolish to demand a perfect, impermeable—and very costly—space defense system. A simpler system that can destroy, say, 20 percent of the first-strike missiles would cast doubt on the success of a pre-emptive strike, and that doubt could well prevent the attack. America's retaliatory power would be restored without building another ICBM. And space-borne non-nuclear weapons would be incapable of killing a single Russian because they are defensive, not offensive.

Gen. Graham's blueprint for "assured survival" is a doctrine of hope, the opposite of the despair and resignation implicit in an "assured destruction" policy.

President Reagan also believes it is better to build weapons that eat nuclear warheads than to build more warheads. But he also knows that one system can't be trashed until a better system is operational.

Gen. Graham's central message is this: It is wiser to don a bullet-proof vest than expose a bare chest to Moscow's military might.●

FAMINE IN ETHIOPIA

● Mr. MOYNIHAN. Mr. President, the northern provinces of Ethiopia are faced with a famine that threatens to become one of the worst in African history. The Washington Post reports that 50 to 100 children are dying every day and that the death toll could surpass 200,000 people. Unlike the disastrous famine Ethiopia suffered just over a decade ago—a disaster that was hidden from the world—we have a warning this time, a warning that could enable us to avert catastrophe and save thousands of lives. The mounting death rate and the appeals from international and private relief agencies must not go unheeded. The priority that this Nation has historically placed on humanitarian aid must not be subverted by the politics of the situation. We are a nation that responds to famine emergencies, and we must respond to this crisis with the needed assistance.

I commend my colleague from Arizona, Senator DECONCINI, for his rapid response to this urgent situation and join him in support of Senate Resolution 168. The United States must, without delay, respond to the appeals of international and private relief agencies and provide the necessary assistance to prevent mass starvation in Ethiopia.●

TRIBUTE TO BRIG. GEN. DICK SHARP

● Mr. HOLLINGS. Mr. President, on Wednesday, June 15, death claimed U.S. Army Brig. Gen. Dick Sharp while he was participating in morning physical fitness training at Hunter Army Airfield, Ga.

Those of us who had the privilege of knowing Dick Sharp when he was assigned as the Army liaison officer to the U.S. Senate mourn his passing. In every sense of the word he deserved the title of "soldier's soldier," and I want his wife, Pat, and his children, Ashley and Scott, to know that we in the U.S. Senate grieve for him and will miss him also. It is only appropriate that I request insertion in the RECORD the remarks of Maj. Gen. John R. Galvin, Commanding General, 24th Infantry Division (mechanized), as offered Monday during the burial services at Arlington National Cemetery.

BUT I REMEMBER . . .

Each man brings to earth
Certain influences,
Sustaining forces from Our God.

What a man says,
And what he does,
And the way other men see in him
What is in them:
These are the things.

Richard Harry Sharp was born in Kansas City, Kansas on the 4th of November 1934. He lived in Kansas all his young years until he joined the Army as a Private Soldier in 1957. From that time, according to all who knew him well, he was a Soldier—first, last, and always.

Dick was selected for Officer Candidate School, graduating as a Second Lieutenant of Infantry in 1959. He then went on to the Officer Basic Course at Fort Benning, and to Ranger and Airborne School. While at that post he met an "Army Brat," Pat

Richie, daughter of a Colonel who was stationed there, and on the 22d of July 1960 at the Chapel at Fort Benning, they were married.

They then went off to the first of Dick's company grade assignments in the United States and then in Korea. After a daughter, Ashley, was born, Pat finished her undergraduate work.

There are many Rangers here today and Dick knew these Rangers well. Not only had he graduated from the Ranger School, but he subsequently became a Ranger Instructor at the jungle camp in Florida. During his service with the Ranger Department, his son Scott was born. Dick was assigned to the Ranger Department from 1963 to 1965 when he went to the University of Nebraska at Omaha to finish his Bachelor's Degree in History.

In 1967 General Sharp went to Vietnam to the 9th Infantry Division in the Delta Region where, as a Major, he became the S3 Operations Officer for the 3d Battalion, 60th Infantry. There he served with great courage, being awarded—as a staff officer—the Silver Star, the Army Commendation Medal with V for Valor and the Vietnamese Cross of Gallantry. He was to go on to receive 23 other awards in his career.

After the year in Vietnam, he attended the Command and General Staff College at Leavenworth where he served with such distinction that he was sent to represent the United States Army at the British Staff College at Camberley.

1971 found the Sharp family in Germany with Dick serving as Executive Officer to the Chief of Staff of United States Army, Europe. He was promoted to Lieutenant Colonel during this tour and in 1973 he returned to his beloved "Old Reliables" of the 9th Infantry Division, now stationed at Fort Lewis, Washington. There, he commanded the 3d Battalion, 47th Infantry in the 3d Brigade.

After his command time with the 9th Division, Dick went to the Army War College at Carlisle Barracks, Pennsylvania. While studying there during the year 1976-1977 he obtained his Master's Degree in Public Administration from Shippensburg State College.

Dick Sharp went on to serve at the Pentagon in the Office of the Deputy Chief of Staff for Operations and also in the Office of Legislative Liaison. It was Major General Ed Peter who brought him into the latter after hearing how well he had done in the 9th Division as a commander.

After his Washington tour was over, Dick went to Korea where he commanded the 2d Brigade of the 2d Infantry under Major General Robert Kingston. General Kingston—who has never been known as a man given to hyperbole—called me this year to tell me how lucky I was to get a great soldier like Dick Sharp in the 24th Infantry Division.

When he returned from Korea, Dick became the Chief of Staff of the 5th Infantry Division (Mechanized) at Fort Polk, Louisiana. There, the Assistant Division Commander, Brigidier General Tom Kelly, said: "You have to see Dick Sharp in action to know what a Chief of Staff can really do." His Division Commander, Major General Peter, told me: "Dick Sharp will always be the greatest soldier that I have ever known."

Dick arrived to be Assistant Division Commander of the 24th Infantry Division in February of this year. I had not known him before but had heard these good things. I could see from the start that he was the broad-gauged leader. He was a team player. Right from the beginning it was amazing how quickly people came to know and like him, not only on the military side but also in the city of Savannah. He was happy as the Assistant Division Commander and the Commander of Hunter Army Airfield. He was proud of his new star and looking forward to his service with Victory Division. We felt lucky to have him.

All that a man brings
Comes as a drop falls to a pool
And the tiny ripples of his influence
Spread to other men and into time
And generations.

And the little drop,
Raising the level in the pool,
Cannot be found.

And so men go out
To what must be done,
Pushed on by what they have forgotten:
The quiet word, the nod,
The hour of companionship.

But I remember
And what had raised the level is not lost.
And though it is not necessary to remember
Or to understand,
I do, and missing him, it helps.●

THE CALENDAR

Mr. STEVENS. Mr. President, with the consent of my good friend, the distinguished Democratic leader, I would like to proceed with some calendar items.

I ask unanimous consent that the Chair lay before the Senate en bloc Calendar Order Nos. 245, 260, and 264, and that the Senate consider those items en bloc.

Mr. BYRD. Mr. President, before the Chair puts the question, these items have been cleared on this side of the aisle. I have no objection to their being considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC HEALTH EMERGENCIES

The bill (H.R. 2713) to amend the Public Health Service Act to authorize appropriations to be made available to the Secretary of Health and Human Services for research for the cause, treatment, and prevention of public health emergencies, was considered.

Mr. MOYNIHAN. Mr. President, I rise in full support of H.R. 2713, a bill to establish the Public Health Emergency Fund. I support this important legislation for three reasons: It is the correct response to an immediate health emergency, AIDS; it points toward a long-term solution to the chronic problem of resource allocation during health emergencies; and it provides a needed Federal answer to a national crisis.

I would first examine the immediate problem. Acquired immune deficiency syndrome, known as AIDS, is a newly discovered disease that impairs the immune system, leaving the victim susceptible to certain types of cancer and a number of infectious diseases. As of June 27, there were 1,673 cases and 679 deaths, a mortality rate of 40.6 percent, and no known instances of a victim being cured of the disease. Once the victim has contracted AIDS, he or she can only treat the symptoms, knowing fully that death within months or weeks is inevitable.

I would second note that AIDS is a national problem: 38 States have reported cases. As the number of victims spirals weekly, the general population becomes increasingly concerned. One worrisome aspect of the disease is that over 6 percent of its victims belong to no apparent risk group. Simply put, we do not know how this disease is communicated, we do not know who is susceptible, we do not know how to prevent it, and we do not know how to cure it. What we do know is that more people are getting it, and more people are dying from it. Indeed, the Federal Government has an obligation to address forcefully a disease of this scope and complexity.

Finally, I would point out that to leave the primary responsibility for dealing with AIDS to the States and cities would be to ignore the national complexion of the disease. States and localities are ill-prepared to tackle the problem. San Francisco, in the first 5 months of 1983, has spent over 5 percent of its entire health budget on providing counseling and patient services to AIDS victims. The average cost per patient is over $100,000. How are public hospitals to finance such expenses? New York State proposes to allocate $5.2 million for AIDS research, but according to Governor Cuomo, the State has no idea where to find the money.

H.R. 2713 is the rational and humanitarian response to the short-term tragedy of AIDS and the long-term specter of public health emergencies. I urge most strongly that my colleagues in the Senate give it their unqualified support.

Mr. KENNEDY. Mr. President, I rise in support of H.R. 2713, a bill which would provide for the creation of a permanent revolving fund for use by the Secretary of Health and Human Services for response to public health emergencies.

It is clear that adequate resources must be available for research on diseases that are public health emergencies. Such diseases as Legionnaire's disease, toxic shock syndrome, and acquired immune deficiency syndrome (AIDS) have been both frightening to the American public and often fatal to their victims.

It is also clear that during a period of a public health emergency, the Public Health Service (PHS) must mount an effective campaign to respond to the health needs of the American people. While it is possible to plan for some unanticipated emer-

gencies, it is not possible, however, to define the nature and complexity of any emergency beforehand. As a result, the PHS contingency fund has been inadequate to meet the unexpected health crises of the numbers, size, and complexity that America has faced in recent years.

When faced with exhausted contingency funds, the PHS has been forced to divert money from other activities or to act and then request supplemental appropriations to cover costs incurred, or simply to do the best it could, permitting problems to linger.

The time has come for the Congress to provide for a public health contingency fund similar to that used for disaster management or for overseas relief. H.R. 2713 authorizes to be appropriated to a fund of $30 million in fiscal year 1984. In succeeding fiscal years, there are authorized such sums as may be necessary to have the fund equal to $30 million at the beginning of each fiscal year.

The moneys from the Public Health Emergency Fund will be used not only for disease crisis but also for public health situations like the Tylenol incident or the Three Mile Island crisis. The PHS fund will not be used for routine agency or public health activity nor will it be a substitute for the normal reserves that an agency must have.

Mr. President, this country is now being threatened by the most significant epidemic since polio. Acquired immune deficiency syndrome (AIDS) is a deadly disease that destroys the body's immune deficiency system, leaving the individual highly susceptible to life threatening infections. There have been a number of newspaper and magazine articles about the epidemic proportions of this disease.

Although the majority of AIDS victims have been members of high-risk groups, the disease is spreading beyond those people in well-defined categories. While the disease does not appear to be transmitted by casual contact, those dealing with AIDS victims and the general public have grown more fearful of contacting AIDS. AIDS is possibly the most serious public health issue facing the country today.

As of June 20, 1983, 1,641 cases of AIDS have been reported to the Center for Disease Control; 644 people have died of AIDS since 1981. Four to five new cases are reported every day and the case rate is doubling every 6 months.

However, Federal response to the AIDS crisis has been slow and inadequate. Therefore, I have joined several of my colleagues in the consponsorship of S. 1226, a bill to amend the Public Health Service Act to authorize appropriations to be made available to the Secretary of Health and Human Services to respond to public health emergencies and S. 971, a bill to authorize the Secretary of Health and Human Services to expedite research into a disease or disorder which constitutes a public health emergency.

S. 1226 would establish a public health emergency fund in order to help insure the availability of funds for prompt Federal response to public health emergencies. The language of S. 971 was incorporated in S. 773, the biomedical research, training, and medical library assistance amendments of 1983 when reported out of committee.

H.R. 2713 authorizes $10 million less than S. 1226. However, since it has passed the House, it represents a reasonable compromise. Thus, to expedite matters, I am supporting H.R. 2713 today, so that we can get action on this legislation.

While these bills are not specific to AIDS, they were written to specifically apply to AIDS. Research into causes and prevention of AIDS is vital for the protection of our citizens, The AIDS crisis demonstrates that we need an effective mechanism for responding to public health emergencies quickly and with adequate resources.

The fear that has developed around AIDS is discussed in the media almost every day. Hospital staff are afraid to treat AIDS victims. Patients are postponing surgery because of their fear that the Nation's blood supply has been contaminated with the blood for AIDS victims. And morticians are afraid to embalm the bodies of those AIDS victims who have died.

In the meantime, those people afflicted with AIDS are dying, often without compassion because of the public's fear. Until we know the cause and cure for AIDS, we should do everything to alleviate public fear and to promulgate current and accurate information about this disease. AIDS victims must not have inflicted upon them the double burden of the disease and unchecked public fear. Research is imperative.

H.R. 2713 will provide a genuine mechanism for an appropriate Federal role in addressing the problem of AIDS and other public health emergencies.

I urge my colleagues to support the passage of H.R. 2713.

Mr. President, I ask unanimous consent that the editorial in the New York Times of June 25, 1983, describing public fear of AIDS and the Reagan administration's response to this public health threat be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 25, 1983]

THE FEAR OF AIDS

The new disease known as AIDS, or acquired immune deficiency syndrome, has set loose a deadly epidemic. Morticians, prison guards and policemen have expressed an understandable but probably excessive fear of AIDS. The Reagan Administration, on the other hand, yawned through the first two years of the crisis and has now awakened to declare that no special efforts are needed. It could usefully imbibe a little of the public's panic.

AIDS is indeed a frightening disease: it kills many of its victims by sabotaging their immune systems. Its cause and cure have yet to be discovered. But it does not strike at random. It remains confined to male homosexuals, users of intravenous drugs, Haitian immigrants and, to a far lesser degree, the users of blood products, like hemophiliacs.

Those who are none of the above do not seem to be at risk. Of the 722 AIDS cases known to have occurred in New York City, according to Health Commissioner David Sencer, only four have not so far been assigned to one of the listed risk groups.

Nurses, doctors and laboratory workers who care for AIDS patients are the most obviously exposed persons. If AIDS were spread easily, by touch, coughing or sneezing, they would be the first casualties. So far there has not been one case of AIDS among health care workers who are not also members of the known risk groups. According to Edward Brandt, the top Federal health official, all present evidence indicates that "AIDS is spread almost entirely through sexual contact, through the sharing of needles by drug abusers and, less commonly, through blood or blood products."

A dozen AIDS cases have occurred among the 10 million people who have received blood in the last three years. In all but one, the donors appear to be free of AIDS. The evidently minuscule risk of acquiring AIDS from transfusions has been even further reduced by a recent requirement, agreed to by the homosexual community, that members of known risk groups who donate to blood banks will indicate that their blood be used only for research purposes.

An additional 13 cases of AIDS have occurred among people with the blood-clotting disorder known as hemophilia. They use not whole blood but plasma derived from thousands of donors, some of them paid. Their risk, though still very small, is inevitably higher than that of patients taking whole blood from a single donor.

The so-far unfounded fear that AIDS can be spread by casual contact has caused some of the victims to be doubly punished, once by a cruel disease, and again by landlords who evict them or friends who shun them. Homosexuals are afraid that the public's anxiety will revive discrimination and erode the civil rights they have gained.

AIDS patients need compassion. They should not be treated as lepers. When their disease is fully understood, the knowledge gained about immunology and cancer will benefit everyone. The homosexual community deserves support in its effort to combat the disease and to comfort its victims.

The Administration, saying it now considers AIDS the nation's No. 1 health priority, has diverted a small sum from existing budgets but wants no extra money appropriated for AIDS research. The meager amount that the National Institutes of Health has belatedly allocated from its $4 billion budget will not be dispensed for several months. One group of researchers has become so frustrated by the lack of Federal support that they have formed the AIDS Medical Foundation to raise private contributions.

"Some very promising research is taking place, but funding for that research is pitifully inadequate," says Mathilda Krim, a biologist at the Sloan-Kettering Institute of Cancer Research, who helped set up the foundation.

In caring for fellow citizens struck down by this bizarre and often lethal epidemic, the public has better lights to follow than the example of inattention and apathy that the Administration has set.

Mr. CRANSTON. Mr. President, I rise in support of H.R. 2713, a bill that would establish, and authorize appropriations for, a public health emergency fund to be used for research and investigations into the causes, treatment, and prevention of diseases or conditions that the Secretary of Health and Human Services determines present a public health emergency. S. 1226, a measure I introduced on May 5, 1983, along with Senators MOYNIHAN, KENNEDY, and TSONGAS, is a companion to this House-passed bill.

This legislation is vitally needed to remedy a serious inadequacy in our Nation's health system—the lack of a Federal mechanism for dealing effectively and expeditiously with large-scale public health emergencies which occur suddenly and require immediate action, such as investigating and monitoring outbreaks of disease, removing contaminated products from the market, or undertaking new medical research. These bills are designed to insure the availability of funding for swift and effective Federal responses to public health emergencies—including funding for priority research into the causes, treatment, and prevention of diseases or disorders, such as acquired immune deficiency syndrome (AIDS) that constitute public health emergencies.

To this end, the legislation before us today would establish in the Treasury a public health emergency fund and authorize the appropriation to the fund of $30 million for fiscal year 1984, and for each subsequent fiscal year such sums as are necessary for there to be $30 million in the fund at the beginning of the fiscal year. The fund would be available for use in responding to an emergency if the Secretary of HHS, after consultation with the Director of the National Institutes of Health, the Commissioner of the Food and Drug Administration, the Administrator of the Centers for Disease Control, or the Administrator of the Alcohol, Drug Abuse, and Mental Health Administration, determines either that a disease or disorder presents a public health emergency or that a public health emergency otherwise exists with respect to which the Secretary has authority to take responsive action. Following that determination, the allocation of moneys from the fund would be authorized for the purpose of appropriate responses to the emergency.

The House-passed bill differs from S. 1226 in only two significant ways. First, the authorization of appropriations for fiscal year 1984—and the authorized level of the fund in subsequent years—would be $30 million rather than the $40 million that S. 1226 would authorize. Second, the House bill would require the Secretary of HHS annually to report on the use of the funds to the House Committee on Energy and Commerce and the Senate Committee on Labor and Human Resources. I believe the reporting requirement is a good addition, and in the interest of the quick enactment of this legislation, I can accept the $30 million authorization in lieu of the $40 million. The authorized amount can be adjusted later based on experience under the legislation.

Mr. President, our Government needs to be better prepared to deal swiftly with public health emergencies. We have learned this lesson the hard way through the current AIDS crisis. Although the CDC has called AIDS the worst epidemic since smallpox and the Secretary of HHS recently declared that the investigation of AIDS has become the No. 1 priority of the Public Health Service, the initiation of a Federal response to AIDS, so critical for protecting the public health, was slow and inadequate. Had the Federal Government been able to respond faster to this emergency and applied its health resources more effectively to find some answers to this fatal disease, we might today be much closer to controlling the spread of AIDS and preventing this most tragic death toll from climbing higher. Also, by acting earlier and with greater visibility, we might have been able to allay some of the public hysteria that has grown around this disease by making sure that accurate information about AIDS was made widely available and thereby have discredited some of the ugly rumors that have been spread about the disease. Misinformation and groundless fears have resulted in a number of most regrettable incidents of discrimination to the point of the ostracism of AIDS victims.

Had we been better prepared, we might also have been able to supply faster the information needed by the Social Security Administration to act on applications by AIDS victims for social security disability insurance benefits and supplemental security income payments. This could have helped avoid the unnecessary suffering caused by the denial of such benefits. As the late Congressman Phil Burton noted in a March 25, 1983, letter to the Commissioner of the Social Security Administration, there were a number of cases in which AIDS patients were denied SSDI benefits despite the disastrous effects of this disease and the fact that the treatment for AIDS is itself often debilitating.

I am pleased that in response to the concerns raised by Congressman Burton, by me, and by others, the Social Security Administration ultimately took action to correct the unfair denial of social security disability benefits and supplemental security income payments to AIDS patients.

Mr. President, although several Government agencies have authority to address different aspects of public health problems, the costs, which can be substantial for public health emergencies, cannot be anticipated. Recent unexpected public health crises—such as Legionnaire's disease, toxic shock syndrome, the Tylenol poisonings, and three of the largest food recalls, salmon, mushrooms, and infant formula—have been of such numbers, sizes, and complexity that any funds budgeted for in advance have quickly been depleted. Without a contingency fund and coordinated effort, HHS, only way to react to these problems is by siphoning resources out of other programs to which the same immediacy may not attach but which are equally important in protecting the health of our Nation's citizens. Moreover, when those other resources cannot be found and diverted quickly, we experience dangerous delays in our efforts to stop the spread of diseases that can cause widespread suffering and death.

Mr. President, I want to thank the majority and minority leaders for their efforts—as I urged on the floor of the Senate on June 14, 1983—in having H.R. 2713 placed on the Senate Calendar and for enabling the Senate to take up the bill at this time. In a June 17 letter, I, together with the cosponsors of S. 1226, urged them to take this action, and I am delighted that the bill is now before the Senate. Enactment of this measure prior to consideration of the fiscal year 1984 Labor, HHS, Education and Related Agencies appropriations bill would greatly enhance the prospects for having a fully funded public health emergency fund operational early in fiscal year 1984.

The passage of this legislation will clearly demonstrate to the American people—and especially to those so very concerned about AIDS—that the Congress can respond comprehensively and in a bipartisan manner to a great public concern about a serious problem and act constructively to meet urgent national needs.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point the exchange of correspondence with the Social Security Administration regarding SSDI and SSI benefits for AIDS victims, as well as the letter that I, along with Senators MOYNIHAN, KENNEDY, and TSONGAS, sent to the majority and minority leaders urging that H.R. 2713 be

placed on the Senate Calendar and considered as soon as possible.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., June 17, 1983.

Hon. HOWARD H. BAKER, Jr.,
Majority Leader,
Hon. ROBERT C. BYRD,
Minority Leader,
U.S. Senate,
Washington, D.C.

DEAR HOWARD AND ROBERT: We are writing both to thank you for your efforts in having H.R. 2713—a bill to establish a public health emergency fund—placed on the Senate calendar and to urge that the bill be taken up and passed at the earliest opportunity if this can be done without the bill being amended.

As you know, S. 1226, which we introduced on May 5, 1983, is a companion to the House-passed bill. These bills respond in part to a very deeply felt concern of the American public that a major effort must be devoted to dealing with the acquired immune deficiency syndrome (AIDS) epidemic. They would establish, and authorize appropriations for, a public health emergency fund for research and investigation into the cause, treatment, and prevention of diseases or conditions which the Secretary of Health and Human Services determines present public health emergencies. Thus, this legislation would remedy a serious inadequacy in our Nation's health system—the lack of a mechanism for responding to large-scale public health threats, such as AIDS, that demand emergency action.

The House-passed bill differs from S. 1226 (which is described more fully in the enclosed copy of our May 27 letter to our Senate colleagues) in only two significant ways. First, the authorization of appropriations would be for $30 million rather than $40 million. Second, the House bill would require the Secretary of HHS annually to report on the use of the funds to Congress. We believe that the reporting requirement is a good addition, and, in the interest of quick enactment of this legislation, we would accept the $30 million authorization in lieu of the $40 million authorization at this point.

Enactment of this legislation prior to consideration of the fiscal year 1984 Labor, HHS, Education and Related Agencies appropriations bill would greatly enhance the prospects for having a fully-funded public health emergency fund operational at the outset of fiscal year 1984.

Therefore, we believe that the urgent need for enactment of this legislation warrants Senate action on it as soon as possible (if an agreement precluding amendments can be reached) and urge that H.R. 2713 be taken up as soon as it can be scheduled. This action would demonstrate to the American people—and especially to those so very concerned about AIDS—that the Congress can respond swiftly and in a bipartisan manner to meet urgent national needs.

We want to work with you on this matter in any way you believe would be helpful and very much appreciate your cooperation.

With warm regards,
Cordially,

DANIEL PATRICK MOYNIHAN.
EDWARD M. KENNEDY.
ALAN CRANSTON.
PAUL E. TSONGAS.

U.S. SENATE,
Washington, D.C., May 27, 1983.

DEAR COLLEAGUE: On May 5, 1983, we introduced S. 1226, legislation to establish a Public Health Emergency Fund to help ensure the availability of funding for swift and effective responses to public health emergencies through the Department of Health and Human Services.

There is now no effective mechanism for responding to large-scale public health emergencies that occur suddenly and require immediate action in terms of investigating outbreaks of disease, removing contaminated products from the market, or undertaking new medical research. This deficiency was plain in a number of recent public health emergencies—Legionnaires' disease, toxic shock syndrome, the Tylenol poisonings, and three of the largest food recalls (salmon, mushrooms, and infant formula). Now the outbreak of acquired immune deficiency syndrome (AIDS) a fatal disease that destroys the body's immune system, leaving the individual highly susceptible to life-threatening infections, is rapidly becoming an uncontrolled epidemic and demands urgent action.

These types of public health problems cannot be planned for in advance. Their costs, which can be substantial, cannot be calculated into an agency's fiscal year budget. Without a contingency fund and coordinated effort to respond to public health emergencies, our only way to react to these problems is by siphoning resources out of other research areas and public health programs to which the same immediacy may not attach but that are equally important in protecting the health of our Nation's citizens. When those other resources cannot be found and diverted quickly, we experience dangerous delays in efforts to stop the spread of diseases that can fast reach epidemic proportion causing much suffering and death.

The concept of making contingency funds available to meet public emergencies is not unprecedented. The EPA and FEMA have funds available for use in emergencies. Nor is this specific proposal novel. In 1982, then HHS Secretary Schweiker proposed to establish a National Emergency Response Fund to provide the Department with the capability to respond quickly and resourcefully in critical situations that affect the Nation's health and welfare.

Our bill would establish in the Treasury a Public Health Emergency Fund and authorize the appropriation of $40 million to the fund in fiscal year 1984 and, in each subsequent fiscal year, such sums as are necessary for there to be $40 million in the fund at the beginning of the fiscal year. The funds would be available for use in responding to an emergency if the Secretary of Health and Human Services, after consultation with the Director of CDC, or the Administrator of ADAMHA, determines that a disease or disorder presents a public health emergency, or that such an emergency otherwise exists, with respect to which the Secretary already has authority to take responsive action. Following that determination, the allocation of fund moneys would be authorized for the purpose of supporting appropriate responses to the emergency, including grants or contracts for research into the cause, treatment, and prevention of such a disease or disorder.

We hope that you will join with us in helping to prepare our country to respond more quickly and more effectively to public health emergencies. If you have any questions, or if you would like to join as a cosponsor, please have your staff contact Nancy Barrand at 4-3553.

With warm regards,
Cordially,

EDWARD KENNEDY.
DANIEL PATRICK MOYNIHAN.
ALAN CRANSTON.
PAUL TSONGAS.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 25, 1983.

Commissioner JOHN A. SVAHN,
Social Security Adminstration,
Baltimore, Md.

DEAR COMMISSIONER SVAHN: A number of constituents have recently asked my office to bring a matter of great urgency to your attention.

Because of the recent, and rapidly spreading, epidemic of A.I.D.S., a number of previously healthy young people have become afflicted with life-threatening and disabling accompanying illnesses such as Kaposi-Sarcoma and Pneumocystis Pneumonia.

In several cases these patients have been denied Social Security disability benefits despite the fact that the underlying syndrome is currently irreversible, the treatment (including chemotherapy) is often debilitating, the patients' vital health needs often require minimum stress and exertion, and the diseases are fatal in more than 80% of the patients after a two-year period.

It is clear that a firm diagnosis of KS or PCP should qualify a claimant for benefits under the equivalency concept. I was reassured to learn that this opinion is shared by Dr. Krajeski, the Chief Medical Advisor of the Program Branch of the Regional District in San Francisco, and by Gladys Vedros, the Director of the Regional Disability Programs Branch.

Other A.I.D.S. diagnoses, less obviously debilitating, could be handled on a case-by-case basis by workers familiar with the syndrome.

Both Dr. Krajeski and Mrs. Vedros have been extremely helpful to my office in this matter. However, some claimants with clear diagnoses continue to be denied eligibility on initial application, and sometimes again after appeal.

The unnecessary suffering caused by these denials, which are clearly inconsistent with existing criteria, could be avoided if the medical opinion of Dr. Krajeski and of all physicians treating these patients that a firm diagnosis of KS or PCP is a qualifying condition on equivalency grounds would be made a clear and undisputable matter of national policy, made clearly known to those responsible for initial evaluations.

The urgency of this matter for the individuals involved is obvious. For the larger society, it will become increasingly significant as these diseases occur in other areas. This is clearly a national problem.

I would like to stress that, in my opinion and in the opinion of all knowledgeable physicians of whom I am aware, this matter does not require any change in existing regulations. It requires only a clarification of existing regulations for front-line decision makers who, probably because of unfamiliarity with a very new and complicated medical problem, are unaware of the very clear qualification of these claimants.

I look forward to your response and to a prompt resolution of this matter in the interests of justice and sound medical practice.

Please reply to 11104 Federal Building, 450 Golden Gate Avenue, San Francisco, CA 94102.

Sincerely,

PHILLIP BURTON,
Member of Congress.

U.S. SENATE,
Washington, D.C., April 22, 1983.

Hon. MARGARET M. HECKLER,
Secretary of Health and Human Services, Washington, D.C.

DEAR MARGARET, I am contacting you in connection with a March 25 letter (copy enclosed) to you from the late Congressman Phil Burton regarding acquired immune deficiency syndrome (A.I.D.S.).

That letter expressed specific concerns about the denial of eligibility for social security disability insurance and supplemental security income benefits for certain individuals who have A.I.D.S. I have significant concerns regarding that matter and would, therefore, appreciate your providing me with your response to the issues he raised and the suggestions he made.

Thank you for your cooperation.

With warm regards,

Cordially,

ALAN CRANSTON.

THE SECRETARY OF
HEALTH AND HUMAN SERVICES,
Washington, D.C., June 7, 1983.

Hon. ALAN CRANSTON,
U.S. Senate, Washington, D.C.

DEAR SENATOR CRANSTON: Thank you for your inquiry supporting the late Congressman Burton's concerns about people with Acquired Immune Deficiency Syndrome (AIDS) being denied Social Security disability benefits and supplemental security income payments.

The Social Security Administration (SSA) has been monitoring the disability determination services (DDS) to determine if there are any problems with cases where the applicant is diagnosed to have AIDS. SSA recently found that some DDS' may not be deciding these cases properly.

As a result of this finding, SSA issued a notice to all DDS' pointing out the widely reported high mortality rates for people with AIDS and the associated infections and diseases such as Kaposi's sarcoma and Pneumocystic carinii pneumonia. Because of the high mortality rate, they advised the DDS' that a finding of medical equivalence will be appropriate if the condition is fully documented. Disability benefits would be paid in these cases, assuming all other eligibility criteria are met.

SSA's action is just one of a number of activities this Department has undertaken to combat AIDS. Since the first reports of AIDS cases in 1981, HHS has devoted the full range of assistance and expertise of its public health professionals—working with State and local public health officials, the practicing medical community, the academic and research communities, representatives of high risk groups, and the blood banking community. These early efforts have allowed us to identify high risk groups, to understand the spread of the syndrome, and to make recommendations to reduce the risk of spread of AIDS. Researchers within the Public Health Service, as well as in the major medical institutions of this country and around the world, are pursuing the cause of AIDS so that effective treatment and prevention measures can be developed and put in place.

I appreciate your interest and concern in this matter.

Sincerely,

MARGARET M. HECKLER,
Secretary.

DEPARTMENT OF
HEALTH AND HUMAN SERVICES,
April 26, 1983.

Attention: Ms. Doris Thomas.
Fifth Congressional District of California, Federal Building, San Francisco, Calif.

DEAR MS. THOMAS: I am responding to your inquiry of March 25, 1983 about people with Acquired Immune Deficiency Syndrome (AIDS) being denied Social Security disability benefits.

We have been monitoring the disability determination services (DDS) to determine if there are any problems with cases where the applicant is diagnosed to have AIDS. Only recently did we find that some DDS's may not be deciding these cases properly.

We are, therefore, issuing a notice to all DDS's pointing out the widely reported high mortality rates for people with AIDS and the associated infections and diseases such as Kaposi's sarcoma and Pneumocystis carinii pneumonia. Because of the high mortality rate, we are advising the DDS's that a finding of medical equivalence will be appropriate if the condition is fully documented.

I share your concern in this matter and appreciate your calling it to my attention.

Sincerely,

JOHN A. SVAHN.

The bill was ordered to a third reading, read the third time, and passed.

RECORD RENTAL AMENDMENT OF 1983

The Senate proceeded to consider the bill (S. 32) to amend title 17 of the United States Code with respect to rental, lease, or lending of sound recordings, which had been reported from the Committee on the Judiciary, with amendments, as follows:

On page 2, line 5, strike "copyright owners", and insert "owners of copyright in the sound recording and in the musical works embodied therein";

On page 2, line 7, strike "of a sound recording";

On page 2, line 8, after "dispose", insert "or authorize disposal";

On page 2, after line 11, insert the following:

SEC. 3. Section 115(c) of chapter 1 of title 17 of the United States Code is amended by renumbering paragraphs (3) and (4) thereof as paragraphs (4) and (5), respectively, and by adding after paragraph (2) the following new paragraph:

"(3) A compulsory license under this section includes the right to distribute phonorecords by rental, lease, or lending (or by acts or practices in such nature). Without prejudice to the royalty payable under paragraph (2) of this subsection and chapter 8 of this title, a royalty shall be payable by the compulsory licensee for every act of distribution of a phonorecord by or in the nature of rental, lease, or lending, by or under the authority of the compulsory licensee. With respect to each work embodied in the phonorecord, the royalty shall be a proportion of the revenue received by the compulsory licensee from every such act of distribution of the phonorecord under this paragraph equal to the proportion of the revenue received by the compulsory licensee from distribution of the phonorecord under paragraph (2) that is payable by a compulsory licensee under such paragraph and under chapter 8. The register of Copyrights shall prescribe regulations to carry out the purpose of this paragraph."

On page 3, line 9, strike "3.", and insert "4.";

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "Record Rental Amendment of 1983".

SEC. 2. Section 109(a) of chapter 1 of title 17 of the United States Code is amended by replacing the period at the end thereof with a colon and inserting thereafter the following: "*Provided, however,* That, unless authorized by the owners of copyright in the sound recording and in the musical works embodied therein, the owner of a particular phonorecord may not, for purposes of direct or indirect commercial advantage, dispose or authorize disposal of the possession of that phonorecord by rental, lease, or lending, or by any other activity or practice in the nature of rental, lease, or lending.".

SEC. 3. Section 115(c) of chapter 1 of title 17 of the United States Code is amended by renumbering paragraphs (3) and (4) thereof as paragraphs (4) and (5), respectively, and by adding after paragraph (2) the following new paragraph:

"(3) A compulsory license under this section includes the right to distribute phonorecords by rental, lease, or lending (or by acts or practices in such nature). Without prejudice to the royalty payable under paragraph (2) of this subsection and chapter 8 of this title, a royalty shall be payable by the compulsory licensee for every act of distribution of a phonorecord by or in the nature of rental, lease, or lending, by or under the authority of the compulsory licensee. With respect to each work embodied in the phonorecord, the royalty shall be a proportion of the revenue received by the compulsory licensee from every such act of distribution of the phonorecord under this paragraph equal to the proportion of the revenue received by the compulsory licensee from distribution of the phonorecord under paragraph (2) that is payable by a compulsory licensee under such paragraph and under chapter 8. The register of Copyrights shall prescribe regulations to carry out the purpose of this paragraph.".

SEC. 4. This amendment becomes effective upon its enactment.

Mr. THURMOND. Mr. President, when the Committee on the Judiciary organized at the beginning of this Congress, I proposed, and the committee ratified, the creation of a new Subcommittee on Patents, Copyrights, and Trademarks. The purpose of this subcommittee was to address, with developed expertise, the increasing need for legislative responses to the high technology advances of the 1980's.

S. 32, the Record Rental Amendment of 1983, is the first piece of legislation to be reported out of that subcommittee. The advantages of developed expertise are clearly demonstrated by the amendments offered to that bill by the distinguished Senator from

Utah, Mr. HATCH. The complexity of the issue is evidenced, not only in the changes made by S. 32 in our Federal copyright laws, but also by the changes it does not propose to make.

Mr. President, our committee report describes in detail the problem which S. 32 addresses in a farsighted manner. We are witnessing in this country the shadow of a phenomenon which has had a substantial adverse impact on the recording industry in Japan. Specifically, record rental stores lease record albums for a fee which represents a small portion of the purchase price. The lessee takes advantage of this opportunity to tape the rented record before its return. Thus, the rented record clearly displaces a potential sale. The fact that subsequent taping is clearly the motive behind the rental is demonstrated by the fact that some record stores even include a blank tape in the price of the rented record.

The first sale doctrine of our Federal copyright laws currently permits the rental of a record without the authority of the copyright holder. As a preventive measure, and in order to avoid the displacement of record purchases, S. 32 would modify that doctrine to prohibit the commercial leasing of records without the permission of the copyright owner. It would, however, preserve the ability of libraries to lend records.

Mr. President, I stress that S. 32 deals only with rental of records. It does not deal with the rental of video materials, which is a very different question. The committee concluded that the modification of the first sale doctrine proposed in S. 32 and the reasons for that modification cited in the committee report were appropriate in light of the unique problems presented by record rental and copying. The committee has under separate consideration legislation dealing with other aspects of the first sale doctrine.

Mr. President, I want to commend the sponsor of this bill, Senator MATHIAS, and our distinguished majority leader for their leadership on this legislation. As a fellow lover of country music, I recognize its importance to our national spirit and the contributions of the entire music industry to our economy. S. 32 is an attempt to protect that important industry from a potential, serious problem.

S. 32, THE RECORD RENTAL AMENDMENT OF 1983

Mr. MATHIAS. In 1909 Congress updated the copyright law and codified the first sale doctrine. As the report explains, the first sale occurs at the time the copyright owner conveys title to an unrelated person or company—be it a jobber, a distributor, a retailer, or the ultimate consumer. Congress originally adopted the doctrine to codify the common law rule against restraints on the alienation of tangible property. It focused on contract and commercial law, not on copyright law. It worked well until technology changed the record industry, and widespread home taping threatened to sap its strength by undermining its coin of the realm—copyright.

Record rental shops rent popular albums for 1 or 2 days for a dollar or two. This practice, which the copyright owners cannot prevent under the first sale doctrine, displaces sales since the customers go home and tape the records on their tape recorders. The industry's sales losses from home taping are estimated at $1 billion a year.

There are only 250 or so record rental stores in our country. But in Japan, where record rental originated in 1980, there are over 1,700 rental outlets—20 percent of the entire record retail industry. Conventional record sales in Japan in the vicinity of rental outlets have fallen by over 30 percent.

Under the provisions of S. 32, the copyright owners will regain some control over the way their products are marketed by retailers. The bill will allow the parties to work out between themselves how best to protect the interests we all have—retailers, the record companies, the artists and writers, and consumers alike—in keeping the music business healthy.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION AUTHORIZATION

The Senate proceeded to consider the bill (H.R. 2065) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes, which had been reported from the Committee on Commerce, Science, and Transportation with an amendment to strike out all after the enacting clause, and insert the following:

TITLE I

SEC. 101. That there is hereby authorized to be appropriated to the National Aeronautics and Space Administration to become available October 1, 1983:

(a) For "Research and development," for the following programs:

(1) Space transportation capability development, $2,009,400,000;

(2) Space transportation operations, $1,545,600,000;

(3) Physics and astronomy, $562,100,000;

(4) Planetary exploration, $220,400,000;

(5) Life sciences, $59,000,000;

(6) Space applications, $313,000,000;

(7) Technology utilization, $10,000,000;

(8) Aeronautical research and technology, $320,300,000;

(9) Space research and technology, $143,000,000; and

(10) Tracking and data systems, $700,200,000; and

(b) For "Construction of facilities," including land acquisition, as follows:

(1) Space Shuttle facilities at various locations as follows:

(A) Modifications for additional chillers for mission control center, Lyndon B. Johnson Space Center, $2,300,000;

(B) Modifications to mobile launch platform, John F. Kennedy Space Center, $27,300,000; and

(C) Modification of manufacturing and final assembly facilities for external tanks, Michoud Assembly Facility, $11,700,000;

(2) Space Shuttle payload facilities at various locations as follows:

(A) Construction of cargo hazardous servicing facility, John F. Kennedy Space Center, $9,000,000; and

(B) Modifications to spacecraft assembly and encapsulation facility for cargo processing, John F. Kennedy Space Center, $3,000,000;

(3) Construction of frequency standards laboratory, Jet Propulsion Laboratory, $2,700,000;

(4) Modifications to space flight operations facility, Jet Propulsion Laboratory, $1,600,000;

(5) Construction of fluid mechanics laboratory, Ames Research Center, $3,900,000;

(6) Construction of aeronautical tracking facility, Hugh L. Dryden Flight Research Facility, $800,000;

(7) Modifications and addition for composite materials laboratory, Langley Research Center, $5,100,000;

(8) Modifications to 30- by 60-foot wind tunnel, Langley Research Center, $4,400,000;

(9) Modifications for small engine component testing facility, Lewis Research Center, $7,000,000;

(10) Modifications to icing research tunnel, Lewis Research Center, $3,600,000;

(11) Relocation of 26-meter STDN antenna, Spain, $1,700,000;

(12) Repair of facilities at various locations, not in excess of $500,000 per project, $19,500,000;

(13) Rehabilitation and modification of facilities at various locations, not in excess of $500,000 per project, $24,500,000;

(14) Minor construction of new facilities and additions to existing facilities at various locations, not in excess of $250,000 per project, $4,800,000; and

(15) Facility planning and design not otherwise provided for, $9,200,000.

(c) For "Research and program management," $1,242,500,000, and such additional or supplemental amounts as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law.

(d) Notwithstanding the provisions of subsection 101(g), appropriations hereby authorized for "Research and development" may be used (1) for any items of a capital nature (other than acquisition of land) which may be required at locations other than installations of the Administration for the performance of research and development contracts, and (2) for grants to nonprofit institutions of higher education, or to nonprofit organizations whose primary purpose is the conduct of scientific research, for purchase or construction of additional research facilities; and title to such facilities shall be vested in the United States unless the Administrator determines that the national program of aeronautical and space activities will best be served by vesting title in

any such grantee institution or organization. Each such grant shall be made under such conditions as the Administrator shall determine to be required to insure that the United States will receive therefrom benefit adequate to justify the making of that grant. None of the funds appropriated for "Research and development" pursuant to this Act may be used in accordance with this subsection for the construction of any major facility, the estimated cost of which, including collateral equipment, exceeds $250,000, unless the Administrator or his designee has notified the Speaker of the House of Representatives and the President of the Senate and the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate of the nature, location, and estimated cost of such facility.

(e) When so specified and to the extent provided in an appropriation Act, (1) any amount appropriated for "Research and development" or for "Construction of facilities" may remain available without fiscal year limitation, and (2) maintenance and operation of facilities, and support services contracts may be entered into under the "Research and program management" appropriation for periods not in excess of twelve months beginning at any time during the fiscal year.

(f) Appropriations made pursuant to subsection 101(c) may be used, but not to exceed $35,000, for scientific consultations or extraordinary expenses upon the approval or authority of the Administrator and his determination shall be final and conclusive upon the accounting officers of the Government.

(g) Of the funds appropriated pursuant to subsections 101(a) and 101(c), not in excess of $75,000 for each project, including collateral equipment, may be used for construction of new facilities and additions to existing facilities, and for repair, rehabilitation, or modification of facilities: *Provided*, That, of the funds appropriated pursuant to subsection 101(a), not in excess of $250,000 for each project, including collateral equipment, may be used for any of the foregoing for unforeseen programmatic needs.

SEC. 102. Authorization is hereby granted whereby any of the amounts prescribed in paragraphs (1) through (14), inclusive, of subsection 101(b)—

(1) in the discretion of the Administrator or his designee, may be varied upward 10 percent, or

(2) following a report by the Administrator or his designee to the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate on the circumstances of such action, may be varied upward 25 percent,

to meet unusual cost variations, but the total cost of all work authorized under such paragraphs shall not exceed the total of the amounts specified in such paragraphs.

SEC. 103. Not to exceed ½ of 1 percent of the funds appropriated pursuant to subsection 101(a) hereof may be transferred to and merged with the "Construction of facilities" appropriation, and, when so transferred, together with $10,000,000 of the funds appropriated pursuant to subsection 101(b) hereof (other than funds appropriated pursuant to paragraph (15) of such subsection) shall be available for expenditure to construct, expand, or modify laboratories and other installations at any location (including locations specified in subsection 101(b)), if (1) the Administrator determines such action to be necessary because of changes in the national program of aeronautical and space activities or new scientific or engineering developments and (2) he determines that deferral of such action until the enactment of the next authorization Act would be inconsistent with the interest of the Nation in aeronautical and space activities. The funds so made available may be expended to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances utilities, and equipment. No portion of such sums may be obligated for expenditure or expended to construct, expand, or modify laboratories and other installations unless (A) a period of 30 days has passed after the Administrator or his designee has transmitted to the Speaker of the House of Representatives and to the President of the Senate and to the Committee on Science and Technology of the House of Representatives and to the Committee on Commerce, Science, and Transportation of the Senate a written report containing a full and complete statement concerning (i) the nature of such construction, expansion, or modification, (ii) the cost thereof including the cost of any real estate action pertaining thereto, and (iii) the reason why such construction, expansion, or modification is necessary in the national interest, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 104. Notwithstanding any other provision of this Act—

(1) no amount appropriated pursuant to this Act may be used for any program deleted by the Congress from requests as originally made to either the House Committee on Science and Technology or the Senate Committee on Commerce, Science, and Transportation,

(2) no amount appropriated pursuant to this Act may be used for any program in excess of the amount actually authorized for that particular program by subsections 101(a) and 101(c), and

(3) no amount appropriated pursuant to this Act may be used for any program which has not been presented to or requested of either such committee,

unless (A) a period of 30 days has passed after the receipt by the Speaker of the House of Representatives and the President of the Senate and each such committee of notice given by the Administrator or his designee containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of such proposed action, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 105. It is the sense of the Congress that it is in the national interest that consideration be given to geographical distribution of Federal research funds whenever feasible, and that the National Aeronautics and Space Administration should explore ways and means of distributing its research and development funds whenever feasible.

SEC. 106. The authorization for space transportation capability development includes provision for the production activities necessary to provide for a fleet of Space Shuttle orbiters, including the production of structural and component spares, necessary to ensure confident and cost-effective operation of the orbiter fleet, as well as provisions for maintaining production readiness for a fifth orbiter vehicle.

SEC. 107. Title III of the National Aeronautics and Space Act of 1958, as amended, is amended by adding at the end thereof the following new section:

"MISUSE OF AGENCY NAME AND INITIALS

"SEC. 310. (a) No person (as defined by section 305) may (1) knowingly use the words 'National Aeronautics and Space Administration' or the letters 'NASA', or a combination, variation, or colorable imitation of those words or letters either alone or in combination with other words or letters, as a firm or business name in a manner reasonably calculated to convey the impression that such firm or business has some connection with, endorsement of, or authorization from, the National Aeronautics and Space Administration which does not, in fact, exist; or (2) knowingly use those words or letters or any combination, variation, or colorable imitation thereof either alone or in combination with other words or letters in connection with any product or service being offered or made available to the public in a manner reasonably calculated to convey the impression that such product or service has the authorization, support, sponsorship, or endorsement of, or the development, use, or manufacture by or on behalf of the National Aeronautics and Space Administration which does not, in fact, exist.

"(b) Whenever it appears to the Attorney General that any person is engaged in an act or practice which constitutes or will constitute conduct prohibited by subsection (a), the Attorney General may initiate a civil proceeding in a district court of the United States to enjoin such act or practice.".

SEC. 108. Section 103(1) of the National Aeronautics and Space Act of 1958, as amended, is amended, by striking out "and (C)" and inserting in lieu thereof "(C) the operation of a space transportation system including the Space Shuttle, upper stages, space platforms, and related equipment, and (D)".

SEC. 109. Notwithstanding any other provision of law, there shall be transferred to NASA three government-owned tracts of NASA used land and improvements thereon (totalling approximately 33.5 acres) at Ellington Air Base, Texas, without any transfer of funds therefor.

SEC. 110. Any decision or proposed policy by the President or the National Aeronautics and Space Administration to commercialize some or all of the existing expendable launch vehicle technologies and associated facilities and equipment shall be presented to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Science and Technology of the House of Representatives for their review. No such decision or policy shall be implemented unless (A) a period of 30 days has passed after the receipt by each such committee of a full and complete statement of the decision or proposed policy and the facts and circumstances relied upon in support of such decision or proposed policy, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the decision or proposed policy.

SEC. 111. This Act may be cited as the "National Aeronautics and Space Administration Authorization Act, 1984".

TITLE II

SEC. 201. There is authorized to be appropriated $29,336,000 for the fiscal year 1984 for the purpose of operating the land remote sensing satellite system, including provision for storage of a backup satellite.

SEC. 202. Notwithstanding title II of the National Aeronautics and Space Administration Authorization Act, 1983, the Secretary of Commerce shall not transfer the ownership or management of any civil land, meteorological, or ocean remote sensing space satellite system and associated ground system equipment unless, in addition to any other requirement of law—

(1) the Secretary of Commerce or his designee has presented, in writing, to the Speaker of the House of Representatives and the President of the Senate, and to the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate, a comprehensive statement of recommended policies, procedures, conditions, and limitations to which any transfer should be subject; and

(2) the Congress thereafter enacts a law which contains such policies, procedures, conditions, or limitations (or a combination thereof) as it deems appropriate for any such transfer.

Mr. GORTON. Mr. President, for the purpose of authorizing funds for fiscal year 1984 for the National Aeronautics and Space Administration (NASA), the Commerce Committee reported a substitute amendment which reflects an agreement reached between the members of the Senate Committee on Commerce, Science, and Transportation and the members of the House Committee on Science and Technology.

On April 26, 1983, the House passed its NASA authorization, H.R. 2065, which would authorize $7,268,220,000 for NASA in fiscal year 1984. On June 15, 1983, the Senate passed its NASA authorization, S. 1096, which would authorize $7,278,100,000 for NASA for fiscal year 1984.

The compromise legislation before us, H.R. 2065 as amended, authorizes $7,267,600,000 for fiscal year 1984 NASA activities. This figure is $10,500,000 below the authorization in S. 1096 and is $620,000 below the authorization in the original House legislation.

The major differences between this substitute amendment and the administration request are:

An additional $82 million for space transportation capability development, primarily for additional main engines for the space shuttle fleet and long leadtime spare part components for the orbiters.

An increase of $45 million for the Space Telescope for overrun costs estimated for fiscal year 1984 and $17.5 million for other space science programs.

An additional $30 million for space applications and technology utilization.

An increase of $20 million for aeronautical research and technology.

Reductions totaling $13.4 million in construction of facilities and research and program management.

NASA has just completed the launch and return of the space shuttle in what was the most successful mission so far. We can take great pride in the contribution which NASA's programs in space and aeronautics is making to our Nation's technological leadership and aspirations.

I ask unanimous consent that the following brief statement on behalf of myself and Senator HEFLIN, the ranking member of the Subcommittee on Science, Technology, and Space, explaining the provisions of the substitute amendment, be printed in the RECORD.

There being no objection, the explanatory statement was ordered to be printed in the RECORD, as follows:

EXPLANATORY STATEMENT OF THE SUBSTITUTE AMENDMENT

The NASA request for fiscal year 1984 totaled $7,106,500,000. The House authorized $7,268,220,000 and the Senate authorized $7,278,100,000. The substitute amendment provides a total authorization for fiscal year 1984 of $7,267,600,000 as follows:

SUMMARY OF ADJUSTMENTS TO H.R. 2065—NASA FISCAL YEAR 1984 AUTHORIZATION

	Budget request	House action	Senate action	Substitute amendments
Research and development:				
Space transportation capabilities development	$1,927,400,000	$1,999,400,000	$2,022,400,000	$2,009,400,000
Space transportation operations	1,570,600,000	1,570,600,000	1,535,600,000	1,545,600,000
Physics and astronomy	514,600,000	566,600,000	558,600,000	562,100,000
Planetary exploration	205,400,000	220,400,000	215,400,000	220,400,000
Life sciences	59,000,000	59,000,000	59,000,000	59,000,000
Space applications	289,000,000	306,000,000	321,000,000	313,000,000
Technology utilization	4,000,000	10,000,000	10,000,000	10,000,000
Aeronautical research and technology	300,300,000	311,600,000	328,300,000	320,300,000
Space research and technology	138,000,000	143,000,000	138,000,000	143,000,000
Tracking and data acquisition	700,200,000	700,200,000	700,200,000	700,200,000
Total	5,708,500,000	5,886,800,000	5,888,500,000	5,883,000,000
Construction and facilities	150,500,000	138,920,000	142,100,000	142,100,000
Research and program management	1,247,500,000	1,242,500,000	1,247,500,000	1,242,500,000
Grand total	7,106,500,000	7,268,220,000	7,278,100,000	7,267,600,000

The points in disagreement and the resolution of them are as follows:

1. NASA requested $1,927,400,000 for Space Transportation Capability Development activities.

The House authorized $1,999,400,000, a net increase of $72 million as follows: an increase of $70 million to increase funding for orbiter and engines spares and to maintain production readiness for a fifth orbiter; an increase of $10 million to continue contractor space station studies, to fund alternative concept studies, and to fund studies of a space platform serviced by an extended-duration orbiter; and a decrease of $8 million to reduce level of support for engineering and technical base activities.

The Senate authorized $2,022,400,000, an increase of $95 million as follows: an increase of $85 million for the initiation of procurement of a fifth Space Shuttle orbiter; an increase of $5 million for additional space station studies; and an increase of $5 million for the teleoperator maneuvering system.

The substitute amendment authorizes $2,009,400,000 for Space Transporation Capability Development activities including the following: an increase of $75 million for orbiter and engine spares, an increase of $10 million for space station studies, a decrease of $8 million in engineering and Technical Base, and an increase of $5 million for the teleoperator maneuvering system.

2. NASA requested $1,570,600,000 for Space Transportation Operations activities.

The House authorized the NASA request.

The Senate authorized $1,535,600,000, a reduction of $35 million in the level of support for operations.

The substitute amendment authorizes $1,545,600,000, a decrease of $25 million, for Space Transportation Operations activities.

3. NASA requested $514,600,000 for Physics and Astronomy activities.

The House authorized $566,600,000 which is $52 million over the request and includes: an increase of $45 million for the Space Telescope program to offset cost overruns; an increase of $6 million in Research and Analysis for experimental and theoretical research ($4M) and for instrumentation ($2M); and an increase of $1 million in Mission Operations and Data Analysis for HEAO data analysis.

The Senate authorized $558,600,000 a net increase of $44 million over the request. This budget includes an increase of $50 million in Space Telescope for cost overruns; an increase of $4 million in Research and Analysis for experimental and theoretical research and mission definition; an increase of $1 million in Mission Operations and Data Analysis for HEAO data analysis; and a decrease of $11 million in Shuttle/Spacelab Payload Development which is a net of a $16 million decrease for Solar Optical Telescope and an increase of $5 million for Space Plasma Lab.

The substitute amendment authorizes $562,100,000 for Physics and Astronomy ac-

tivities including the following: an increase of $45 million for the Space Telescope program, a decrease of $4.5 million for Shuttle/Spacelab Payload Development and Mission Management (the net result of a decrease of $7 million for the Solar Optical Telescope and an increase of $2.5 million for the Space Plasma Lab), an increase of $1 million in Mission Operations and Data Analysis for HEAO data analysis, and an increase of $6 million in Research and Analysis.

4. NASA requested $205,400,000 for Planetary Exploration activities in fiscal year 1984.

The House authorized $220,400,000, an increase of $15 million over the NASA request. The increase is in Research and Analysis for university research support and instrumentation and to partially restore the activity to fiscal year 1980 purchasing power.

The Senate authorized $215,400,000 an increase of $10 million over the NASA request. The increase is for Research and Analysis for experimental and theoretical research and mission definition.

The substitute amendment authorizes $220,400,000, an increase of $15 million for Research and Analysis activities.

5. NASA requested $289,000,000 for Space Application activities in fiscal year 1984.

The House authorized $306,000,000 an increase of $17 million over the request. This amount includes an increase of $9 million in Solid Earth Observations—for Agristars ($2M) to continue NASA participation; for Research and Analysis ($4M) for Synthetic Aperture Radar and Global Resource Information Systems studies; for Technology Transfer ($3M) for Application System Verification Tests. Also included is an increase of $3 million in Environmental Observations for Research and Analysis to support mission definition studies for Origin of Plasmas in the Earth's Neighborhood ($2M) and a study of Sun-Earth interactions ($1M). The House also authorized an increase of $5 million in Materials Processing for a university center for research on the separation and purification of organic materials and to augment industrial research aimed at commercial applications.

The Senate authorized $321,000,000 an increase of $32 million over the request. This includes an increase of $12 million in Solid Earth Observations for future sensor development and data utilization activities in Agristars ($3M), Research and Analysis ($5M), and Technology Transfer ($4M). The Senate authorized an increase of $10 million for Environmental Observations in Space Physics-Advanced Technological Development for university research in the Origin of Plasmas in the Earth's Neighborhood program ($2M); for Upper Atmosphere Research Satellite experiments ($4M); for Atmosphere Dynamics and Radiation Research ($2M) for advanced microwave sounder; and for Ocean Processes Research ($2M) for an advanced scatterometer. The Senate also authorized an increase of $5 million in Materials Processing to continue developing technology including small scale hardware for preliminary flight experiments and validation of concepts and for research in the separation and purification of biomaterials. Finally, the Senate authorized an increase of $5,000,000 for the Communications program for research on advanced communications systems (beyond ACTS).

The substitute amendment authorizes $313,000,000 for space applications programs including the following changes: an increase of $9 million for Solid Earth Observation as provided in the House action; an increase of $7 million in Environmental Observations ($2 million to support mission definition studies for Origins of Plasmas in the Earth's Neighborhood and $5 million to be used at the agency's discretion for Upper Atomspheric Research Satellite Experiments, for Atmosphere Dynamics and Radiation Research, and for Ocean Processes Research with the expectation that NASA will be guided by the Committee comments in the Legislative Report accompanying S. 1096); an increase of $5 million for Materials Processing in Space activities for the establishing university centers for research on the separation and purification of organic materials, for small scale hardware for preliminary flight experiments and concept validation, and for industrial research aimed at commerical applications; and an increase of $3 million for advanced satellite communications technology development (beyond ACTS). Within available funds NASA is directed to undertake a study of Sun-Earth interactions as called for in the Legislative Report accompanying H.R. 2065. The Members also adopt the Senate provision calling for a study of the Space Applications program.

6. NASA requested $300,300,000 for Aeronautical Research and Technology activities in fiscal year 1984.

The House authorized $311,600,000 an increase of $11.3 million over the request. This increase is the net of an increase of $20 million for the Advanced Turboprop program, an increase of $14 million for civil systems technology, and a general decrease of $22.7 million in the Research and Technology base.

The Senate authorized $328,300,000, an increase of $28 million over the request. This increase is the net result of a general reduction of $15 million in the Research and Technology Base in an increase of $43 million in System Technology Programs. The Systems Technology increase would be applied as follows: Advanced Turboprop ($18M); Laminar flow control ($5M); Advanced Transport Operating System ($2M); Advanced Turbofan ($4M); General Aviation/Commuter Engine Technology ($3M); and $11 million for the following technologies, advanced composites, energy efficient engine, energy efficient transport, and aeronautical systems studies.

The substitute amendment authorizes $320,300,000. Within this amount, $20 million is authorized only for the Advanced Turboprop Program, including activities leading to a flight test by 1987. The total further reflects the net of a $22.7 million reduction in the Research and Technology Base and a $22.7 million increase to be applied at NASA's discretion to civil Systems Technology programs, including Advanced Transport Operating Systems, Laminar Flow Control, Small Engine Component Technology, Advanced Turbofan Research, Advanced Composites, Advanced Metallics, Energy Efficient Engine, Energy Efficient Transport and Aeronautical Systems Studies.

7. NASA requested $138,000,000 for Space Research and Technology activities in fiscal year 1984.

The House authorized $143,000,000, an increase of $5 million over the request. This increase is in the Research and Technology base for university instrumentation ($2.5M) and advanced chemical propulsion ($2.5M).

The Senate authorized $138,000,000 which was the level requested.

The substitute amendment authorizes $143,000,000 as provided by the House with the expectation that NASA will initiate steps, possibly through planning grants, to identify the needs of universities and colleges for modern research laboratories, instrumentation, equipment, student fellowships and faculty development in order to maintain a healthy university base to support our Nation's civil space program.

8. NASA requested $150,500,000 for Construction of Facilities activities in fiscal year 1984.

The House authorized $138,920,000 a decrease of $11,580,000 below the request. This decrease was the net result of a general reduction of $5 million, the deletion of $8.4 million for the Ellington Air Force Base property transfer and an increase of $1.82 million to provide for the disassembly of an Apollo Launch Umbilical Tower in a manner that would allow reassembly for historical preservation.

The Senate authorized $142,100,000 which would delete the $8.4 million in the request for the Ellington Air Force Base property transfer.

The substitute amendment authorizes $142,100,000 for Construction of Facilities activities reflecting the deletion of $8.4 million requested for the transfer to NASA of property at Ellington Air Force Base. The House and Senate authorization Committees agree that the Apollo Launch Umbilical Tower should be disassembled in a manner that would allow the tower to be reassembled for historical preservation. The House and Senate authorizing Committees further agree that the funding required to reassemble the tower should be the responsibility of government agencies or private groups having a direct interest in historical preservation.

9. NASA requested $1,247,500,000 for Research and Program Management activities in fiscal year 1984.

The House authorized $1,242,500,000 a general reduction of $5 million below the request.

The Senate authorized $1,247,500,000, the level of the request.

The substitute amendment would authorize $1,242,500,000.

10. The House included a language provision in Sec. 1(a)(8) related to funding amounts for the Advanced Turbo-prop program.

Senate bill had no comparable provision.

The substitute amendment would delete the language added by the House.

11. The House included a language provision in Sec. 1(b)(1)(B) related to preservation of an Apollo Launch Umbilical Tower.

The Senate bill contained no comparable provision.

The substitute amendment would delete the language added by the House since NASA has already exercised the contract option as specified using fiscal year 1983 funding.

12. The House included a new Section 109 authorizing transfer to NASA of property at Ellington Air Force Base without any transfer of funds therefor.

The Senate bill included a similar provision as Sec. 1(h) with some technical changes.

The substitute amendment includes the Senate language as Section 109.

13. The House added language at the end of Section 106 providing for maintaining production readiness for a fifth orbiter vehicle.

The Senate added language at the end of section 106 authorizing initiation of procurement of a fifth orbiter vehicle.

The substitute amendment adopts the House language but deleted the references to the size of the orbiter fleet as being four orbiter vehicles.

14. In adopting Section 107, a provision related to misuse of the agency name as proposed by the Administration, the House deleted the second sentence in subsection (b).

The Senate adopted as Sec. 108 the Administration provisions related to misuse of the agency name.

The substitute amendment would adopt the House language as Sec. 107.

15. The House included in a new Sec. 108 an amendment to the Space Act to include within the definition of aeronautical and space activities as specified in Sec. 203 of the Space Act the following: "the operation of a space transportation system including the Space Shuttle, upper stages, space platforms, and related equipment."

Senate bill had no comparable language.

The substitute amendment includes the new Sec. 108 amending the Space Act as included in the House bill to clarify the definition of aeronautical and space activities.

16. The Senate included a new Sec. 107 to provide that any decision and proposed policy related to the commercialization of expendable launch vehicles be presented to the Senate Committee on Commerce, Science, and Transportation and the House Committee on Science and Technology for review and approval.

The House bill included no comparable language.

The substitute amendment includes a new Sec. 110 to provide that any decision and proposed policy related to the commercialization of expendable launch vehicles be presented to the Senate Committee on Commerce, Science and Transportation and the House Committee on Science, and Technology for review thirty days prior to implementation.

Mr. HEFLIN. Mr. President, I would like to join the chairman of the Subcommittee on Science, Technology and Space, Senator GORTON, in submitting this statement pertaining to the fiscal year 1984 NASA authorization. We have worked out a compromise with the House of Representatives. I am particularly pleased with the funds provided for a fifth shuttle orbiter, the teleoperator maneuvering system, space station studies, space science, materials processing, and aeronautics. I am also supportive of steps we will be taking to address the needs of universities and colleges to undertake space-related research.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

Mr. STEVENS. Mr. President, I move to reconsider en bloc the votes by which bills were passed.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AUTHORIZATION FOR TESTIMONY OF CAROL MANTLE IN THE TRIAL OF UNITED STATES OF AMERICA AGAINST KENNETH TRAVIS BYNUM, CR. NO. 83-00408 (N.D. FLA.)

Mr. STEVENS. Mr. President, I send to the desk a resolution in behalf of the distinguished majority leader and the distinguished minority leader and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 170) to authorize the testimony of Carol Mantle in the trial of United States of America v. Kenneth Travis Bynum, Cr. No. 83-00408 (N.D. Fla.)

The PRESIDING OFFICER. Without objection, the Senate will proceed to its immediate consideration.

The Senate proceeded to consider the resolution.

Mr. STEVENS. Mr. President, this resolution would authorize testimony by Carol Mantle, an employee in Senator Hawkins' office, in the case of the United States against Kenneth Bynum, which is pending in the U.S. District Court for the Northern District of Florida. Counsel for the Government has requested this testimony at the trial, which is set for June 29. This criminal prosecution charges violation of the Federal statute against mailing threatening communications. This resolution would authorize Ms. Mantle to testify regarding the receipt and handling of the letter underlying the prosecution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 170) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

S. RES. 170

Whereas, the case of *United States of America* v. *Kenneth Travis Bynum*, Criminal Action No. 83-00408, is set for trial on June 29, 1983, in the United States District Court for the Northern District of Florida;

Whereas, counsel for the government has requested the testimony of Carol Mantle, a Senate employee in Senator Hawkins' Winter Park, Florida, office;

Whereas, by the privileges of the Senate of the United States and Rule XI of the Standing Rules of the Senate, no evidence under the control or in the possession of the Senate can, by the judicial process, be taken from such control or possession but by permission of the Senate;

Whereas, when it appears that testimony of an employee of the Senate is needful for use in any court for the promotion of justice, the Senate will take such action thereon as will promote the ends of justice consistently with the privileges and rights of the Senate: Now, therefore be it

Resolved, That Carol Mantle is authorized to testify in the case of, *United States of America* v. *Kenneth Travis Bynum*, Criminal Action No. 83-00408 (N.D. Fla.), except concerning matters that are privileged from disclosure.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

DISCHARGING THE JUDICIARY COMMITTEE FROM FURTHER CONSIDERATION OF S. 650

Mr. STEVENS. Mr. President, I ask unanimous consent that the Judiciary Committee be discharged from further consideration of S. 650, a bill to raise the retirement age for superior court judges in the District of Columbia, and I ask that it be referred to the Committee on Governmental Affairs.

The PRESIDING OFFICER. Without objection, it is so ordered.

VETERANS HEALTH CARE AND PROGRAMS IMPROVEMENTS AMENDMENTS OF 1983

Mr. STEVENS. Mr. President, I ask that the Chair lay before the Senate Calendar Order No. 223, S. 578.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 578) to amend title 38, United States Code, to provide for adult day health care services for veterans, to authorize the Veterans Administration to administer a community residential care program, to establish a presumption of service-connection for former prisoners of war suffering from dysthymic disorder and to revise and clarify eligibility for reimbursement of expenses of travel for Veterans Administration health care, which had been reported from the Committee on Veterans' Affairs with an amendment.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Veterans' Affairs with an amendment to strike out all after the enacting clause and insert the following:

That (a) this Act may be cited as the "Veterans' Health Care and Programs Improvement Act of 1983".

(b) Except as otherwise expressly provided, whenever in this Act an amendment is expressed in terms of an amendment to a section or other provision, the reference shall be considered to be made to a section or other provision of title 38, United States Code.

TITLE I—VETERANS' ADMINISTRATION HEALTH CARE PROGRAMS

ADULT DAY HEALTH-CARE SERVICES

SEC. 101. (a) Section 620 is amended—

(1) by adding at the end of the catchline a semicolon and "adult day health care pilot program";

(2) in subsection (a), by striking out "the jurisdiction" and inserting in lieu thereof "the direct jurisdiction";

(3) in subsection (b), by inserting "or adult day health care" after "nursing home care";

(4)(A) by redesignating subsection (e) as subsection (f), and inserting "(1)" before "For"; and

(B) by adding at the end of subsection (f) (as so redesignated) the following new paragraph:

"(2) For the purposes of this section, the term 'adult day health care' means health and social services furnished to individuals in congregate settings during daytime hours for the purpose of enabling such individuals to reside in supportive home environments rather than in nursing home care facilities. Such health and social services may include medical services furnished on an outpatient or ambulatory basis, midday meals, and transportation, including transportation between home and the facility providing such health and social services."; and

(5) by inserting after subsection (d) the following new subsection:

"(e)(1)(A) Subject to subparagraphs (B) and (C) of this paragraph, the Administrator may conduct a pilot program of adult day health care under which the Administrator, in the case of a veteran described in paragraph (1) of subsection (a) of this section who is eligible for transfer pursuant to such subsection, may transfer such veteran for the purpose of such veteran being furnished such care, at the expense of the United States, to any public or private facility not under the direct jurisdiction of the Administrator which furnishes such care. Such care may not be furnished under this paragraph at the expense of the United States for more than 6 months in the aggregate in connection with any one transfer, except (i) in the case of a veteran whose hospitalization was primarily for a service-connected disability, or (ii) where in the judgment of the Administrator a longer period is warranted in the case of any other veteran.

"(B)(i) The terms and conditions set forth in subsections (b) and (c) of this section applicable (I) to the transfer or admission of veterans to institutions for nursing home care under this section, and (II) to contracts for the provision of such care, respectively, shall apply to the furnishing of adult day health care under this subsection.

"(ii) The authorities provided in the final sentence of subsection (a) of this section and in the first two sentences of subsection (d) of this section with respect to furnishing nursing home care to certain veterans shall be available to the Administrator for the furnishing of adult day health care to such veterans under this subsection.

"(C) Adult day health care may be furnished to a veteran under this subsection only if the Administrator determines that the cost per week of such care will be less than the lesser of the cost per week of furnishing such veteran nursing home care under this section or the cost per week of furnishing such veteran nursing home care in a facility under the direct jurisdiction of the Administrator.

"(2) In exchange for the United States being relieved from paying all or part of the expenses that would otherwise be paid by the United States under paragraph (1) of this subsection to a facility providing care to an eligible veteran under such paragraph, the Administrator may, pursuant to a contractual arrangement with such facility, provide such facility with inkind assistance through Veterans' Administration employees and the sharing of other Veterans' Administration resources. In any such contractual arrangement, the Administrator may agree to provide such assistance for utilization solely in the furnishing of adult day health care and only to the extent that the cost of such assistance is equal to or less than the amount of the expenses that, under such arrangement, the United States will be relieved from paying.

"(3) The Administrator may, as part of the pilot program under paragraph (1) of this subsection, establish and conduct at each of four geographically dispersed hospital or outpatient facilities over which the Administrator has direct jurisdiction a program of adult day health care for veterans who are eligible for such care under paragraph (1) of this subsection.

"(4) To the extent that the pilot program authorized by this subsection is carried out, the Administrator—

"(A) shall plan and conduct such program and a study thereof so as to provide for the assessment and demonstration of (i) any medical efficacy and cost effectiveness of furnishing adult day health care as an alternative for nursing home care, and (ii) the comparative advantages and disadvantages of providing such care through facilities not under the direct jurisdiction of the Administrator and facilities that are under such jurisdiction; and

"(B) may not furnish adult day health care under this subsection after September 30, 1987.

"(5) In the annual reports to the Congress for each of fiscal years 1984, 1985, and 1986 as required by section 214 of this title, the Administrator shall include detailed descriptions of the activities carried out under this subsection. Not later than December 1, 1986, the Administrator shall submit to the Committees on Veterans' Affairs of the House of Representatives and the Senate a report containing—

"(A) the results of any study conducted under paragraph (4)(A) of this subsection; and

"(B) any recommendations for legislative and administrative action that the Administrator considers appropriate.".

(b) The table of sections at the beginning of chapter 17 is amended by amending the item relating to section 620 to read as follows:

"620. Transfers for nursing home care; adult day health care pilot program.".

VIETNAM-ERA VETERANS' READJUSTMENT ISSUES

SEC. 102. Section 612A is amended—

(1) in subsection (a), by striking out "September 30, 1984" and inserting in lieu thereof "September 30, 1985";

(2) in subsection (g)(1)—

(A) by striking out "September 30, 1984" and inserting in lieu thereof "September 30, 1985"; and

(B) by striking out "October 1, 1984" and inserting in lieu thereof "October 1, 1985"; and

(3) in subsection (g)(2)—

(A) by striking out "April 1, 1984" and inserting in lieu thereof "September 30, 1984";

(B) by striking out "on" after "report" and inserting in lieu thereof "containing (A) a description of"; and

(C) by inserting before the period a comma and "and (B) the Administrator's evaluation of the effectiveness of the readjustment counseling services provided pursuant to this section in helping to meet the readjustment needs of veterans who served on active duty during the Vietnam era, with particular reference to identification and treatment of post-traumatic stress disorder".

SEC. 103. (a) The Administrator of Veterans' Affairs shall design and conduct a comprehensive study of the prevalence, incidence, and effects of post-traumatic stress disorder and related problems in readjusting to civilian life among veterans who served on active duty during the Vietnam era, with particular emphasis on those who have service-connected disabilities and those who served in the Republic of Vietnam or elsewhere in the Vietnam theater of operations and with specific reference to women veterans.

(b) Not later than March 1, 1985, the Administrator shall submit to the Committees on Veterans' Affairs of the House of Representatives and the Senate a report on the results of the study required by subsection (a). Such report shall contain (1) a description of the results of the study, (2) information regarding the capability of the Veterans' Administration to provide treatment to the number of veterans identified in such study as suffering from post-traumatic stress disorder and related readjustment problems, (3) a description of the policy and procedures of the Veterans' Administration with respect to providing disability compensation for such disorder and problems, (4) a description of the activities of the Veterans' Administration to attempt to coordinate Veterans' Administration health-care and compensation programs with respect to post-traumatic stress disorder, and (5) such recommendations for administrative or legislative action, or both, as the Administrator considers appropriate in light of the study results.

(c) For the purposes of this section, the terms "veteran", "service-connected", "active duty", and "Vietnam era" shall have the meaning provided in section 101 (2), (16), (21), and (29), respectively, of title 38, United States Code.

PREVENTIVE HEALTH-CARE SERVICES

SEC. 104. (a) Section 601(6)(A)(i) is amended by inserting "(in the case of a person otherwise receiving care or services under this chapter), preventive health-care services as defined in section 662 of this title" after "podiatric services".

(b) Section 661 is amended—

(1) by striking out "under which the Administrator may attempt to" and inserting in lieu thereof "in order to help";

(2) by inserting after "certain" the first place it appears "veterans otherwise being furnished care or services under this chapter, including";

(3) by striking out "for certain" the second place it appears; and

(4) by striking out "treatment" and inserting in lieu thereof "care or services".

(c) Section 663 is amended—

(1) in subsection (a)(1)—

(A) by striking out "may" and inserting in lieu thereof "shall, during fiscal years 1984 through 1988,";

(B) by inserting "otherwise being furnished care or services under this chapter" after "title";

(C) by striking out "and treatment" and inserting in lieu thereof "or services"; and

(D) by adding at the end the following new sentence: "In carrying out the pilot program under this subchapter, the Administrator may furnish such preventive health-care services to any other veteran described in section 612(f)(2) of this title.";

(2) by striking out subsection (b) and redesignating subsections (c) and (d) as subsections (b) and (c), respectively; and

(3) in subsection (c) (as so redesignated), by striking out "fiscal year 1984" and inserting in lieu thereof "each of fiscal years 1984 through 1988".

(d) Section 664 is amended by inserting "for each of fiscal years 1984 through 1988" after "Congress".

CHIROPRACTIC SERVICES

SEC. 105. (a)(1) Section 601 is amended by adding at the end the following new paragraph:

"(9) The term 'chiropractic services' means the manual manipulation of the spine performed by a chiropractor (who is licensed as such by the State in which he or she performs such services and who meets the uniform minimum standards promulgated for chiropractors under section 1861(r)(5) of the Social Security Act (42 U.S.C. 1395x(r)(5))) to correct a subluxation of the spine. For the purposes of this paragraph, such term does not include physical examinations, laboratory tests, radiologic services, or other tests or services determined by the Administrator to be excluded.".

(2) Subchapter III of chapter 17 is amended by adding at the end the following new section:

"§ 630. Chiropractic services

"(a) The Administrator shall, under regulations which the Administrator shall prescribe, reimburse a veteran eligible for medical services under this chapter for the reasonable charge for chiropractic services for which such veteran has made payment, or, in lieu of such reimbursement make payment of the reasonable charge for such chiropractic services directly to the chiropractor who furnished such services, if—

"(1) such chiropractic services were for the treatment of a service-connected neuromusculoskeletal condition of the spine,

"(2) the veteran is a veteran who has been furnished hospital care by the Veterans' Administration for a neuromusculoskeletal condition of the spine within a 12-month period prior to the provision of such chiropractic services, or

"(3) the veteran is a veteran described in section 612(f)(2) of this title who has been furnished hospital care or medical services by the Veterans' Administration for a neuromusculoskeletal condition of the spine, to the extent that such veteran is not entitled to such chiropractic services or reimbursement for the expenses of such services under an insurance policy or contract, medical or hospital service agreement, membership or subscription contract, or similar arrangement for the purpose of providing, paying for, or reimbursing expenses for such services.

"(b)(1) The Administrator shall, in consultation with appropriate public and nonprofit private organizations and other Federal departments and agencies that provide reimbursement for chiropractic services, establish a schedule of reasonable charges for such services, which schedule shall be consistent with the reasonable charges allowed under title XVIII of the Social Security Act (42 U.S.C. ch. 7).

"(2) The amount payable by the Administrator for chiropractic services furnished under this section shall not exceed $400 in any 12-month period in the case of any veteran.

"(c) Notwithstanding any other provision of this title, total expenditures for chiropractic services reimbursed under this section shall not exceed $2,000,000 in any fiscal year and no reimbursement or payment may be made under this section for chiropractic services furnished after September 30, 1987.".

(3) The table of sections at the beginning of chapter 17 of such title is amended by inserting after the item relating to section 629 the following new item:

"630. Chiropractic services.".

(b) Not later than December 31, 1984, and not later than December 31 of each of the next 3 years thereafter, the Administrator of Veterans' Affairs shall prepare and submit to the Committees on Veterans' Affairs of the House of Representatives and the Senate a report on the use made of the authority provided for in the amendments made by subsection (a) of this section. Each such report shall contain specification of—

(1) the number of requests by eligible veterans for reimbursement or payment for chiropractic services in the fiscal year preceding the fiscal year in which the report is submitted under section 630 of title 38, United States Code (as added by subsection (a)(1) of this section), and the number of such veterans who made such requests;

(2) the number of reimbursements or payments made by the Administrator of Veterans' Affairs under such section in such fiscal year and the number of veterans to or for whom such reimbursements or payments were made; and

(3) the total amounts of expenditures by the Administrator of Veterans' Affairs for such reimbursements and payments under such section in such fiscal year.

COMMUNITY RESIDENTIAL CARE

SEC. 106. (a) Subchapter III of chapter 17 is amended by adding at the end thereof the following new section:

"§ 630A. Transfers for community residential care

"(a) Subject to the terms and conditions set forth in this section and regulations prescribed by the Administrator under this section, the Administrator may assist a veteran to whom the Administrator is furnishing hospital, domiciliary, or nursing home care or medical services on an outpatient basis or has furnished such care or services within the preceding 12 months and for whom placement in a community residential-care facility is appropriate by referring such veteran for and aiding such veteran in obtaining placement in such a facility.

"(b)(1) The Administrator may not provide assistance under subsection (a) of this section with respect to a community residential-care facility unless the Administrator has approved such facility in accordance with paragraph (2) of this subsection.

"(2) The Administrator's approval of such a facility under paragraph (1) of this subsection shall be based upon the Administrator's determination, after inspection of such facility, that such facility meets the standards set forth in the regulations prescribed under this section. Such standards shall include:

"(A) health and safety criteria, including a requirement of compliance with applicable State laws and local ordinances relating to health and safety;

"(B) a requirement that the costs charged for care by a community residential-care facility be reasonable, as determined by the Administrator, giving consideration to such factors as (i) the level of care, supervision, and other services to be provided, (ii) the cost of goods and services in the geographical area in which the facility is located, and (iii) comparability with other facilities in such area providing similar services;

"(C) criteria for determining the resources that a community residential-care facility needs in order to provide an appropriate level of services to veterans; and

"(D) such other criteria as the Administrator determines are appropriate to protect the welfare of veterans placed in community residential-care facilities under this section.

"(3) Payment of the charges for any care or services provided to a veteran whom the Administrator has referred to a community residential-care facility under this section shall not be the responsibility of the United States Government or the Veterans' Administration.

"(c)(1) The Administrator shall provide for periodic inspection of community residential-care facilities to determine continued compliance with the standards set forth in regulations prescribed under this section. Such standards and any report of inspection of such facilities under subsection (b)(2) of this section or under this subsection made by or for the Administrator shall, to the extent possible, be made available to all Federal, State, and local agencies charged with the responsibility of licensing or otherwise regulating or inspecting such facilities.

"(2) If the Administrator determines that such a facility is not in compliance with such standards, the Administrator, in accordance with regulations prescribed under this section—

"(A) shall cease to refer veterans to such facility; and

"(B) may, with the permission of the veteran or the person or entity authorized by law to give permission on behalf of the veteran, assist in removing a veteran from such facility.

Regulations prescribed to carry out this paragraph shall provide for reasonable notice and, upon request made on behalf of such facility, a hearing before any action authorized by this paragraph is taken.

"(d) The Administrator shall prescribe regulations to carry out this section.

"(e) For the purpose of this section, the term 'community residential-care facility' means a residential facility that provides, at a minimum, room and board and such limited personal care for and supervision of residents as the Administrator determines, in accordance with regulations prescribed under this section, are necessary for such resident's health, safety, and welfare.".

(b) The table of sections at the beginning of chapter 17 is amended by adding after the item relating to section 630 the following new item:

"630A. Transfers for community residential care.".

STATE HOME PER DIEM INCREASE

SEC. 107. (a) Section 641(a) is amended by striking out "$6.35", "$12.10", and "$13.25" and inserting in lieu thereof "$7.30", "$13.95", and "$15.25", respectively.

(b)(1) Except as provided in paragraph (2), the amendments made by subsection (a) shall take effect on April 1, 1984.

(2) With respect to months prior to September 1984, such amendments shall take effect only if adequate funds are specifically provided for such purpose in an appropriations Act.

PUERTO RICO

SEC. 108. (a) Section 601(4)(C)(v) is amended by striking out "September 30, 1983" and

inserting in lieu thereof "September 30, 1984".

(b) Not later than December 1, 1983, the Administrator of Veterans' Affairs shall submit to the Committees on Veterans' Affairs of the House of Representatives and the Senate a report containing the plans of the Administrator, and the reasons therefor, for meeting the health-care needs of veterans (as defined in section 101(2) of title 38, United States Code) in the Commonwealth of Puerto Rico and in the Virgin Islands who are eligible for health care under chapter 17 of title 38, United States Code, and, most particularly, the health-care needs of veterans (as so defined) in that population whose disabilities are service-connected (as defined in section 101(16) of such title). Such report shall (1) take into account the report by the Veterans' Administration's Office of Inspector General entitled "Report of Special Audit, Veterans' Administration Medical and Regional Office Center, San Juan, Puerto Rico (Report No. 3R2-A05-043)", dated February 22, 1983, and (2) include, with respect to each construction project (if any) that the Administrator recommends in such plans and for which a prospectus would be required under section 5004(b) of such title if such project were proposed to the Congress by the President or the Administrator, a prospectus that meets the requirements of such section.

RESOURCE REALIGNMENT

SEC. 109. (a) Section 111(e) is amended by adding at the end the following new paragraph:

"(5)(A) In order to achieve compliance with the limitation in subsection (b) of section 109 of the Veterans' Health Care and Programs Improvement Act of 1983 on certain obligations under this section in fiscal year 1984, the Administrator is hereby authorized to and shall prescribe regulations to be effective on October 1, 1983, restricting, to the extent necessary to achieve such compliance, the making of payments under this section to persons other than persons receiving benefits under this title for or in connection with a service-connected disability.

"(B) The substantive provisions so restricting such payments may be continued in effect in regulations after the end of such fiscal year.".

(b) Notwithstanding any other provision of law and subject to subsection (e), not more than $71,209,000 may be obligated in fiscal year 1984 from the Veterans' Administration medical care account (hereinafter in this section referred to as "the account") for payments under section 111 of title 38, United States Code.

(c)(1) Of the funds that are appropriated to the account for fiscal year 1984, the Administrator shall direct that a total of not less than $20,000,000 shall be made available for obligation in fiscal year 1984 for—

(A) the provision of nursing home care and adult day health care to eligible veterans under section 620 of title 38, United States Code (as amended by section 101 of this Act), and

(B) the provision of preventive health-care services (as defined in section 662 of such title) under sections 610 and 612 and subchapter VII of chapter 17 of such title (as amended by section 104 of this Act),

over and above the amount that was requested to be appropriated for such care and services in the President's budget transmitted pursuant to section 1105(a) of title 31, United States Code (hereinafter in this section referred to as "the President's budget"), for fiscal year 1984. In so directing, the Administrator shall allocate such total of not less than $20,000,000 so as to make available for such care or services under each such section and under such subchapter a significant portion of such total.

(2) If at any time during fiscal year 1984 the Administrator estimates that obligations in such year from the account for payments under section 111 of title 38, United States Code, will be an amount less than $71,209,000, the Administrator shall direct that such amount be obligated, as specified by the Administrator, for care described in clause (A) of paragraph (1), services described in clause (B) of paragraph (1), or otherwise authorized activities that are conducted by facilities over which the Administrator has direct jurisdiction and that are designed to avoid the need for, or to shorten the periods of, the institutionalization of veterans, or a combination of such care, services, and activities.

(3) Not later than September 15, 1983, the Administrator shall submit to the Committees on Veterans' Affairs of the House of Representatives and the Senate (hereinafter in this section referred to as "the Committees") a report containing information specifying—

(A) the total amount that the Administrator estimates will be obligated in fiscal year 1984 from the account for such payments (taking into account the effect of the regulations described in paragraph (5)(A) of section 111(e) of such title (as added by subsection (a)));

(B) the amounts requested in the President's budget for fiscal year 1984 to be appropriated for the care and services specified in paragraph (1) under each section and subchapter there specified; and

(C) the amounts of the portion of the total, over and above amounts so requested to be appropriated, that the Administrator has directed be made available for obligation for such care and services under each such section and subchapter and the justification for each such amount.

(4) On the same day that the President's budget for fiscal year 1985 is transmitted, the Administrator shall submit to the Committees a report containing information (A) with respect to each month of fiscal year 1984, as to the amounts of the portion of such total that have been or are estimated to be obligated for such care and services obligated under each such section and subchapter, and (B) specifying (i) any revisions that the Administrator has made, since submitting the report required by paragraph (3), in the amounts of the portions of such total that the Administrator has directed to be made available for obligation under each such section and subchapter, and (ii) the justification for any such revisions.

(d)(1) Not later than August 1, 1984, the Administrator shall submit to the Committees and to the Comptroller General of the United States a report containing, with respect to each category of care and services described in subsection (c)(1)—

(A)(i) information, for each month of fiscal year 1984 for which such information is then available, as to the amounts obligated and the amounts by which such obligation have exceeded one-twelfth of the amounts requested to be appropriated in the President's budget for fiscal year 1984, and (ii) taking into account the information provided pursuant to subclause (i), the amounts that the Administrator estimates have been or will be obligated in each remaining month of fiscal year 1984 and the amounts by which such estimated amounts will exceed such one-twelfth; and

(B) the justification for the Administrator's estimates of the amounts that will be obligated in each such category in fiscal year 1984.

(2) Not later than September 1, 1984, the Comptroller General shall submit to the Committees a report containing—

(A) the results of an analysis by the Comptroller General, conducted in consultation with the Director of the Congressional Budget Office, of the report required by paragraph (1); and

(B) the Comptroller General's determination whether, on the basis of such analysis, the total obligations, for care and services described in subsection (c)(1) in fiscal year 1984 can reasonably be expected to exceed by a total of $20,000,000 or more the amount requested to be appropriated for such care and services in the President's budget for fiscal year 1984.

(3) If the Comptroller General's determination under paragraph (2) is that the amount by which such total obligations will exceed the amount so requested to be appropriated for such care and services in fiscal year 1984 cannot reasonably be expected to be $20,000,000 or more, subparagraph (B) of section 111(e)(5) of title 38, United States Code (as added by subsection (a)), shall lose effect on September 30, 1984, as if repealed by an Act of Congress.

(e)(1) If the Comptroller General of the United States determines, pursuant to paragraph (2), that the enactment of any law or any action of the Director of the Office of Management and Budget in connection therewith has made it impossible for the Administrator, based on the annual rate of appropriations that have been made to the account for fiscal year 1984 as of the date of such enactment, to comply with the provisions of subsection (c)(1) without causing to be diverted funds that have been appropriated to the account and intended by the Congress to be obligated for a purpose other than payments under section 111 of title 38, United States Code, then on the forty-sixth day after the date of the enactment of such law, the amendment made by subsection (a) and the provisions of subsection (b) shall lose effect as if repealed by an Act of Congress.

(2) Not later than 45 days after the enactment of each law making appropriations to the account for fiscal year 1984 or in any way restricting the obligation or expenditure of any funds appropriated to the account for fiscal year 1984, the Comptroller General, after consulting with the Administrator, shall submit to the Committees a report containing the Comptroller General's determination whether such law of such action so makes such compliance impossible.

(f) Not later than the date on which the President's budget for fiscal year 1986 is transmitted, the Administrator shall submit to the Committees a report containing (1) information as to the amounts actually obligated in fiscal year 1984 (A) from the account for payments under section 111 of title 38, United States Code, (B) for each category of care and services described in subsection (c)(1), and (C) any additional amounts obligated pursuant to subsection (c)(2) and the purposes for which they were spent; and (2) an explanation of the reasons for any significant differences between such actual obligations and the amounts of such expenditures during such fiscal year as estimated pursuant to subsection (d)(1).

TITLE II—PROVISIONS TO IMPROVE THE RECRUITMENT AND RETENTION OF CERTAIN PERSONNEL

SEC. 201. Section 4104 is amended—

(1) in paragraph (2), by striking out "physical therapists,";

(2) in paragraph (2), by striking out "bacteriologists" and inserting in lieu thereof "microbiologists";

(3) by striking out the period at the end of paragraph (2) and inserting in lieu thereof a semicolon; and

(4) by adding at the end the following new paragraph:

"(3) Certified or registered respiratory therapists, licensed physical therapists, and licensed practical or vocational nurses.".

SEC. 202. (a) Section 4105(a) is amended—

(1) in clause (1), by striking out "Physicians" and inserting in lieu thereof "Physician";

(2) by striking out clauses (8) and (9);

(3) by redesignating clause (10) as clause (8); and

(4) by adding at the end the following new clause:

"(9) Physician assistant, expanded-function dental auxiliary, certified or registered respiratory therapist, licensed physical therapist, licensed practical or vocational nurse, occupational therapist, dietitian, microbiologist, chemist, biostatistician, medical technologist, dental technologist, or other position—

have such medical, dental, scientific, or technical qualifications as the Administrator shall prescribe.".

(b) Section 4105(b) is amended by striking out all beginning with "as physician" through "auxiliary" and inserting in lieu thereof "to a position listed in section 4104(1) of this title".

SEC. 203. (a) Section 4106 is amended by adding at the end the following new subsection:

"(g)(1) The Administrator, upon the recommendation of the Chief Medical Director, may use (A) the authority in subsection (a) of this section to establish the qualifications for and, subject to paragraph (2) of this subsection, to appoint individuals to positions listed in section 4104(3), and (B) the authority in subsection (c) of this section for the promotion and advancement of Veterans' Administration employees serving in such positions.

"(2) In using such authority to appoint individuals to such positions, the Administrator shall apply the principles of preference for the hiring of veterans and other persons established in subchapter I of chapter 33 of title 5, United States Code.".

(b)(1) Not later than 90 days after the enactment of this section, the Administrator of Veterans' Affairs shall publish in the Federal Register, for public review and comment for a period of not less than 30 days, proposed regulations for the continued implementation of paragraph (2) of subsection (g) of section 4106 of title 38, United States Code (as added by subsection (a)).

(2) Not later than 180 days after the date of the enactment of this section, the Administrator shall publish in the Federal Register final regulations for such implementation.

SEC. 204. Section 4107 is amended—

(1) in subsection (f)—

(A) by striking out the comma after "regulations" and inserting in lieu thereof "(1)"; and

(B) by inserting before the period a comma and "and (2) notwithstanding any other provision of law, when the Administrator determines it to be necessary in order to obtain or retain the services of certified or registered respiratory therapists, licensed physical therapists, or licensed practical or vocational nurses, the Administrator may, on a nationwide, local, or other geographic basis, pay persons employed in such positions additional pay on the same basis as provided for nurses in subsection (e) of this section"; and

(2) by amending subsection (g)—

(A) by amending clause (A) of paragraph (1) to read as follows:

"(A) of individuals employed in positions listed in paragraphs (1) and (3) of section 4104 of this title; or"

(B) by amending paragraph (3) by inserting "and licensed physical therapists" after "anesthetists"; and

(C) by amending paragraph (4) by inserting "with respect to health-care personnel described in clause (B) of such paragraph" after "subsection".

SEC. 205. The second sentence of section 4110(a) is amended to read as follows: "The majority of employees on a disciplinary board shall be employed in the same category of position as the employee who is the subject of the charges.".

SEC. 206. Section 4111 is amended—

(1) by inserting "(a)" before "There";

(2) in subsection (a) (as so designated by clause (1)), by striking out "paragraph (1)" and inserting in lieu thereof "paragraphs (1) and (3)"; and

(3) by adding at the end the following new subsection:

"(b) Notwithstanding any other provision of law, the Administrator may, after considering an individual's existing pay, higher or unique qualifications, or the special needs of the Veterans' Administration, appoint an individual to a position in the Department of Medicine and Surgery providing direct patient-care services or services incident to direct patient-services at a rate above the minimum rate of the appropriate grade.".

SEC. 207. (a)(1) Not later than January 1, 1984, the Administrator of Veterans' Affairs and the Director of the Office of Personnel Management shall submit a joint report to the Committees on Veterans' Affairs of the House of Representatives and the Senate (hereinafter in this section referred to as "the Committees") regarding the status of efforts to carry out the recommendations made in the report prepared by the Veterans' Administration, pursuant to section 117 of Public Law 96-330, entitled "Study of the Feasibility and Desirability of Converting Selected Health Care Occupations to title 38, United States Code" and transmitted to the Committees on September 1, 1982.

(2) Such report shall contain—

(A) with respect to each such recommendation, information on the decision that has been made as to whether such recommendation is being implemented in the manner described in the report and, if not, as to whether it is to be implemented in a modified form or not implemented and a statement of the reasons for such decision, and of the position of each agency with respect to such recommendation and such decision;

(B) the timetable for the actions planned for the implementation of each recommendation that is being implemented either in its original form or as modified;

(C) any further recommendations of the Administrator or Director or both for legislative or administrative action, or both, relating to the subject matter of such report; and

(D) such other information relating to the subject matter of such report as the Administrator or the Director or both consider appropriate.

(b)(1) Not later than 90 days after the date of the enactment of this Act, the Administrator shall submit to the Committees a report on the implementation of the amendments made by this title, including the steps taken and planned to be taken (including the timetable therefor) and the justification therefor, to exercise the authorities provided by such amendments. Such report shall also contain a description and justification of the extent to which such authorities have not been or are not planned to be exercised.

(2) Not later than September 30, 1985, the Administrator shall submit to the Committees a report containing—

(A) descriptions of (i) the results of the exercise of the authorities provided in the amendments made by this title, and (ii) the efforts under section 4101(b) of title 38, United States Code, to develop and carry out programs of education and training for career advancement for nursing assistants, noncertified, nonregistered inhalation therapists, and other para-professionals employed in the Department of Medicine and Surgery who provide either direct patient-care services or services incident to direct patient-care services;

(B) an evaluation of the effects of both the exercise of such authorities and such programs on the recruitment and retention of Veterans' Administration employees, on such employees' productivity and morale, and on such employees' effectiveness in carrying out the missions of the Veterans' Administration; and

(C) such recommendations for administrative or legislative action, or both, as the Administrator considers appropriate in light of such evaluation.

TITLE III—WOMEN VETERANS

ADVISORY COMMITTEE ON WOMEN VETERANS

SEC. 301. (a) Chapter 3 is amended by inserting after section 221 the following new section:

"§ 222. Advisory Committee on Women Veterans

"(a)(1) The Administrator shall establish an advisory committee to be known as the Advisory Committee on Women Veterans (hereinafter in this section referred to as 'the Committee').

"(2) The members of the Committee shall be appointed by the Administrator from the general public and shall include—

"(A) appropriate representatives of women veterans;

"(B) individuals who are recognized authorities in fields pertinent to the needs of women veterans, including the gender-specific health-care needs of women; and

"(C) appropriate representatives of both female and male service-connected-disabled veterans, including at least one female service-connected disabled veteran and at least one male service-connected disabled veteran.

The Committee shall also include, as ex officio members, the Chief Medical Director and the Chief Benefits Director, or their designees, and one public member and one military member of the Department of Defense Advisory Committee on Women in the Services selected therefrom by the Administrator after consultation with the Secretary of Defense. The Administrator may also invite representatives of such other departments and agencies of the United States as the Administrator considers appropriate to

participate in the meetings and other activities of the Committee.

"(3) The Administrator shall determine the number, terms of service, and pay and allowances of members of the Committee appointed by the Administrator, except that a term of service of any such member may not exceed 3 years. The Administrator may reappoint any such member for such additional terms of service as the Administrator considers appropriate.

"(4) The Committee shall meet not less than three times in fiscal year 1984 and thereafter at such times as determined by the Committee but not less than two times in each fiscal year.

"(b) The Administrator shall, on a regular basis, consult with and seek the advice of the Committee with respect to (1) the administration of benefits under this title for women veterans, (2) reports and studies pertaining to women veterans, and (3) the needs of such veterans with respect to compensation, health care, rehabilitation, outreach, and other benefits and programs administered by the Veterans' Administration.

"(c) Not later than July 1, 1984, and not later than July 1 of each year thereafter, the Committee shall submit to the Administrator a report on the programs and activities of the Veterans' Administration that pertain to women veterans. Each such report shall contain (1) an assessment of the needs of such veterans with respect to compensation, health care, rehabilitation, outreach, and other benefits and programs administered by the Veterans' Administration, (2) a review of the programs and activities of the Veterans' Administration designed to meet such needs, and (3) such recommendations (including recommendations for administrative and legislative action) as the Committee considers appropriate. Within 30 days after receiving each such report, the Administrator shall submit it to the Congress with any comments concerning the report that the Administrator considers appropriate. The Committee may also submit to the Administrator such other reports and recommendations as the Committee considers appropriate. The Administrator shall submit with each annual report submitted to the Congress pursuant to section 214 of this title a summary of all reports and recommendations of the Committee submitted to the Administrator since the previous annual report of the Administrator submitted to the Congress pursuant to such section.".

(b) The table of sections at the beginning of such chapter is amended by inserting after the item relating to section 221 the following new item:

"222. Advisory Committee on Women Veterans.".

FEE-BASIS CARE FOR WOMEN VETERANS

SEC. 302. (a) Section 601(4)(C)(iv) is amended by inserting after "veterans" a comma and "and, until September 30, 1989, medical services described in section 612(f)(1)(A) of this title for a woman veteran if the Administrator has determined, based on an examination by a physician employed by the Veterans' Administration (or, in areas where no such physician is available, by a physician carrying out such function under a contract or fee arrangement), that a disability of such woman veteran relating to her gender precludes appropriate treatment in facilities described in clause (A) or (B) of this paragraph".

(b)(1) At the time the President's budget for each of fiscal years 1985 through 1989 is transmitted to Congress pursuant to section 1105(a) of title 31, United States Code, the Administrator of Veterans' Affairs shall (as part of the documentation submitted by the Administrator in justification of such budget with respect to the Veterans' Administration medical care account) report to the appropriate committees of the Congress on (A) the Administrator's plans for, and estimated extent of, utilization in such fiscal year of (including estimated amounts of expenditures under) the authority provided by the amendment made by subsection (a), and (B) the activities undertaken and planned with respect to the utilization of (including estimated amounts of expenditures under) such authority in the fiscal year during which such budget is submitted. In so reporting with respect to fiscal years 1986 through 1989, the Administrator shall also provide information on activities undertaken (including amounts of expenditures) under such authority during the year or years preceding the fiscal year in which the report is submitted.

(2) Not later than September 30, 1988, the Administrator shall submit to the Committees on Veterans' Affairs of the House of Representatives and the Senate a report containing (A) the Administrator's recommendations, and reasons therefor, with respect to whether the September 30, 1989, expiration date in such authority should be extended and, if so, the date to which such authority should be extended, or whether such authority should be made permanent, and (B) any other recommendations for legislative or administrative action that the Administrator considers appropriate with respect to the Veterans' Administration's meeting the gender-related health-care needs of women veterans. Prior to submiting such report to such Committees, the Administrator shall submit the proposed report to the Advisory Committee on Women Veterans, established pursuant to the amendments made by section 301(a) of this Act, and shall consult with the Advisory Committee which shall promptly advise the Administrator of its views on the Administrator's proposed report and its recommendations on the subjects covered therein, and the Administrator shall include such views in such report along with any comments the Administrator considers appropriate.

TITLE IV—PRESUMPTION CONCERNING DYSTHYMIC DISORDER

SEC. 401. Section 312(b) is amended—

(1) in clause (8), by striking out "or";

(2) in clause (9), by inserting after the comma "or"; and

(3) by adding at the end the following new clause:

"(10) dysthymic disorder (or depressive neurosis),".

TITLE V—STATUS AND ROLE OF ADMINISTRATOR OF VETERANS' AFFAIRS

SEC. 501. (a) The Congress finds that—

(1) the Nation has an historic and deeply-rooted commitment to providing benefits and services to those who served in the Armed Forces;

(2) this commitment must be continued and maintained, both to fulfill moral obligations to those who served in the past and to assure those now in the Armed Forces and potential service men and women that the Nation's obligations to those who serve will always be honored;

(3) the Veterans' Administration is the principal Federal entity responsible for veterans' benefits and programs;

(4) the Veterans' Administration has a potential population of beneficiaries totaling nearly thirty million veterans and over sixty-six million survivors and dependents;

(5) the Veterans' Administration will distribute over $13 billion in income maintenance payments and approximately $1.7 billion in education, training, and rehabilitation assistance payments in fiscal year 1983; operates one of the Federal Government's two major home loan guaranty programs, with over 4 million loans currently guaranteed; administers the largest direct insurance program in the Nation; operates 108 national cemeteries and provides burial assistance for nearly 350,000 deceased veterans annually;

(6) the Veterans' Administration operates the largest centrally administered health-care system—consisting of, among other facilities, 172 hospitals, 226 outpatient clinics, and 99 nursing home care units—in the United States;

(7) the Veterans' Administration health-care system serves as the primary backup to the medical resources of the Department of Defense in time of war or national emergency involving the use of the Armed Forces in armed conflict;

(8) in terms of share of the annual Federal budget, the Veterans' Administration ranks sixth among Federal departments and agencies, and among Federal departments and agencies only the Department of Defense employs more personnel;

(9) the Administrator of Veterans' Affairs is the principal executive branch official responsible for the administration of the benefits, services, and programs of the Veterans' Administration and for seeking the coordination of veterans' programs administered by other Federal departments and agencies;

(10) there is a need for greater coordination between the Veterans' Administration and other Federal entities administering veterans programs and between the Veterans' Administration and other Federal entities providing similar benefits to individuals on a basis other than their status as veterans;

(11) by virtue of the Administrator of Veterans' Affairs not being included in the President's Cabinet, the Administrator generally is not included in Cabinet meetings and deliberations and generally does not have the ready access to the President and senior advisers on the President's staff that Cabinet members have; and

(12) as a consequence, Presidential decisions affecting veterans and the Veterans' Administration are made from time to time without an understanding of their full impact on veterans and on the Veterans' Administration's performance of its statutory missions.

(b) In view of the findings in subsection (a), it is the sense of the Congress that the Administrator of Veterans' Affairs should be designated by the President as a member of, and full participant in all activities of, the Cabinet and as the President's principal adviser on all matters relating to veterans and their dependents.

TITLE VI—RADIATION EXPOSURE STUDY AND GUIDE

SEC. 601. (a)(1)(A) Subject to paragraph (2)(B), the Administrator of Veterans' Affairs, through contracts or agreements with private or public agencies or persons (other than the Department of Defense or the Department of Energy) and in consultation with the Director of the Office of Technolo-

gy Assessment, shall provide for the conduct of epidemiological study of the long-term adverse health (including psychological) effects of exposure to ionizing radiation from the detonation of a nuclear device in connection with the test of such device or with the American occupation of Hiroshima and Nagasaki, Japan, during the period beginning September 11, 1945, and ending on July 1, 1946, in persons who, while serving in the Armed Forces of the United States, may have been exposed to such radiation. Such study shall include, but not necessarily be limited to, a study of identifiable prevalent illnesses, including malignancies, in the persons potentially exposed and genetic and congenital problems suffered by the natural children of such persons.

(B) In the event that the Administrator determines that it is not feasible to conduct a scientifically valid study of any or all of the matters required under subparagraph (A) to be studied, the Administrator shall promptly notify the appropriate committees of the Congress of this determination and the reasons therefor.

(2)(A) The Director of the Office of Technology Assessment shall monitor the development of the protocol or protocols for and the conduct of study under paragraph (1)(A) and shall submit to the appropriate committees of Congress, at each of the times specified in the second and third sentences of this subparagraph, a report on such monitoring. Reports under the preceding sentence shall be submitted within 6 months after the date of the enactment of this Act, within 12 months after such date, within 25 months after such date, and annually thereafter until such study is completed, and shall contain a review of and comments on the most recent report of the Administrator required to be submitted under paragraph (5). In the event that the protocol for such study or any part thereof is not completed by the end of the 12-month period beginning on the date of the enactment of this Act, the Director shall submit to such committees, at the end of the 60-day period beginning at the end of such 12-month period and thereafter at the end of each succeeding 60-day period until such protocol is completed, a report on the status of such protocol.

(B) In the event that the Administrator notifies the Congress of a determination or determinations made pursuant to paragraph (1)(B), the Director, not later than 60 days after such notification, shall submit to the appropriate committees of the Congress a report evaluating and commenting on such determination and the reasons therefor. To the extent that the Director concurs in such determination or determinations of the Administrator, the matter or matters required under paragraph (1)(A) to be studied to which such determination or determinations apply shall, nothwithstanding paragraph (1)(A), not be required to be studied. In the event that the Administrator has determined under paragraph (1)(B) that, taken as a whole, study under paragraph (1)(A) is not scientifically feasible and the Director concurs in the Administrator's determination, the requirement in paragraph (1)(A) that the Administrator provide for the conduct of epidemiological study shall lose effect as if repealed by an Act of Congress.

(3) Not later than 12 months after the date of the enactment of this Act, the Administrator shall submit to the appropriate committees of the Congress a report on the development of a protocol or protocols for study under paragraph (1)(A) and, in the event that such a protocol has not been developed, an estimate of the completion date therefor together with an estimate of the cost to be incurred in developing such protocol.

(4) At such time as the Administrator has entered into a contract or agreement with an agency or person for the conduct of a study under paragraph (1)(A), the Administrator and such agency or person shall submit a joint report to the appropriate committees of the Congress containing detailed information on the proposed study, including estimates of the number of individuals to be studied, the length of the study (specifying significant milestones prior to its completion), and the total cost of the study.

(5) Not later than 24 months after the date of the enactment of this Act, and annually thereafter, the Administrator shall submit to the appropriate committees of the Congress a report on the status of study under paragraph (1)(A). Such report shall contain (A) a description of the progress on and any results obtained under such study, and (B) such comments and recommendations for administrative or legislative action, or both, as the Administrator considers appropriate in light of such progress and results.

(6) Not later than 90 days after the submission of each report required by paragraph (5), the Administrator, based on the progress and results described in such report and the comments and recommendations thereon and any other available pertinent information, shall publish in the Federal Register, for public review and comment, a description of actions, if any, that the Administrator proposes to take with respect to programs administered by the Veterans' Administration. Each such description shall include a justification for any such action the Administrator proposes to take.

(7) The requirement in paragraph (5) for the submission of annual reports shall expire upon the submission of a report after the completion of study under paragraph (1)(A).

(b)(1) Not later than one year after the date of the enactment of this Act, the Administrator shall develop and publish an indexed reference guide, derived from existing pertinent research-result compilations, designed to provide appropriate Veterans' Administration personnel who either furnish health care or adjudicate claims for benefits under title 38, United States Code, with readily useable information regarding the state of medical and other scientific information on any long-term adverse health (including genetic and psychological) effects in humans of exposure to radiation, including nuclear-device, medical, and occupational exposures.

(2) Not later than 13 months after the date of the enactment of this Act, the Administrator shall submit to the appropriate committees of the Congress a report on the indexed reference guide developed under paragraph (1), together with such comments and recommendations for administrative or legislative action, or both, as the Administrator considers appropriate, including recommendations regarding (A) the need for any additional research that the Administrator considers necessary for the resolution of questions regarding adverse long-term health effects result from exposure to radiation, and (B) the departments, agencies, or instrumentalities that should carry out such research.

(3) The Administrator shall distribute (A) such guide to the Veterans' Administration personnel described in paragraph (1), and (B) such guide and such report to the departments, agencies, and instrumentalities described in subsection (c) and such other departments, agencies, and instrumentalities of the Federal Government as the Administrator considers appropriate and shall recommend to the appropriate such departments, agencies, and instrumentalities that they carry out any such additional research.

(4) The Administrator shall periodically review such guide and, to the extent the Administrator considers appropriate, update it based on the results of research completed after the guide was published or other available pertinent information.

(c)(1) For the purpose of ensuring that any study, research, or other activity carried out by the Federal Government with respect to adverse health effects in humans from exposure to radiation is scientifically valid and is conducted with efficiency and objectivity, the President shall ensure that—

(A) study under subsection (a)(1)(A), the development of the guide required by subsection (b)(1), and such additional research as may be identified pursuant to subsection (b)(2) are fully coordinated with studies or other activities which are planned, are being conducted, or have been completed by other departments, agencies, and instrumentalities of the Federal Government and which pertain to the adverse health effects in humans from exposure to radiation, including the radioepidemiological tables mandated by section 7 of the Orphan Drug Act (Public Law 97-414; 96 Stat. 2059); and

(B) all appropriate coordination and consultation is accomplished between and among the Administrator and the heads of such departments, agencies, and instrumentalities that may be engaged, during the conduct of study under subsection (a)(1)(A), in the design, conduct, monitoring, or evaluation of such radiation-exposure studies.

(2) Not later than 90 days after the date of the enactment of this Act, the President shall submit to the appropriate committees of the Congress a report containing a description of the steps taken and plans made to ensure the coordination and consultation required by paragraph (1).

(d)(1) There are authorized to be appropriated for fiscal years after fiscal year 1983 such sums as may be necessary for the conduct of the study required by subsection (a)(1)(A).

(2) The authority to enter into contracts under subsection (a)(1)(A) shall be effective for any fiscal year only to such extent or in such amounts as are provided in advance by appropriations Acts.

TITLE VII—MISCELLANEOUS AND TECHNICAL AMENDMENTS

SEC. 701. Clause (3) of section 610(a) is amended by inserting "(A)" after "(3)" and by inserting at the end "or (B) a person who, but for a suspension pursuant to section 351 of this title (or both such a suspension and the receipt of retired pay), would be entitled to disability compensation, but only to the extent that such person's continuing eligibility for such care is provided for in the judgment or settlement described in such section;".

SEC. 702. (a) Section 203(b) is amended by striking out "not".

(b) Section 360 is amended by striking out "has suffered (1)" and inserting in lieu thereof "(1) has suffered".

(c) Section 361 is amended by striking out "United States Code,".

(d) Section 719(b) is amended by striking out "subsections" and inserting in lieu thereof "sections".

(e) Section 1682(c)(1)(C) is amended by inserting a comma after "week)".

(f) Sections 2002 and 2002A are amended by striking out "a Assistant" and inserting in lieu thereof "an Assistant".

(g) Section 3005 is amended by striking "subchapter II of chapter 7 of title 42" each place it appears and inserting in lieu thereof "title II of the Social Security Act".

(h) Section 4118(g)(3) is amended by striking out the comma after "title 31".

(i) Section 4142 is amended—

(1) in subsection (f)(2), by striking out "section 3324(a) and (b)" and inserting in lieu thereof "subsections (a) and (b) of section 3324"; and

(2) in subsection (i)(4), by striking out the comma after "not accepted".

(j) Section 5010(c)(2)(B) is amended by striking out "or" the first place it appears and inserting in lieu thereof "and".

Mr. SIMPSON. Mr. President, I am most pleased to rise now in support of S. 578, the proposed "Veterans' Health Care and Programs Improvement Act of 1983," which was unanimously reported by the Committee on veterans' Affairs on April 20.

On February 23, 1983, as chairman of the committee, I introduced S. 578. As originally introduced, S. 578 had a central purpose of providing the VA with certain specific authority to further address the growing strains placed on the present VA medical-care system by what has been referred to as "the graying of the American veteran." Mr. President, there are at present some 11.4 million veterans of World War II. On the average they are now 62 years old. And under the provisions of section 610 of title 38, United States Code, all veterans automatically become eligible for a broad range of medical care in VA hospitals and nursing homes at age 65, regardless of need, and regardless of whether service was during a period of war or the disability for which treatment is sought is service-connected.

Many veterans who are part of this aging veteran population may not need the intensity of acute inpatient services or the round-the-clock services afforded by institutional care such as nursing homes or domiciliaries and who have some personal and family resources. Three provisions which I introduced in my original legislation and which are included in the committee bill S. 578 are directed at meeting the special health-care needs of these older veterans. One provision would authorize the VA to conduct a pilot program of adult day health-care services; the second provision would provide the VA with the authority to administer a program for community residential care; and the third provision would realine VA health-care resources from the VA medical care account for beneficary travel expenses for fiscal year 1984 by making available $20 million for the provision of adult day health care and nursing home care.

I intend to go into a bit more detail regarding these provisions, but first I would wish to note a fourth provision which was in my orginal bill and is included in the committee version of S. 578. The purpose of this provision is to add "Dysthymic Disorder" (depressive neurosis) to the list of presumptions for certain mental disorders suffered by a most deserving group of veterans—those who were held as prisoners of war while defending their Nation. Details of this provision will also follow.

I would wish to note that I am pleased to speak today in favor of the other provisions of the committee bill which address the needs of a special group of our veterans—those who served during the Vietnam era—by extending the period in which eligible veterans may request readjustment counseling from the VA and by directing the Administrator to conduct a study of the incidence and prevalance of post-traumatic stress disorders, otherwise known as "PTSD," in Vietnam era veterans.

S. 578 would also address concerns of another important segment of our veteran population—women veterans. The bill would require the VA to establish an Advisory Committee on Women Veterans that would evaluate VA programs, services, benefits, and other activities as they relate to women veterans. The bill would also authorize the VA to provide on a "fee-for-service" basis certain outpatient care for a nonservice-connected gender-specific disability of a woman veteran when the VA is unable to provide appropriate in-house care for her gender-related disability.

As reported, S. 578 would increase assurance of the ability of the VA to compete effectively with other non-VA health care providers in attracting and retaining certain highly qualified health-care personnel. This would be achieved by giving the VA certain new authorities to determine the qualifications of applicants, for appointing individuals to positions in DM&S, for advancing and promoting individuals and for setting rates of pay including both basic pay and special pay for work outside of the regular workday or workweek, for the following three occupations while leaving them within the title 5 personnel system: licensed physical therapists, licensed practical/vocational nurses, and certified or registered respiratory therapists.

ADULT DAY HEALTH CARE

Mr. President, section 101 of title I of the bill would authorize the Administrator to operate on a pilot-program basis through fiscal year 1987, a program of adult day health care services, aimed primarily at meeting the needs of elderly veterans whose medical treatment requirements and home living situation will permit them to receive daytime care only, thus avoiding the need for more elaborate and costly institutionalization in a VA hospital, nursing home, or domiciliary. These adult day health-care programs would provide, in a congregate setting, during normal working hours, health-care services for patients thereby enabling them to be maintained at home in a supportive environment rather than be institutionalized in a nursing home or hospital. Under the bill, veterans who are eligible for nursing home care—generally veterans who have received hospital care but still require extended medical supervision—would be eligible for adult day health care. Thus, adult day health care under this provision would be a clear alternative to nursing home placement. While I—as well as other members of the committee—am aware that there are other categories of veterans who might also benefit from adult day health-care services, this limitation on possible participants is designed to facilitate thorough monitoring and evaluation of this pilot program regarding characteristics of the participants, staff, and health outcomes.

There is already considerable interest within the VA in the adult day health care concept. The VA has already initiated adult day health-care programs at four VA medical centers in North Chicago, Ill.; American Lake, Wash.; Palo Alto, Calif.; and Butler, Pa. The services that have been provided in these projects have been carried out under the general authority of chapter 17 of title 38, United States Code, and the health services research authority under section 4101(c)(1) of title 38. S. 578 as reported would provide the Administrator with specific authority under section 620 of title 38, United States Code, to conduct a pilot program of adult day health-care services. The authority would allow the Administrator to provide adult day Health-care services to certain veterans by contracting for adult day health-care programs at four VA medical centers. This authority would expire on September 30, 1987.

COMMUNITY RESIDENTIAL CARE

Section 106 of title I of the committee bill which is derived from the original bill, S. 578, which I introduced, would authorize the VA to set standards governing community residential care facilities—that is, private homes inspected by the VA but chosen by the veteran, where the veterans receive, at their own expense, room, board, personal care and supervision. Veterans who would be eligible for this program no longer require hospitalization but are not able to live independently because of their health-care needs and have no suitable family resources to provide the needed care.

Since 1951, the VA has been referring previously institutionalized veterans to residential care facilities—originally only certain psychiatric patients, but more recently, medical and surgical patients as well. However, the VA has no specific statutory authority to set standards for residential care facilities to which it refers eligible veterans. The committee joins me in a decision that it is important for the VA to be provided legislative authority to administer this program, and specifically to set program standards, establish guidelines for procedures involving the approval of the residences, conduct annual inspections, and examine services received by the veterans within the facilities. These standards would include criteria for health and safety; costs of care, supervision, and other services; resources that a facility needs in order to provide an appropriate level of services; and other factors which the Administrator would determine to be appropriate to protect the welfare of veterans placed in community residential facilities. This authority would affect only those facilities wishing to receive referrals from the VA. A facility's participation in a VA assessment of standards would remain entirely voluntary, and its operators would be under no obligation to accept any recommendation by the assessment team. Those facilities that do participate but are found not to comply with the VA standards would receive notice and an opportunity for a hearing prior to the cessation of referrals from the VA.

RESOURCE REALINEMENT

Section 109 of the committee bill which was part of my original bill, S. 578, would provide for the realinement of VA health-care resources by requiring that at least $20 million be added to the President's fiscal year 1984 budget for the provision of certain health-care services to eligible veterans and that the budget for beneficiary travel reimbursement payments be reduced by the same amount.

In order to avoid the need for, or shorten periods of institutionalization of veterans, not less than $20 million would be made available for fiscal year 1984 for adult day health care and community nursing home care services to eligible veterans. The Administrator would be required to prescribe regulations to effectuate this realinement in the VA medical care account by funds obligated for "beneficiary travel" or travel expenses to and from VA facilities. The bill would prohibit the restriction of payment of travel benefits to veterans receiving care for or in connection with service-connected disabilities. In developing the regulations, the VA is expected to take into account the primary missions of its health care system and the special circumstances of veterans in Alaska and Hawaii where there are no VA hospitals and where the geography poses particular travel problems for many veterans.

PRESUMPTION CONCERNING DYSTHYMIC DISORDER

Title IV of the committee bill which is derived from my original bill, S. 578, would clarify the original intent of Public Law 97-87, the Former Prisoners of War Benefits Act of 1981, by adding dysthymic disorder—or depressive neurosis—to the list of presumptive diseases which is used as a basis for disability compensation and for eligibility for VA medical care. The specific addition of this diagnosis will clarify the intent of Public Law 97-37 and thereby aid in its implementation.

I am very concerned that congressional intent in Public Law 97-37 is met. Certainly when that legislation was considered, the Senate recognized the need for some liberalization with respect to claims filed by former POW's for certain mental disorders. The complexity of "anxiety states," "anxiety neuroses," "post-traumatic stress disorder," and "dysthymic disorders" and their associated and sometimes interrelated diagnoses inadvertently resulted in a lack of clarity regarding the granting of service connection for depression, a lack of clarity documented by correspondence, by testimony received by the committee pursuant to hearings on this and other health care issues, and by the literature on mental health disorders. The specific addition of "dysthymic disorder" will eliminate this problem.

The cost of this addition will be quite modest as the number of claims is quite small but the benefit will be great because these worthy veterans, if they are diagnosed as having depressive neurosis, will now be granted the service connection they deserve.

VIETNAM-ERA VETERANS' READJUSTMENT ISSUES

The committee bill would extend by 1 year, to September 30, 1985, the period of eligibility to request readjustment counseling. It would also extend by 6 months, until October 1, 1984, the date by which the VA must report to Congress on the VA's plans for continuing to provide readjustment counseling after the expiration of the eligibility period.

Public Law 96-22, the Veterans' Health Care Amendments of 1979, provided the authority for the VA to provide readjustment counseling to Vietnam-era veterans. Under that law, eligible Vietnam veterans had 2 years from the date of their discharge or 2 years from a pre-October 1, 1979, discharge (the situation for the vast majority of Vietnam-era veterans), that is until September 30, 1981—to make an initial request for counseling.

In 1981, Public Law 97-72, the Veterans' Health Care, Training, and Small Business Loan Act of 1981, extended the period of eligibility to request readjustment counseling by 3 years, until September 30, 1984. In providing this extension, the Congress recognized that the VA's program for providing readjustment counseling—called the vet center program—had, of necessity, taken a considerable time to get underway and begin operating effectively and that there was a continuing need for the services offered by the program. Public Law 97-72 also mandated the VA to study how to meet the Vietnam-era veterans' readjustment needs after September 30, 1984, eligibility expiration date and to submit a report to Congress by April 1, 1984, on its plans in that regard.

Mr. President, I believe it is important to note that the first vet center did not open until January 1980 and that quite a few centers have now been open for less than a year. According to the VA, as of March 1983, the 136 vet centers and satellites have been open an average of 27.7 months. The agency further reported that 28 of these centers were opened in calendar year 1982 and that as of March 1983 those 28 had been open an average of only 10.5 months. The proposed extension would give the program at its present size the stability necessary to identify and serve the needs of eligible veterans as well as giving veterans in areas where vet centers have recently opened a fair opportunity to benefit from the program.

Extending the period between the due date of the VA's report, and the expiration of the period to make the initial request for counseling would give the Congress a better chance to review the various alternatives for the future. In connection with the extension of the readjustment counseling eligibility authority, the committee bill would require the Administrator to carry out a study on the issue of PTSD and related readjustment problems of Vietnam-era veterans. The purpose of this study would be to determine the prevalence, incidence, and effects of PTSD and related readjustment problems. The Administrator would be required to place particular emphases on veterans with service-connected disabilities, those who served in Vietnam or elsewhere in the Vietnam theater of operation (for example, on a Navy ship in the South China Sea or with an Air Force squadron in Thailand), and consider the problems of women veterans. These particular emphasis should insure that information is developed to assist the VA in evaluating the effectiveness of past efforts to provide assistance to veterans in the groups involved and, to the extent particular problems are identified in one or another of the specific groups, to fashion appropriate remedies.

HEALTH CARE PERSONNEL PROVISIONS

The committee bill contains a number of provisions that are de-

signed to improve the VA's ability to attract and retain various health care personnel employed in the VA's Department of Medicine and Surgery (DM&S) and to insure that the VA is able to compete effectively with non-VA health care employers for the services of qualified health care personnel.

In response to the committee's long-standing concern that the VA was experiencing significant recruitment and retention difficulties with respect to certain DM&S health care personnel, Public Law 96-330 directed the VA to conduct a study and report to Congress on recruitment and retention problems of DM&S health care personnel that provide direct patient care services or services incident to direct patient care services. The DM&S task force report, entitled "Study of Feasibility and Desirability of Converting Selected Health Care Occupations to Title 38, United States Code," was a comprehensive survey of the current situation regarding title 5 health-care personnel with DM&S, and contained many recommendations. The task force found that certified or registered respiratory therapists, physical therapists, and licensed practical or vocational nurses experience "severe difficulties in recruitment, retention, and morale on a nationwide basis."

S. 578 would give the Administrator new authorities as to these occupations for determining the qualifications of applicants, for appointing individuals to positions in DM&S, for advancing and promoting individuals, and for setting rates of pay including both basic pay and special pay for work outside of the regular workday or workweek.

By giving the Administrator greater flexibility in these areas, the attractiveness of the VA as a career for the members of these occupations who are licensed, certified, or registered should increase. I am particularly pleased that special emphasis to promote career development and career ladders for other members of these occupations is included in S. 578.

Mr. President, I would wish to congratulate the current VA Administrator, Harry N. Walters, on his initiatives in the area of women veterans. His administrative establishment of an advisory committee on women veterans is surely a timely move for his group of our veterans and the proposed statutory establishment of such an advisory committee is not intended to unduly restrict his efforts.

Regarding the provision in S. 578 as reported which provides for the study of certain veterans who may have been exposed to low level ionizing radiation and development of a guide for VA health care and claims personnel on radiation exposure, Mr. President, I would wish to reiterate my concerns about the feasibility of such a scientific effort and the questionable benefit to be derived therefrom. While I agree that the idea of scientific feasibility can be conceptually separated from the idea of cost, I believe it is important that the anticipated value of any results should be carefully weighed against the anticipated cost and benefits to be derived. This is especially important in view of expert testimony received in committee hearings that the study might be "very expensive, very difficult to accomplish and of dubious value."

Therefore, my support for this provision depended on the following: First, that there be a specific determination of scientific infeasibility, and second, that a decision to appropriate funds to conduct the study include a careful comparative analysis of expected gains in scientific knowledge and the expected costs of the study.

Mr. President, in concluding I should wish to sincerely thank my friend, the distinguished ranking minority member from California, Senator CRANSTON, for his invaluable help and cooperation on this bill and the other committee members for their contributions.

In addition, I should like to recognize and to thank the very able members of the majority staff for their efforts—Tom Harvey, Julie Susman, Vic Raymond, Cindy Alpert, Becky Hucks and Laurie Altemiose, and our editorial director, Harold Carter, as well as members of the capable minority staff—Jonathan Steinberg, Ed Scott, Bill Brew, Katy Burdick, Ingrid Post, and Charlotte Hughes.

Mr. President, I believe the committee has reported out a bill which is well balanced, and one that meets the needs of our most deserving veterans. On behalf of the entire committee, I urge the Senate's favorable consideration of this bill. Thank you, Mr. President.

Mr. President, at this time I ask unanimous consent that excerpts of the committee's report on S. 578 be inserted in the RECORD to more fully explain and clarify the details of the committee's bill.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

INTRODUCTION

S. 578 was introduced on February 23, 1983, by the Chairman of the Committee, Senator Alan Simpson. As introduced, S. 578 would have, first, provided for adult day health-care services for veterans; second, authorized the VA to administer a community residential-care program; third, established a presumption of service connection for former prisoners of war suffering from dysthymic disorder; and fourth, revised eligibility for reimbusement of expenses of travel for VA health care.

On January 26, 1983, Senator Alan Cranston, the Committee's Ranking Minority Member, together with Committee members Senators Randolph, Matsunaga, DeConcini, and Mitchell, introduced S. 11. As introduced, S. 11 would have, first, established a VA Advisory Committee on Women Veterans; second, required and authorized certain preventive health-care activities; third, authorized the Administrator to provide certain outpatient care on a fee-for-service basis for a non-service connected gender-related disability of a woman veteran; fourth, extended the period for Vietnam-era veterans to request counseling under the VA's Readjustment Counseling Program; fifth, enhanced the VA's ability to recruit and retain certain health-care personnel in its Department of Medicine and Surgery; sixth, expressed the sense of the Congress with respect to the role of the Administrator of Veterans' Affairs; and seventh, required the Administrator to provide for the conduct of an epidemiological study of long-term health effects in veterans from exposure to ionizing radiation from nuclear test detonations and of a review and analysis of the literature relating to long-term adverse health effects from exposure to radiation.

On February 23, 1983, Senator Strom Thurmond introduced S. 567. As introduced, S. 567 would have authorized reimbursement for the reasonable charges for chiropractic services provided to certain veterans.

On March 1, 1983, Senator Cranston, with Senator Randolph's cosponsorship, introduced S. 629. As introduced, S. 629 would have increased the per diem rate payable by the VA to States providing domiciliary, nursing home, and hospital care to eligible veterans in State veterans' homes.

On March 3, 1983, Senator Alan Simpson introduced S. 664 at the request of the Administration. As introduced, S. 664 would have extended for three years the authority of the Administrator of Veterans' Affairs to provide certain contract hospital care and medical services in Puerto Rico, the Virgin Islands, and other territories.

On January 26, 1983, Senator Cranston, with the cosponsorship of Committee members Randolph, Matsunaga, DeConcini, Mitchell, Denton, and Murkowski, introduced S. Con. Res. 2. As introduced S. Con. Res. 2 expressed the sense of the Congress that the Administrator of Veterans' Affairs should be designated a member of the President's Cabinet.

On March 9 and 10, 1983, the Committee held hearings, chaired by Senator Simpson, to receive testimony on S. 578, S. 11, S. 567, S. 629, S. 664, and S. Con. Res. 2. Testimony was received on March 9 from Dr. Donald Custis, Chief Medical Director of the VA; James Morrison, Jr., Associate Director for the Compensation Group of the Office of Personnel Management; William Weissert, Ph. D., Senior Research Associate at the Urban Institute; Dr. Stanley Korenman, Chief of Medical Service at the VA Medical Center in Sepulveda, California; Sudie Goldston, Chair, the National Institute on Adult Daycare of the National Council on Aging; Glenn Gee, President of the American Association for Respiratory Therapy; R. Charles Harker, Director of Government Relations of the American Physical Therapy Association; and Paul Tendler, representing the National Federation of Licensed Practical Nurses.

On March 10 testimony was received from the Honorable Baltasar Corrada, the Resident Commissioner of Puerto Rico; Clyde Behney, Program Manager for Health of the Officer of Technology Assessment; Dr. Nora Scott Kinzer, Special Assistant to the Administrator of Veterans' Affairs; representatives of the American Veterans Committee; the Vietnam Veterans of America; the American Legion, the Veterans of For-

eign Wars, the Disabled American Veterans, and AMVETS; Robert Fitzgerald, International Chiropractors Association; and Lee Selby, American Chiropractors Association.

After carefully reviewing the testimony, the Committee met in open session on April 20, 1983, and voted unanimously to report favorably S. 578 with an amendment in the nature of a Committee substitute. S. 578, as reported consists of provisions derived with modifications from S. 578, S. 11, S. 567, S. 629, S. 664, and S. Con. Res. 2.

SUMMARY OF PROVISIONS

The Committee bill has seven titles: Title I, Veterans' Administration Health Care Programs; Title II, Provisions to Improve the Recruitment and Retention of Certain Personnel; Title III, Women Veterans; Title IV, Presumption Concerning Dysthymic Disorder; Title V, Status and Role of Administrator of Veterans' Affairs; Title VI, Radiation Exposure Study and Guide; and Title VII, Miscellaneous and Technical Amendments, as follows:

Title I: *Veterans' Administration Health Care Programs.*—This title would establish new health services programs for veterans and improve existing programs. Included in title I of the Committee bill are provisions that would:

1. Authorize an approximately 4-year pilot program of adult day health care—generally to be provided in non-VA facilities—as an alternative non-institutional form of care for veterans who are eligible for transfer to community (non-VA) nursing homes for care at VA expense.

2. Extend by 1 year the period within which eligible veterans of the Vietnam-era may request readjustment counseling from the VA.

3. Direct the Administrator to conduct a study of the prevalence and incidence of post-traumatic stress disorder in Vietnam-era veterans with particular emphasis on veterans with service-connected disabilities and those who served in Vietnam or the Vietnam theater, and with specific reference to women veterans.

4. Authorize the provision of preventive health-care services to persons otherwise receiving health care from the VA.

5. Make mandatory a discretionary pilot program of preventive health-care services; extend the program, with a $15 million annual cap on expenditures, through fiscal year 1989; and require the Administrator to provide through the program at least one preventive health-care service to all veterans with 50-percent-or-more service-connected disability ratings otherwise being furnished VA health care for any disability and to all veterans receiving VA care for their service-connected disabilities.

6. Provide for the reimbursement (or direct payment) of reasonable charges for chiropractic services, not otherwise covered by available health insurance or other reimbursement, provided by non-VA providers to certain veterans with neuromusculoskeletal conditions of the spine; limit the amount payable for authorized chiropractic services furnished an individual veteran to $400 per year and the total VA expenditures for chiropractic services to $2 million in any fiscal year; and establish a September 30, 1987, cutoff date for the provision of chiropractic services for which reimbursement or payment may be made.

7. Expressly provided the VA with authority to conduct a program of referring VA veteran-patients to, and helping them obtain placement in, private, VA-approved community residential-care facilities; and thus codify and clarify the authority for an existing program under which the VA provides veterans with this kind of help.

8. Increase by 15 percent the rates of per diem payments to States veterans' homes—to $7.30 for domiciliary care, $13.95 for nursing home care, and to $15.25 for hospital care—for eligible veterans.

9. Extend for 1 year, through fiscal year 1984, VA authority to provide certain contract health-care services to eligible non-service-connected veterans in Puerto Rico and the Virgin Islands, and require a report by the Administrator, not later than December 1, 1983, on the VA's plans for meeting the health-care needs of veterans in those places.

10. Realign certain resources within the VA health-care budget by requiring that $20 million in fiscal year 1984 funds be redirected from VA health-care beneficiary travel-expense reimbursements to the provisions of community nursing home care, adult day health care, and preventive health-care services to eligible veterans; require the Administrator of Veterans' Affairs to prescribe regulations that achieve the necessary reduction in beneficiary travel payments; and authorize the Administrator to keep those regulations in effect after fiscal year 1984 if this $20 million add-on in spending for community nursing home care, adult day health care, and preventive services were achieved as the result of the reduction in beneficiary travel costs.

Title II: *Provisions to Improve the Recruitment and Retention of Certain Personnel.*—This title would revise, extend, and improve various VA programs designed to recruit and retain sufficient and qualified health-care personnel in the VA's Department of Medicine and Surgery. Included in title II are provisions that would:

1. Authorize the Administrator, without regard to civil-service rules, laws, and regulations, to establish the qualifications for and appoint certified or registered respiratory therapists, licensed physical therapists, and licensed practical or vocational nurses in the VA's Department of Medicine and Surgery (DM&S); provide the Administrator with certain new authorities with respect to the promotion and advancement of DM&S personnel in those categories; but require the Administrator to observe principles of veterans preference in the hiring of personnel in those categories.

2. Authorize the Administrator, when and to the extent necessary for recruitment or retention purposes, to use the additional pay (overtime, weekends, and so forth) authorities for DM&S nurses in compensating personnel in the categories listed in item 1, above.

3. Authorize the Administrator, without the Administrator's action being statutorily subject to review by the President as under current law, to adjust minimum, intermediate, or maximum rates of basic pay for personnel in the categories listed in item 1, above, when necessary for recruitment and retention purposes in certain circumstances.

4. Authorize the Administrator, after considering a potential employee's existing pay or higher or unique qualifications, or the special needs of the VA, to appoint an individual to a position in DM&S providing direct patient-care services or services incident to such direct-care services at a rate of pay above the minimum of the appropriate grade.

5. Require the Administrator and the Director of the Office of Personnel Management to submit a joint report to the Congress on the efforts made to carry out the recommendations made by the VA in the September 1, 1982, report entitled "Study of the Feasibility and Desirability of Converting Selected Health Care Occupations to title 38, United States Code."

6. Require that the majority of individuals serving on a disciplinary board considering charges against DM&S employees in certain categories be in the same occupational category as the employee who is the subject of the charges.

7. Require the Administrator, within 90 days after the date of enactment, to report to the Committees on Veterans' Affairs on the status of the implementation of the provisions summarized in items 1 through 5, above.

8. Require the Administrator, not later than September 30, 1985, to submit a report to the Committees on Veterans' Affairs on the results of the VA's use of the authorities provided in provisions summarized in items 1 through 5, above, and ongoing efforts to develop and carry out programs of education and training for career advancement for certain allied health professionals employed in DM&S.

Title III: *Women Veterans.*—This title would improve the Veterans' Administration's efforts with respect to women veterans. Included in title III are provisions that would:

1. Provide for the establishment by the Administrator Veterans' Affairs of an Advisory Committee on Women Veterans (ACWV) to advise the Administrator on the administration of VA benefits for women veterans and their needs for compensation, health care, rehabilitation, outreach, and other VA programs.

2. Require the ACWV to submit to the Administrator by July 1, 1984 and by July each year thereafter, a report which would include an assessment of the needs of women veterans for compensation, health care, rehabilitation, outreach, and other VA programs, a review of VA programs designed to meet those needs, and any recommendations for legislative and administrative actions that the Committee considers appropriate; and require the Administrator within 30 days after receiving each of these reports, to submit them (together with any comments the Administrator considers appropriate) to the Congress.

3. Authorize the Administrator, until September 30, 1989, to provide certain outpatient care on a fee-for-service basis for a non-service-connected, gender-related disability of a woman veteran, when the VA is unable to provide appropriate care for such disability.

Title IV: *Presumption Concerning Dysthymic Disorder.*—This title includes a provision that would add dysthymic disorder (or depressive neurosis) to the list of diseases which, in the case of former prisoners of war who were interned for not less than 30 days, are presumed to have been incurred or aggravated by active-duty service.

Title V: *Status and Role of Administrator of Veterans' Affairs.*—This title includes a provision that would express the sense of Congress that, in light of the size and importance of the Veterans' Administration, the Administrator of Veterans' Affairs should be designated by the President as a member of the Cabinet and be the President's principal advisor on all matters pertaining to veterans and their dependents or survivors.

Title VI: *Radiation Exposure Study and Guide.*—This title includes a provision that

would direct the Administrator, through contracts or agreements, to provide for the conduct—except as determined by the Administrator, with the concurrence of the Director of the Office of Technology Assessment not to be scientifically feasible—of an epidemiological study (or studies) of the long-term adverse health effects from exposure to ionizing radiation from certain detonations of nuclear devices and to develop and publish an indexed reference guide, derived from existing research-result compilations, regarding the state of medical and other scientific information on any long-term adverse health effects in humans from exposure to radiation, including nuclear device, medical, and occupational exposures.

Title VII: *Miscellaneous and Technical Amendments.*—This title includes one substantive amendment, relating to eligibility for VA health care for certain individuals, and several technical amendments. The one substantive provision would provide for continuing VA health-care eligibility for an individual who suffered injury while receiving VA health-care or vocational-rehabilitation services and would, as a result, be entitled to disability compensation but for the fact that the individual has received a settlement or judgment, but such health-care eligibility would be provided only to the extent specifically provided for in the judgment or settlement.

Mr. CRANSTON. Mr. President, as the ranking minority member of the Committee on Veterans' Affairs, I am delighted to join with my good friend, the distinguished chairman of the committee (Mr. SIMPSON), in urging our colleagues to give their unanimous approval to the pending measure, S. 578, the proposed Veterans' Health Care and Programs Improvement Act of 1983, as reported. This measure, which was reported by the committee on May 23, is a carefully developed compromise that includes provisions from a variety of measures, the two principal ones being S. 578 as introduced by the Chairman on February 23, 1983, and S. 11, which I introduced on January 26, 1983. If enacted, this measure will help maintain and improve the quality, scope, and efficiency of health-care services provided the Nation's veterans through the Veterans' Administration health-care system.

HEALTH CARE PROGRAMS

Title I of the pending measure, which I will refer to as the committee bill, contains a variety of provisions that would establish new health services programs for veterans and improve and extend existing programs.

PREVENTIVE HEALTH CARE

Mr. President, certain provisions in the committee bill, which are derived from S. 11 as introduced, are designed to promote the provision of preventive health-care services to veterans by the VA. As the author of current law provisions which authorize the VA to conduct a pilot program through which certain service-connected-disabled veterans can receive preventive health-care services through the VA and such services can be evaluated—an authority which has been almost totally unused since it was enacted in 1979—I am gratified that the committee has agreed to my proposal to make this pilot program mandatory. Taken together with the provision in the bill that would give the agency new discretionary authority to provide preventive health-care services to all veterans otherwise receiving VA health-care services, this pilot program mandate should insure major activity by the VA in providing these services. This in turn should insure that the VA will learn a great deal more about the cost effectiveness and practicality of various preventive health-care services. In this era of increasing emphasis on reducing the cost of medical care and increasing efforts in health programs in general in the United States to prevent disease and disability, gains by the VA in this area can be translated into improved health care for eligible veterans through the VA and, as a result of the VA's significant involvement in the medical community, increased understanding generally which will be to the benefit of the Nation as a whole.

VIETNAM VETERANS READJUSTMENT ISSUES

Mr. President, provisions in the committee bill would extend the period of eligibility for the VA's readjustment counseling program for 1 year—until September 30, 1985—and would also extend the due date for and modify the content of a report from the VA related to this program.

These provisions, which are derived from provisions in S. 11, are designed to give the VA the opportunity to perform a detailed evaluation of the readjustment counseling program and to report to the Congress on this evaluation. Also, this extension will give the Congress the opportunity to study the Agency's report in preparation for taking further action with respect to this program.

As the author of the legislation establishing the readjustment counseling program, I remain deeply committed to this program and will make every effort to insure that it is maintained as long as needed to meet the readjustment counseling needs of Vietnam veterans. Information is becoming available that suggests that a longer term extension will certainly be necessary, and I fully expect the VA's report to detail this information and recommend a significant extension. I view the extension provided for in the committee bill as an interim extension that will provide the basis for future action.

Mr. President, with further reference to the readjustment problems of some Vietnam veterans, the committee agreed to my proposal to include in the committee bill another provision which would mandate the VA to carry out a comprehensive study to determine the prevalence, incidence, and effects of post-traumatic stress disorder—PTSD—and related readjustment problems in Vietnam veterans. The information from this study, as well as other information on VA policies for providing benefits to veterans suffering from PTSD and other readjustment problems that would be required to be included in the report to Congress, should be of significant value to the committee and the Congress as we consider the future shape and direction of the VA's readjustment counseling program.

PROGRAMS FOR OLDER VETERANS

Mr. President, various provisions in the committee bill relate to the VA's ongoing efforts to meet the health-care needs of a veteran population that continues to age, particularly the large number of World War II veterans who are approaching an average age of 65.

First, the committee bill would authorize the VA to develop a 4-year pilot program of adult day health care. Under this program, the VA would provide noninstitutional health-care services, as an alternative to nursing home care, to veterans who are eligible under current law for nursing home care in a non-VA facility at VA expense. Adult day health care would be provided through contracts with private providers and through a limited number of in-house efforts. These services, which could include a wide range of medical and social services and would be provided during normal working hours, would be designed so that the veterans participating in the program could be maintained at home in a supportive environment rather than be institutionalized in a nursing home or hospital. Through the pilot program, the VA should learn a great deal about the effectiveness and efficiency of various methods of providing adult day health-care services and thus be able to recommend appropriate legislation to the Congress to support future VA efforts in the area of noninstitutional alternatives for older veterans. I am delighted to have been able to collaborate closely with the chairman in the provisions that were included in the committee bill on this point which were derived from his bill as introduced.

Mr. President, other provisions in the committee bill would clarify and codify the VA's authority to administer a community residential-care program. For a number of years, the Agency has supported programs through which patients who no longer need institutionalization are referred to community homes where they receive, at their own expense, room, board, personal care, and general health-care supervision. Because of the importance of this effort in the overall range of health-care programs and because there have been some in-

stances in the recent past where some question has been raised about the VA's authority to monitor the status of veterans in community homes, the provisions in the committee bill would give the VA specific legislative authority to carry out such a program. Specifically, the bill would authorize the VA to set program standards, to establish procedures for approving the residences, to conduct annual inspections, to examine services received by the veterans within the facilities, and to assist in the removal of a veteran from a facility that has lost its approved status. Providing such specific legislative authority should insure that this important noninstitutional program for long-term care for veterans will be maintained and improved. I feel that the committee has effectively refined and clarified the legislation proposed by the VA for these purposes.

Mr. President, another provision in the committee bill, derived from S. 629, legislation I introduced with my good friend from West Virginia (Mr. RANDOLPH) in which we were later joined by our committee member from Pennsylvania (Mr. SPECTER), and directly related to providing care to older veterans, would provide for a 15-percent increase in the per diem rates paid by the VA to State veterans homes for the care of eligible veterans. The State home program is a vital adjunct to the VA's overall efforts, both now and in the future, to meet the health-care needs of older veterans. It is vital that the Federal Government continue to contribute to the total cost of providing care to eligible veterans in the various State home facilities, and the buying power of the Federal contribution has been significantly eroded by inflation since October 1980, the effective date of the last increase in the per diem rates. In line with actions taken by the Congress this year regarding cost-of-living increases, the effective date for the increase has been postponed by 6 months and specific appropriations would be required before it could become effective prior to September 1984. I strongly support the State home program and am pleased that the committee included our proposed per diem increase in the committee bill.

HEALTH CARE IN PUERTO RICO AND THE VIRGIN ISLANDS

Mr. President, a final health-care provision that I wish to comment on would provide a 1-year extension of the VA's authority to provide, on a contract basis in Puerto Rico, the Virgin Islands, and other territories of the United States, hospital care for non-service-connected disabilities and certain outpatient treatment. As stated in the committee report accompanying the committee bill—Senate Report No. 98-145, on pages 44-45—although this extension is necessary to insure the continuity of medical care for certain veterans in the areas concerned, it is essential that the VA develop and submit to the Congress a report containing plans for meeting the future health-care needs of veterans in Puerto Rico and the Virgin Islands. Since 1978, the issue of how to meet these needs has been discussed and studied and various alternatives have been developed. To date, however, the VA has been unable or unwilling to settle on a particular approach for addressing this issue and to take the necessary steps to implement it. As a result, the Congress has had to provide a series of short-term extensions of the contract authority. It is time to put an end to this lingering indecision, and I believe the provisions in the committee bill, together with the strong views of the members of the committee on this issue, should yield needed progress. Finally, I note that the action we have taken for a short-term extension and a VA report by December 1, rather than the VA's proposal for a 3-year extension, is directly responsive to the recommendations to our committee by the delegate from Puerto Rico (Mr. CORRADA), and we are grateful for his participation and good counsel.

HEALTH-CARE PERSONNEL PROVISIONS

Mr. President, I am very pleased that the committee bill contains numerous provisions, derived from S. 11 as introduced, that are designed to improve the VA's ability to attract and retain various health-care personnel employed in the VA's Department of Medicine and Surgery—DM&S.

Mr. President, these provisions represent the latest step in a process that began in 1980, when the committee was considering legislation related to DM&S personnel matters. Because of concerns expressed to the committee at the time that the VA was experiencing significant recruitment and retention difficulties with respect to certain health-care occupations within DM&S, the committee reported a provision that I authored, later enacted as section 117 of Public Law 96-330, to direct the VA to conduct a study and report to the Congress on which additional categories of DM&S employees that provide direct patient-care services or services incident to direct patient-care services should be considered for conversion from the regular civil service personnel system under title 5, United States Code, to the special DM&S personnel system under title 38.

Mr. President, the mandated report, entitled "Study of the Feasibility and Desirability of Converting Selected Health Care Occupations to Title 38, United States Code", was submitted to the Congress on September 1, 1982. This report is a well-documented and comprehensive evaluation of the current situation regarding nontitle 38 health-care personnel within DM&S. The task force that conducted the study found that three health-care occupations in DM&S—certified or registered respiratory therapists, physical therapists, and licensed practical or vocational nurses—experience severe difficulties in recruitment, retention, and morale on a nationwide basis and recommended that they be converted to the title 38 personnel system.

Mr. President, in response to this study recommendation, I included provisions in S. 11 to convert the three occupations to title 38 but continue to leave in effect with respect to them certain title 5 provisions relating to employee probation periods, performance appraisals, and termination and disciplinary actions. After reviewing various viewpoints on this issue at the committee's March 9 and 10 hearings and responses to followup questions, the committee decided that, although a legislative solution was needed to address the recruitment and retention problems facing these three occupations, a conversion to the title 38 personnel system was not the most appropriate solution. Rather, the committee chose an approach which leaves the three occupations in the title 5 system but gives the Administrator new authorities as to these occupations for determining the qualifications of applicants, for appointing individuals to positions in DM&S, for advancing and promoting individuals, and for setting rates of pay including both basic pay and special pay for work outside of the regular workday or workweek.

Mr. President, I proposed to the committee the solution included in the reported bill because of my concern that the conversions to title 38 might have had significant undesirable economic impact on both the VA and certain employees concerned as a result of differences between the title 5 and title 38 systems. Also, I am satisfied that the approach adopted in the committee bill should yield the same result—in terms of improving the VA's ability to attract and retain individuals in the three occupations—as conversions to title 38. Certainly, if my expectations in this regard prove not to be the result and the VA continues to experience the difficulties found by the task force as to these occupations, I will urge that the committee consider further legislative action.

I also want to note that the committee bill contains a number of provisions requiring the submission of reports that are designed to keep the committee informed about the use and the impact of the use of these new personnel authorities and also about joint VA-Office of Personnel Management efforts to implement other recommendations from the task force report that do not appear to require legislative action at this time. These reports are designed both to promote

timely executive branch action and to insure that the committee remains advised about the status of efforts within DM&S to address pressing personnel issues, and I intend to review them carefully.

WOMEN VETERANS

Mr. President, as more women enter the armed services, serve, and ultimately leave the service, the number of women veterans continues to increase. This in turn brings more women to the VA seeking benefits and services as veterans. A 1982 GAO report—"Actions Needed to Insure That Female Veterans Have Equal Access to VA Benefits," GAO/HRD-82-98—concluded that, because the VA's target population has been so predominantly male over the years, there are various shortcomings at present in the agency's efforts to meet the needs of women veterans. The committee bill contains two provisions, both derived from S. 11, that are intended to remedy, in part, this current situation by improving the agency's ability to respond to the needs of women veterans.

ADVISORY COMMITTEE ON WOMEN VETERANS

Mr. President, one provision in the committee bill would require the Administrator to establish an Advisory Committee on Women Veterans that would have responsibility for evaluating VA programs, services, benefits, reports, and other activities as they relate to women veterans; to advise the Administrator on issues concerning women veterans; and to submit an annual report to the Congress on its views and findings.

This advisory committee is a very important element in the VA's efforts to recognize and respond to the needs of women veterans, and I look forward to its establishment.

In this regard, I note that the present VA Administrator, Harry Walters, has taken steps to establish such an advisory committee on an administrative basis, and congratulate him on taking that action. I feel very strongly, however, that there is a need for a statutory basis for this advisory committee—a viewpoint that received wide support at the committee's hearings—to ensure both that it will survive the tenure of the current Administrator and that it provides its recommendations and views to the Congress as well as to the Administrator.

FEE-BASIS OUTPATIENT CARE

Mr. President, the other provision in the committee bill directly focused on women veterans would authorize the Administrator to provide on a fee-for-service basis certain outpatient care for the non-service-connected gender-specific disability of a woman veteran when the VA is unable to provide appropriate in-house care. This authority would be time-limited—it would expire on September 30, 1989—and the VA would be required to report annually on planned and actual utilization of this authority.

During the committee's consideration of this provision, the VA opposed its enactment, based on the view that the agency has or would shortly have the ability to meet the health-care needs of women veterans, including gender-specific conditions. Without disputing the accuracy of the agency's projections on this point, I believe very strongly that fee-basis authority is needed until it is abundantly clear that the VA has reached the desired goal of being able to provide equal access to health care to both male and female veterans. Also, to the extent that the VA will be able routinely to provide needed treatment to women veterans, there will be no occasion to rely on this fee-basis authority because it is being made available for use only in those circumstances where VA-provided care is not available.

STATUS AND ROLE OF ADMINISTRATOR OF VETERANS' AFFAIRS

Mr. President, a provision in the committee bill, derived from S. 11 and Senate Concurrent Resolution 2, which I introduced with broad, bipartisan cosponsorship on January 26, would express the sense of Congress with respect to the role of the Administrator of Veterans' Affairs—specifically that the Administrator should be designated a member of the Cabinet, should fully participate in Cabinet meetings, and should be the principal adviser to the President on all matters relating to veterans and their dependents.

Mr. President, for more than 50 years, the VA has been the principal Federal agency with responsibility for providing benefits and services to veterans. Today, there are more than 29 million veterans and about 66 million dependents or survivors of veterans. Among Federal departments and agencies, only DOD has more employees than the VA, and the VA's budget—around $25 billion—ranks sixth among Federal departments and agencies. The VA operates the largest centrally managed health-care system in the United States and administers the largest direct insurance program in the country. The VA will be distributing over $13 billion in income maintenance payments and approximately $1.7 billion in education, training, and rehabilitation assistance payments in fiscal year 1983; operates one of the Federal Government's two major home loan guaranty programs, with over 4 million loans currently guaranteed; and operates 108 national cemeteries and provides burial assistance for nearly 350,000 deceased veterans annually.

In light of the VA's size and importance, the agency and its programs should be accorded appropriate recognition, status, and treatment within the executive branch. Too often this has not been the case.

To preclude recurrence of the relegation of the VA to a relatively insignificant role within the executive branch, with the Administrator having little or no access to the President or other top officials in the White House, the VA should be elevated to Cabinet-level status. Such a step would insure that the head of the VA would participate in top administration discussions and decisions, which in turn should result in greater coordination and sharing of expertise between the VA and other Government departments. It would promote greater recognition of the impact of general governmental decisions on the VA's ability to fulfill its mission.

Mr. President, I want to point out that this provision would not mandate the designation of the Administrator as a Cabinet member. The Cabinet consists of executive branch department heads and certain other officials designated by the President. Neither the Cabinet nor its membership was established by the Congress. Thus, I believe it preferable at this time, in striking an appropriate balance between the prerogatives of the President and the Congress, to exercise congressional restraint with respect to the composition of the Cabinet. Legislation mandating a specific official's membership or participation in the Cabinet should, I believe, be considered an extraordinary remedy to be pursued only as a last resort.

However, I consider it entirely appropriate for the Congress to make its view known regarding the advisability and desirability of elevating a particular official to Cabinet membership. In the case of the Administrator of Veterans' Affairs, I believe that a very strong, clear case exists for such a view.

RADIATION EXPOSURE STUDY AND GUIDE

Mr. President, provisions in the committee bill, derived from S. 11, would require the VA to contract with an outside entity, other than the Department of Defense or the Department of Energy, to conduct an epidemiological study or studies, except as such study is determined to be scientifically not feasible, of veterans exposed in service to radiation from nuclear detonations. Also, the VA would be required to develop and publish an indexed reference guide, derived from existing pertinent research compendiums, in order to provide appropriate VA personnel—including both those providing health care and those adjudicating claims for benefits—with readily usable information regarding the state of medical and other scientific information on the long-term adverse health effects in humans of exposure to ionizing radiation. Finally, these provisions would provide a process for promoting Gov-

ernment-wide coordination of research activities related to radiation exposure. Under this process, the President would be required to direct the VA to consult and actively coordinate with other Federal Government entities involved in radiation exposure-related studies and to report to the Congress on that effort.

At the committee's April 6 hearing on issues related to veterans' exposure to ionizing radiation, it was most evident that two important issues remain unresolved regarding the population of veterans exposed to radiation during their service—estimated to include approximately 250,000 who participated in the nuclear weapons test program and approximately 130,000 who participated in the occupation of Hiroshima and Nagasaki or transited those areas shortly after the detonations. These two issues are, first, exposure information on the veterans is certainly not complete and, second, information about the health effects in humans of exposure to low-level ionizing radiation, the so-called dose-response relationships, is also incomplete. The committee bill addresses those issues in several ways.

EPIDEMIOLOGICAL STUDY

Mr. President, the study proposed in the committee bill is very similar to the one that the VA is required to conduct, pursuant to provisions I authorized in Public Law 96-151 as amended by Public Law 97-72, with respect to the exposure of our troops in Vietnam to agent orange. There is one key difference: Whereas the VA had the option of conducting the agent orange epidemiological study by contract—an option which, more than 3 years after enactment of that law, the VA only recently decided, as I and many others had urged, to pursue—the committee bill would require that the VA itself not carry out this radiation epidemiological study but rather contract with an outside entity for its design and conduct.

Although I am far from satisfied with the record of the VA's efforts on the issue of agent orange, I believe that those efforts now, at long last, come closer to what the VA should be doing to resolve such a very difficult and large-scale issue than does the agency's attention to dealing with the health effects in veterans exposed to radiation and the impact of such exposure on those veterans and their offspring. The attitude that has seemed to prevail among some within the VA on the radiation issue is that basically the matter is closed with no questions left unanswered. It is only when confronted with the legislative mandate proposed by S. 11 that the VA has shown some willingness to reexamine its position.

Certainly, there is an evergrowing body of information—most based on followup study of the health history of the Japanese exposed at Hiroshima and Nagasaki—about the health effects of radiation exposure caused by nuclear detonation. However, there is very little information specifically related to those veterans who were actually exposed during the weapons test program or, for that matter, to the nonmilitary personnel exposed to radiation from those tests, such as the citizens in Utah who are currently engaged in litigation on the question of the Government's liability for the health problems that they contend were caused by their exposure.

Mr. President, as I indicated earlier, there are two central questions relating to the veterans' exposure to radiation that must be answered—what was the level of their exposure and what are the probable health effects of that level of exposure. Scientifically valid epidemiological study such as is proposed in the committee bill can help supply part of the missing information—namely, data as to the current health status of the veterans who were present at the Pacific and Nevada test sites or in Hiroshima and Nagasaki, the health status of their natural children, and how the health of these veterans and their children compares to that of persons not exposed to radiation from nuclear weapons. Until such information is available or until there are irrefutable answers to the questions about the level of the veterans' exposure and the effects of such exposure, many of these veterans and their survivors will understandably continue to believe that they are not receiving appropriate treatment from the VA and the Federal Government in general.

Mr. President, as a final point with reference to the proposed study, I want to note that the committee bill includes provisions that require that judgments be made about the scientific feasibility of such study before it begins. Under this provision, if the Administrator determines that any portion of the study is not scientifically feasible, the Administrator would be required to notify the appropriate committees of the Congress promptly of this determination and of the reasons for it. If the Director of the Office of Technology Assessment—OTA—were to agree, that part of the study would not be required. If the Administrator determined that taken as a whole the mandated study is not scientifically feasible and the OTA Director agreed, the entire statutory requirement for the study would lose effect.

Mr. President, with respect to any preliminary determination regarding scientific feasibility, I want to express my strong view that the Administrator should approach the study with an open mind and with an intention to proceed with it and that the Administrator should overcome a heavy presumption of feasibility before deciding that some or all of the study is not scientifically feasible.

REFERENCE GUIDE

Mr. President, the record of the committee's April 6 hearing stands as strong testimony to the value of the VA developing and making available a compilation or summary of the scientific literature concerning the long-term adverse health effects in humans of exposure to low-level radiation. At that hearing, the VA confirmed that there are at present no internal VA guidelines for developing and adjudicating radiation-related claims—claims involving issues which can be very complex. Also, there has not been a clear process for providing up-to-date scientific and medical information to VA physicians who are treating veterans who were exposed to radiation.

Mr. President, VA personnel should have easy access to useful compilations or summaries of the scientific literature concerning health effects of exposure to low-level ionizing radiation. Such a guide, indexed so as to make the information readily accessible, would be a valuable tool, both to adjudication and health-care personnel, and I am very pleased that the committee bill would require the VA to develop such a guide.

COORDINATION OF GOVERNMENT ACTIVITIES

Mr. President, as I noted earlier, the provisions in the committee bill relating to radiation-exposure issues would also require the President to coordinate fully the efforts in this area—including the epidemiological study, development of the guide, and any further research undertaken by the agency—with studies or other activities pertaining to the adverse health effects in humans of exposure to radiation that are planned, ongoing, or completed by other entities in the Federal Government. This procedure should insure that the VA is fully informed of, and gives all appropriate consideration to, the available relevant scientific information regarding human exposure to radiation, and that all Federal efforts in this area are efficiently conducted and coordinated.

Mr. President, I note that the provisions relating to such coordination are very similar to the provisions in section 307(c) of Public Law 96-151 that deal with the coordination of Federal efforts relating to the effects of exposure to dioxin. Despite my strong efforts, both with this and the prior administration, to have the President delegate the dioxin coordination responsibility so that there could be an active coordination effort undertaken, no such delegation has taken place. In an attempt to avoid such a result with reference to the provision in the committee bill, a requirement is included that, not later than 90 days after the date of the enactment of the provi-

sion, the President would be required to submit a report setting forth a description of the steps taken and plans made to insure the required coordination.

PUBLIC LAW 97-72 HEALTH-CARE TREATMENT

As I noted in a statement in the CONGRESSIONAL RECORD on the day of the committee hearing, April 6 at S. 4201—daily edition—the VA on that day finally revised its guidelines for implementing provisions that I authored in Public Law 97-72, enacted November 3, 1981, authorizing the VA to provide health care to veterans for disabilities which may be related to their exposure to radiation or agent orange.

Unfortunately, although the VA guidelines for implementing those provisions carried out congressional intent appropriately with respect to agent orange, they were unduly restrictive with respect to veterans who were exposed to radiation. Having raised the concerns I had in this regard with the chief medical director and both the previous and current Administrators, I was gratified when Administrator Walters indicated in a February 18 letter to me that the discrepancy was going to be eliminated.

CONCLUSION

Mr. President, as always, it has been a great pleasure to work with the chairman (Mr. SIMPSON) and all the members of the committee in the development of legislation to meet important needs of the Nation's veterans.

This bill, as it is before the Senate today, is the result of true bipartisan effort—the type of effort that we on the Veterans' Affairs Committee always strive to put forth. I want to note the hard work of, and to thank, the committee staff members who worked on this legislation: Vic Raymond, Cindy Alpert, Scott Wallace, Tom Harvey, and Julie Susman, on the majority staff; committee editorial director, Harold Carter and James MacRae who so ably provide editorial support to the committee; and, on the minority staff, Bill Brew, Katy Burdick, Ed Scott, Jon Steinberg, Charlotte Hughes, and Ingrid Post.

I believe S. 578 as reported is a well-balanced, fully appropriate measure that, if enacted, will be of substantial help to the VA in seeking to fulfill its health-care mission. It has the unanimous support of the members of the Veterans' Affairs Committee and has wide support among the Veterans' service organizations. I urge my colleagues to give this measure their full support.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

Mr. STEVENS. Mr. President, I ask unanimous consent that the Chair lay before the Senate H.R. 2920, a companion House bill which is being held at the desk.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 2920), to amend title 38, United States Code, to revise and extend certain health-care programs of the Veterans' Administration, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed with the consideration of the bill.

Mr. STEVENS. Mr. President, I move to strike all after the enacting clause of H.R. 2920 and insert in lieu thereof the text of S. 578 as amended by the Senate.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

Mr. STEVENS. Mr. President, I call to the attention of the Senate that this is just another of the bills that has come to us under the chairmanship and the leadership of the Senator from Wyoming dealing with veterans' matters. It is very complicated but, working with his colleague, the distinguished ranking member of the committee (Mr. CRANSTON), he has produced another bill which will deal fairly with the rights of the veterans involved. The Senator from Wyoming is doing a magnificent job in handling this committee in a bipartisan way. I think the whole Senate should congratuate him for that.

I move the third reading of H.R. 2920, as amended.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

The bill (H.R. 2920) was passed.

Mr. STEVENS. Mr. President, I send an amendment to the title to the desk and ask that it be considered.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

Amend the title so as to read: "A bill to amend title 38, United States Code, to provide for adult day health care services for veterans, to establish a Veterans' Administration Advisory Committee on Women Veterans, to promote the recruitment and retention of certain health-care personnel in the Department of Medicine and Surgery of the Veterans' Administration; to extend the period of Vietnam-era veterans to request counseling under the readjustment counseling program, to establish a presumption of service-connection for former prisoners of war suffering from dysthymic disorder, to express the sense of the Congress with respect to the role of the Administrator of Veterans' Affairs, to require the Administrator of Veterans' Affairs to conduct an epidemiological study and develop a reference guide to long-term health effects in veterans of exposure to ionizing radiation; and for other purposes.".

The PRESIDING OFFICER. The question is on agreeing to the amendment to the title.

The amendment was agreed to.

Mr. STEVENS. Mr. President, I move to reconsider the vote by which the bill passed.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, I move to indefinitely postpone consideration of S. 578.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

EXECUTIVE SESSION

Mr. STEVENS. Mr. President, I ask my friend from West Virginia if it would be agreeable at this point to go into executive session for the purpose of considering the nomination under new reports on page 2 of the Executive Calendar.

Mr. BYRD. Mr. President, there is no objection to proceeding with the single nomination under Department of Education on page 2.

Mr. STEVENS. Mr. President, I ask unanimous consent that the Senate proceed into executive session for the purpose of considering the nomination on the Executive Calendar under new reports, Calendar No. 210.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. The clerk will state the nomination.

DEPARTMENT OF EDUCATION

The legislative clerk read the nomination of Madeleine C. Will, of Maryland, to be Assistant Secretary for Special Education and Rehabilitative Services.

Mr. PACKWOOD. Mr. President, I rise today in support of Mrs. Madeleine Will's confirmation by the Senate as Assistant Secretary of Education for Special Education and Rehabilitation Services. In all my years in the Senate, I have rarely had an opportunity to give my unqualified personal and professional support to a nominee of Mrs. Will's qualifications.

Georgie and I have known Madeleine Will, and her husband, George, for a number of years. We have spent time socially in each others' homes and have discussed at length the full range of issues facing this country. Each time I talk to Madeleine, my

original perception of her as an unusually knowledgeable and capable person is reinforced.

Madeleine acquires and analyzes information at a rate that would astound most people, but Madeleine's strength is her approach to problem solving. She looks at each question with an open mind and a determination that is unmatched. When I say she approaches a problem with an open mind, she rapidly assesses the situation and determines what should be done, then she goes all out to accomplish it.

Madeleine's interest in the handicapped stems from personal experience. She and George have a handicapped child. Most of her extensive volunteer activities have centered around public and private endeavors to aid the handicapped.

She has spent many hours lobbying the Maryland State Legislature for aid for the handicapped. Her success in lobbying the legislature has been extraordinary and is an example of what she can get done. A big part of Madeleine's success is that her answer to every problem is not more money. I know she supports necessary funding for programs for the handicapped. But Madeleine and I both believe more dollars will not solve all the problems. Rather, novel and appropriate approaches are her forte.

Madeleine is an advocate, but she is not an unquestioning one. Madeleine's work in numerous advocacy and professional organizations for the handicapped gives her a breadth of knowledge not easily equalled. She listens to all views and works to mold the good ideas into something better. But she will not countenance unreasonable demands.

The Office of Special Education and Rehabilitative Service needs Madeleine Will's skills and talents. The success of Public Law 94-142, the landmark Education for all Handicapped Children Act of 1975, and the Rehabilitation Services Administration require strong and effective leadership. While Madeleine Will is softspoken and polite, she is unusually effective. She will fight for her views and will not compromise her conscience.

In her statement before the Labor and Human Resources Committee, Madeleine stressed her view of partnership and excellence in pursuing the goal of full participation for the handicapped in our society. Her work at all levels of service delivery and her personal integrity assure the integration of services, and the leadership and direction this office needs. I can think of few people I would rather be working in partnership with for the rights of disabled people than Madeleine.

Madeleine is knowledgeable about the subject and programs she will have to administer. She is compassionate for the constituents she will serve without being maudlin and unquestioning about their demands. I am assured she will continue her success with this administration and with this Congress in carrying the banner for a cause in which she believes deeply.

Mr. President, Madeleine has been nominated because of her ability and competence. She starts with more knowledge and ability than most people will finish with. I am proud to support her nomination.

Mr. QUAYLE. Mr. President, today I have the honor to speak in favor of the nomination of Madeleine Will to be Assistant Secretary for Special Education and Rehabilitative Services in the Department of Education. It is a pleasure to join the chorus of support that has accompanied her nomination. The administration has chosen well in selecting Madeleine for this very important post as advocate for the handicapped.

Witnesses before the Labor and Human Resources Committee were enthusiastic and eloquent in their praise of Madeleine. Her strength of character and personal integrity are qualities that should be possessed by those who hold public office.

Madeleine has demonstrated her concern and interest for the handicapped through her role as an advocate at all levels of government. She is a member of the Association for Retarded Citizens, at the national, State, and local levels. She is the founder of an early intervention program for handicapped children in Montgomery County, Md.

In her official and voluntary capacities, Madeleine has proven to be an effective advocate and she understands the need to coordinate services at the local, State, and Federal levels. Based on her experiences, Madeleine has developed her own vision of the appropriate roles for institutions to play in assisting the handicapped to develop their capacities to the fullest. I know of Madeleine's special interest in the role of community-based programs for the handicapped and her belief in educating handicapped children in least restrictive environments (LRE).

I wholeheartedly endorse the nomination of Madeleine Will to be Assistant Secretary for Special Education and Rehabilitative Services. I believe her advocacy will erase the question mark concerning the administration's commitment to assisting the handicapped.

Mr. KENNEDY. Mr. President, it is a privilege for me to support the nomination of Madeleine Will as Assistant Secretary for Special Education and Rehabilitative Services.

Mrs. Will has been called to serve in a role that bears the critical responsibility of continuing to integrate special education programs and rehabilitation services under one department. I am confident that she will work to achieve full coordination of these components so that, along with the educational needs of handicapped children, the vocational training, and employment needs of disabled youth and adults will also be fulfilled.

Mrs. Will has been an active civil rights lobbyist for people who are handicapped and a member of the national governmental affairs board of the Association of Retarded Citizens. She has shown competence and confidence in both positions. I believe that Mrs. Will possesses knowledge, experience, and a professional as well as a personal commitment to people who are disabled.

In sum, I believe that Madeleine Will brings important strengths to her assignment as Assistant Secretary and that she will serve her constituency with wisdom and compassion. I am pleased to share with Mrs. Will a firm commitment to the interests of handicapped people. I commend her to the Senate and I urge her confirmation.

The PRESIDING OFFICER. The nomination is considered and confirmed.

Mr. STEVENS. I move to reconsider the vote by which the nomination was considered and confirmed.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENS. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, the Senate has just confirmed a talented and dedicated woman for a demanding and vital position. Madeleine Will, President Reagan's new Assistant Secretary for Special Education at the Department of Education, is a bright new hope for the millions of handicapped individuals across the country.

Mrs. Will's efforts on behalf of the Maryland Association of Retarded Citizens won her praise from individuals in and out of the disabled community, and I want to commend President Reagan for appointing her.

Mr. President, I am privileged to know Madeleine Will, and I expect that her professionalism, intelligence, and compassion will make her one of the most effective and respected spokespersons in the country for the cause of true and guaranteed rehabilitation.

But, Mr. President, her job will not be an easy one. Assistant Secretary Will can look forward to a gauntlet of regulations. She will have to master her way through the infamous Washington bureaucracy, and she will no

doubt experience a substantial amount of frustration.

Nonetheless, I am confident that she will meet this challenge, and that her appointment will continue to be viewed as a sign of relief for those who are all too aware that there is much to be done for the disabled American.

Mr. President, I ask unanimous consent that a column written by a relative of Mrs. Will's be printed at this point in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington Post, June 23, 1983]

INCLUDE THE HANDICAPPED

(By George F. Will)

In the contemporary spirit of ruthless full disclosure, I herewith disclose that I am sleeping with a government official. Any day now the Senate will do its clear and pleasant duty, confirming Madeleine Will as assistant secretary of education for special education and rehabilitation.

Without dwelling indelicately on the erotic life of Washington, let me say that I now know what it is to sleep with the Federal Register. Madame Secretary, a veteran of service with the Maryland Association of Retarded Citizens, falls asleep talking, and wakes up talking, acronyms and numbers. Remember how approvingly Keats spoke about the Grecian urn? That is how Ms. Will speaks about P.L. 94-142 and Section 504.

P.L. 94-142, the Education for All Handicapped Children Act, is to parents of handicapped children what Social Security is to the elderly: their Magna Carta. It establishes a right to an "appropriate" education in the "least restrictive environment." Section 504 (of the Rehabilitation Act of 1973, requiring that programs receiving federal assistance be accessible to disabled persons) means nothing to most Americans but everything to millions of citizens. They are citizens who have been excluded from fair social participation not because of their handicaps but because of handicapping social attitudes.

Writing in Scientific American about architectural barriers, Gerben DeJong and Raymond Lifchez argue that Section 504 regulations are government power in the service of conservative values—the escape from dependency, the achievement of self-reliance. The most pervasive barriers are attitudinal, and the worst is the belief that disabled persons are helpless and inevitably are drains on public resources.
